About this resource

This resource brings together a range of material to help describe and explain key principles, and concepts (along with supporting ideas/theory) relating to the application and use of social marketing.

This is the 2nd edition of the resource and has benefited from the feedback and discussions generated by those using the 1st edition originally produced in 2005. We would like to thank everyone who provided comments and who have helped inform this edition.

As a resource it does not aim to provide detailed and descriptive explanation of social marketing (other resources are available or are being developed for this purpose). Instead it aims to provide the reader with a resource that can be 'dipped-into' to enhance consideration and wider discussion on different aspects of social marketing.

If it helps in triggering further questions and ideas then it will achieve an important aim.

A key role of the NSM Centre is to stimulate and encourage wider discussion and debate on effective behavioural intervention approaches. In particular how social marketing concepts and approaches can be integrated into routine strategic and operational planning and development.

We are pleased if people would like to use, or adapt, material from this resource, and only ask that you credit us where relevant.

All of the material here is also available in PowerPoint slide format via our website. We regularly update or adjust models and slides as our work progresses, so please consider book-marking the site so you can easily return to it.

If a larger print version would be helpful this can be done by downloading and printing from our website – or alternatively we would be pleased to email or send a larger version to you.

Dr Jeff French & Clive Blair-Stevens
August 2007

National Social Marketing Centre

Background to the NSM Centre

The NSM Centre has been established by the Government as an independent Centre to increase understanding of, and capacity and skills in, social marketing.

It was established as a result of a Government strategic partnership with the National Consumer Council (NCC) to undertake a 2 year independent review into social marketing, announced in 2004, as a commitment in the cross-Government White Paper 'Choosing Health'.

The independent review examined the potential of social marketing to enrich and enhance the impact and effectiveness of behavioural interventions, at national and local levels. It was subsequently published in June 2006, containing practical recommendations for how Government could better harness and integrate effective social marketing within the mainstream of its policy and practice.

The Government accepted the recommendations in principle, and as a result gave the NSM Centre the task of helping build capacity and skills in social marketing and related behavioural interventions.

Central to the NSM Centre's work is therefore to encourage and support greater utilisation and integration of social marketing into policy and practice, both strategically and operationally.

Our overall aims is:
to build capacity and skills across the public and private sectors for he development of effective behavioural interventions (consistent ith best social marketing concepts and approaches).

To do this we:

- Work to build greater understanding and awareness of the potential of social marketing and related behavioural theory and behavioural interventions.
- Encourage on-going discussion and debate amongst policy makers and practitioners about effective behavioural intervention methods and approaches.
- Work with and alongside policy makers and practitioners, to practically assist the application and integration of effective social marketing methods into their work.
- Support the more systematic capture, sharing, and promotion of learning from effective behavioural interventions and related policy and practice.

Making all consumers matter

National Social Marketing Centre

Developing effective behavioural interventions to address major behavioural challenges

The last few years have seen a much stronger focus on how to develop effective behavioural interventions, to address the wide range of behavioural challenges we face as a society. Whether at the national and Governmental level, or at the local and interpersonal levels, people are focusing much more on what really influences behaviour and how we can improve people's lives by helping them achieve and sustain positive behaviours.

While there will always be debates that walk the line between 'the nanny state and the neglecting state', encouragingly the discussion is now increasingly focusing on how to develop much deeper understanding and insight into where people are at now, and using this to craft interventions that are meaningful to people and deliver measurable results in terms of their well-being and quality of life.

The limitations of old style 'mission and message' based communications are now being widely acknowledged and although the pull to 'communicate at people' can still be strong, social marketing at least has become a key influence helping people to step back and review what they are doing in order to help people achieve and sustain different behaviours.

From a national policy context there are now multiple examples where this customer focused approach consistent with social marketing is being revealed.

A few examples are listed below:

1) Prime Minister's Strategy Unit: On-going range of policy discussion papers.
2) Cross-Government White Paper: 'Choosing Health' (2004) which commissioned the independent review examining social marketing's potential (as published by us in 2006).
3) Cabinet Office: 'Engage' programme on-going work to improve Government communications and move to a more strategic communications and social marketing informed approach.
4) The HM Treasury: 'Varney Review' on Service Transformation, helping encourage better service development for citizens and business, and deliver a better deal for taxpayers (2006).

Social marketing in perspective

National Social Marketing Centre

Social marketing in perspective

People come to consider social marketing from a range of different disciplines and professional backgrounds. Simply placing the word ‘social’ next to the word ‘marketing’ can stimulate a number of issues for people, depending on where those people are starting from in the first place.

In talking about social marketing in the UK, and Europe more widely, we found a number of people who did not respond positively to the word ‘marketing’. This was commonly due to a mistaken assumption that this meant a narrow and restrictive focus on the individual in isolation.

There was concern that ‘marketing’ might overlook the powerful external factors (wider determinants) that lie outside of an individual’s control but which, alongside a focus on lifestyle, need to be addressed if real improvements to people’s lives are to be achieved.

Looked at historically, development of social marketing had its roots in the 50’s and 60’s. With an increase in mass-production, a growing consumer culture began to take hold, and the discipline of marketing became increasingly concerned with ways to incentivise and influence people’s purchasing behaviour.

However even from these early days there were those who had reservations about the development and impact of what was seen to be a marketing-fueled consumer culture. This reflected the growing anxiety that a focus on material benefits might undermine traditional community and people-focused values.

Indeed from the earliest days it was from within the marketing world that some of the primary concern and dissatisfaction grew. Then and today, a number of marketers have questioned whether their developing experience and skills might be better harnessed for a wider social good, rather than simply helping fuel profit margins and share-holder value.

Parallel to this development within marketing, however, has been perhaps an even longer debate from across the different social sciences, about what really influences and affects individual and community behaviours. The disciplines of psychology, sociology, anthropology, public health (to name just a few) have all helped significantly in providing different understanding and insights into how to positively influence individual and community behaviours.

National Social Marketing Centre

The bottom line

"If we continue to do what we've always done, then we will only get what we've always got"

- **Social marketing is not a panacea or *magic bullet*,**

  but:

- **Growing evidence and experience shows that when social marketing is applied effectively, and in the appropriate context, it can be a powerful tool for achieving tangible and measurable impact on behaviours.**

- **Improving the level of understanding and application of social marketing is therefore critical if we are to achieve real and measurable impacts on peoples behaviour(s) across a range of different policy and practice agendas.**

National Social Marketing Centre

Coming to social marketing from different starting points

A common concern and starting point

Recognising that all policy and strategy areas essentially represent:

BEHAVIOURAL CHALLENGES

Using available resources to craft and develop:

BEHAVIOURAL INTERVENTIONS

Segmented and tailored
Empower and mobilise
Networked leadership
Whole system

'Tell, sell and control' paradigm

Customer-focused social marketing paradigm

National Social Marketing Centre

Social marketing is all about…

UNDERSTANDING

people
communities
citizens
customers
consumers
clients
patients
professionals
politicians
etc

looking at **what** people do

examining **why** they do it

influences & influencers

incentives & barriers

National Social Marketing Centre

The person and the behaviour

1: PERSON

understanding what 'moves and motivates'

A strong and driving focus on understanding people and what moves and motivates them – being 'customer-focused' (whether the customer is the public or the professional or the politician – the same principle applies). Starting from understanding where the person is at now, what is important to them in their everyday lives.

However, good social marketing considers and addresses **'the individual within their wider social context'.**

So that important influences that may lie outside their immediate control are considered alongside lifestyle issues and options.

2: BEHAVIOUR

understanding and influencing this positively

Ensuring the driving concern is on people's behaviour 'what they do' – rather than just 'communicating to them'.

The overarching concern and key measure of impact for social marketing is on what people actually did as a consequence of the intervention – not simply what they might know or value about something.

This does not mean that knowledge and attitudes are not important but rather that the end is clearly seen in terms of what people do – their behaviour – and in particular finding ways to maintain and sustain positive behaviours over time.

National Social Marketing Centre

Taking a 'helicopter view' of social marketing

Before looking at a formal definition and description it is useful to consider the following:

1. **Social marketing as a dynamic and integrative discipline that has changed and developed over time**
    - 'a dynamic and integrative discipline'

2. **It can be helpful to see it as having two key parents**
    - '2 parents' of social marketing

3. **It can be used strategically and operationally:**
    - strategic social marketing
        - operational social marketing

National Social Marketing Centre

1. A dynamic & integrative discipline

Social marketing is essentially a ‘behavioural intervention’ and, as such, draws from a wide variety of theory and practice to look at the best ways to achieve the desired influence on specific behaviours.

It is dynamic in the sense that it has developed and adapted over time, and is now a much more mature and rounded approach benefiting from theory and practice across a range of different disciplines.

Avoiding being boxed in by drawing rigid and artificial lines or distinctions

Good social marketers are not concerned about drawing artificial lines between what they do, and what others do.

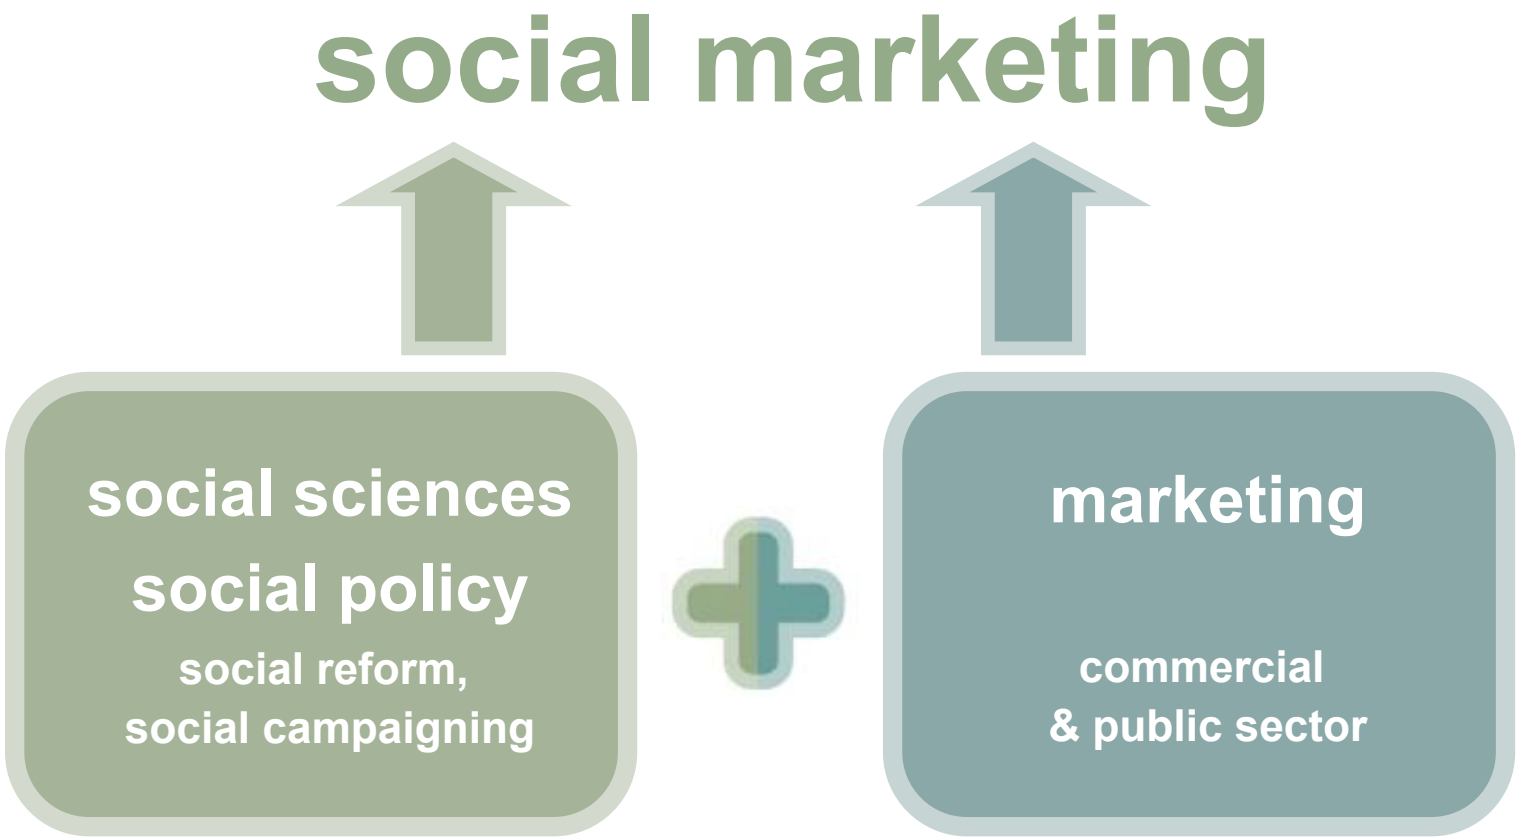
Rather, they focus on ways to integrate social marketing alongside the options and methods available, to help achieve more effective interventions, that can achieve greater and more positive impacts on people’s lives.

National Social Marketing Centre

2. The ‘2 parents’ metaphor

When social marketing was first described in the 1970’s the word ‘social’ was simply used to refer to the focus on ‘social good’.

However since then it has developed and matured as a discipline and the ‘2 parents’ metaphor is useful for helping to highlight this.



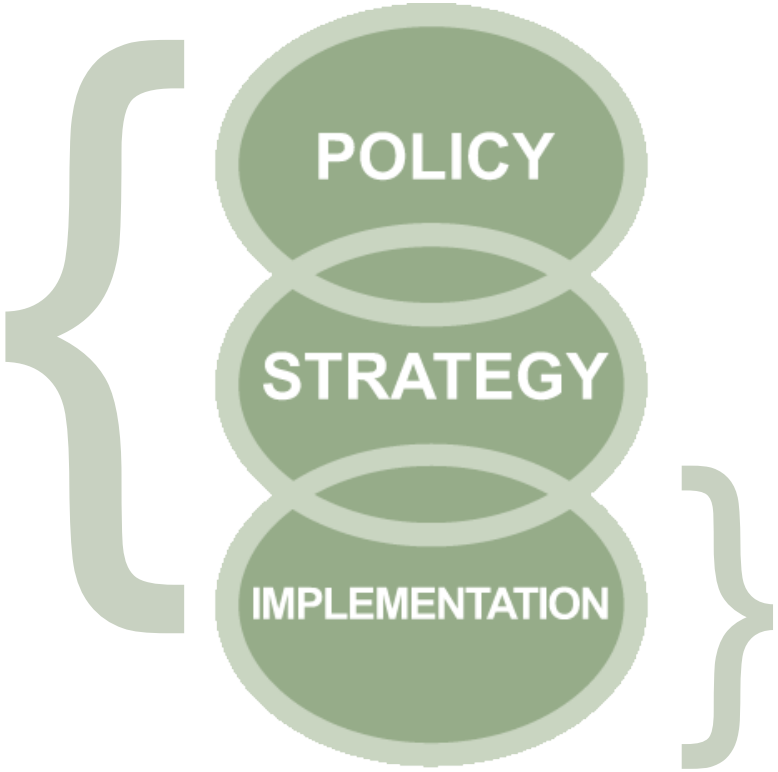
It can be helpful therefore, to consider that alongside the original ‘marketing parent’, people are increasingly recognising that it has an important ‘social parent’ too – drawing from a wide range of learning and experience in the areas of **social science, social policy and social reform**.

‘social parent’

‘marketing parent’

National Social Marketing Centre

2. The ‘2 parents’ metaphor



Both areas contribute valuable expertise, skills, techniques and theory

National Social Marketing Centre

3. Strategic and operational use of social marketing

STRATEGIC social marketing

Using customer understanding and insight to inform policy and stratgey development

OPERATIONAL social marketing

Undertaken as a specific topic based programme or campaign

National Social Marketing Centre

How social marketing can contribute

Across three key areas:

1. POLICY:
By enhancing effective policy development

2. STRATEGY:
By directly informing effective strategy development

3. IMPLEMENTATION AND DELIVERY:
By strengthening effective implementation and delivery

Improved customer insight will:

- **Improve effective TARGETING** (of both audiences and of methods)
- **Enhance the IMPACT on actual behaviour**

National Social Marketing Centre

Clearing up some potential misunderstandings

- It's just commercial marketing for the public sector – NO!
- It's basically just good communications – NO!
- It's really just social advertising – NO!
- It's about telling people what to do, the nanny state – NO!
- It's only focused on individuals and misses all the wider influences on behaviour – NO!
- It ignores the harms that can arise from bad marketing and commercialisation – NO!
- It's a top-down approach – NO!
- It's just another public sector fad – NO!
- And……?

B.

Policy

and how social marketing can help

National Social Marketing Centre

Governments are increasingly recognising the potential

Customer-focused social marketing

There is growing evidence for the contribution that customer-focused social marketing can make to improving the impact and effectiveness of behavioural interventions, whether in policy formulation, strategy development or implementation and delivery. (see *'It's our Health!'* 2006)

Some challenges

- **We need to increase understanding of how an integrated and strategic social marketing approach can directly contribute.**
- **We need to develop a wider shared language and understanding when tackling behavioural challenges and crafting behavioural interventions.**
- **We need to much better capture and share on-going learning from effective behavioural interventions, consistent with social marketing principles.**
- **We need to invest in and improve overall co-ordination of the development and delivery of behavioural interventions across sectors, and at national, regional and local levels.**
- **We need to refocus attention on increasing the impact and effectiveness of all interventions and ensure they have clear and measurable behavioural goals.**

National Social Marketing Centre

A growing range of important policy drivers

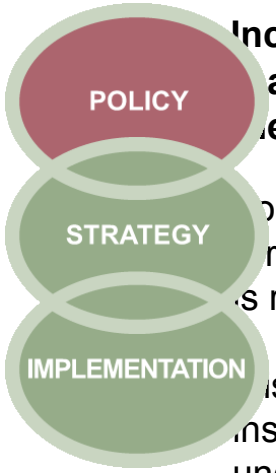
- public health strategy
- wider determinants of health
- health inequalities

- customer-focused government

- health inequalities

- public health strategy
- social marketing

- public services



- social marketing
- social exclusion

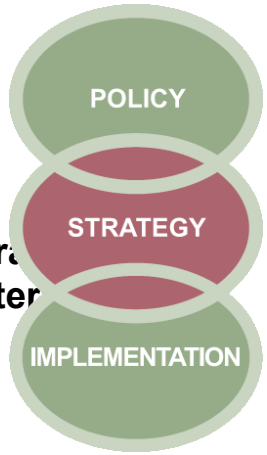
- communitiy services

National Social Marketing Centre

How social marketing can contribute

1. Enhancing effective POLICY development

Increasingly, across Government, the focus is on developing policy that is based on a sound understanding of the citizen, their lives and the communities they are part of.



For shorthand, this is sometimes described as being *citizen-centric* (or alternatively *customer-centric* or *consumer-centric*), ensuring that policy is really driven by people's needs, wants and aspirations.

It is here that a social marketing perspective can directly contribute real insights and value. A central feature of social marketing is its focus on understanding the *citizen / customer / consumer* and developing a profound insight into their lives.

National Social Marketing Centre

How social marketing can contribute

2. Directly informing effective STRATEGY development

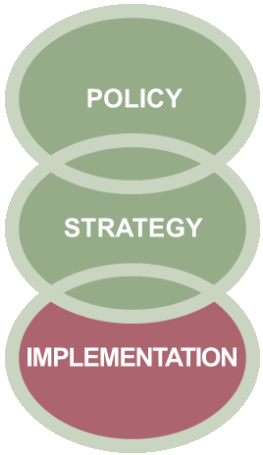
The task of turning policy into coherent and effective strategies is a critical one, whether at national Government, local or regional levels. Central to this is being able to both:

a) decide which intervention options to include in the

b) decide the relative balance between different

(given the available resources, both financial and human).

Social marketing can directly assist and inform these decisions in two key ways:



1. By helping ensure a deeper understanding of the citizen or customer and related insights social marketing can directly inform the selection of appropriate intervention options. The critical factor in selecting a particular intervention is whether it is likely to achieve the desired impact on those it is seeking to reach. Social marketing's insight approach linked to its population analysis and segmentation approach, can directly inform and assist this assessment and judgement.

2. Beyond simply informing the strategic selection of intervention options, social marketing can be undertaken as a specific intervention in its own right, thereby adding an additional intervention option to the strategy developer's toolbox. Planning and systematically undertaking a targeted social marketing intervention can directly contribute to the achievement of behavioural goals and therefore potentially extend and strengthen overall strategic impact and effectiveness.

National Social Marketing Centre

How social marketing can contribute

3. Strengthening IMPLEMENTATION and DELIVERY

While ensuring effective policy and strategy development is important, their ultimate success rests on effective implementation and delivery.

Good policy and strategy can be undermined if implementation is poorly undertaken and managed.

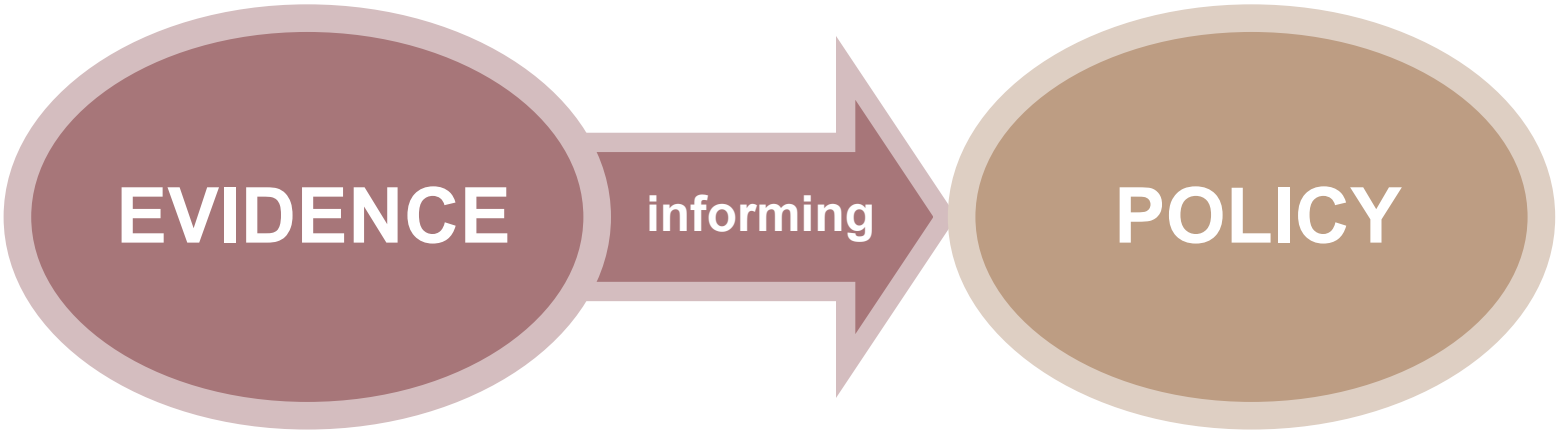
Social marketing can help in two key ways:

1. By ensuring a developed and responsive understanding of *'the customer or consumer'*, it can inform all initiatives and service developments.

2. As an implementation method (whether at the level of a dedicated social marketing programme, campaign or intervention) it can be systematically applied to achieve and deliver real impacts on targeted behavioural goals.

National Social Marketing Centre

'Individual' vs *'the state'*



Refocusing the Government's role on to co-production and behavioural approaches

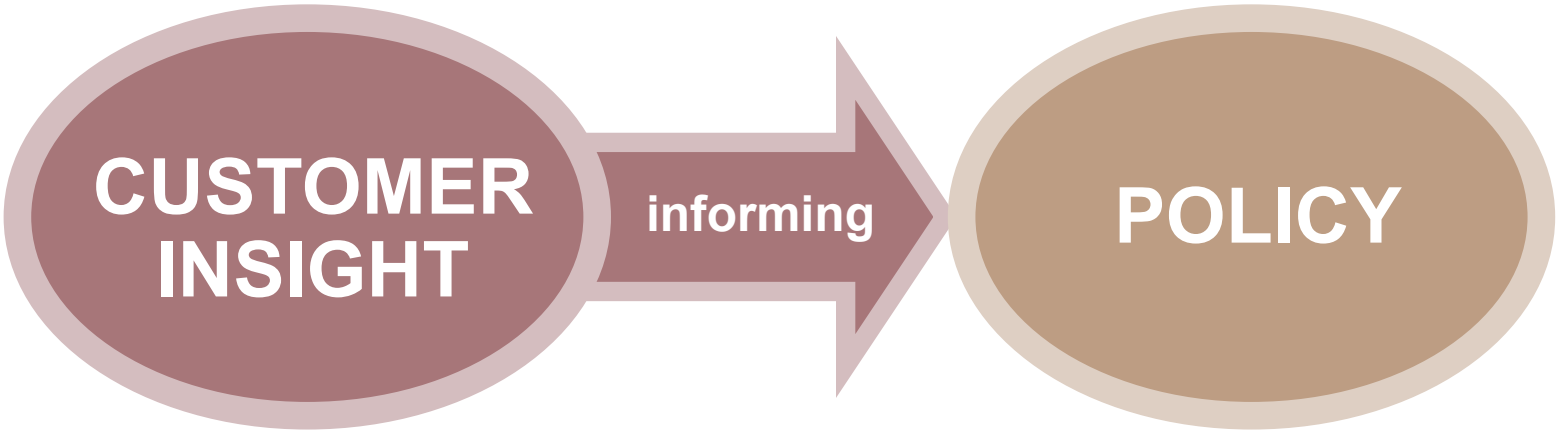
National Social Marketing Centre

Evidence based policy?



