Acknowledgements

I was enormously fortunate to have Professor Guido Maretto as my supervisor. Professor’s clear and sharp guidance always cleared ideas and allowed me to move forward. Professor Guido’s rigor provided endless motivation to work and to learn, leaving the space for my individuality and for me to challenge myself yet giving the direction to achieve what I could not alone. I learned immensely from him and am very thankful.

I am also thankful to Professor Pedro Teles and Professor Patrick Kehoe for providing valuable early advice and for the opportunity to attend insightful seminars. I also thank Professor Carlos Tenreiro for teaching me calculus theorems that were useful to start building the model.

This thesis was the last step of the masters. I thank Professor Iliyan Georgiev for making my masters memorable for his mastery and his dedication and for having motivated me by those.