The reality? …more complex

- Policy – with evidence
- Policy – in search of evidence
- Policy – counter to the evidence
- Evidence – in search of policy

National Social Marketing Centre

Customer-focused policy?

- Policy – with customer insight
- Policy – in search of customer insight
- Policy – counter to the customer insight
- Customer insight – in search of policy

C.

Defining and describing

social marketing

National Social Marketing Centre

In short… social marketing is about

“using marketing for the benefit of people”

Alongside other methods

Rather than financial gain

National Social Marketing Centre

A more formal definition

Social marketing is:

The systematic application of marketing, alongside other concepts and techniques, to achieve specific behavioural goals, for a social good.

French, Blair-Stevens 2006

National Social Marketing Centre

A more formal definition

Health-related social marketing is:

**The systematic application of marketing,
alongside other concepts and techniques,
to achieve specific behavioural goals,
to improve health and reduce health inequalities.**

French, Blair-Stevens 2006

National Social Marketing Centre

Social marketing ‘customer triangle’

A device for highlighting a number of social marketing’s key features

National Social Marketing Centre

3 core concepts

‘Insight’

Developing a genuine insight into the reality of the everyday lives and experiences of the audience (‘customer’) is critical. Avoiding professional or community assumptions about what they want, need, or think. Checking out and pre-testing developing insights.

‘Exchange’

Really examining what is being offered to people to encourage and support a given behaviour. Making sure it is something that ‘they value’ and not simply the benefits that those people planning the intervention think are important.

The offer to customer >> The price or cost to the customer

Fully understanding what the person has to give, in order to get the proposed benefit,
eg: time, effort, money, social consequences, loss of pleasure, etc.

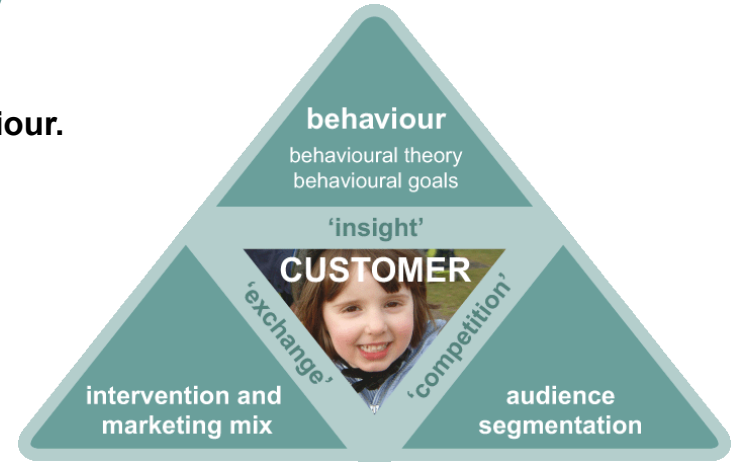
Understanding how the offer can be enhanced to maximise the benefits, while working to minimise potential or actual blocks or barriers to it.

Positive behaviours = increasing incentives + removing barriers or blocks.

Problem behaviours = reducing benefits + adding in barriers or blocks.

‘Competition’

Recognising that whatever is being ‘offered’ will always face competition. Both **external and internal** competition (eg: the power of pleasure, habit, addiction, etc). Can include direct counter messages and competing offers.
Or simply competition for the time and attention of the same target customer / audience.Moving beyond seeing competition in simple terms as the *‘good guys and the bad guys’*.



National Social Marketing Centre

3 core concepts

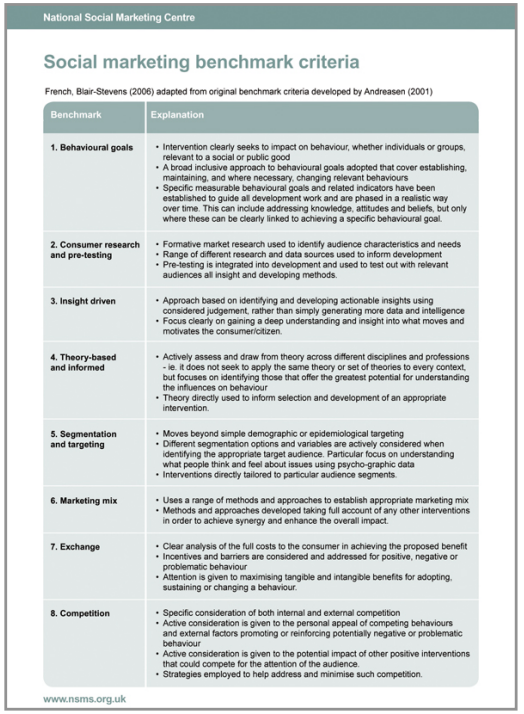
Behaviour – behavioural goals & theory

The driving purpose is to achieve
tangible and measurable impact on actual behaviour.

Moves beyond task of communicating information or messages. Clear focus on understanding existing behaviour, and its key **influences and influencers**. Drawing from different behavioural theory to establish specific **behavioural goals** (not just focusing on 'behaviour change' but also looking at how to **maintain and sustain behaviour** over time.

Intervention & marketing mix

Using a mix of methods or approaches to achieve a given behavioural goal. Examining the range of things that could potentially help achieve and sustain particular behaviours. Within this looking at the relative balance or 'mix' between different methods and approaches, to get the optimum mix for greatest potential effect.



Audience segmentation

Looking at different ways to segment and differentiate audiences. Moving beyond the traditional focus on **epidemiology** and **demography**. Looking at behaviour and **psycho-graphic** aspects eg: what people feel / think about the issue. Usually avoiding **blanket general messages** and approaches and tailoring interventions to the different needs of different segments or groups.

National Social Marketing Centre

Social marketing
National Benchmark Criteria

7. Segmentation and targeting
8. Intervention and marketing mix

National Social Marketing Centre

Social marketing benchmark criteria

French, Blair-Stevens (2006) adapted from original benchmark criteria developed by Andreasen (2001)

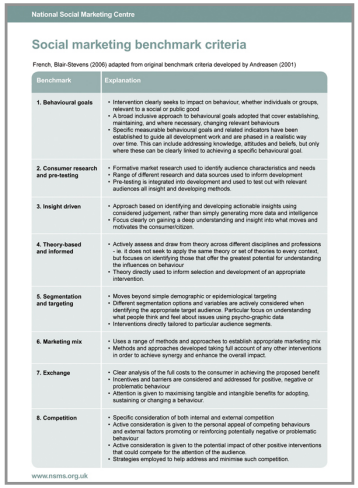
Benchmark	Explanation
1. Behavioural goals	• Intervention clearly seeks to impact on behaviour, whether individuals or groups, relevant to a social or public good • A broad inclusive approach to behavioural goals adopted that cover establishing, maintaining, and where necessary, changing relevant behaviours • Specific measurable behavioural goals and related indicators have been established to guide all development work and are phased in a realistic way over time. This can include addressing knowledge, attitudes and beliefs, but only where these can be clearly linked to achieving a specific behavioural goal.
2. Consumer research and pre-testing	• Formative market research used to identify audience characteristics and needs • Range of different research and data sources used to inform development • Pre-testing is integrated into development and used to test out with relevant audiences all insight and developing methods.
3. Insight driven	• Approach based on identifying and developing actionable insights using considered judgement, rather than simply generating more data and intelligence • Focus clearly on gaining a deep understanding and insight into what moves and motivates the consumer/citizen.
4. Theory-based and informed	• Actively assess and draw from theory across different disciplines and professions - ie. it does not seek to apply the same theory or set of theories to every context, but focuses on identifying those that offer the greatest potential for understanding the influences on behaviour • Theory directly used to inform selection and development of an appropriate intervention.
5. Segmentation and targeting	• Moves beyond simple demographic or epidemiological targeting • Different segmentation options and variables are actively considered when identifying the appropriate target audience. Particular focus on understanding what people think and feel about issues using psycho-graphic data • Interventions directly tailored to particular audience segments.
6. Marketing mix	• Uses a range of methods and approaches to establish appropriate marketing mix • Methods and approaches developed taking full account of any other interventions in order to achieve synergy and enhance the overall impact.
7. Exchange	• Clear analysis of the full costs to the consumer in achieving the proposed benefit • Incentives and barriers are considered and addressed for positive, negative or problematic behaviour • Attention is given to maximising tangible and intangible benefits for adopting, sustaining or changing a behaviour.
8. Competition	• Specific consideration of both internal and external competition • Active consideration is given to the personal appeal of competing behaviours and external factors promoting or reinforcing potentially negative or problematic behaviour • Active consideration is given to the potential impact of other positive interventions that could compete for the attention of the audience. • Strategies employed to help address and minimise such competition.

www.nsms.org.uk

National Social Marketing Centre

National Benchmark Criteria

Understanding what they are



The benchmark criteria are essentially those elements to look for in an intervention that help determine whether it is consistent with and can therefore be described as social marketing.

They should therefore not be confused with ‘the process’ by which you do social marketing. [See the *‘Total Process Planning’* model for a process framework.] The criteria in the benchmarks are relevant throughout the development and implementation of any intervention as a whole.

They should also not be confused with ‘success criteria’ since there are a range of other **important factors** that are critical to any successful interventions, such as (to name a few):

strategic planning,
partnership and stakeholder engagement,
review and evaluation.

These are clearly important in their own right and key to successful interventions. The reason they are not part of the benchmarks are that they are not unique to social marketing. Their presence (or absence) does not indicate if something is social marketing or not. The 8 core criteria included in the benchmarks however, are the things that have to be present in order to be described as consistent with social marketing.

National Social Marketing Centre

Social marketing benchmark criteria

French, Blair-Stevens (2006) adapted from original benchmark criteria developed by Andreasen (2001)

Benchmark	Explanation
1. Behavioural goals	• Intervention clearly seeks to impact on behaviour, whether individuals or groups, relevant to a social or public good • A broad inclusive approach to behavioural goals adopted that cover establishing, maintaining, and where necessary, changing relevant behaviours • Specific measurable behavioural goals and related indicators have been established to guide all development work and are phased in a realistic way over time. Should not be confused with a process of what you do

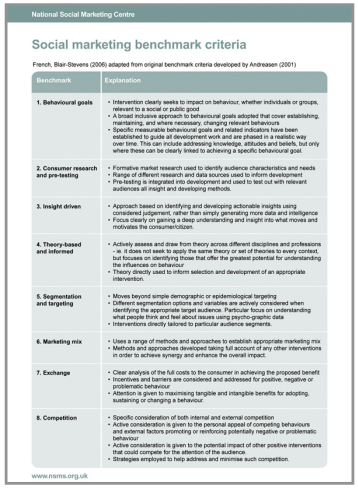
National Social Marketing Centre

National Benchmark Criteria



Building consistency, but maintaining flexibility

As social marketing has developed, it has begun to incorporate a wide range of methods, techniques and activities. This reflects the fact that it is a dynamic and integrative discipline.

This breadth of approach, however, can present challenges to people's understanding of social marketing, particularly in relation to how it fits with other methods and approaches.

The National Benchmark Criteria were specifically developed to help encourage greater consistency, while at the same time not undermining the potential to be flexible and adaptable in developing interventions. The benchmarks therefore help to ensure consistency, but without placing unhelpful constraints on those undertaking interventions or preventing them from developing creative and innovative solutions.

Across the literature, and increasingly in practice, interventions are being described as *'social marketing'*. With increasing attention being paid to social marketing, there is a danger that work is simply re-badged as social marketing and yet not really consistent with its core features. The benchmark criteria therefore provide a simple and easy way to check whether what is being described really is consistent with social marketing: the bottom line being that iif there is not a strong customer and behavioural focus then it is not social marketing. The benchmark criteria will help in making this more evident.

National Social Marketing Centre

Social marketing benchmark criteria

French, Blair-Stevens (2006) adapted from original benchmark criteria developed by Andreasen (2001)

Benchmark	Explanation
1. Behavioural goals	• Intervention clearly seeks to impact on behaviour, whether individuals or groups, relevant to a social or public good • A broad inclusive approach to behavioural goals adopted that cover establishing, maintaining, and where necessary, changing relevant behaviours • Specific measurable behavioural goals and related indicators have been established to guide all development work and are phased in a realistic way over time. National Social Marketing Centre

National Benchmark Criteria

Different ways they can be used

The benchmark criteria can be used in a range of different ways:

Commissioners:

Can use them to incorporate into tender briefs, sent out to people wanting to bid for specific work, with a request that all proposals or bids should clearly indicate how the work proposed will ensure it incorporates and is consistent with, each of the criteria. They can then be used in preparing tender interview panel questions, to test out the extent to which those making bid presentations have understood and genuinely incorporated them into their proposals.

Agencies, consultants & other contractors:

Can use the benchmark as a guide to presenting bids or proposals to funders, to clearly show how their proposal or bid will be consistent with social marketing principles and practice.

Trainers:

Can use them to highlight key features of social marketing and provide a framework from which to examine and explore key concepts and principles.

Intervention planners and developers:

Can use these as a robust guide to ensure that what they do remains consistent with core criteria. As core criteria, they have been specifically framed to allow maximum flexibility for adaptive and creative solutions. However while they are not a 'how to' process they provide a steer to ensure that, as work is developed, it can be checked to ensure it is consistent with the criteria.

Evaluators & researchers:

Can use them when reviewing the impact of interventions, to reinforce the focus on determining if specific behavioural impacts have been achieved or not. They can also be used by those seeking to compare and contrast learning from different interventions and programmes and to help identify aspects of transferable learning.

National Benchmark Criteria 1

Customer orientation

‘customer in the round’

all work based on good market and consumer research, using data synthesis / fusion techniques

National Social Marketing Centre

National Benchmark Criteria 1
Customer orientation

- A broad and robust understanding of the customer is developed which focuses on understanding their lives in the round, and avoids the potential to focus only on a single aspect or feature.

- Formative consumer / market research used to identify audience characteristics and needs

- Range of different research analysis, data synthesis and fusion approaches used, drawing from public and commercial sector sources, to inform understanding of their everyday lives

National Social Marketing Centre

Focusing on the person at the centre

The reason it is called the 'customer triangle'

Different sectors and organisations can describe the customer in different ways, eg:

the consumer
the citizen
the client
the patient
the service-user
the public
the community
the professional
the decision-maker
the politician

The customer can be both:

- **the public or citizens**
- **professionals or key decision-makers**

National Social Marketing Centre

Traditional communications & 'message based' approach

crafting 'our messages' → **communicating the messages**

accurate / relevant / clear

creative / clever / funny / impactful / interesting / attention grabbing / etc

Example: Young people and smoking:

What we see as benefits:

Health benefits:
Life expectancy, illness & disease, lungs, heart, etc

Financial benefits:
Cost, disposable income

Other benefits:
Smell, attractiveness to others, not damaging others (eg children)

Communications:

Posters and adverts
Leaflets and flyers
TV, radio, press (papers / magazines)
Internet / email / phones / viral marketing
Schools / youth clubs / cinemas

Etc

National Social Marketing Centre

‘Customer-focused’ social marketing approach

Starting with the customer

understanding the customer

what ‘moves and motivates’

generating ‘insight’

Example: Young people and smoking:

What’s going on? ‘what moves and motivates’:

Own views not those received from ‘authority’
Self-perception of maturity: ‘an adult’ not ‘a child’
Move away from parents and teachers influence
Importance of peer views and approval
Fun, social benefits, enjoying attention & ‘causes’
Questioning, challenging, rebellion, streetwise
Living in ‘the now’ less concern for distant future

Basic insights:

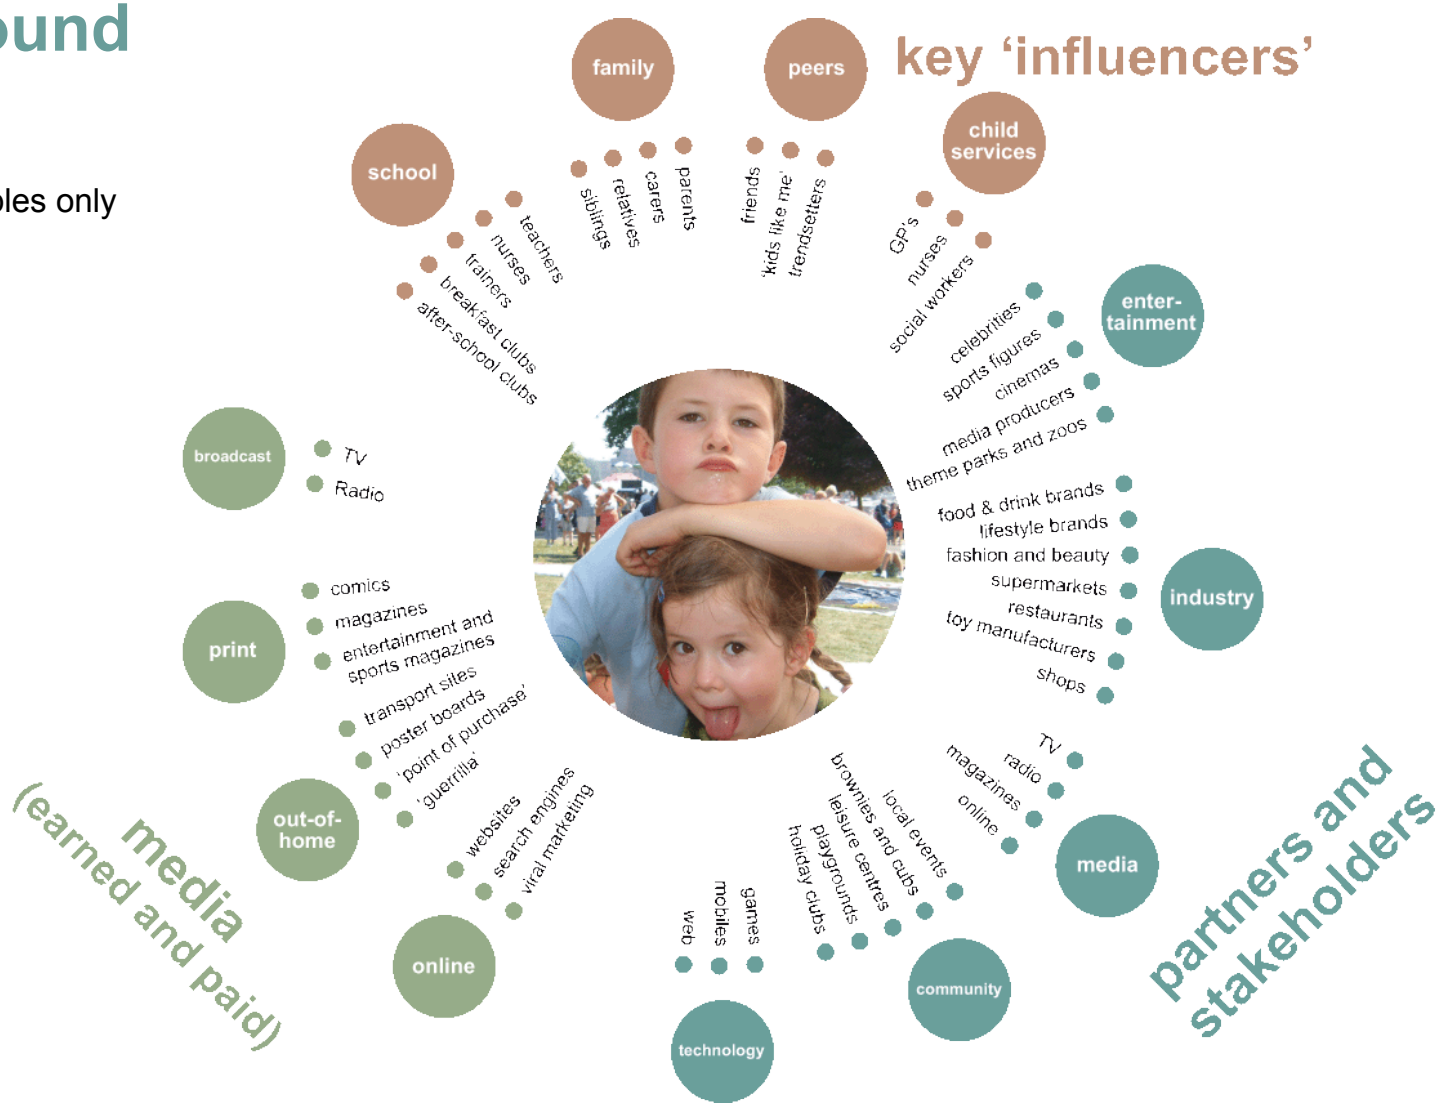
Selling of *‘health’* and longer term benefits, or *‘being good’* very unmotivating – avoid (can be counter motivating)

Connect to ‘own views’, not being conned, link to a cause and rebellion, ensure social & fun benefits are strong

eg: ‘Truth’ campaign approach
www.wholetruth.com

National Social Marketing Centre

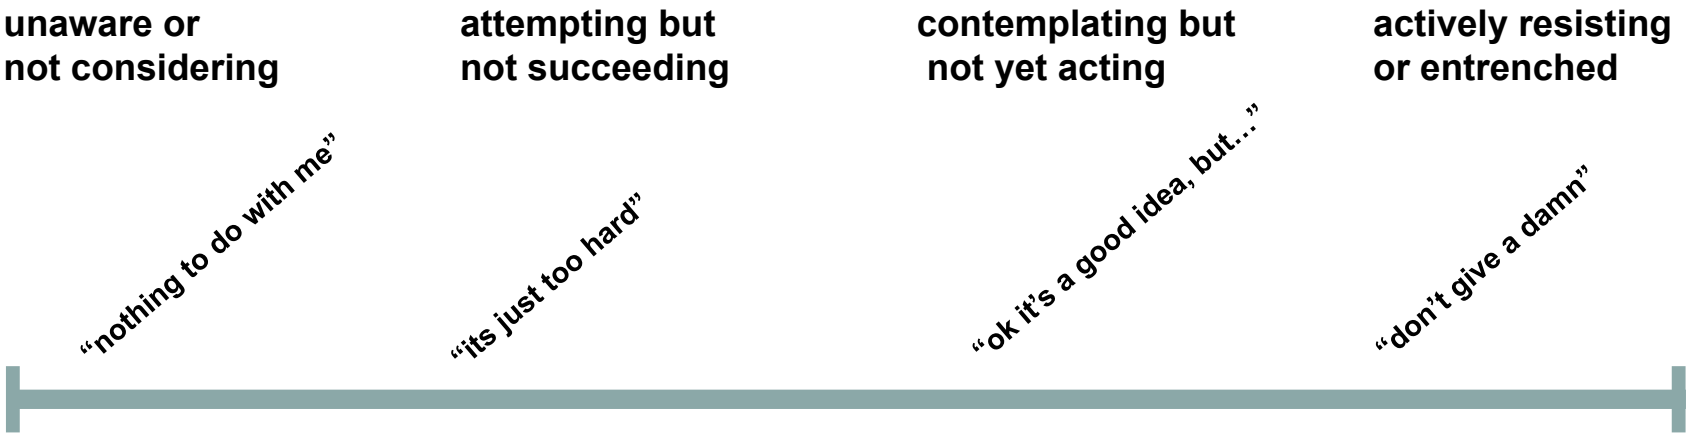
Developing a 360 degree view



A practical tool:

National Social Marketing Centre

Seeing the customer / consumer in the round



eg: Children

A practical tool:

National Social Marketing Centre

Starting from: ‘where the customer is at’

SOCIAL MARKETING

Tailoring interventions to take full account of where the customer is starting from

INFORM
educate
communicate
advise

SUPPORT

DESIGN

CONTROL
require
enforce
legislate

National Benchmark Criteria 2

Behaviour

Clear focus on behaviour, based on strong behavioural analysis with specific behaviour goals

National Social Marketing Centre

National Benchmark Criteria 2
Behaviour

- **A broad and robust behavioural analysis undertaken to gather a rounded picture of current behavioural patterns and trends, including for both**
  the 'problem' behaviour
  the 'desired' behaviour
- **Intervention clearly focused on specific behaviours**
  ie not just focused on information, knowledge, attitudes and beliefs
- **Specific actionable and measurable behavioural goals and key indicators have been established in relation to a specific 'social good'**
- **Intervention seeks to consider and address four key behavioural domains:**
  1. *formation and establishment of behaviour*
  2. *maintenance and reinforcement of behaviour*
  3. *behaviour change*
  4. *behavioural controls (based on ethical principles)*

National Social Marketing Centre

Influencing behaviour… why?

There are many ways to influence behaviour, and many reasons to do so

- whether at the individual level, eg: *as a parent,*
- or at the social or societal level, eg: *as the Government*

As parents:

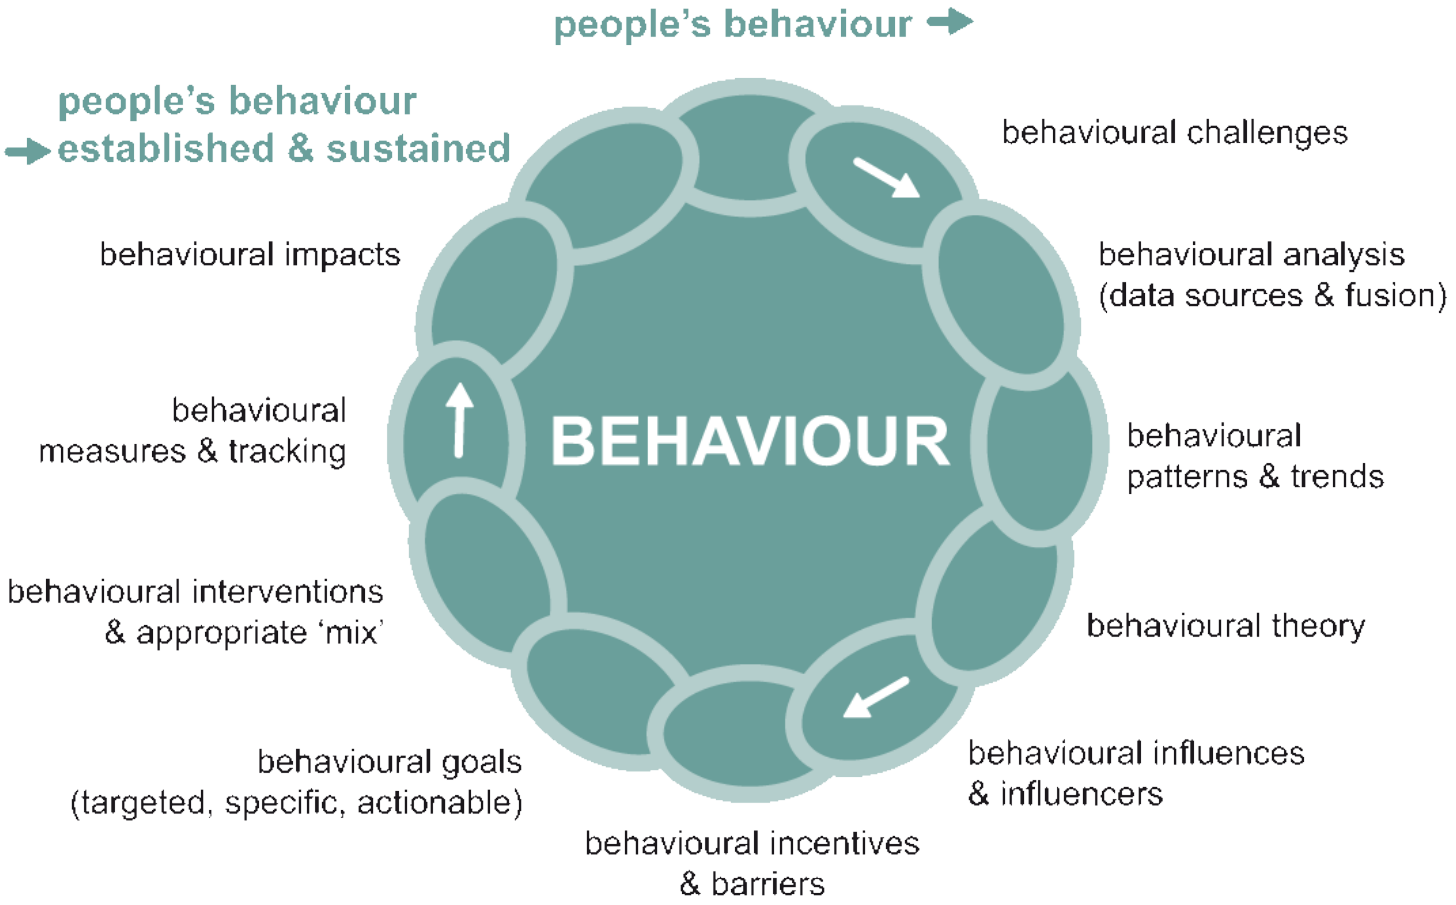
People rapidly learn skills to influence babies and children as they grow up – some proving more effective and positive than others

As the Government:

Almost every single policy area where a Government needs to achieve a positive impact and intervene in some way, has some type of behavioural challenge or focus to it.

eg: the environment, energy conservation, waste management, health and healthcare, crime, transportation, taxation, financial planning and savings, community and civic engagement, voting and volunteering, etc.

National Social Marketing Centre



Understanding behaviour

Clarifying some basic starting points

- **Behaviour =** a pattern of actions over time.
- **Behaviour is inherently *dynamic*.**
  Subject to change and variation in different contexts and at different times.
- **100% consistency is rare to find.**
- **Much routine daily behaviour is about habit and does not necessarily involve conscious and active consideration.**
  Avoid reliance on 'cognitive' message-based communications.
- **Starting from an understanding of an audience's *attitudes, hopes, wishes, desires and other motivations* is generally more productive than trying to identify and fill *information gaps*.**
- **Understanding people's *emotional engagement* is critical.**

National Social Marketing Centre

Keeping the focus on behaviour
'creating a behavioural chain reaction'

The ultimate goal is not just to change behaviour but to ESTABLISH & SUSTAIN IT over time

National Social Marketing Centre

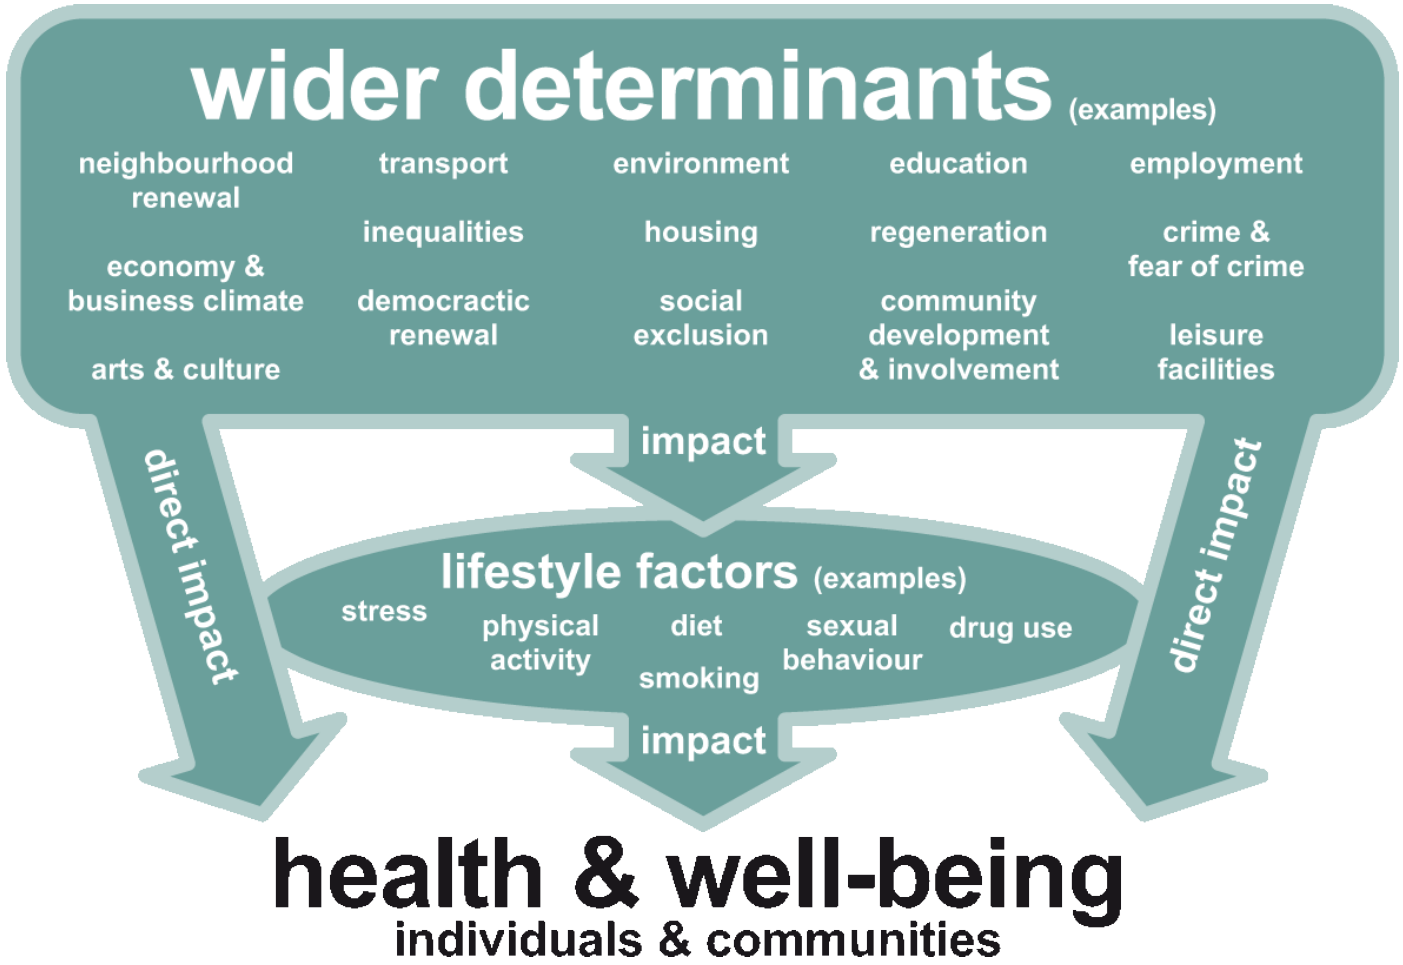
The customer in their wider social and environmental context

Although social marketing has a strong customer focus, good social marketing does not focus on people as isolated individuals, but rather looks at them in their wider social and environmental context.

To be effective social marketing therefore needs to consider:

1. **Those factors within the potential control of the individual**
   eg lifestyle options and choices
2. **Those factors outside of the person's immediate control or influence**
   eg environment, service access options, employment opportunities, housing, etc

National Social Marketing Centre



Seeing the customer in their social context

National Social Marketing Centre

Wider determinants of health

Recognising their influence

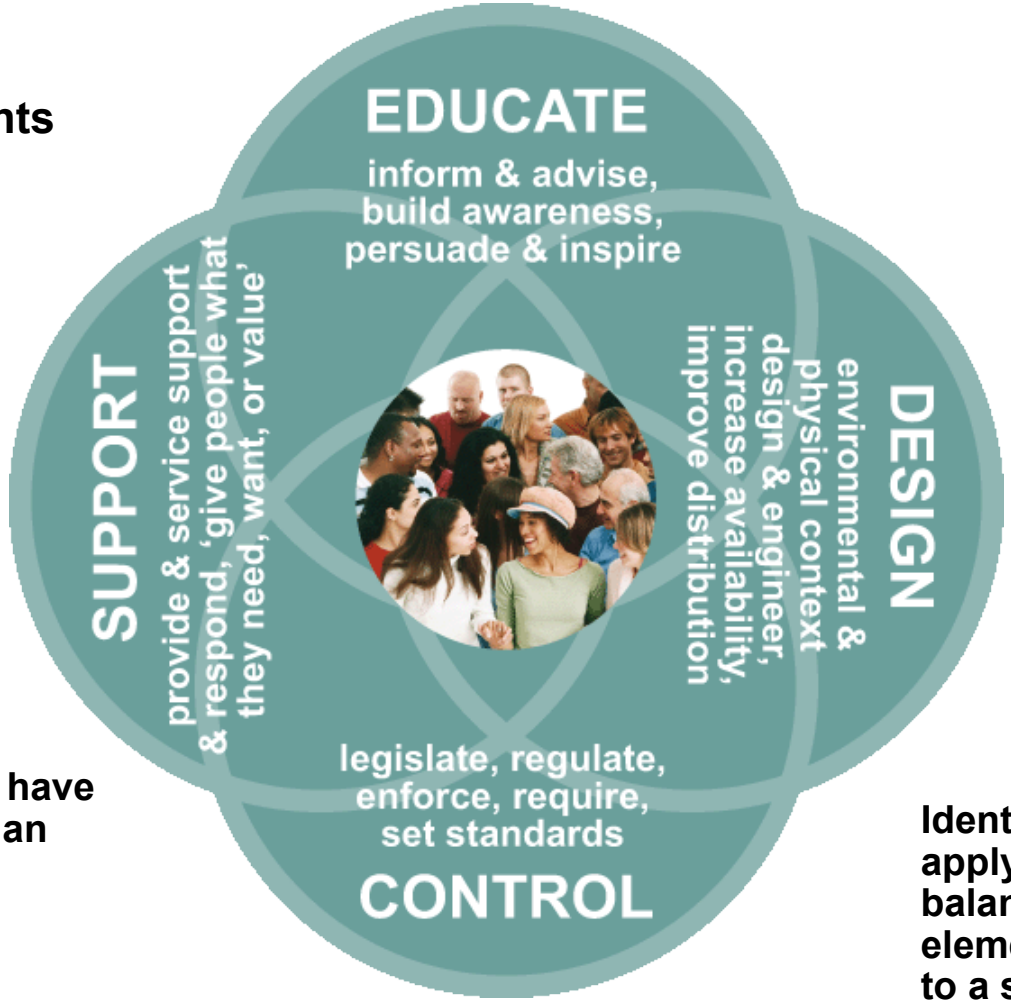
National Social Marketing Centre

4 primary components to influencing behaviour

Educate / encourage

Service / support

Design / construct



Control / require

Most interventions have more than one element and getting the right ‘mix’ is key to successful interventions

National Social Marketing Centre

Influencing behaviour

4 primary elements

Most interventions have features of more than one of these.

Identifying and applying the effective balance between elements is critical to a successful behavioural intervention

National Social Marketing Centre

Influencing behaviour

Some illustrative examples

National Social Marketing Centre

Recognising the limitations of information and cognitive approaches

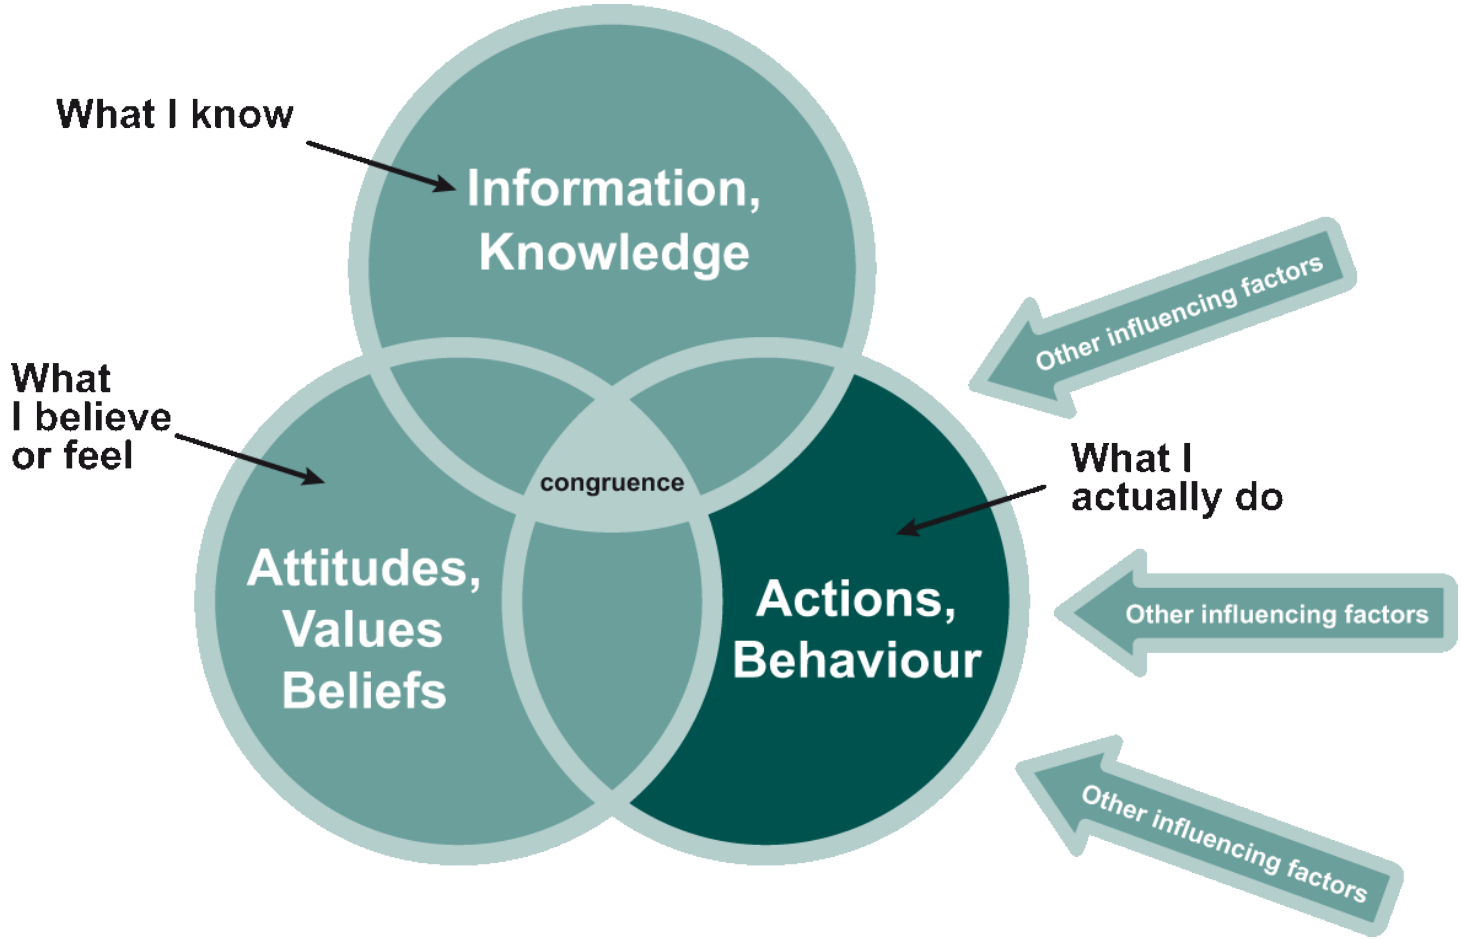
Important to move beyond the simplistic

INFORMATION ⇨ ACTION

A more developed… but still limited approach has involved

INFORMATION ⇨ UNDERSTAND ⇨ ENGAGE ⇨ VALUE

COMMIT ⇨ SKILL / ABILITY ⇨ SUPPORT ⇨ REINFORCEMENT



= ACTION

- **Grounded in what can be described as the CCC approach, 'cognitive communication chain'**
- **The bias is towards seeing behaviour in terms of cognitive decisions.**
- **Where there is a primary and often unquestioned assumption that we need to 'engage the brain' in order to influence behaviour.**

National Social Marketing Centre

Behaviour influenced by more than *'what I know'* or *'what I believe'*

We do not always behave in line with what we know and what we believe

National Social Marketing Centre

Moving beyond the traditional focus on behaviour change

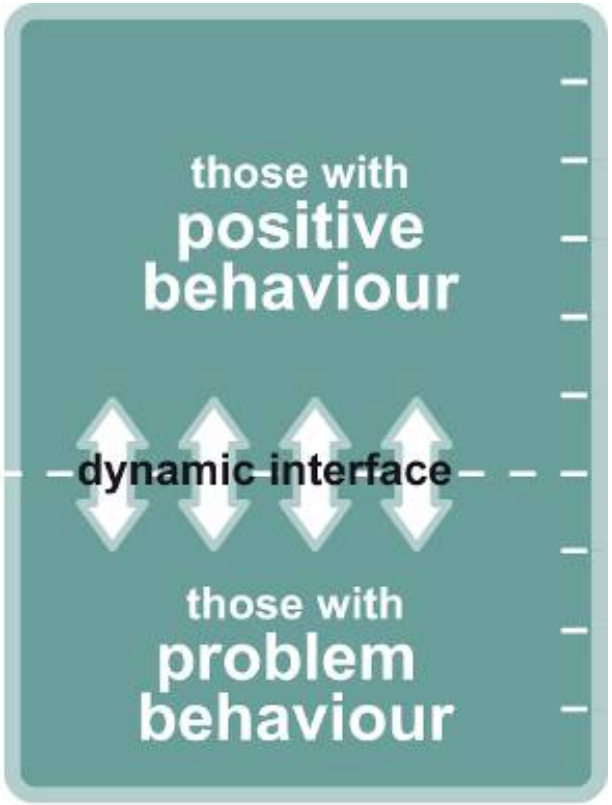
In public health and health improvement generally, the concept of behaviour change is widely used. While useful, it has particular limitations, and identifying and focusing on behavioural goals is more helpful.

Behavioural goals approach

Starts with an initial *whole population analysis* and then considers different ways to divide and *segment* audiences. It looks at four key issues:

1. Understanding the **establishment of behaviour** in the first place
   (for both the problem and the desired behaviour)
2. What helps **maintain and sustain the behaviour** over time
   (again for both the problem and the desired behaviour)
3. Where **behaviour change** may be important
4. Where **behavioural controls** could be ethically justified
   (as the only realistic way to impact on entrenched behaviours)

National Social Marketing Centre

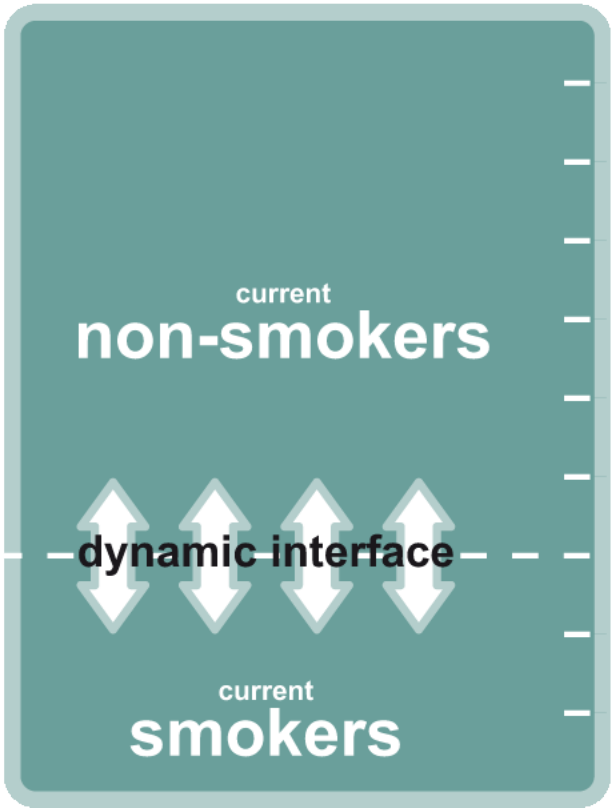


Behavioural goals approach

Key features

- **Starts with a *whole population analysis*.**
- **Examines different ways to segment the population, focusing on ones with the greatest potential utility or application.**
- **Recognises limitations of a *behaviour change* approach.**
- **Particular attention paid to what different audiences think / feel about the particular issue under consideration.**
  eg: with the following smoking example, the approach seeks to look at different ways that ‘different smokers’ and ‘different non-smokers’ might be approaching the issue.
- **Particular attention is on seeking to intervene before establishment of problematic behaviours.**
- **Recognises that *maintaining and sustaining behaviours* is as important as any *behavioural change*.**

National Social Marketing Centre



Behavioural analysis:
behavioural goals and segmentation

National Social Marketing Centre

Behavioural analysis:
behavioural goals and segmentation

eg: Smoking behaviour

SEGMENTATION e.g. by relationship to 'smoking behaviour'	BEHAVIOURAL GOALS
"never smoked, never will"	*behaviour allies / mobilise asset*
"susceptible to pressure to smoke"	*positive behaviour promotion - incentives*
"recent quitter – potential to restart"	*behaviour reinforcement, maintenance support*
"would like to quit but finding it hard"	*behaviour 'change'*
"strong entrenched resisters"	*behaviour controls*

National Social Marketing Centre

The importance of focusing on wider behavioural goals

eg: Smoking behaviour

YEAR 1
10 smokers quit

→

YEAR 2
100 smokers quit

with support from smoking cessation service

On surface looks like a simple example of a good **'behaviour change'** *approach*

Over same period
1000 young people
take up smoking

A **'behavioural goals'** approach would have gone beyond 'behaviour change' to cover:

- Helping prevent people taking up smoking
- Helping existing smokers quit
- Helping maintain and support behaviour

Changing established behaviours is generally harder than helping prevent them in the first place!

National Social Marketing Centre

Major influences on behaviour

Options and choices

To consider and assess the impact of different influences on the behaviour of the target audience or customer

National Benchmark Criteria 3

Theory-based

Behavioural theory informed
Drawing on an integrated theory framework

National Social Marketing Centre

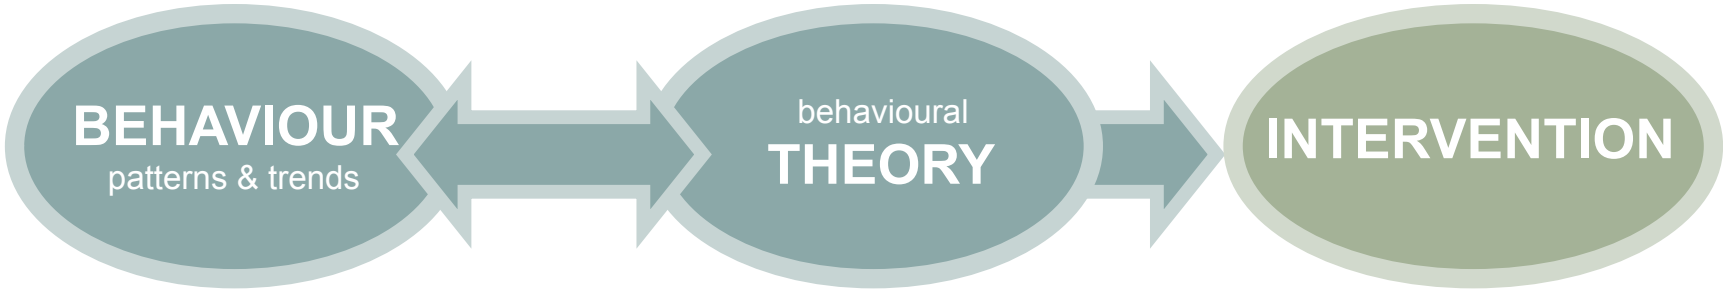
National Benchmark Criteria 3
Theory-based

- **Theory is used transparently to inform and guide development, and theoretical assumptions tested as part of the development process**
- **An open integrated theory framework is used that avoids tendency to simply apply the same preferred theory to every given situation**
- **Takes into account behavioural theory across 4 primary domains:**

1. **bio-physical**
2. **psychological**
3. **social**
4. **environmental / ecological**

National Social Marketing Centre

Behavioural interventions



Understanding the customer(s)

or: citizen, client, consumer, patient, community, public (etc)

Understanding the behaviour

Understanding what the key influences are

Considering the range of options for action

What they do
'patterns & trends'

'influences & influencers'

Why they do it
'Integrated theory framework'

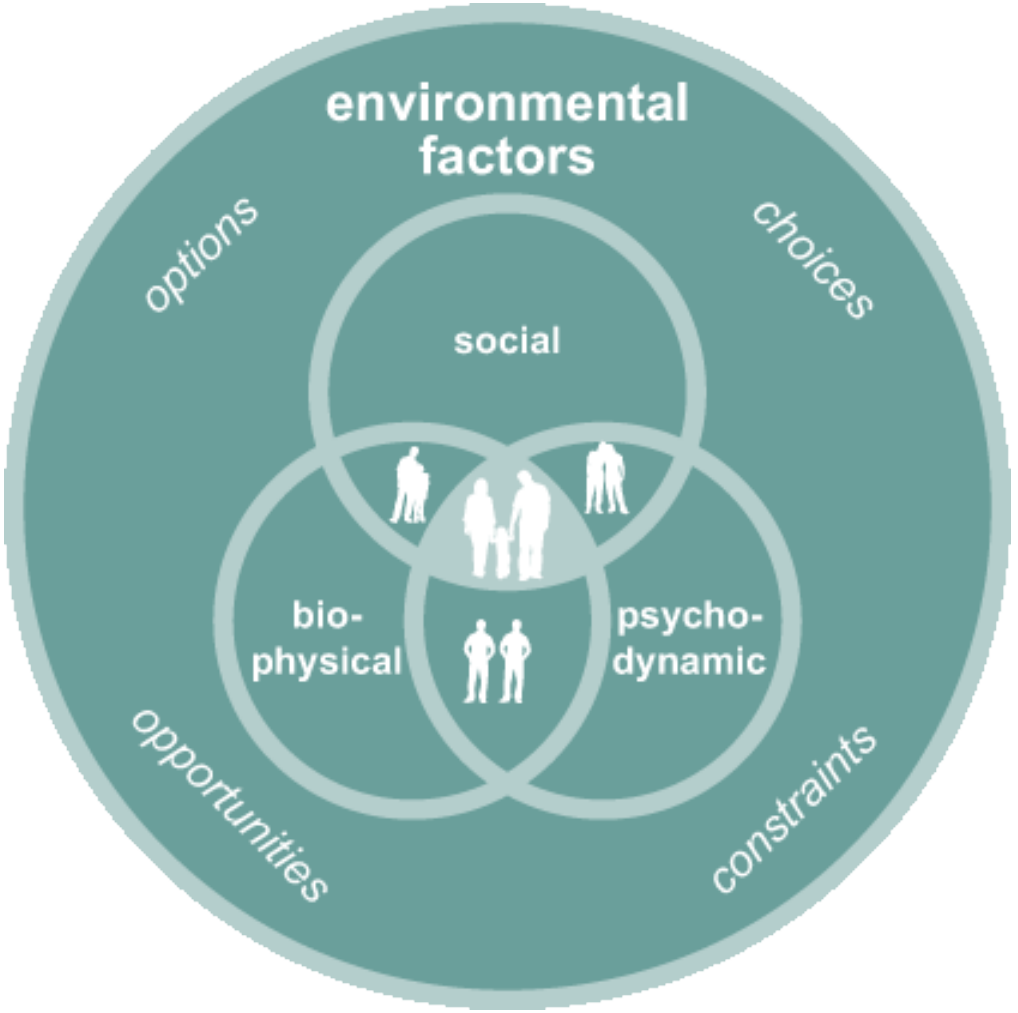
Options and 'mix'
'4 primary components'

National Social Marketing Centre

Wide range of behavioural theories

Some examples commonly mentioned:

Diffusion of innovations theory	Rogers 1962
Social learning theory	Akers & Ronald 1973
Health belief model	Rosenstock 1974
Theory of reasoned action	Fishbein 1980
Model of interpersonal behaviour	Triandis 1980
Protection motivation theory	Rogers 1983
Goal-setting theory	Locke & Latham 1990
Theory of planned behaviour	Ajzen 1991
Model of action phases	Heckhausen 1991
Stages of change	Prochaska, DiClemente 1992
Trans-theoretical model	Prochaska et al 1992
Prototype / willingness model	Gibbons et al 1998
Social cognitive theory	Bandura 1999



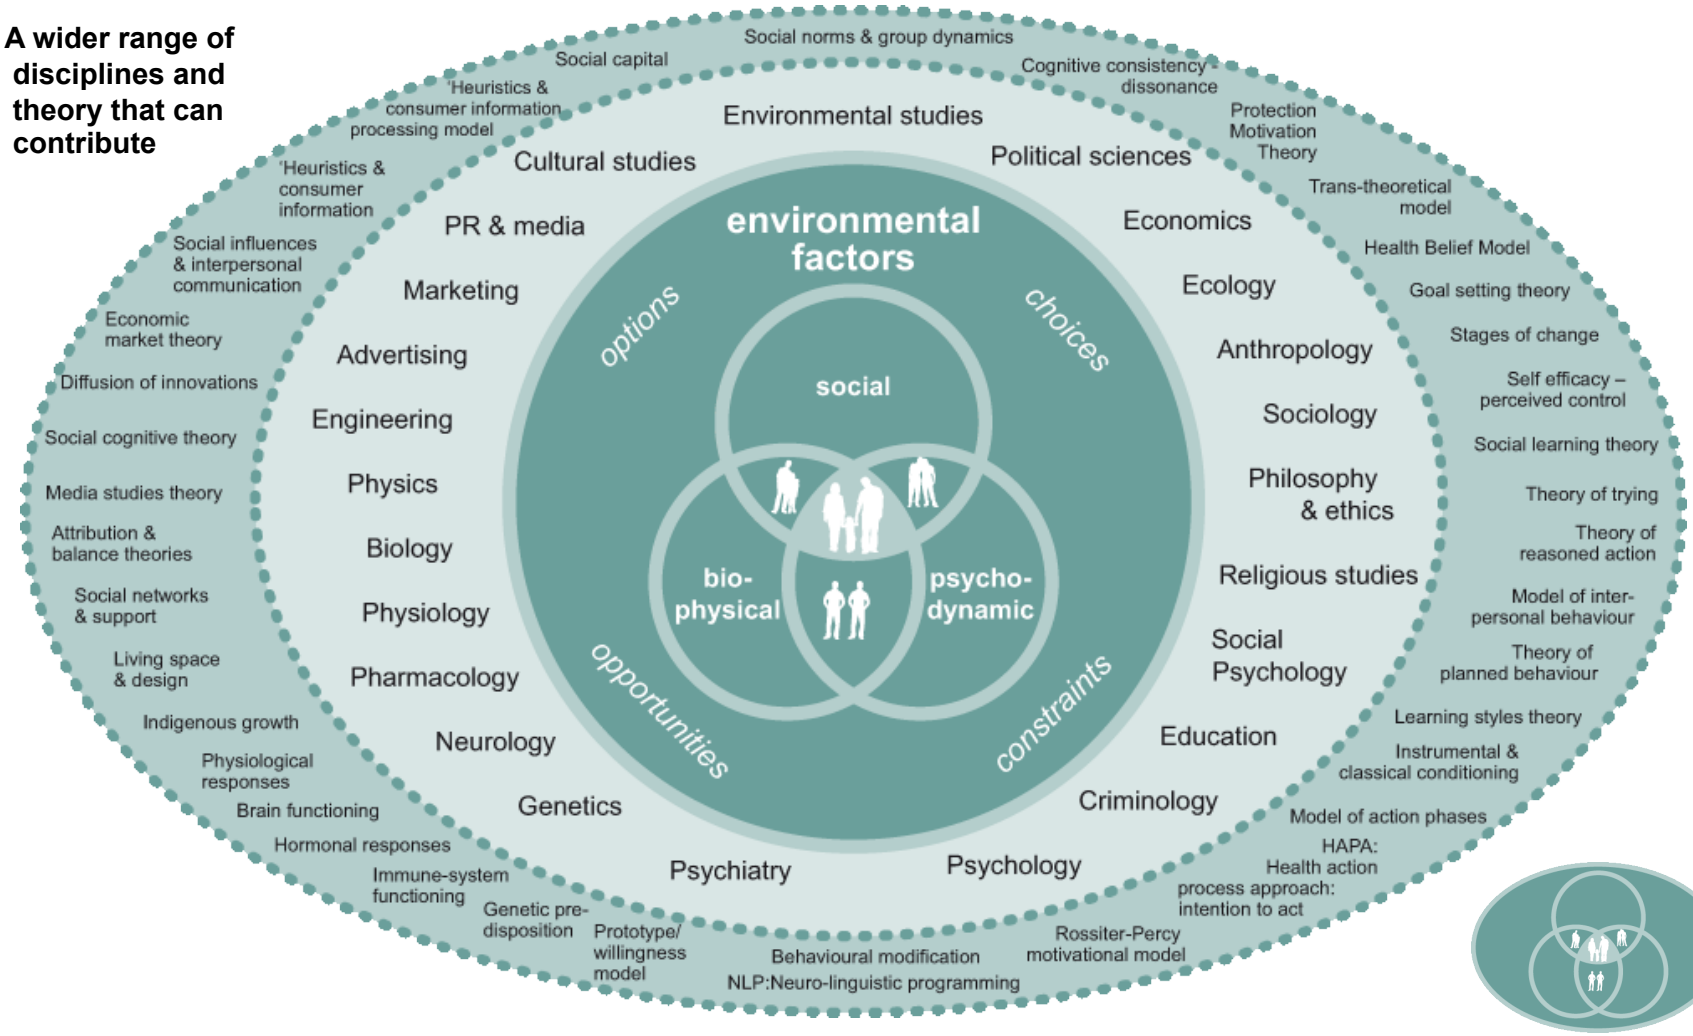
BUT there are many more!

AND the issue is how to decide what to use and draw from?

National Social Marketing Centre

Integrated theory framework

for behavioural influences



National Social Marketing Centre

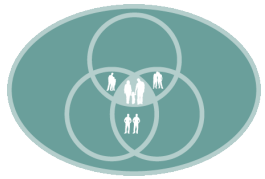
Integrated theory framework
for behavioural influences

A wider range of disciplines and theory that can contribute

National Social Marketing Centre

Using an open theory approach

A key consideration is deciding which disciplines and related theory to draw from, in selecting an intervention method or approach



It is important to:

- **Start with 'the customer' first**
- **Gaining a deep understanding & insight into their everyday lives – 'what moves & motivates them'**
- **Then from initial 'customer insight' looking at what theory can best inform intervention option selection**
- **Avoiding automatic application of 'our preferred theory' to every situation and audience**

National Social Marketing Centre

Theory framework – checklist tool

Taking the potential complexity & managing it

BEHAVIOUR:……

	What factors / theories are potentially relevant?
1. Biological / physical	
2. Psychological	
3. Social	
4. Wider environment	

National Social Marketing Centre

Starting with an open analysis

Avoid closed analysis

Starting with our own preferred theory

Examining the behaviour from the perspective of your preferred theory

Select intervention options that are grounded in the theory you started with

Keeping the analysis open

Start by developing a robust understanding of the customer

eg: collecting data / intelligence on relevant behaviour and related knowledge / perceptions / attitudes / beliefs / values

Draw down from the range of theories (across different disciplines) to identify ones that might offer insight & opportunities for ways to intervene

Develop a 'working proposition' for how to achieve & maintain the desired behaviour

Select intervention options most likely to achieve the behavioural goals

National Benchmark Criteria 4

Insight

Based on developing a deeper insight' approach

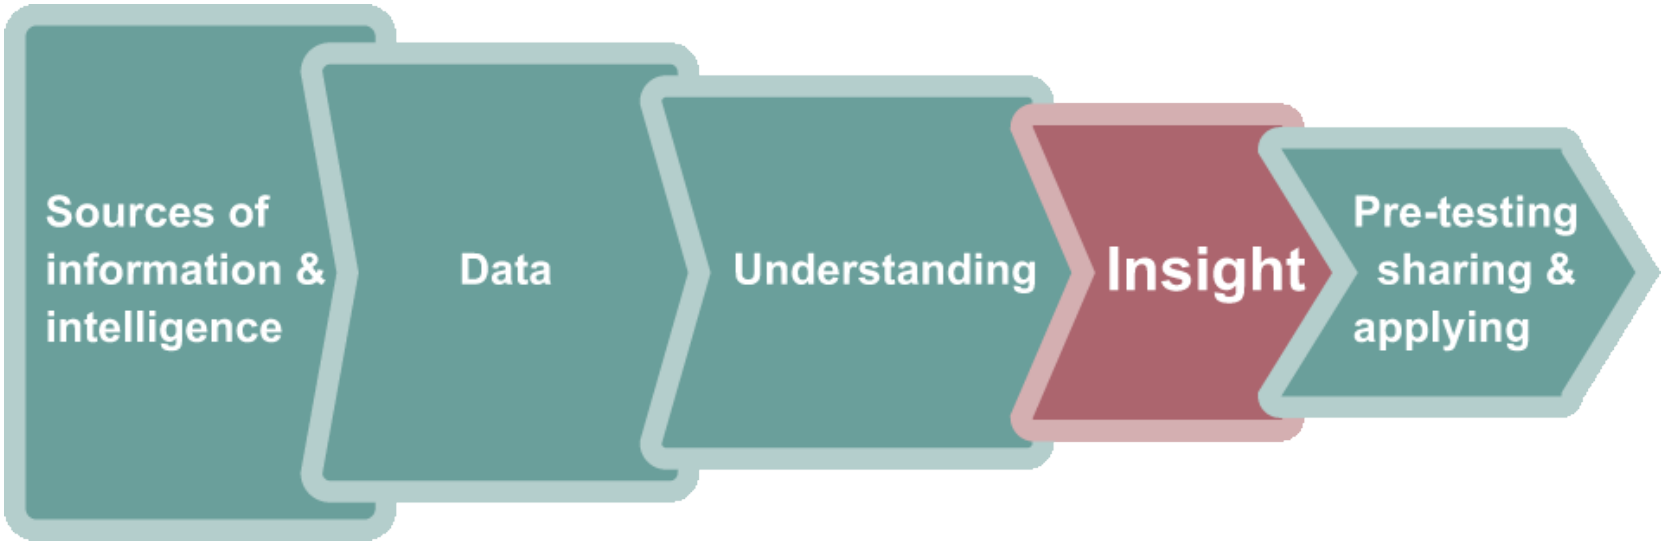
what *'moves and motivates'*

National Social Marketing Centre

National Benchmark Criteria 4
Insight

- **Focus is clearly on gaining a deep understanding and insight into what moves and motivates the consumer.**

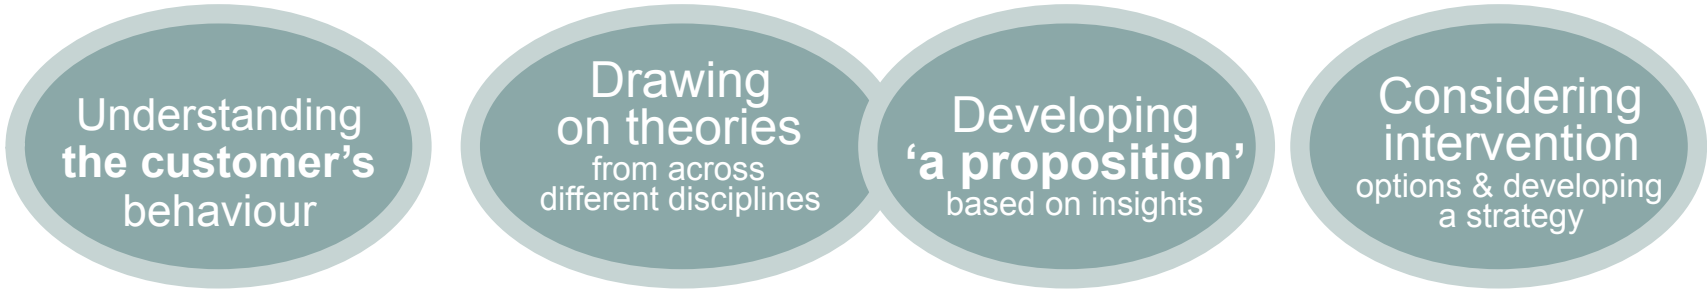
- **Drills down from a wider understanding of the customer to focus on identifying key factors and issues relevant to positively influencing particular behaviour.**



- **Approach based on identifying and developing ‘actionable insights’ using considered judgement, rather than just generating data and intelligence.**

National Social Marketing Centre

Developing ‘actionable insights’



Moving from information to insight

- **Important to move away from simply identifying and collecting a wide range of information, data and intelligence**
- **Towards identifying potential ‘insights’ within the data and intelligence – and then testing these with the audience**

National Social Marketing Centre

Behaviour and theory

How to move from:

current behaviour → **desired behaviour**

National Social Marketing Centre

Developing a proposition

How to move from current to desired behaviour

National Social Marketing Centre

Proposition checklist

	✓
1. Has the proposition been developed based on clear audience / customer insights?	
2. Are there different propositions tailored to different needs and contexts of different audience segments?	
3. Does the proposition clearly articulate what's in it for the customer(s) or society as a whole?	
4. Is it clear that the proposition is not simply a restatement of the intervention aims or policy goals?	
5. Is it clear how the proposition will address or counter competition for the time and attention of the audience?	
6. Is the proposition simple and straight forward to understand? (ie: a single line)	
7. Is the proposition in everyday language?	
8. Have those who need to follow up or contribute to components of the intervention been briefed and understand the reasons for the proposition?	
9. Are pre-testing plans in place for intervention components have been developed based on the proposition?	

National Benchmark Criteria 5

Exchange

Incorporates an ‘exchange’ analysis

Understanding what the person has to give to get the benefits

National Social Marketing Centre

National Benchmark Criteria 5
Exchange

- **Clear analysis of the full cost to the consumer in achieving the proposed benefit (financial, physical, social, time spent, etc.)**
- **Analysis of the perceived / actual costs versus perceived / actual benefits**
- **Incentives, recognition, reward, and disincentives are considered and tailored according to specific audiences, based on what they value**

National Social Marketing Centre

Incentives and barriers

for both the positive and problematic behaviour

National Social Marketing Centre

Incentives and barriers

for both the positive and problematic behaviour

Critical point:

When considering *'incentives and barriers'* it is important to not just focus on the *'problem behaviour'*.

Considering the *'desired behaviour'* is key and provides additional options for ways to build on and reinforce this behaviour.

For example:

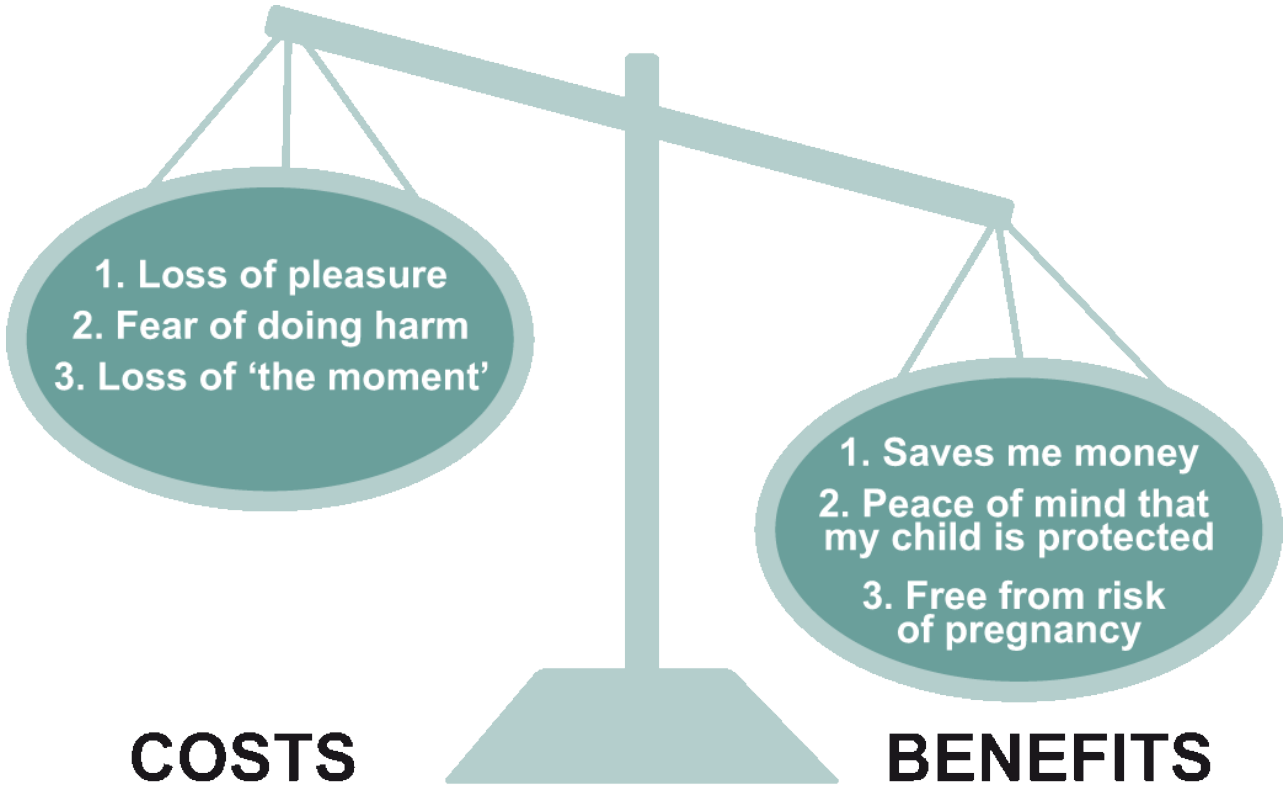
When looking at high teenage pregnancy rates in a deprived community it can be as valuable to consider those young woman who despite their social and environmental context don't become pregnant in their teens.

National Social Marketing Centre

‘Exchange’ concept

In very simple terms for the exchange to be positive the ‘benefits’ to the customer need to be greater than the costs to them

BENEFITS



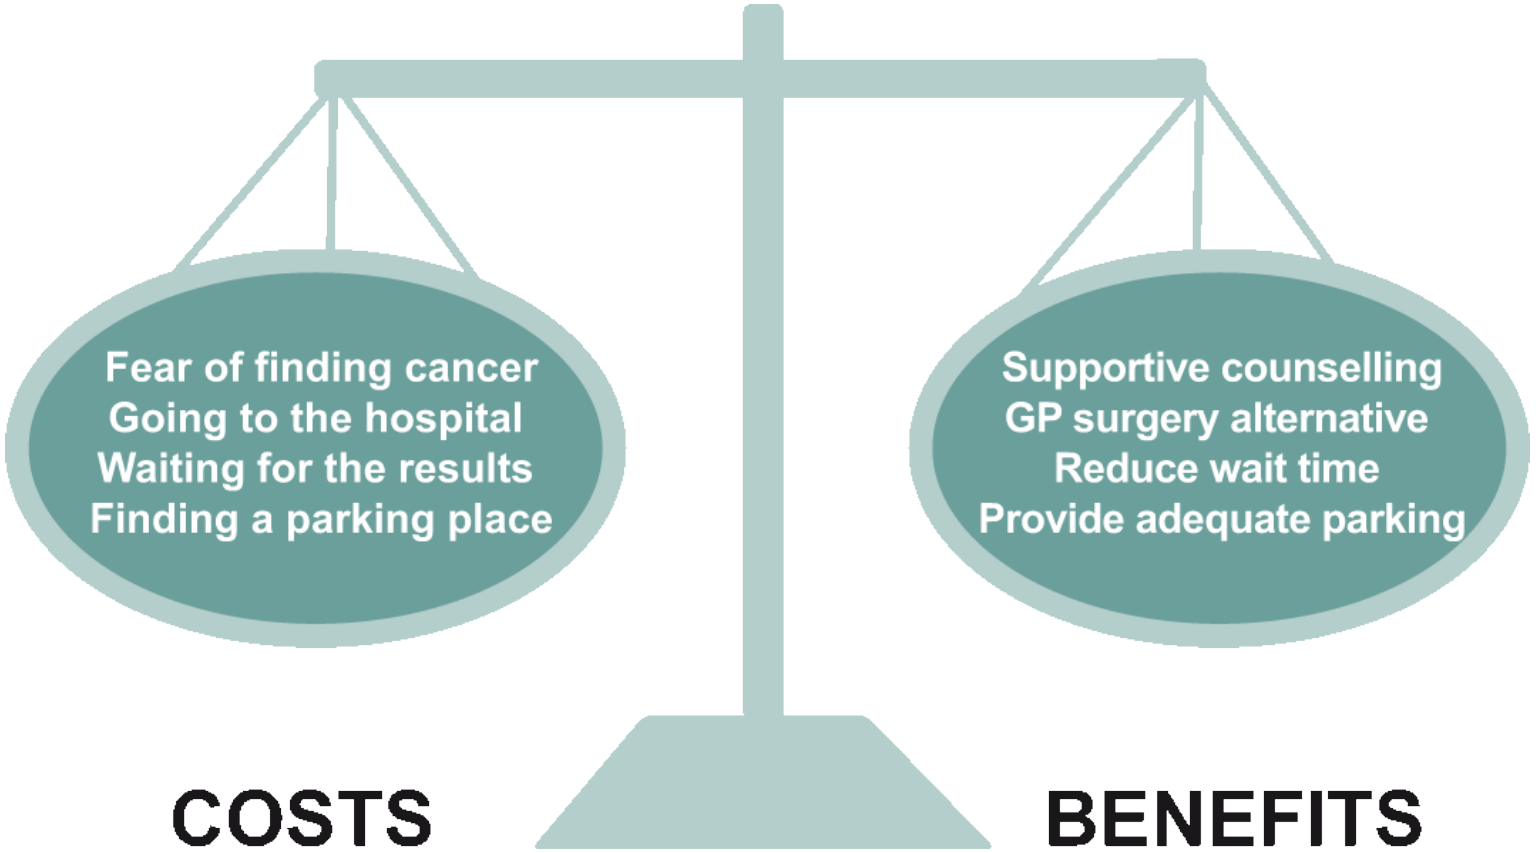
vs

costs

National Social Marketing Centre

Examples:

1. Smoking, 2. Immunisation, 3. Condom use



CRITICAL POINT

The 'benefits' must be what the audience / customer thinks are important and will value – not what we may think are important.

National Social Marketing Centre

Example: Going for a Mammogram

Crafting benefits to directly address costs

National Benchmark Criteria 6

Competition

Incorporates a ‘competition’ analysis

Understanding what competes for the time and attention of the audience

National Social Marketing Centre

National Benchmark Criteria 6
Competition

- **Both internal & external competition considered and addressed**

  ### Internal
  eg: psychological factors, pleasure, desire, risk taking, addiction etc

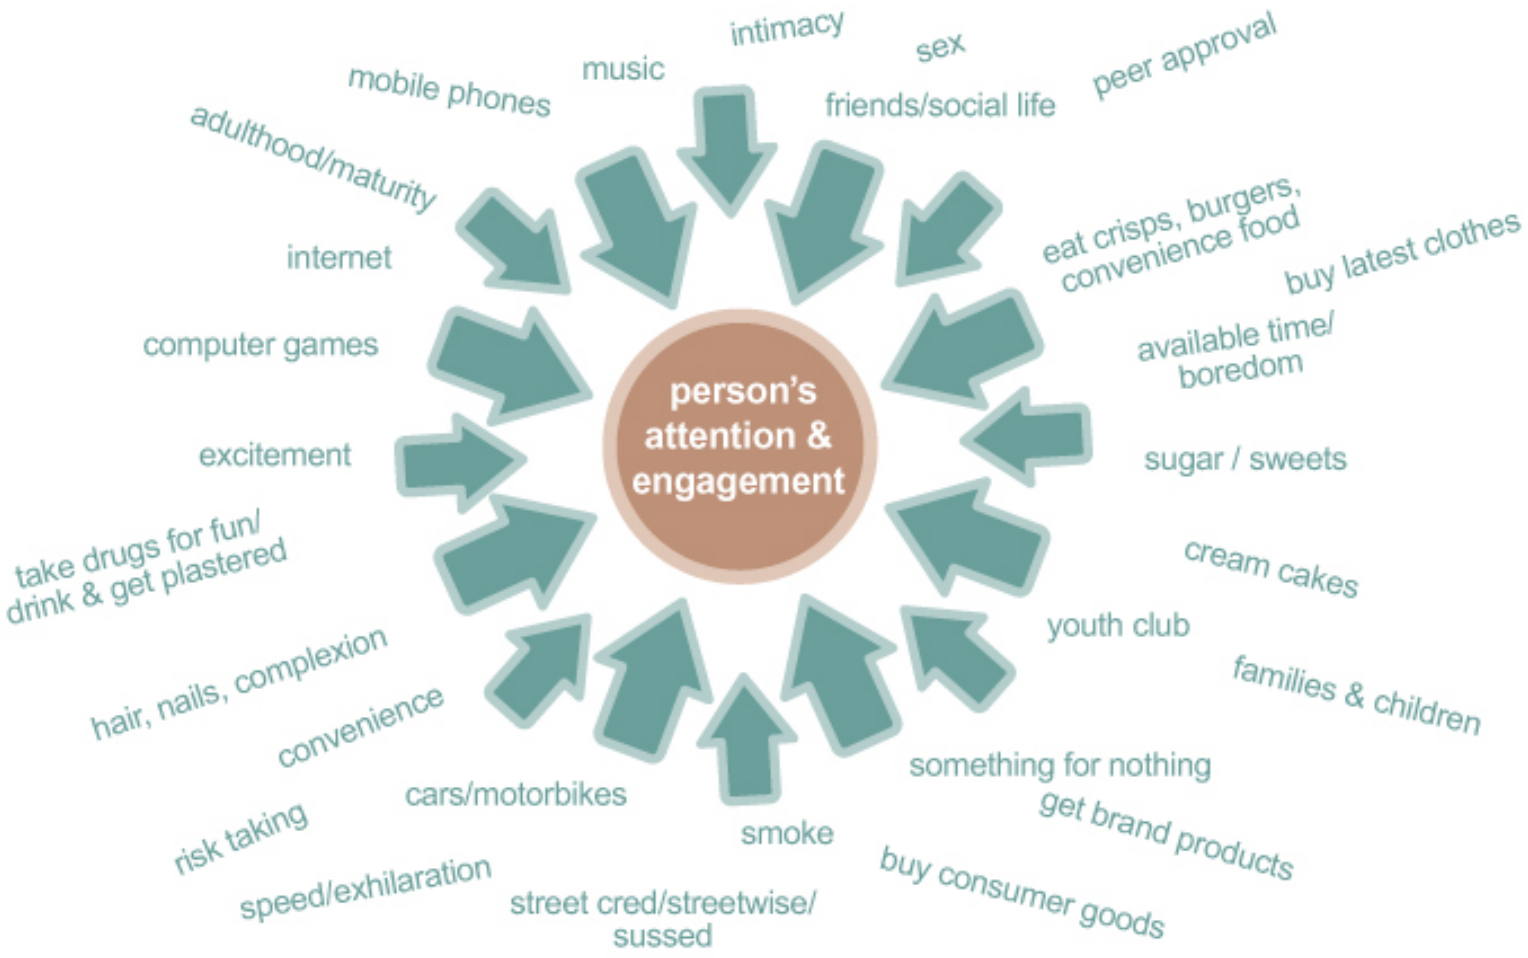
  ### External
  eg: wider influences / influencers competing for audience's attention and time, promoting or reinforcing alternative or counter behaviours

- **Strategies aimed to minimise potential impact of competition by considering positive and problematic external influences and influencers**

- **Factors competing for the time and attention of a given audience considered**

National Social Marketing Centre

Understanding the competition



'our' mission & messages

National Social Marketing Centre

Understanding the competition

Everyday life

National Social Marketing Centre

Understanding the competition

Reality check

National Benchmark Criteria 7

Segmentation

Uses a developed segmentation approach (not just targeting)

Avoiding blanket approaches

National Social Marketing Centre

National Benchmark Criteria 7
Segmentation

- **Traditional demographic or epidemiological targeting used, but not relied on exclusively**
- **Deeper segmented approaches that focus on what *'moves and motivates'* the relevant audience, drawing on greater use of psycho-graphic data**
- **Interventions directly tailored to specific audience segments rather than reliance on 'blanket' approaches**
- **Future life-style trends considered and addressed**

National Social Marketing Centre

Segmentation

- Segmentation involves a process of looking at the audience or 'market' and seeking to identify distinct sub-groups (segments) that may have similar needs, attitudes or behaviours.
- Traditionally this has focused attention on the use of demography and geo-demographic mapping.
- In the health context this can also include use of epidemiological data and mapping.
- However the wider use of attitudinal and psycho-graphic data provides potentially valuable ways to identify potentially homogeneous groups that may provide a useful starting point for developing tailored interventions.

Important note:

The is no *'right way'* to do segmentation and in each case the task is to examine potential data that might assist or support segmentation. Then using the *'utility principle'* test out which might best assist future intervention design and development.

National Social Marketing Centre

Segmentation

"the process of sub-dividing a market into distinct subsets of customers that behave in the same way or have similar needs"

Commercial companies often segment according to one or more of the following critera:

- **Geography**
- **Demographics**
- **Psycho-graphics**
- **Behavioural characteristics**
- **Benefits sought**

National Social Marketing Centre

Segmentation – options

Some examples

SOCIO-DEMOGRAPHIC

GEO-DEMOGRAPHIC

BEHAVIOURAL

PSYCHO-GRAPHIC AND ATTITUDINAL

each has strengths and weaknesses

EPIDEMIOLOGICAL (in health context)

National Social Marketing Centre

Common segmentation factors

Overview

BEHAVIOURS / 'MODE'
based on what people do

Behaviour & usage, eg
> frequency
> place
> time
> occasion
> extent of use (a little / a lot)
> persistency (loyalty)

Activities & interest, eg
> type of activity (sport)
> lifestyle
> car, bike, walk
> leisure interest
> what money spent on

Media consumption, eg
> TV channels, radio, press
> where most info comes from
> internet & digital use
> how info is absorbed
> what media engaged
> access to media

SOCIO-DEMOGRAPHIC
based on who people are

Demographics, eg
> gender
> family – age & life stage
> household type / composition
> education
> income & social class
> working status
> physical status
> urban vs rural
> postcode & region
> mobility
> moving frequency
> house ownership

ATTITUDES
based on how people think & feel

Needs, benefits, motivations, eg
> need, convenience, reliability, support
> beliefs, desires, wants
> deep seated drivers (love, hope)

Attitudes & beliefs eg
> to life in general
> to organisation intervening (local or national body, Govt etc)
> life specific (health, food, exercise, race)

Influences, eg
> authority figures (teachers, doctors, police, social workers)
> parents, friends & peers
> role models – community influences

MULTI-FACTORAL SEGEMENTATION
based on combination of data and factors

> data fusion and synthesis
> statistical modelling

Adapted from GCN Engage www.comms.gov.uk/engage

National Benchmark Criteria 8

Methods mix

Identifies an appropriate ‘mix of methods

‘intervention mix’ = for strategic social marketing

‘marketing mix’ = for operational social marketing

National Social Marketing Centre

National Benchmark Criteria 8
Methods Mix

- **Range of methods used to establish an appropriate mix of methods**
  Avoids reliance on single methods or approaches used in isolation

- **Methods and approaches developed taking full account of any other interventions in order to achieve synergy and enhance the overall impact**

- **Four primary intervention domains considered:**

  1. **informing / encouraging**
  2. **servicing / supporting**
  3. **designing / adjusting environment**
  4. **controlling / regulating**

National Social Marketing Centre

Huge range of intervention methods and approaches

National Social Marketing Centre

Keeping the focus on what will influence the behaviour

It is possible to get caught in a debate about where a particular intervention is ‘social marketing’ or not.

Some question if we ‘go up-stream’ to address issues such as legislation and regulation, and consider interventions that might include aspects of controlling or restricting behaviour, whether this can still be considered as social marketing or not. This is in part why we make an important distinction between:

strategic social marketing and operational social marketing.

Wherever it is possible to adopt a strategic approach, it is critical that the basic **customer understanding and insight** that social marketing can bring is directly used to inform strategic considerations of what overall package or mix of interventions is appropriate to use.

For example, if customer insights indicate that no amount of encouragement or promotion will encourage some ‘entrenched resisters’ to alter their behaviour then it is this ‘insight’ that informs the ethical considerations regarding use of restricting or controlling approaches. Rather than focusing on whether this would be social marketing or not the important consideration is that using social marketing customer insights can be critical to decisions about the intervention mix to use.

National Social Marketing Centre

The intervention mix and the marketing mix

Intervention mix – at the strategic social marketing level

- Considering what intervention options to use
- Considering the balance or 'mix' between different intervention options
- Assessing benefits of including a social marketing intervention in the mix

Marketing mix or social marketing mix – at the operational social marketing level

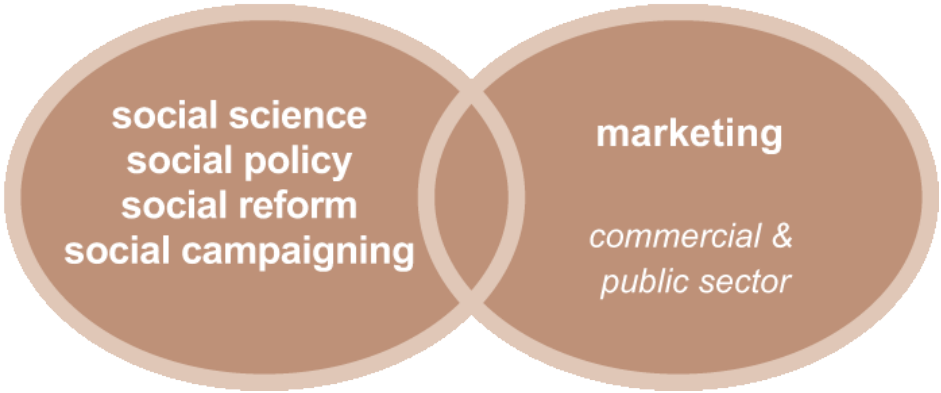
- Considering what methods and approaches to use
- Considering the balance or 'mix' between different methods and approaches within the specific social marketing intervention

D.

The fit
with marketing

National Social Marketing Centre

Recognising the differences



COMMERCIAL MARKETING

The classic 4 P's

SOCIAL MARKETING

'The 2 parents'

THE BEHAVIOUR

Purchasing of a product or service
– ideally repeatedly –

Often complex individual & societal behaviours
a range of major behavioural challenges

National Social Marketing Centre

The classic 4 P's of marketing

Useful but not directly transferable to social marketing

- **In commercial marketing the concept of the 4 P's was developed to highlight key aspects in developing marketing, sometimes referred to as the *marketing mix*.**

Product – Price – Place – Promotion

- **This concept has proved useful and enduring in the commercial context, helping to assist the systematic consideration of the marketing process and helping effective development and targeting.**

National Social Marketing Centre

Classic 4 P's of marketing

- **Product** What does the customer / consumer get?
  What's being offered to them?

- **Price** How much will it cost them?
  (Not just money, but also time, effort, emotional costs, etc)

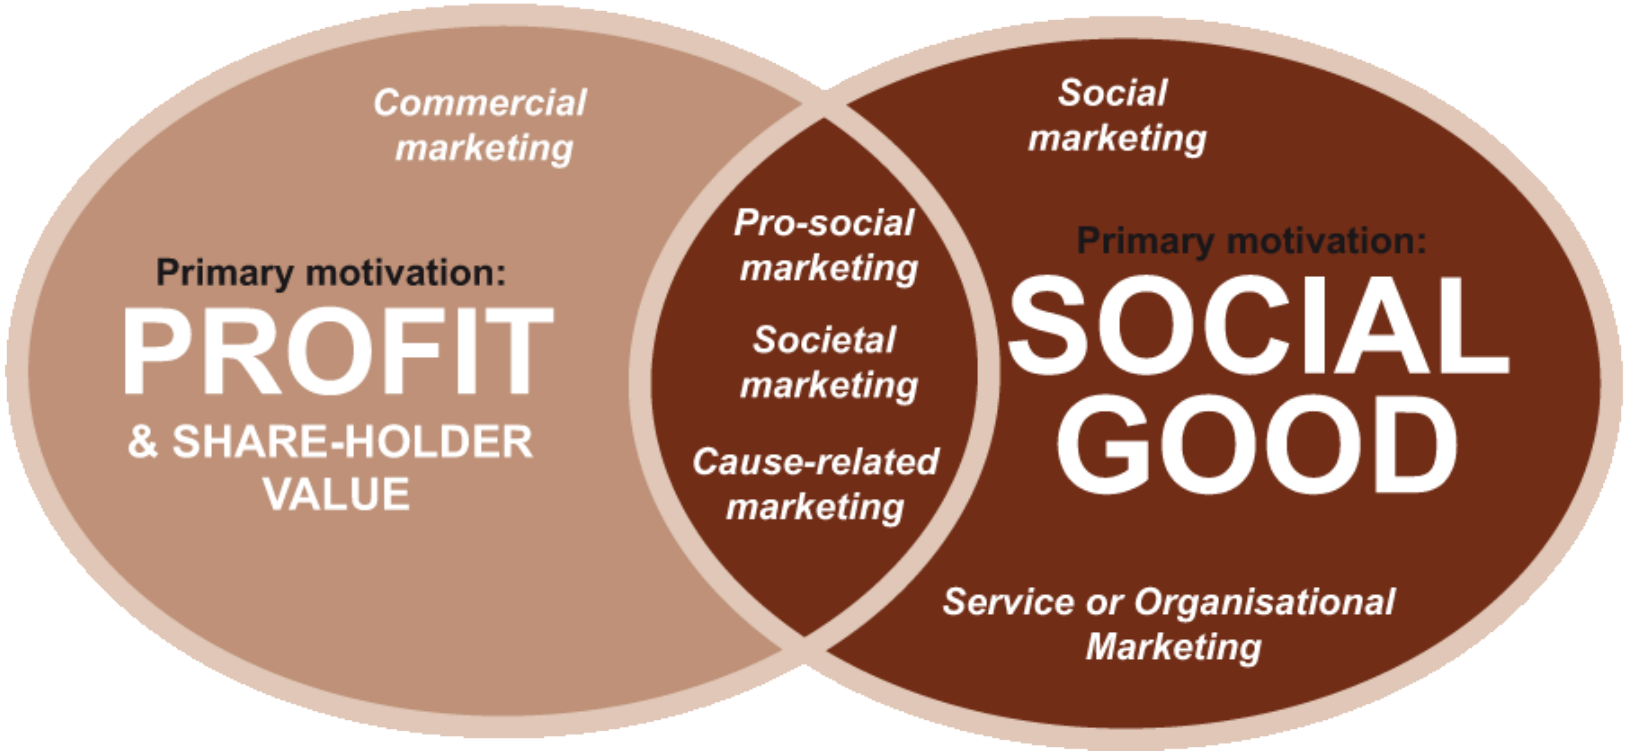
- **Place** Where does the relevant behaviour happen?
  Where are there opportunities to reach the customer / consumer?

- **Promotion** What *package of incentives* can be put in place
  which will be valued by the customer / consumer?

Sometimes referred to as the 'marketing mix'

National Social Marketing Centre

Social marketing goes beyond the 4 P's



While it can be a useful starting point in social marketing to consider the 4 P's, in practice a more developed approach is required. Increasingly people have recognised the limitations of the 4 P's when tackling the more complex lifestyle and behavioural challenges that need addressing.

To recognise the need to go beyond the 4 P's, some have simply added in more P's:

- **Proposition** How it is envisaged that the intervention will help and support the customer to move from current to desired behaviour.
- **Partnerships** Identifying common goals and working together in genuine collaborative partnerships
- **Purse-strings** Looking at ways to maximise resources by engaging across all sectors – not just financial but also human resources
- **Politics** Recognising the political drivers and potential constraints and looking at ways to inform, influence and engage the relevant 'political players'
- **Policy** Using social marketing to help link and connect different policy agendas – maximising its impact across a whole system
- **People...** **Public, Professionals, Politicians** – recognising the customer can be any or all of these and gearing efforts accordingly
- **P ...** ….and potentially many more!

National Social Marketing Centre

Different types of marketing that can contribute to 'social good'

National Social Marketing Centre

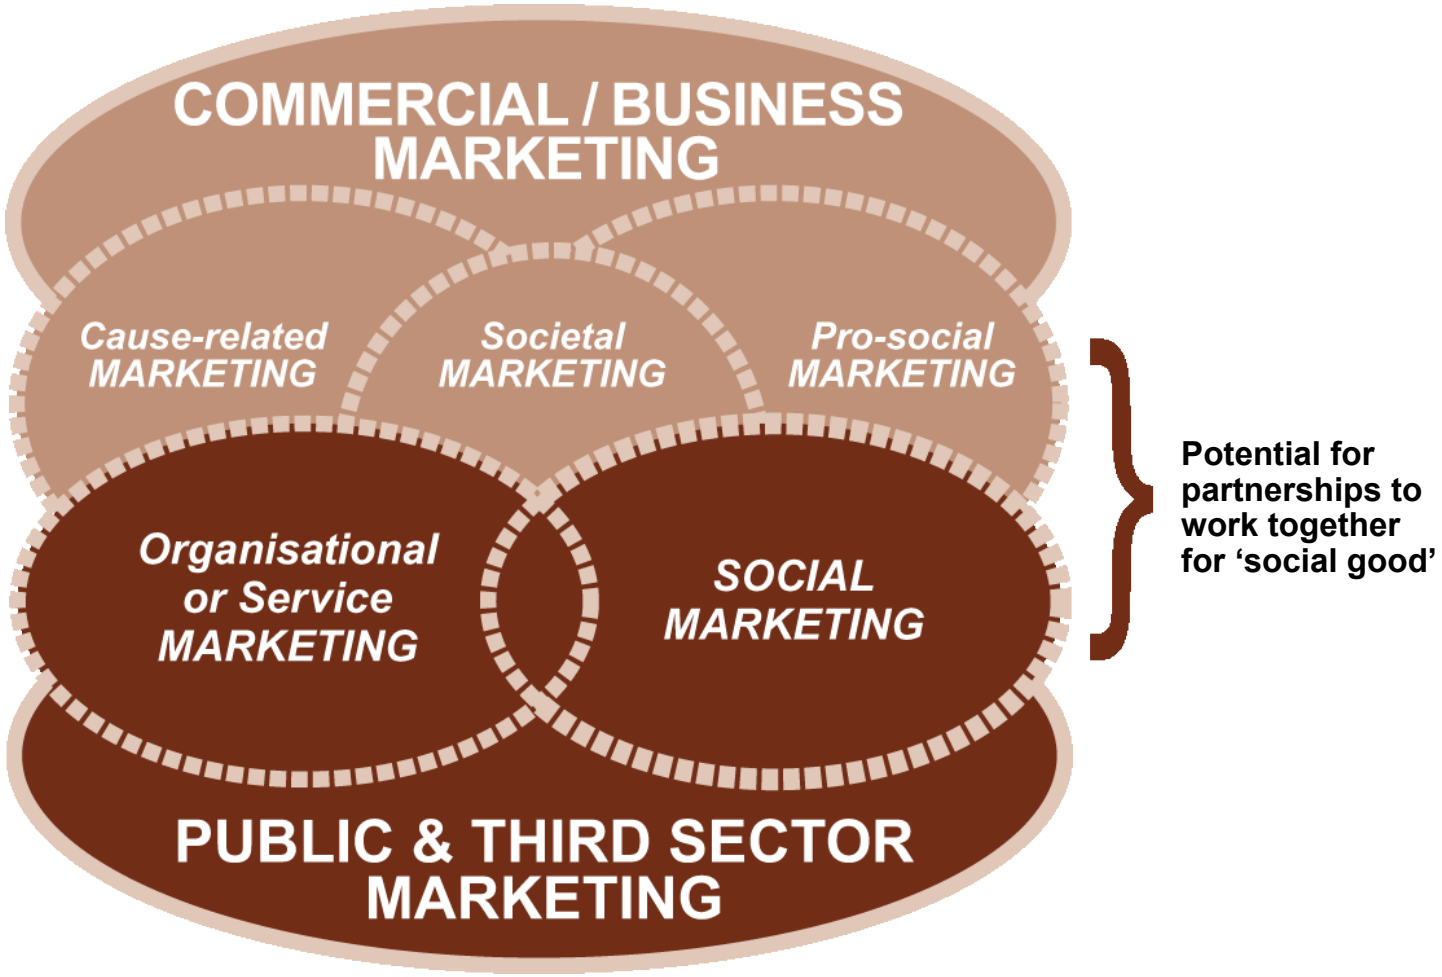
Different types of marketing that can contribute to 'social good'

Marketing in the COMMERCIAL / PRIVATE SECTOR
Where marketing can contribute to 'social good'

CAUSE-RELATED MARKETING
Where marketing approach includes a % of profits going to a good cause

PRO-SOCIAL MARKETING
Where marketing approach includes providing a profile for a social issue

SOCIETAL MARKETING
Where marketing approach promotes the companies commitment to positive and responsible business practices and policies eg recycling



Marketing in the PUBLIC or THIRD SECTOR
Where marketing's main aim is a 'social good'

SOCIAL MARKETING
Where marketing is used to help achieve and sustain positive behaviours for social good

SERVICE OR ORGANISATIONAL MARKETING
Where marketing is used to promote a public or third sector service or the organisation – can include generating income but where monies raise go directly back into organisation's 'social' aims

National Social Marketing Centre

Linking marketing strategies and developing partnerships to contribute to a social good

National Social Marketing Centre

Recognising some of the differences

Commercial marketers	Social marketers
Primary aim: Sales, profit and shareholder value	Primary aim: Achieving a ‘social good’
Funded from: Investments and sales	Funded from: Public funds (taxes, donations)
Privately accountable eg: shareholders and directors	Publicly accountable
Performance measured in profits and market share	Performance measured by actual behavioural goals
Defined products or services driven by demand	Products or services often focused on addressing complex, challenging or controversial behaviours
Commercial culture – risk-taking culture often evident	Public sector culture – risk averse culture often evident
Relationships commonly competitive	Relationships often based on building trust

E.

Social marketing as a planned

process

National Social Marketing Centre

A systematic total process approach

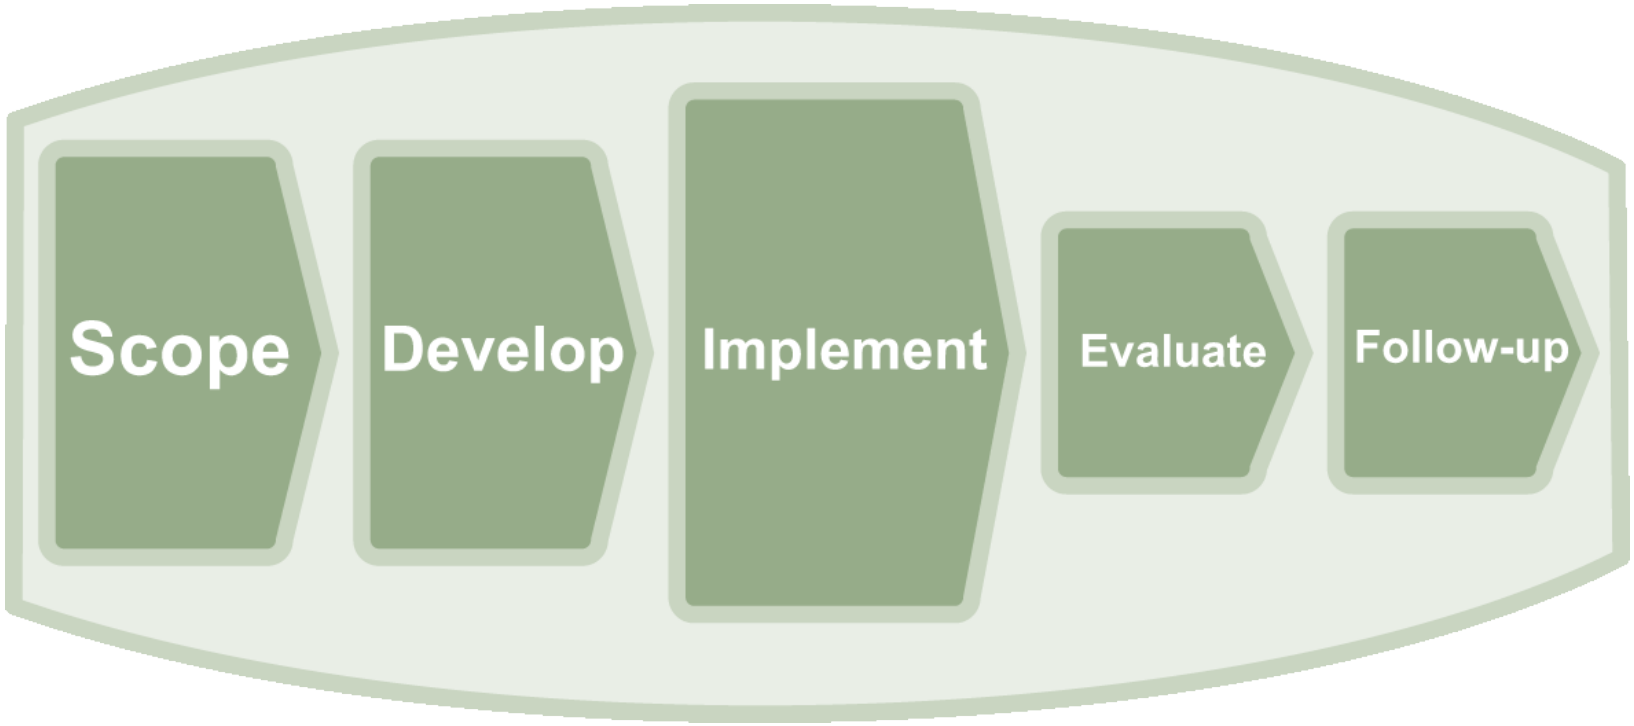
- The key stages in the Total Process Planning model will be familiar to anyone applying systematic programme or project planning methods:

  scope >> develop >> implement >> evaluate >> follow-up!

- While this is a broadly linear process, with each step feeding into the next, the way that activities are organised within each stage is much more *organic and fluid*.

Being flexible, but also systematic

- While social marketing is flexible and can be adapted and tailored to different contexts, it is important to be systematic when applying it as an intervention.

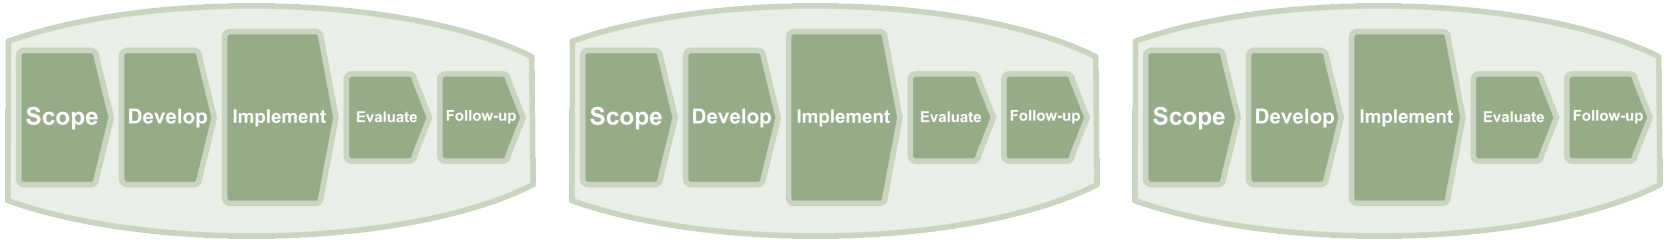


- Avoiding the temptation to merge stages is particularly important. eg: avoiding jumping into the *development* stage before proper *scoping* has been undertaken.

- Investment of time and effort in effective scoping and development is a critical success factor for most interventions, but for social marketing it can make the difference between a powerful intervention with strong impacts, and one which is ineffective.

National Social Marketing Centre

Total Process Planning model



A straightforward but systematic and staged process

National Social Marketing Centre

Total Process Planning framework

Using the process systematically means that learning and insights from each stage can be used to feed into the scoping and development of new initiatives, as they are agreed and resourced.

Building this approach over time, means that all scoping work can therefore take account and build on the learning from previous interventions.

National Social Marketing Centre

Total Process Planning framework

Beware:

The TPP framework looks on first glance to be a fairly basic and straight-forward process. However in practice it can be much harder to achieve.

In undertaking our 2 year independent national review of social marketing we found (despite some positive examples):

- Limited evidence that a formal 'scoping stage' is routinely undertaken.
- Where aspects were present, they were often not written up, to help guide development and support on-going stakeholder engagement, or subsequent review.
- Reliance on a 'mission and message' approach was strong and this tended to mean initial work jumped to the 'Development Stage' with the crafting of key messages.
- Side-stepping of important scoping work around understanding the audience and what would in practice, move and motivate them (rather than assuming that 'a message' would).

National Social Marketing Centre

Scoping stage – key elements

SCOPING describing presenting issue, examining audience and behaviour

- **Initial preparation work – establishing starting point**
- **Team development, alongside stakeholders and partners engagement**
- **Behavioural analysis and 'customer' understanding, insight and segmentation**
- **Developing an initial 'proposition' and selecting relevant intervention options**
- **Confirming agreement on what to move into the 'Development' stage with (with relevant decision making)** – writing report (inc: ethical audit checklist)

Primary output: 'A SCOPING REPORT'

Note: Activities are rarely sequential and usually involve a more fluid & iterative process.

National Social Marketing Centre

Scoping stage – key elements

SCOPING describing presenting issue, examining audience and behaviour

Initial preparation work – establishing what we start with
a: summarising key policy drivers, relevant targets or other requirements/expectations
b: resources & assets analysis (resources available or can be mobilised)
c: mapping existing work or previous interventions across sectors
d: reviewing existing evidence, practice learning, and potential behavioural theory options

Team development, alongside stakeholders and partners engagement
a: establishing initial working team(s), clarifying roles and responsibilities
b: sketching out initial anticipated project/programme development process and related systems and structures
c: clarifying what those developing the work want/need to achieve – examining 'what we are wanting to achieve'
d: identifying/engaging key stakeholders relevant to the topic & audiences involved
e: examining key stakeholder views – 'what they are wanting to achieve' (acknowledging differences where they exist)

Behavioural analysis and customer understanding, insight and segmentation
a: identifying and reviewing available data sources – examining data fusion/synthesis approaches
b: behavioural analysis: examining patterns & trends + influences & influencers for both desired & problem behaviour
c: examining segmentation options and approaches (based on 'utility principle')
d: developing 'customer insights' – based on what 'moves & motivates'
e: agreeing overarching behavioural goals, but then developing tailored behaviour goals relevant to specific segments
f: ensuring baseline data available with which to evaluate impact of work in future

Developing an initial 'proposition' and selecting relevant intervention options
a: based on customer insights deciding what is most likely to achieve the behavioural goals
b: agreeing initial 'intervention/marketing mix' to get optimum balance ('mix') between different methods selected

Confirming agreement with relevant decision-makers on what to take into 'Development' stage
a: ethical audit checklist
b: writing up into summary Scoping Report (annexing more detailed information as required)

Primary output: 'A SCOPING REPORT'

Note: Activities are rarely sequential and usually involve a more fluid & iterative process.

National Social Marketing Centre

Development stage

Testing out the proposition and developing a specific social marketing intervention – key aspects include:

- **Examining a range of social marketing activity and deciding what 'social marketing mix' to use**
- **Undertaking primary development work and ensuring that secondary development 'pre-tests' and refines work**
- **Determining appropriate indicators and how best to verify**
- **Effective stakeholder involvement and 'priming' are critical success factors to any subsequent implementation**

Note: Once the proposition is developed and pre-tested this can involve adjusting or refining the original scoping work, based on audience or 'customer' feedback

National Social Marketing Centre

Development stage

Tasks are illustrative – a fuller Planning Resource is being developed

DEVELOP

Primary: Testing out 'the proposition'

- **Social marketing options and mix**
- **Potential incentives and barriers**
- **Segmentation and targeting**
- **Further refining aims and objectives**
- **Indicators of success and verification**
  Short, medium and long term
- **Evaluation research design**
- **Creative development and design**
- **Message(s) where relevant to approach**

Secondary: Pre-testing / refining / adjusting

- **Testing concepts, approaches, and related messages with relevant audience(s)**
- **Scheduling and phasing action**
- **Stakeholder supports**
  Sales-force preparation/priming

Note: Activities are rarely sequential and usually involve a more fluid & iterative process.

National Social Marketing Centre

Implementation stage

The most immediately visible stage of social marketing – key aspects include:

- **Handling a 'live' and dynamic process that needs to be actively managed to ensure both**
  a) Potential new opportunities arising from the intervention are identified and rapidly capitalised on
  b) Potential issues and problems anticipated, or rapidly identified and addressed

- **Maintaining effective stakeholder engagement is critical – ensuring that *'the potential sales-force'* are fully informed and are able to actively input to developments as they occur**

National Social Marketing Centre

Implementation stage

Tasks are illustrative – a fuller Planning Resource is being developed

IMPLEMENT

Commence interventions / campaign

- **Active live monitoring**
- **Spotting other potential opportunities**
- **Tackling possible issues or problems**
- **Live adjustment and refinement**
- **Maintaining stakeholder engagement**
  sales-force support

Complete current stage

- **Recording and capturing**
- **Feeding back, acknowledging and thanking!**
- **Inputting into developing evidence base**
  NSM Centre Archive Resource

Note: Activities are rarely sequential and usually involve a more fluid & iterative process.

National Social Marketing Centre

Evaluation stage

Dedicated to examining and reviewing the intervention – key aspects include:

- **Evaluating impact, outcome, process and cost-effectiveness**

- **Determining the actual impact on specific behavioural goals**
  While factors such as 'levels of awareness' and 'audience views of interventions' may be important they are secondary considerations to what actually happened in terms of the targeted behaviours

- **Ensuring relevant stakeholders and partner input – utilising effective participatory evaluation**

Note: While this is a specific stage, it is important to ensure effective integration of an 'evaluation mindset' through all the stages of the process, from scoping onwards

National Social Marketing Centre

Evaluation stage

Tasks are illustrative – a fuller Planning Resource is being developed

EVALUATE

Impact

- **Assessing achievement of aims and objectives** Using short, medium and long term indicators
- **Audience(s) knowledge, attitudes and particularly behavioural goals**
- **Opinions of others** parents, opinion leaders, stakeholders
- **Wider societal reactions** eg: media coverage
- **Identifying any unintended impacts** positive or negative

Process

- **Learning from how the work was undertaken** efficiency, effectiveness, equity, quality, engagement, management process, etc

Cost assessment

- **Potential cost-effectiveness / cost-benefit**

Note: Activities are rarely sequential and usually involve a more fluid & iterative process.

National Social Marketing Centre

Follow-up stage

Importance of recognising it as a dedicated stage

- **Evaluation is often seen as the end stage of interventions. However, having a clear and dedicated *follow-up stage* is critical to ensuring short-term impacts are built into on-going medium and longer term work**

- **The central purpose of this stage is to:**

  a) actively consider the outcome from the evaluation stage (avoiding potential for findings to be left on the shelf)
  b) to decide how best to capitalise on what has been achieved
  c) To be clear about what remains to be achieved
  d) To capture and record follow-on decisions to inform further scoping work for any follow-on activities
  e) to directly inform further resource decisions for on-going work

National Social Marketing Centre

Follow-up stage

Tasks are illustrative – a fuller Planning Resource is being developed

FOLLOW-UP

- **Considering with stakeholders implications arising from evaluation**
- **Following up with relevant decision-makers and commissioners as relevant**
- **Capitalising on what was achieved**
- **Following-up for medium and long term**
- **Reviewing in relation to other interventions (non-social marketing) outcomes**
- **Recording and capturing to inform any further scoping and development work**

Note: Activities are rarely sequential and usually involve a more fluid & iterative process.

Recognising success & spotting rubbish

National Social Marketing Centre

Behavioural interventions and social marketing

KEYS TO SUCCESS

1. **Strong customer orientation and 'insight' focus**
   Theory, evidence and audience / market research driven
2. **Explicit behavioural goals established**
   Tailored to different segments as required
3. **Whole system analysis and wider determinants approach adopted**
   Addressing 'the customer' in their wider social and environmental context
4. **Segmentation used to tailor approaches to different audiences / customers**
   Avoiding generalised 'blanket' messaging
5. **Active engagement of individuals and communities**
   Drawing in understanding and insights, and moblising contributions
6. **Significant investment in developing multi-sector partnerships**
   Mobilising 'delivery coalitions'

National Social Marketing Centre

Behavioural interventions and social marketing

KEYS TO SUCCESS

7. **Clear and systematic planning that assists stakeholder engagement**
   Time and effort invested in coordination and information management
8. **Budget allocations and resources appropriate to aims and objectives**
   Realistic assessment of what budgets and resources can achieve
9. **Multi-component strategies used (intervention and marketing mix)**
   Avoiding reliance on single methods
10. **Commitment to sustained approach, which mobilises resources and assets**
    Focusing on the longer term, and not just driven by budget allocations
11. **Integrated model used to encourage connections and synergies**
    Helping join up and link different local, regional and national efforts
12. **Learning and reflective culture in place**
    Alongside effective review and on-going evaluation

National Social Marketing Centre

‘Rubbish social marketing’

How to spot the symptoms (1)

- **No clear focus on specific behaviour** – distorted emphasis on ‘providing information’ and ‘raising awareness’
  – behavioural goal too broad and generalised
- **‘Mission and message-based’ and not ‘People-based’**
  – too strong a focus on ‘getting our message across’
- **Focuses on the individual and their ‘lifestyle’ in isolation**
  – without addressing wider influences, outside of their control
- **Over-reliance on ‘communications’**
  – failure to look at full range of influences on behaviour
- **Too much attention on trying to change people’s values and beliefs** – instead of starting from where people are at
- **Not really understanding what is important to the audience**
  – failing to really look at what ‘moves and motivates’
- **No ethical framework used to inform intervention selection and mix**

rubbish

National Social Marketing Centre

‘Rubbish social marketing’

How to spot the symptoms (2)

- **Focuses on the wrong ‘customers’**
  – not addressing role of politicians, professionals, practitioners
- **Distorting focus on the ‘problem behaviour’**
  – not looking at both ‘desired’ & ‘problem’ behaviours
  – not addressing the interface between them
- **Limiting application of different behavioural theory**
  – tendency to use the same theory in every situation
- **Generalised targeting without any real ‘segmentation’ analysis**
- **Over-reliance on ‘single methods’**
  – failure to develop an appropriate intervention/marketing mix
- **Weak use of ‘exchange’ – more ‘our benefits’, not the audience’s**
- **Failure to consider and address the ‘competition’**
  – eg: not addressing the real benefits of the problem behaviour
- **Limited one-off interventions, no medium or longer term approach**

We are in this together

Your feedback

While the content of this resource comes from the material we use in more interactive training and development sessions where it is possible to examine issues more fully, we would nevertheless be pleased to receive comments on the material and ideas in it. Please send feedback and comments by emailing us on: **nsmc@ncc.org.uk**

Your work

If you are involved in work that focuses on trying to achieve different behavioural goals with different individuals, groups and communities, then we would be pleased to hear from you and to receive information on your developing work. We are particularly keen to receive information on different types of evaluation that have been undertaken, where these can demonstrate an impact on behaviour.

Network and database

To join our National Social Marketing e-Network send us your contact details and we will add you to our database.

Important note: We are well aware of information overload and therefore limit the general information / update emails we might send out to around four a year.

Social marketing

local demonstration projects

While there is increasing interest in the practical application of social marketing to date in England, the development of social marketing approaches is still in its relative infancy. As a result the NSM Centre has developed a national initiative to support and assist a number of Local Demonstration Projects.

The aims of the demonstration sites are:-

- To stimulate the use and integration of social marketing approaches into existing local programmes and strategies;
- To increase understanding and development of skills at the local level in using and applying social marketing concepts and approaches;
- To test-out and contribute to the further development of Centre practical resources and tools on social marketing, plus the materials developed by the Centre based on national work, for example the resource currently being developed by the Centre for the DH obesity team;
- To capture learning and the promotion of social marketing best practice;
- To stimulate an evidence-base for social marketing in the England, across a variety of public health and geographical areas.

Each demonstration project follows the simple *Total Process Planning* model developed by the NSM Centre and which places a strong emphasis on investing time in proper 'front-end' Scoping stage. A local *Social Marketing Steering Group* is developed for each of the demonstration sites, as well as a local '*Solution Group*' which is made up of members of the local community who can assist in the development of the actual intervention.

The Centre has an overall *Demonstration Project Coordinator* (Rowena Merritt), along with a named *Social Marketing Associate* contact for each project.

The demonstration sites are mapped out on page seven. Further details in relation to target audience and the stage at which the demonstration site currently is are given in Table I (page 6).

Table I

Training and skills development

Social marketing workshops

National Social Marketing Centre

NSM Workshop development

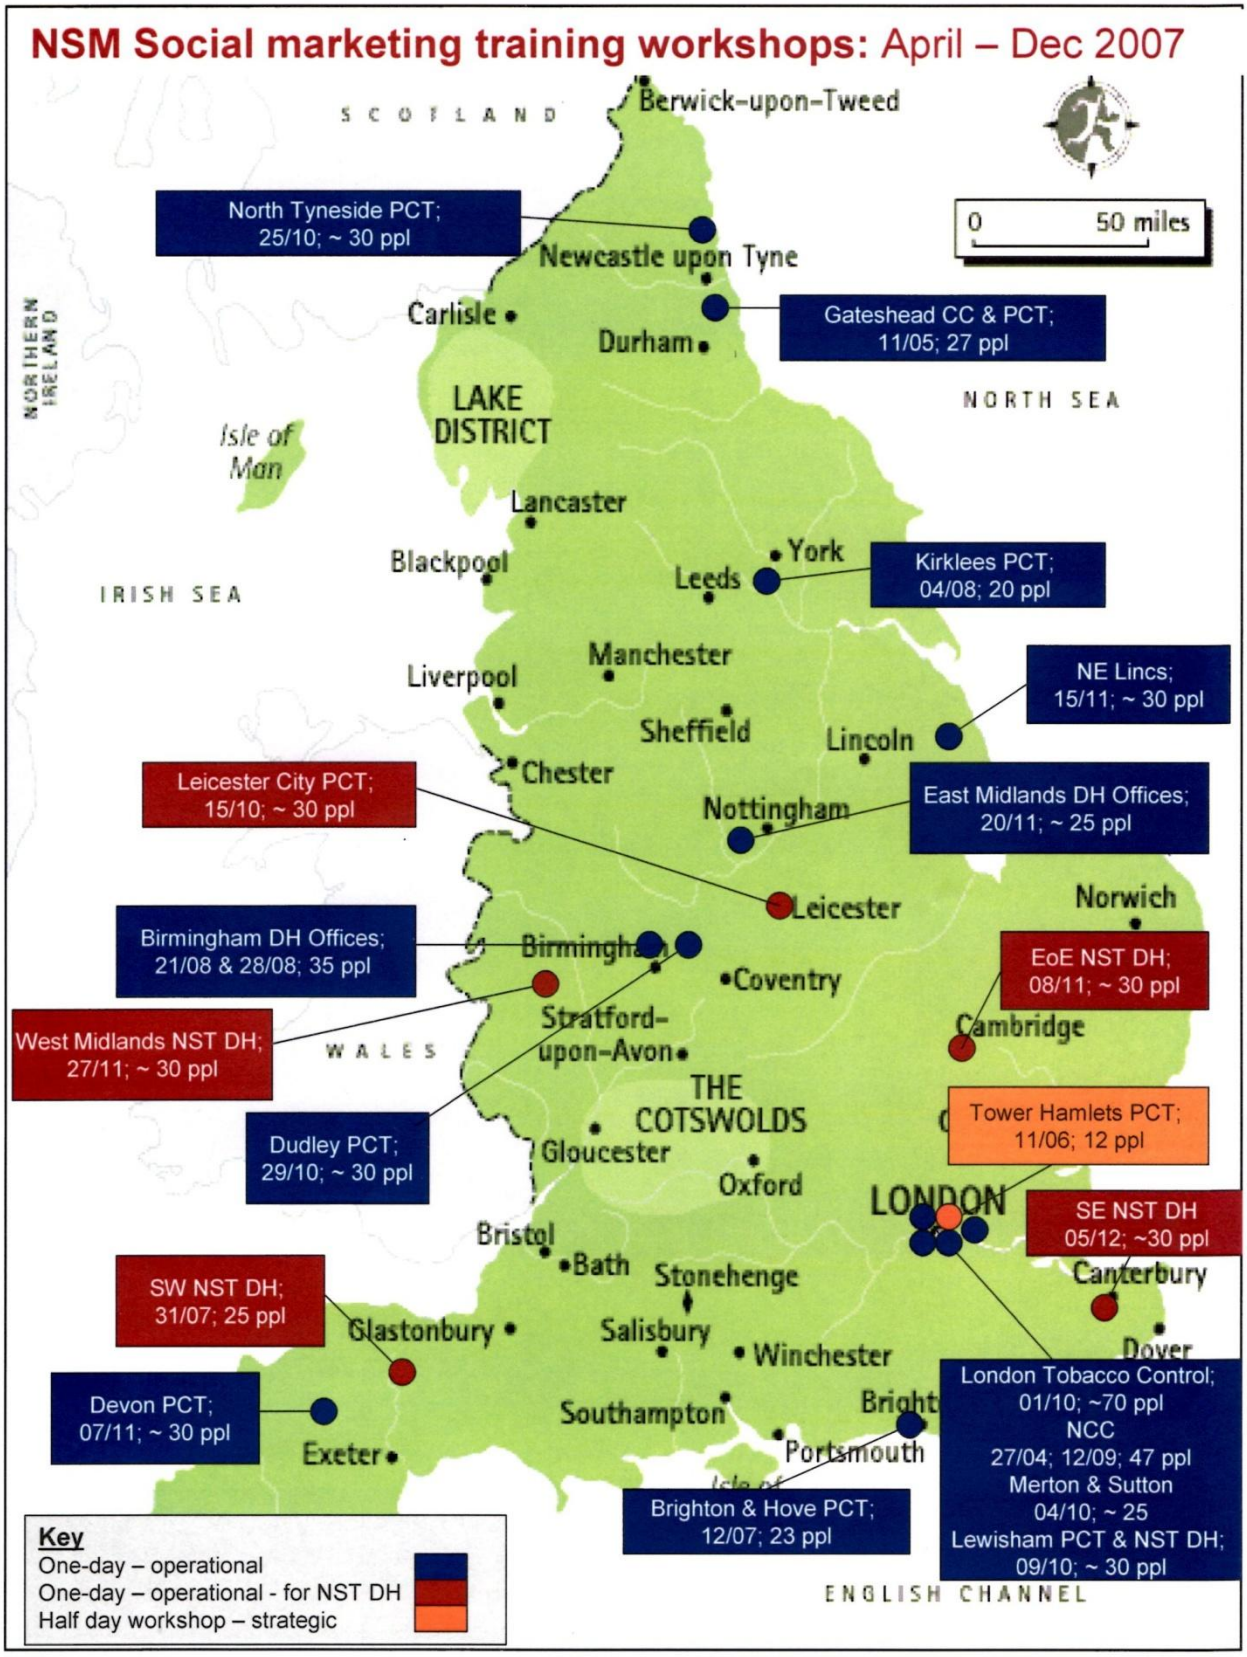
Since October 2006, one-day workshops have been held around the country. The workshops are aimed at PCT public health employees. After every workshop evaluation forms are completed by the participants, and the programme is refined based on the feedback given.

Since April 2007, eleven one-day social marketing operational workshops have been held. A full list of workshops held is given in Appendix I, and mapped out on page ten. In addition, a social marketing workshop on commissioning social marketing work was held as a pilot for Tower Hamlets PCT. After positive reviews, the Centre is looking to roll out the workshop to other PCTs and SHAs.

Currently, eleven more training days are scheduled between September and December 2007. In January 2008, the roll out of the regional training days, which will accompany the DH obesity insight resource being developed by the Centre, will commence.

An example programme for a one-day training programmes and the event's objectives are given in Appendix II.

Work with the DH National Support Team



Since July 2007, the Centre has worked closely with the NST Tobacco Team and their Health Inequalities Team in a variety of ways:-

- *Tobacco work.* A pilot workshop was run in Taunton for the South West regional SSS leads. Due to the success of the workshop. It is now being rolled out across the other eight regions.

- *Health inequalities work.* Support for the Inequalities Team is given in the form of training and the supporting of four local sites: Leicester City, Wolverhampton, Hartlepool, and Hull.

- *Obesity work.* It is proposed that the Centre will also work with the newly established obesity team to deliver the DH obesity insight resource.

Academic sector development

National Academic Advisory and NSM Academic Network development

National
Social Marketing
Centre

National Academic Network & National Academic Advisory Group development

The NSM Centre was created to help directly drive the development of capacity and skills in social marketing at national and local levels across the NHS, local government, voluntary and private sectors. The academic sector is playing an important role in developing this capacity.

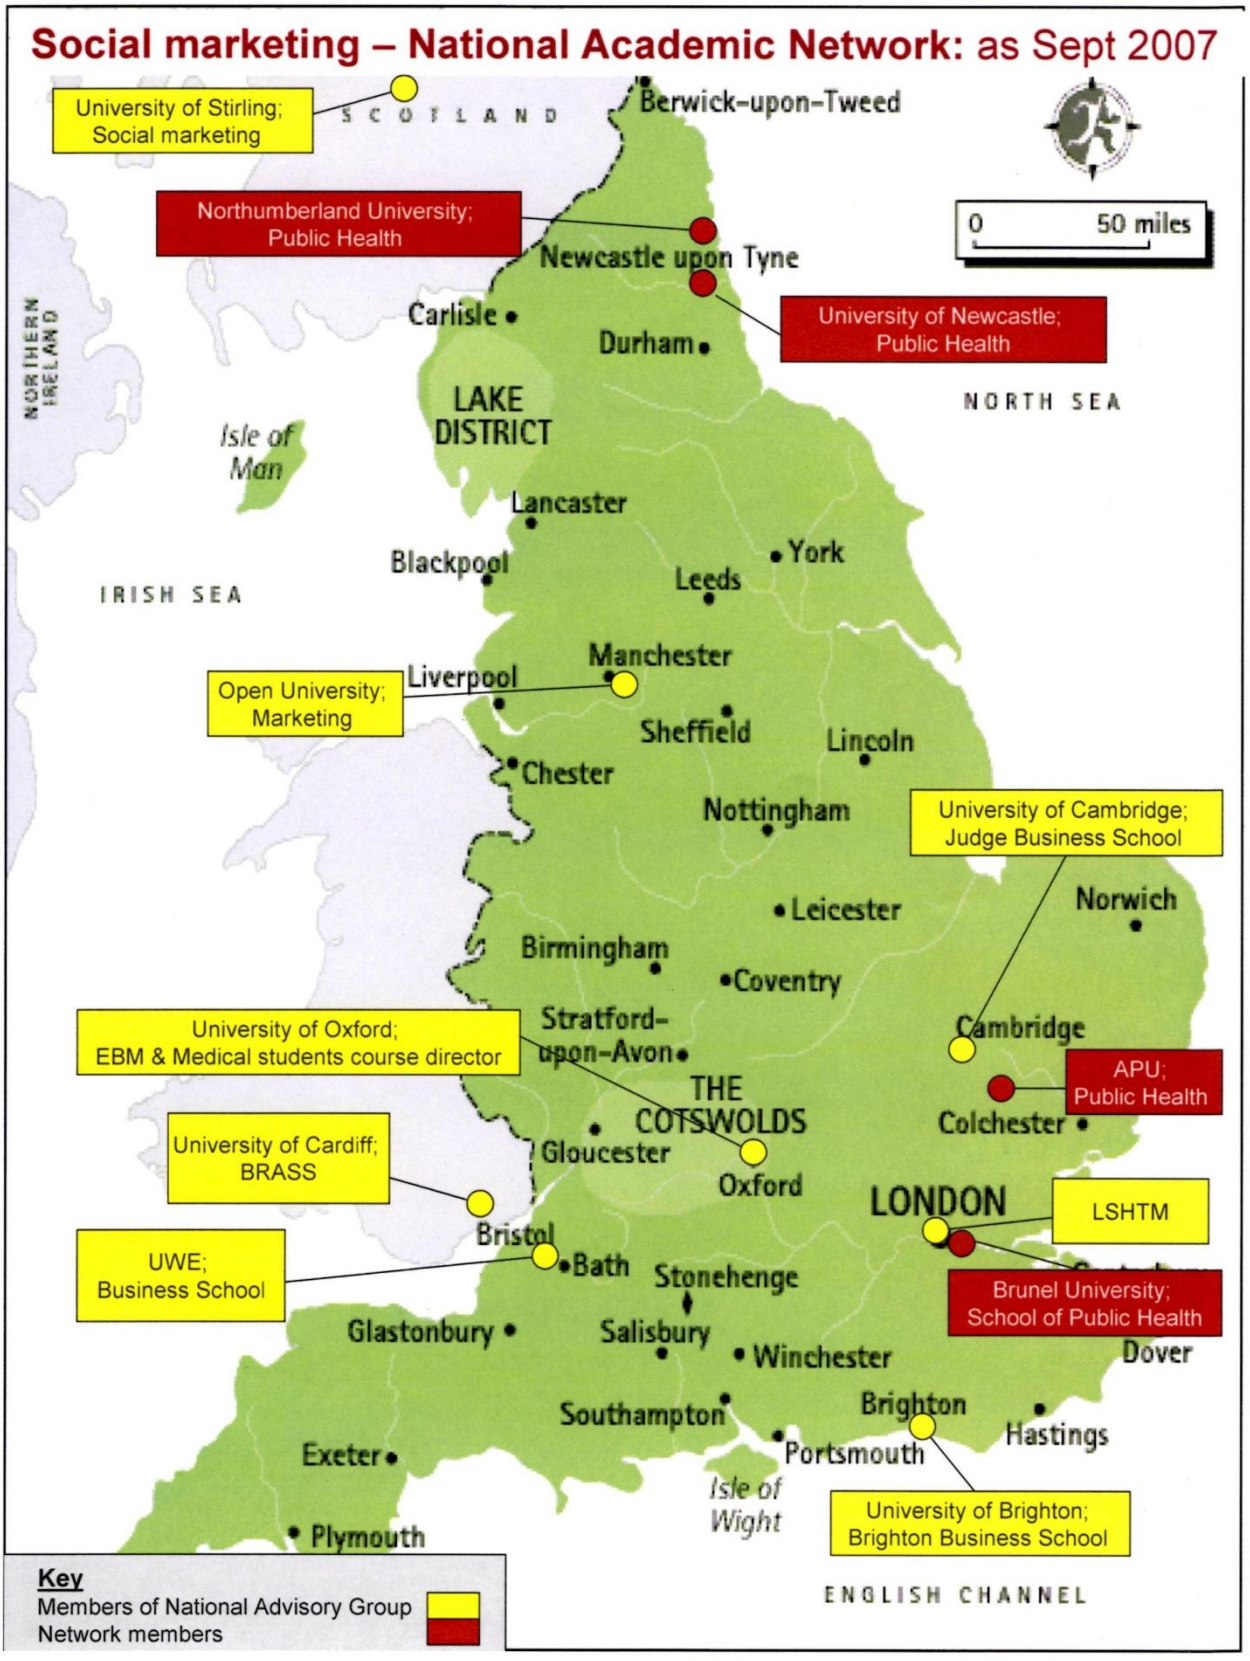
In March 2007, a social marketing National Academic Advisory Group was established. At its first meeting initial aims and objectives were agreed.

Overall aim
To enhance the teaching, training and research capacity in social marketing within the UK academic sector.

Objectives

1: To engage with the main funding bodies (MRC, ESRC, DH) and encourage a call for research in the area of social marketing (offering an expert panel to help appraise applications appropriately);

2: To help in the accreditation and quality control of social marketing initiatives;



3: To assist in the development and evaluation of course materials;

4: To help link academics from the business, social and medical disciplines to generate a fusion of ideas; and

5: To develop joint research bids between academic centres.

The second NSM academic steering group meeting is scheduled for the end of September. Also a wider discussion is to be held at the 2nd National Social Marketing conference with academics attending the event. The discussion aims to look at the different ways academic capacity can be developed at undergraduate and postgraduate levels in England.

A map of the current academic connections which have been fostered by the Centre is given on page 13.

National Social Marketing Centre

Social marketing – One day workshops

One-day workshops completed

April – September 2007

27th April – Held at NCC London offices*

3rd May – NE Lincolnshire, cancer services

11th May – Gateshead PCT & CC

8th June – Norwegian DH, Oslo

11th June – Held at NCC London offices*

12th July – Brighton & Hove PCT

31st July – South West Region Stop Smoking Services (DH NST)

21st Aug – Birmingham, DH regional office

28th Aug – Birmingham, DH regional office

4th Sept – Kirklees PCT

12th Sept – Held at NCC London offices*

Note: This list does not include half day or shorter workshops or training events. For a full list contact Rowena Merritt.

* Attended by people from regional SHAs, PCTs, CC, Las and the voluntary sector.

Social marketing – One day workshop

Example timetable

(for NST tobacco team)

9.15	*Refreshments*
9.45	**Welcome and introduction**
9.50	**Meeting your expectations**
10.10	**This thing called social marketing: what it adds to the party**
10.30	**Defining behavioural goals**
11.05	*Refreshment break*
11.20	**Understanding your target audience: mood board exercise**
12.00	**Moving beyond targeting: Segmentation and DH insight**
12.45	*Lunch*
13.30	**The Social Marketing National Benchmark Criteria**
14.10	**Moving beyond promotion: Using all the 4 P's and branding**
14.50	**Ethical considerations in social marketing: A debate**
15.20	*Refreshment break*
15.35	**DH update: Understanding the national work**
15.45	**Taking social marketing back to work: An action plan**
16.20	**Feedback session**
16.30	*Finish*

APPENDIX II

National Social Marketing Centre

Social marketing – One day workshop
Example of learning objectives

(for NST tobacco team)

1) To understand the basic principles and concepts of social marketing

2) To use social marketing techniques on smoking related behavioural interventions (including increasing recruitment to stop-smoking services and clinics)

3) To understanding how social marketing could help increase usage of national smoke-free materials within the local clinics

4) Understand what further information and support is available from DH and the NSM Centre

By the end of the day's workshop, all participants will be able to:

- Define social marketing
- Describe the eight point benchmark criteria
- Have developed a 'back to work' plan
- Understand a social marketing case study
- Have an understanding of branding and DH materials

NSM Centre – Strategic Aims and Objectives

Aims and objectives:

To help builder wider capacity and skills in social marketing at national and local levels, and to work with others to increase understanding and practical utilisation of strategic and operational social marketing

0: NSM Directors Office, Strategy and Partnership

1: Local Practice Development Support Programme

2: National Technical Assistance Support Programme

3: Standards, Learning & Innovation Programme

4: Resources Development, Communications and Events Programme

5: Research, Intelligence & Insight Support Programme

6: Special projects and programmes

DRAFT

0: NSM Directors Office, Strategy and Partnership

Programme aims:
To manage and further develop the NSM Centre as a resource to support Government in its work to promote and support adoption and integration of customer focused social marketing approaches, including business development, strategic partnership development, governance, reporting and review

Project Area / Objectives • *Project objective*	**Key outputs for delivery**	**Delivery Time-scale**	**Progress reporting 2 (Red, Amber, Green RAG rating)**	**Resource base Human / Financial Budget : Actual vs Profile**	**Key themes emerging and Risks to delivery: (internal and external)**
0.1 NSMC Development					
Governance and business planning and Grant Agreement issues	DH Grant Agreement with NCC specifies confirmation of following years Programme budget in December of previous year	Dec 2007	Indicative budget set Governance paper underway	DH not yet confirmed Programme / Projects budget for 2008-9 – NSMC working on 'steady state' assumption at present Current year budget conforms to allocated budget	DH internal planning not currently aligned with agreed Grant Agreement with NCC Other contracts with DH and other Government departments and Agencies.
	DH/NSMC business planning meeting scheduled for 31st January.	Feb 2008	Business planning meeting held and actions being taken forward		
Review and assessment for future NSMC organisation form	Options appraisal produced for DH and NCC Board	March 2008	New specification written	Conforms to allocated budget	
Options appraisal for potential foundation	Specification developed	March 2008	Work being commissioned	As above	As above
On-going development and adjustment to NSMC current organisational structure based on response to growing demand	Revised structure proposed and commented on by NSMC staff. A number of new posts envisaged across organisation including research director and programme 3 – standards, learning and innovation.	Jan 2008 March 2008	Changes made in light of comments received by staff and revised organisational structure produced. Job descriptions and job specifications being finalised and recruitment process to follow once work streams and budgets agreed.	New structure is matched by increased funding, affordability tests have been carried out.	Increased human capacity necessary in light of increased DH / NHS demand for service

NSM Centre and Staff development	All NSMC staff with personal development plans and personal objectives agreed	Sep 2007 & on-going	All staff with objectives and pdp's agreed.	Conforms to allocated budget	Need for presentation, speed reading and policy development. Workshops on inequality and DH and NHS structure completed.
NSM Centre strategic partnerships development	Agree 3 – 6 strategic partnerships with organisations who share NSMC values and ethos and who have complementary skills	April 2008 & on-going	Five/Six potential partnerships identified and initial discussions completed	Cost neutral	Initial discussions held with Institute for Involvement & Improvement, Innovation Foundation, Consultation Institute, Brilliant Futures, SE Public Health Group, PHAST, & The SM Practice
0.2 Public private partnerships					
Paper: Effective public /private engagement	Produce guidance paper on how to develop private sector engagement in DH, NHS social marketing progs	April 2008	Initial drafting complete but work will now be outsourced due to time pressure of regional developments	Conforms to allocated budget	Regional development needs/support currently taking priority
National business sector stakeholder events	Partners identified and event programmes agreed, dates secured	April 2008 and ongoing	Initial work completed, but pressure of work from regions and advice form DH marketing and DCMO have resulted in a change of emphasis to developing two practical examples of collaboration rather than events to discuss working in partnership.	Conforms to allocated budget	Demonstration partnerships being worked up, tow possible include fitness industry and pharma support of smoking cessation.
0.3 Additional policy work					
DH health policy and programme advice	NSMC to sit on key DH advisory groups and provide strategic, planning and evaluation advice	April 2008 and ongoing	NSMC contributing to: Cancer Reform Strategy, Health Choices, DH Customer Insight Group, Responsibility in Gambling National Steering Group,	Conforms to allocated budget	Need for generic marketing support in the NHS
Consumer and Competitiveness	NSMC to provide with NCC consumer and competitiveness advice to Dh and NHS	April 2008 and ongoing	NSMC contributing to: Marketing code of practice MSSSB Standards committee, Kings Fund incentives forum, and Cabinet Office Health Incentives policy work.	Conforms to allocated budget	Need for generic marketing support in the NHS

0.4 Additional regional engagement work:					
London – Regional Centre and Programmes development initiative	Developing proposals for new London SM centre and allocation of £5 million marketing boost of London.	April 2008 and ongoing	Marketing programme agreed and organisational programme underway. Audit of capability competed.	Budget agreed	Need for more hands on support. Need for good practice sharing.
North East – Regional Centre development (Newcastle base)	Establish NE SM centre with SHA and Newcastle University	Dec 2007 and ongoing	Centre and steering group established. BIG support programme commenced. Audit of capability competed.	Conforms to allocated budget	Need for more hands on support. Need for good practice sharing.
North West – Regional Social Marketing Programme support	Assist with planning regional approach and strategic launch.	Aril 2008 and ongoing	Conference and launch of strategy planned. Audit of capability competed.	Negotiations underway	Need for more hands on support. Need for good practice sharing.
Yorkshire & The Humber – Regional development	Contribute to strategic planning and establishment of regional pilots.	April 2008 and ongoing	Strategic work completed and support for pilots ongoing. Audit of capability competed.	Conforms to allocated budget	Need for more hands on support. Need for good practice sharing.

DRAFT

1: Local Practice Development and Support Programme

Programme aims:
Develop and embed a social marketing approach within local and regional organisations to enhance capacity and capability to deliver social marketing interventions to support and sustain positive lifestyle behaviours.

1 To work with local and regional organisations to increase understanding and develop social marketing capacity and skills
2 To encourage and support integration of social marketing into relevant local strategic and operational planning and delivery work across different sectors
3 To assess on-going commissioner and practitioner needs and capture learning from developing work
4 To work with local / regional organisations to increase understanding and develop social marketing capacity and skills

Programme Manager: Rowena Merritt

Project Area / Objectives • *Project objective*	**Key outputs for delivery**	**Delivery Time-scale**	**Progress reporting 2 (Red, Amber, Green RAG rating)**	**Resource base Human / Financial Budget : Actual vs Profile**	**Key themes emerging and Risks to delivery: (internal and external)**
1.1: NSM seminar and training					
Manage and promote a multifaceted programme of training events across the country aimed at PCT/LA practitioners and PCT/SHA/LA senior staff	▪ 10 one-day workshops successfully delivered ▪ Evaluation report from seminar and training events written ▪ Training workshops run for the NST (two so far and another seven planned between Oct 2007 and Jan 2008) ▪ Running a one-day workshop tailored for members of the National Support Team (NST) staff ▪ Advanced practitioner development (APD) days run for existing PCT employees who have social marketing in their job title or job description – advertised through e-bulletin and other	April 2008 April 2008 (on-going after each training) Feb 2008 Jan 2008 Dec 2007 & March 2008	Completed 24 one day workshops, as well as a number of half day workshops. Evaluation is completed after each training event and materials adjusted accordingly. Workshop successfully delivered The days were well received with people form across the regions in attendance.	The majority of the workshops have been delivered by in-house staff. In 2008-2009, the workshops need to be developed above the introductory level, which is currently being delivered. The best place to do this is in-house. However, this will require some staff reducing their current workload on different areas to achieve this.	Potential loss of programme lead to support DH 'Ambitions for Health' represents both internal and external risks to delivery.

	PH networks				
1.2: Local Learning Demonstration sites initiative					
Work with and alongside a range of local PCTs and LAs to support them in learning about and applying social marketing techniques in a range of different Learning Demonstration sites (n=10) in England	▪ For a least 5 sites, the scoping, pre-testing and design completed by April 2008, ready for pilot Summer/ Autumn 2008. ▪ Dedicated area of the website for site leads to access (password protected). Scoping reports, worksheets, & aids are available in that area. ▪ A monthly newsletter for the site leads developed and distributed. ▪ Free training and development days for each site successfully delivered. ▪ Monthly surgeries for associates/ in-house staff supporting the sites. ▪ Regional site meetings to develop evaluation strategies. ▪ Promotional leaflet produced on the learning demo sites. ▪ Associate diaries for each site, noting the barriers and challengers, are being written and info shared (internally only to date). ▪ Project Process Plans written for each site. ▪ Scoping reports completed for each site. ▪ Marketing plans written for each site ▪ Development Away day for Associates and staff currently working on sites ▪ Local on-going support to 4 areas in which the NST's	April 2008 – onwards Oct 2007 Oct 2007 – ongoing April 2008 Oct 2007 – ongoing Jan 2008 Jan 2008 Sept 2007 – ongoing Nov 2007- updates ongoing summer 2008 Feb 2008 Aug 2007 –	On schedule with only 2 sites, 3 others will pre-test in late spring/early summer. Completed Distributed monthly Completed Completed Held in February 2008. Completed, awaiting for ministerial sign off. On schedule On schedule On schedule Will be written during the development phase. Held in February 2008. Support on-going.	Initially, a seemingly generous budget was allocated for demonstration sites (£60K). However, the majority of this has been taken up by the wages for an associate in the NE. By using more in-house staff's time the demonstration sites initiative can flourish. However, as with the new training course development, the time has to be freed up from other areas. Programme 5 has given £40K to commission out the evaluation of each site.	DH/NST to visit Norfolk and Waveney site The demonstration sites have faced several obstacles: 1) *Re-structuring of the PCTs.* Some of the original demonstration leads have now got new jobs, or been moved to a different PCT. 2) *Lack of social marketing knowledge.* Whilst many of the demonstration site leads know the principals and basics of social marketing, they do not understand the importance of project management and how to take the SM theory and turn it into practice. 3) *Social marketing is often seen in isolation*, as simply an add on. Therefore, the local areas motivation to drive the project forward is often limited and predominantly target driven. *Support from the NSMC.* The original contract gave demonstration sites *10 days of a consultant's time.* However, the sites where far more time has been

	Health Inequalities unit is working: Hartlepool, Hull, Leicester and Wolverhampton. ▪ Regional support to Yorks & Humber SHA and NE SHA on a variety of local projects – including the development of a NE Centre for Social Marketing, set up in conjunction with the NSMC, the local SHA and Newcastle University	ongoing May 2007 – ongoing	On schedule		invested, are the sites furthest along. Despite these set backs, we are now working very closely and spending more time in the demonstration sites to encourage and speed along the process
1.3: NSM Centre Associates Scheme & development of Social Marketing Roster & regional managers team					
Establish NSM Centre Associates Scheme Establish an NSM Centre Social Marketing Roster Develop proposals for Social Marketing Regional Managers initiative	▪ After consultations with COI, develop a social marketing roster to be finalised by April 2008 ▪ Run six personal development days for existing associates and those on the new roster ▪ Recruitment of the Regional Project Mangers team; aim to have them in post by April 2008 ▪ Intensive training of the Regional Project Mangers team ▪ Run a 'Train the Trainer' session for NST staff and NSM Associates ▪ Development day run for Associates, second one planned for March 2008	April 2008 Starting in April 2008 Dec 2007 – March 2008 March-April 2008 Sept 2007 July 2007 & March 2008	The roster will be delayed until summer 2008, as COI has stated that it will take at least 6 months to set up. Interviewing potential associates Feb'08 – completed. Interviews are being held in March 2008, regional leads in post 2nd June 2008. Starting on 2nd June 2008. Completed Completed. Three development days held; 1 in July 2007 and 2 in February 2008.	To develop the roster, internal human resources will be used. Out of the 2008-2009 budget, money will be allocated to bring in some speakers for the development days. Successful roster candidates will have to attend at least three of the six offer development days per year, or be taken off the roster. Potential new candidates will be interviewed yearly.	DH/COI meeting held and action to follow-up with Mike Horah on logistics.
1.4: NSM Academic Network Development					
Develop and promote the academic committee's, including wider academic,	▪ Area on website dedicated to academic steering group ▪ 2 x steering group meetings	January 2008	Completed. March 2008 meeting		

work through the NSM Centre's electronic forums and outlets	held ▪ 1 x wider network group meetings held ▪ Discussion paper on building academic capacity and skills presented to and discussed with DH. ▪ Links developed with the DH Public Health academic network. ▪ Special edition of the journal, Social Marketing Quarterly, to be published 2007. This will include a discussion paper on building academic capacity and skills. ▪ Skills audit conducted for members of the academic steering committee.	April 2008 April 2008 Jan 2008 Jan 2008 April 2008 March 2008	postponed to May 2008 due to poor attendance by academics. Completed. Held in September 2007. To be completed April 2008 and presented at May meeting. Working to arrange a joint meeting between the two academic groups. Hoping to run an event in Summer 2008. Completed Edition, published Spring 2008. On schedule: To be completed April 2008.		
Scope out with members of the NSM academic steering committee the possibility of developing a fellowship/ secondment scheme	▪ Discussion at March 2008 NSM Academic Steering Committee ▪ Short paper outlining future possibilities	March 2008 April 2008	Postponed to May 2008 meeting. On schedule – academic capacity map commissioned.	No budget has been allocated specifically for a fellowship/ secondment scheme. However, if this scheme is to progress in 2008-2009, one needs to be allocated.	Budgetary constraints £4,000 has been allocated to the academic development as a whole. Therefore, unless the fellowships/ secondments cost the centre £0, it may not be possible to proceed with this option.
1.5: Course Material and Syllabi Development					
Assess need in different sectors and develop a comprehensive range of practical training / course materials	▪ Benchmark criteria resource developed, pre-tested and promoted ▪ Workbook produced to accompany workshops and pre-tested ▪ Short information leaflet written to accompany commissioner level workshop and pre-tested	Dec 2007 Jan 2008 Jan 2008	Currently being pre-tested by target audience. To be completed June 2008. Written. At designers. To be printed late Spring 2008.		

Support and assist the development of social marketing related syllabi on relevant academic or professional courses	▪ Commission out the development of standard academic course materials, which will be available for all universities/ academic institutions to use ▪ Training courses for academic on the materials	April 2008 Summer 2008	**Deferred until 2008-09 financial year** **Deferred until 2008-09 financial year**		Further development of academic social marketing capacity required and underway linked to on-going work as part of development of the National Academic Advisory Group

DRAFT

2: National Technical Assistence and Support Programme

Programme aims:

To support the Department of Health to understand, apply and integrate social marketing into policy development, strategic planning and delivery.

1 To increase the integrated use of social marketing from insight generation, and policy development, through to local delivery
2 To increase the use of the social marketing Benchmark Criteria when developing plans or commissioning work for behavioural interventions.
3 To promote the DH's leadership role in sharing best practice and learning from effective behavioural interventions between government departments.
4 To increase the understanding and use of social marketing within other selected government departments.

Programme Manager: Steve Menzies

Project Area / Objectives	Key outputs	Delivery/Timescale	Progress reporting 3 (RAG rating)	Resource base Human / Financial Budget : Actual vs Profile	Key themes emerging and Risks to delivery: (internal and external)
1.1: Build Social Marketing Capacity within DH & Health Improvement Directorate					
To assess DH needs in relation to integrating social marketing principles into their policy and practice	Needs Assessment Report	Apr08	Survey and interviews with key staff scheduled for completion in March.		
To support DH in developing its social marketing related capacity and skills	Training and Capacity Development Plan	Apr08	To be finalised on completion of needs assessment.		
To support and assist internal sharing of learning and networking	Internal Practice Group Established	Apr08	To be finalised on completion of needs assessment.		
To ensure that at least 20 key HID policy, programme, communications and research staff have taken this training programme by May 2008	Training & Seminar Programme	Feb-May 2008	First internal ½ training for 10 HID staff on 13 December.		Providing additional support for NST training
1.2: Planning and Support					
To develop an agreed Roster of social marketing related agencies for use by DH and others	Social Marketing Roster	Dec 2008	Meetings progressing with COI and HID		Delayed – finalising preferred hosting requirements
To assist DH in rolling out learning from national obesity related work	Obesity Insight Training and Resources	Oct 2007 – April 2008	Guidance on social marketing to be incorporated into NHF		Training programme finalised and work underway to ensure: - DH input into each session

			toolkit Training provider selected for practitioner workshops		- Guidance on national/local integration - System for collecting and sharing best practice
1.3: Resources & Tools					
To develop a practical resource for effective planning of social marketing related interventions	HID Social Marketing Planning Guide	June 2008	Need to develop in collaboration with HID internal user / reference group		Awaiting development of generic Planning Guide
To produce model template to assist effective Scoping stage of interventions development and subsequent design	Model Scoping Report	June 2008			
To develop model template for social marketing plan	Model Social Marketing Plan	Aug 2008			
To ensure that practical planning tools and case examples are developed together with key DH staff	4X "Integrated" DH Case Studies	Dec 2008			
1.4: Support for other Government Departments					
To promote DH leadership role in sharing best practice in social marketing across the public sector	Cross Government Best Practice Group Established	Feb 2008			Initial meeting with Julie Alexander and Philip Stamp (DEFRA) rescheduled with for 3 April.
**See Programme 6 for projects with other government agencies*					

DRAFT

3: Standards, Learning & Innovation Programme

Programme aims:

1. Steer social marketing standards development and benchmarking. Mobilise the ethics development process and develop practical guidance.
2. Identify, capture and promote learning from practice – Build learning from practice through case studies and networks in an on-line resource.
3. Establish Awards through integration within existing awards schemes and inception of NSM awards – Encourage strengths in social marketing generically and excellence in specific categories
4. Encouraging relationship with BITC (and CSR bodies) to share learning, case studies, potential for social marketing BITC award/use of social marketing Criteria for awards

Programme Manager: Paul White

Project Area / Objectives	Key outputs for delivery	Delivery Time-scale	Progress reporting 2 (RAG rating)	Resource base Human / Financial Budget : Actual vs Profile	Key themes emerging and Risks to delivery: (internal and external)
3.1 Standards and Benchmarking					
Mobilise the *standards* development process and establish draft competencies as a basis for a national professional standards framework in social marketing.	NSM Standards Development Group established Business case developed Competency/standards framework developed Support of MSSSB Standards process	Nov 2006 Aug 2007 Sept 2007 March 2007	Complete Complete Facilitated development for outcome of NOS Standards process. Handover of Steering Group to MSSSB agreed at Nov 30 meeting. Continued support can now be progressed through POW. First meeting of the new MSSD Group held on 23/002/08		MSSSB awarded Social Marketing Standards funding in Sept. MSSSB consultant appointed to progress further. NSM Centre director now appointed as Chair to MSSSB national steering group
Mobilise *ethics* development process and develop practical guidance and resources in consultation with an *NSM Ethics Advisory Group* and wider stakeholders	Establish Ethics Advisory Group Publish initial guidance resource	Nov 2007 Mar 2008	Outline plan Revised planning, some work linked to Text Book material being prepared		Insufficient agreed resource for development Revised approach with The SM Practice agreed, linked to agreed revision to NSMC staff structure
Further develop & roll-out	Reviewed National Benchmark	Mar 2008	Benchmark Criteria in		Promotion to field in hand –

social marketing *National Benchmark Criteria*	criteria published		active use – being actively promoted at all main events and seminars		further work to roll out practical application and use within DH to be considered
3.2 Learning from Practice					
Publish illustrative case examples compendium resource	Prioritised list of case examples Published suite of case examples	May 2007 Sept 2007	Complete Completed 20 initial case examples (ongoing) Communications plan agreed		Further case studies being populated
Establish publicly accessible database resource for case studies	Design and publish web environment	Sept 2007	Complete	Agreed resource spend used up	
Establish 'intelligent' web access resource to information domains of case examples	Publish web access resource	Mar 2008	Web sources identified		
3.3 Award Schemes					
Define award criteria	Award criteria	July 2007	complete		
Establish existing award scheme partnerships with SM category	3 Partner Award schemes established	Mar 2008	2 Award categories established (AHC & EMAC). For 3rd see 3.4		AHC SM award in Sept – want to continue next year
Develop bespoke NSM Award scheme for new applications	Bespoke NSM Award scheme package linked to 1 Award scheme	Mar 2008	HSJ confirmed new SM Award 2008. Contract being developed.		
3.4 BITC & CSR					
Explore potential for Social Marketing Award category	BITC Social marketing Award category	Jan 2008	Concept principles discussed but not yet developed		Depends on BITC view of number of existing Award categories
Review current best practice from BITC initiatives	Links with BITC case studies to NSMC case study database	Feb 2008	1 case study linked to date		
Explore relationship with BITC and CSR bodies for collaborative projects	Partnership collaboration project	Mar 2008	Area of facilitating public private partnership identified for development		May be insufficient time to fully develop. Depends on timing of BITC programming.

4: Resources Development, Communications and Events Programme

Programme aims:

1. To engage with key stakeholders as identified in the Service Level Agreement and the NSM Centre stakeholder strategy
2. To develop resources and materials that assist in building social marketing capacity and skills amongst targeted stakeholders
3. To raise awareness of the term and discipline of social marketing
4. To develop internal communication procedures which capture learning and ensure consistency of quality service across NSM Centre staff.

Programme Manager: Patrick Ladbury

Project Area / Objectives	Key outputs for delivery	Delivery Time-scale	Progress reporting 3 (RAG rating)	Resource base Human / Financial Budget : Actual vs Profile	Key themes emerging and Risks to delivery: (internal and external)
4.1 Stakeholder Engagement					
Develop a stakeholder strategy which provides a focus for the existing and future work of the NSM Centre	▪ Stakeholder strategy agreed by all NSM Centre staff ▪ Stakeholder database evaluation report produced ▪ Priority stakeholder mapping process completed including organisations and individuals within DH, NCC and NHS ▪ Secondary stakeholder mapping process completed ▪ Develop list of external conferences and journals which engage stakeholders and deliver 20 presentations and publish 10 articles ▪ Produce list of private organisations that undertake social marketing (link with roster) ▪ Establish system for capturing media announcements on social marketing and relevant key topics ▪ Ensure the consistent usage of social marketing definitions and messages to stakeholders across all	Jan 2008 Dec 2007 May 2008 Oct 2008 July 2008 Nov 2007 Nov 2007 Ongoing	Redrafted strategy to be agreed by NSM Centre staff by end of April 2008. CRM (Customer Relationship Management) software being explored with Co-Op Systems. Recommendations to be finalised by 30.03.08. Media watch system now in place, monitoring print and online media for keywords. A more proactive approach now in place and several articles produced to align with our key messages. Ongoing exploration of potential partnership engagement.	Stakeholder mapping and strategy needs to be delivered with DH and other work programmes particularly national interventions and practitioner development. All NSM Centre staff will need training on new database and maintaining stakeholder records. Cost of new database not within current budget (£35K)	NSM Centre meeting demand for assistance with social marketing strategies and projects NSM Centre positioned as a theoretical rather than a practical Centre Measuring the uptake of social marketing within the NHS Ensuring the definition of social marketing is clear and understandable and not confused with social networking Private organisations undertake 'rubbish' social marketing – damaging social marketing's reputation

	media				
4.2 Social Marketing Resources and building Skills Capacity					
To develop social marketing resources (including 4.2 e-network) in response to stakeholder's requirements	▪ Develop calendar and priority list for producing resources ▪ Produce 6 new resources (commissioning guide, planning guide, Social marketing quarterly edition, obesity resources, demonstration site booklet, text book) ▪ Develop approvals process, new resource template and stock holding spreadsheet ▪ Produce a website development plan ▪ Review format of e-bulletin and increase subscribers by 300	Dec 2007 April 2008 Dec 2007 Nov 2007 Jan 2008 March 2008	Priority list for production of new products produced. Regular e-bulletins and continuous website updates. Feb e-bulletin sent to network. Formal web strategy document to be produced by March 08. Meeting arranged with Worth Media to discuss development of website on 8.2.08. Strategy to be submitted by 30.03.08. Comms team contributions toward new text books and recent DH 'Social Marketing Factsheet'. Ethics chapter and resources appendix added. New articles placed with Barker's 'Drum' magazine and FPH Newsletter.	Internal work – reliant on Aiden's knowledge of website and technology to deliver web based resources Budget implications for improving video technology for the website (Apr 2008 budget)	NSM Centre needs to produce clearer, easier to read and use – moving away from theory to practice Demand on staff to produce resources in short time scale with other conflicting demands Measuring the impact of the Centre and its resources
4.3 Event management					
To develop events in response to stakeholder's requirements and assist in developing key stakeholder relationships	▪ Develop a 2008 NSM Centre events calendar (includes training and targeted events at key individuals) ▪ Develop a 2008 external conference & events calendar ▪ Appoint conference agency to manage the World Conference	Dec 2007 Dec 2007 Nov 2007 Jan 2008	Call for abstracts for 2008 World Conference now circulated and initial web page setup to provide information. Conference website now live. Full-page ads for the NSM Centre and Conference placed in the	External agency will be recruited to manage the World Conference Reviewing an external provider for training resources	Managing the demand for training and events on staff time particularly practitioner development. Co-ordinating the partners for the World Social Marketing Conference

	▪ Produce communications plan for World Conference including call for papers ▪ Organise 3 SM Forums ▪ Organise 3 briefing sessions for private organisations that undertake social marketing ▪ Respond to requests (5) for seminars from organisations	2008 2008 2008	new 'Drum' magazine. Ongoing. Looking for a Forum date and location in North West.		
4.4 Internal Communication for NSMC staff					
To develop internal communication procedures that respond to the needs of the other work programmes and adapt to the needs of the developing organisation	▪ Produce an internal comms plan which incorporates regionally based staff ▪ Produce communication plans for each NSM Centre work programme where needed (Case study database, academics, research, national interventions etc) ▪ Develop key messages for the NSM Centre & its work prog. ▪ Review brand guidelines and templates ▪ Review internal filing system and resource library ▪ Capture examples of social marketing in practice for the case study database and NSM Centre archives`	Jan 2008 Ongoing Dec 2007 Dec 2007 Feb 2008 Ongoing	Filing system review undertaken. Work has begun and files are being moved to new directory structure. Refinement of case studies recording implemented. Continued development of NSM Associates message board. Academic steering group web page setup with email list-server. Contribution to Associates training days (Resources presentation).	Internal resources Temporary worker employed to assist with this task One staff member tasked with collecting case studies	Ensuring consistency across all NSM Centre staff, regional staff and associates

5: Research, Intelligence and Insight Programme

Programme aims:
To support the NSM Centre key role of building capacity and skills in social marketing by managing a programme of related research, intelligence and insight.

In particular:

1. Ensuring that research and evaluation methods are integrated into all NSM Centre programmes and project areas, and the Centre's work as a whole, developing and assisting related staff and consultants to achieve this..
2. To further develop social marketing related research methods and develop related resources to assist practitioners in undertaking best research practice
3. To assist practitioners (at national and local levels) by developing accessible resources, including:
   a: 1-stop-shop to help bring together key customer/market related research from the Public and Private sectors
   b: National programmes and campaigns information and learning archive for key national interventions
4. To capture, assess and promote wider understanding of the needs of those involved in different behavioural interventions at the national and local levels (inc policy, strategy and implementation contexts)
5. Develop bespoke research projects to address the gaps in learning for use at a national and local level. e.g. societal cost analysis of preventable illness.

Programme Managers: Dominic McVey and Adam Crosier

Project Area / Objectives	Key outputs for delivery	Delivery Time-scale	Progress reporting 2 (RAG rating)	Resource base Human / Financial Budget : Actual vs. Profile	Key themes emerging and Risks to delivery: (internal and external)
5.2 Customer Research - One Stop Shop : Phase 1 - DH research only					
To create a web-based resource providing access to published and unpublished data on consumer knowledge, attitudes, beliefs and behaviour. The first phase of this project will focus on DH research (& work commissioned by DH from COI) Two priority areas have been selected for immediate	▪ Agree the scope of the project and develop a plan for the data collection phase of this project. ▪ Brief external consultants to collect key texts, assess quality of the reports and prioritise reports for inclusion in the one stop shop ▪ Commissioned consultants/editors to summarise key insights across PSA subject areas	Consultants to have completed work by June 2008	Availability of suitable freelance consultants has resulted in project delay. Emails describing the project aims will be sent to DH policy and comms staff in early March. This will result in a delay of the delivery of the first wave of research from June to August.		

attention : 1. Young People 2: Obesity	and key population groups				
5.3 APHO engagement inc: segmentation work					
To form a strategic alliance with the APHO and in doing so develop jointly branded resources for PHOs and PCTs	To convene a regular bi lateral meetings between YHPHO and NWPHO (as SM reps of the PHO network)	Three bilateral meetings already taken place.	On track		
	To write a joint segmentation resource / guidelines to be published jointly by APHO and NSMC	Draft Segmentat-ion Resource available Feb	Resource will be available in April following PHO workshop in March.		
	To convene a workshop on applying geo-demographics to health data	Workshop planned for February	Workshop moved to March 20th.		
	To work with PHOs looking at assessing existing geo-demographics systems against indices of multiple deprivation (IMD)	Work on IMD and Geodem going			
5.4: National Campaigns Archive					
To capture the corporate memory and written documentation within DH as it pertains to campaign development, implementation and evaluation.	▪ To develop a plan for the data collection phase of this project ▪ Brief for external consultants to collect learning for archive and report this in an agreed standard format ▪ To review and capture learning from 10 selected DH campaigns	Information on 10 campaigns will be collected by May 2008	Availability of suitable freelance consultants has resulted in project delay. Emails describing the project aims will be sent to DH policy and comms staff in early March. This will result in a delay of the delivery of the first wave of research from June to August.		
5.5: NSMC overall review & evaluation					
To provide an overall assessment of the performance of the NSMC in achieving its aims and objectives during 2007-2008	▪ Agree the scope of the evaluation and the indicators of success ▪ Brief NSMC staff to keep data relating to these indicators for use by an external assessor	Draft Report July 2008	Delayed DH want to broaden the scope of the project and commission an independent evaluation of the centre.		

	▪ Brief an external consultant/academic department to assess the performance of the NSMC against the key indicators ▪ Report from External consultants re : NSMC performance				
5.6: Stakeholder research: Review PCT / SHA social marketing integration					
The aim of these projects is to provide baseline information about the use of social marketing by PCTs in the delivery of PSA targets at a local level.	Qualitative research report among 3 tiers of staff in 10 PCTs in England (outside NW region) and 3 tiers of staff among all 24 PCTs in NW region. All interviews either face to face or telephone. In addition to the money from the DH budget, the NW has provided money to conduct more interviews across their region.	Fieldwork began November 2007 and both studies are due to report in March 2008	On track to deliver Presentation of NW region research delivered 21 Feb. Presentation of findings from both NW and England planned for 7 March to NSMC staff. Other presentations to be discussed. Summary document of research findings to be produced. Final report due end of April.		
5.7: Evaluation of the NSMC Demo sites					
To provide evaluation support to the NSMC demonstration projects:- • One- to- one expert advice re: evaluation methods and data collection • Independent assessment of the overall functioning and effectiveness* of the demonstration projects	1: Agree the scope of the evaluation – i.e what the NSMC and its commissioned research experts will provide by way of support to the demo sites and what additional independent assessment will be conducted. 2. Brief the demo sites about the evaluation plan and what we expect from them 3: Brief external	Tender project and commission academic Institution by February 2008	Evaluation workshop days arranged with Demo sites to discuss the NSMC evaluation plan – completed in London and Newcastle. Tender will be out in April.	A projected under-spend of 40K from other areas in the Research Budget will be used to fund the project.	*Given the limited funds available the "effectiveness" measures may be limited to process indicators rather than attributable behaviour change indicators.

	consultants/academic department to work with NSMC researchers to provide support and set up data collection				
5.8:The Costs of Preventable illness					
Development of an agreed framework for evaluating the impact and cost effectiveness of public health prevention measures. Building on phase 1 of this work, the original analysis will be extended to include illicit drug use and the existing sexual health analysis will be revisited. A consensus group will be convened with key academics to review the analysis framework	▪ To build on phase 1 of the research by extending the analysis to include illicit drug use and to revisit the sexual analysis ▪ To develop a consensus on the analysis framework ▪ To disseminate the learning from this work	Convene consensus workshop- Jan -Feb 2008 Reports on the new analysis & consensus workshop- March 2008 Dft academic paper - March 2008	On track		
5.9: Futures Workshop					
The aim is to build insight among DH senior leadership team of the possible developments in technologies and how these may impact on communication and marketing – with particular relevance to public health.	To deliver a half day workshop/event on futures and technologies and marketing and public health	Nov 2007	Date of workshop postponed due to lack of interest among DH staff. Alternative dates being sought from presenters. Support from DH will be required to secure attendance. Our aim is to deliver workshop to DH by end March/early April.		

6: Special Projects and Programmes

Summary of projects being undertaken by NSM Centre in addition to Core Grant Agreement, including Non DH clients

- **DH Health Inequalities Programme**
- **DH Social Determinants work re: WHO Commission on the Social Determinants of Health Report**
- **DH Health Literacy Programme**
- DH HID extras:
  - **Healthy Lifestage Segmentation aka 'Blended'**
  - **Alcohol scoping**
  - **FRANK**
  - **Sexual health**
- **Local Learning Demo Sites – Lewisham Smoking**
- **EU Determine project**
- **Sport England** to provide training on social marketing and the next steps following on from a segmentation exercise to the organisation.
- **Remember a Charity** re Wills and links to Home Office proposal:
- **HM Treasury Thoresen Review :** rapid reviews to develop the Generic Financial Advice engagement strategy particularly vulnerable groups
- **National Audit Office:** Study looking at how to influence consumer behaviour, possibly smoking
- **Pan-London Health Improvement programme**:
- **Ministry of Justice** "Making Wills"

Project Area / Objectives	Key outputs for delivery	Delivery Time-scale	Progress reporting 2 (RAG rating)	Resource base Human / Financial Budget : Actual vs Profile	Key themes emerging and Risks to delivery: (internal and external)
DH Health Inequalities Programme	A number of project specifications have been agreed with Julie Alexander and Mike Horah. Specs have been drawn up and we are in the process of commissioning agencies and consultants e.g The Public Health Resources Unit	Expect to complete initial projects by the end of February 2008.	Awaiting confirmation of contracts from EU partner, Terms of Reference paper prepared. PHRU commissioned to conduct two projects; "five key principles for HI work" and "Sharpening the Spearhead" – Both will report in April.	DH UPWEIGHT £480,000 Mike Horah, secondee from DH started with NSMC 4th February'08.	
WHO Commission on the Social Determinants of Health Report		To March 08	WHO have commissioned NSM Centre to provide a rapid report looking at the public health approach to	Funding via WHO	

			behaviour change and the implications for the WHO. First draft of this is due 29th Feb.		
DH social determinants work re To scope the key aspects in the Commission's interim and knowledge network reports relating to individual and population attitude behaviour change and identify the opportunities for using social marketing techniques to address social determinants of health. Develop and implement a strategy including cross government, to take forward social marketing approaches to address the social determinants of health including obesity, PA and nutrition	Project plan completed for scoping the work Strategy developed and implemented	Mid Jan2008 March 2009	First meeting held with Fiona Adshead. Paper being developed Mid-march setting out focus for the work.	DH UPWEIGHT £382,000 John Bromley, secondee from DH due to start with NSMC I April. Stephanie Allen, DH contractor due to start with NSMC and lad communications function for social determinants on 1st April	
DH Health Literacy Programme	An updated report of the NCC's review of literature on Health Literacy A short paper proposing a Health Literacy Index – a list of items and measures that may be used either independently or together with other databases (eg Health Poverty Index) to assess different levels of Health Literacy in England Further development of a HL Index – and development of interactive resource	April 2008	Commissioned to Karen Jochelson, Kings Fund. Draft report received Oct 07. A new paper may be required for publication. Awaiting findings from Prof Rowlands analysis of SFL survey and QOF As above	DH UPWEIGHT £250,000	

	A short paper identifying recommendations about how the DH may wish to participate in a Europe-wide comparative survey of Health Literacy A paper setting out considerations and proposals for a national survey to assess levels of Health Literacy among the general population and among key disadvantaged groups A paper identifying the costs of low levels of health literacy to society		NSMC/NCC (with DH as partner) became co-applicant (Summer 2007) on proposal for EU funding. EU decision expected – early 2008 He EU have delayed the start of the project to August 2008. Contract issued December 2007 to London South Bank University to undertake original research		
DH HID extras: **Healthy Lifestage Segmentation aka 'Blended'**	Work continues on sampling strategy and questionnaire development	Main stage pilot to commence 14th Jan. Main survey results due in Sept 2008	Main stage questionnaire signed off on 22nd Feb. Fieldwork in progress. Enabling interviews with Ethnic Minority Groups planned.	DH UPWEIGHT Ongoing research consultancy support to this area	
DH HID extras: **Alcohol scoping**	Advising the COI and DH alcohol team on segmentation stage – Support with commissioning and briefing research agency to conduct insight work with target group	Completed		DH UPWEIGHT Ongoing research consultancy support to these projects	
DH HID extras: **FRANK**	Advisory role in initial scoping report on vulnerable groups	Completed		DH UPWEIGHT Ongoing research consultancy support to these projects	
DH HID extras: **Sexual health**	Advisory the COI and DH sexual health team on the segmentation stage and re-analysis of the NATSAL	Completed	Project moving from scoping into pilot intervention stage.	DH UPWEIGHT Ongoing research consultancy support to these projects	

	survey Support with commissioning and briefing research agency to conduct insight work with the target group. Fieldwork Dec		SM agency commissioned, NSMC providing advice and support to the project and the evaluation.		
Local Learning Demonstration Site – Lewisham Smoking	To increase uptake of the NHS Stop Smoking Service in Evelyn Ward, Lewisham – the most socio-economnically disadvantaged ward in the PCT.	March 2008	Initial scoping completed. Steering group established and operating well. Insight research among smokers and health care providers about to be contracted to Lewisham Primary Care Research Unit – to be completed by March 2008	DH UPWEIGHT £55,000	
EU Determine project	The NSMC are leading European work package as part of the EU Determine Project. This will involve commissioning 3 innovative pilots addressing Health Inequalities.	2110 (3 years)	Currently undertaking review of innovative approaches to address health-related behaviour among vulnerable groups – to be completed in March. Designing pilot selection process – innovative pilots to be selected in late August. Contributing to consortium meeting in May. Project will run until 2009.	Funding via the EU With equivalent of £50k contribution from NSMC (calculated mainly in terms of staff / consultant time).	
Sport England to provide training on social marketing and the next steps following on from a segmentation exercise to the organisation.	6 workshops	Nov07-Mar08	Nothing to report.	Addt to DH work £12,000	
Remember a Charity re Wills and links to Home	Recommendations report	Mid January 2008	Initial scooping work underway with further	Addt to DH work	

Office proposal: To review existing research and interview stakeholders			work planned	£13,200	
HM Treasury Thoresen Review : Learning from Public Sector engagement strategies. Proposal sets out how NSMC would undertake a number of rapid reviews to develop the GFA engagement strategy and branding particularly aimed at vulnerable groups	Provide checklists and real life examples from programmes that have some relevance of similarities to proposed new service. Give summary of strengths and weaknesses of different elements of marketing mix, risks and scale of probable costs Produce outline budget for the service launch and first three years	Feb 2008	Work completed and presentation to NSM Centre staff planned.	Addt to DH work £36,000	
National Audit Office: Study looking at how to influence consumer behaviour, possibly smoking	Mini-report on case study based on document review and stakeholder interviews	March 2008	Consultant engaged under supervision of NSMC to take this work forward starting mid-January 2008	Addt to DH work £30,000	
Pan-London Health Improvement programme: Options proposal to consider a range of PH issues, including vascular prevention programme to tackle food and PA, incorporating setting up a behaviour intervention centre	3 year programme to establish a PAN-London Health Improvement structure, current investment opportunity identified programmes highlighted with a focus on vascular prevention	3 years starting January 2008	Finalising financial details with DH/NHS London in respect to NSMC Regional Centre (£2,250,000) and Programme activities totalling £5,000,000.	NHS work (Addt to central DH work) £7,250,000 over 2 years	
At discussion stage: **Ministry of Justice** "Making Wills" – A Social Marketing Proposal for the Ministry of Justice to develop cost-effective interventions that are based on a full understanding of the barriers and motivations of the priority target audiences	3 social marketing options to consider over 4-6 month period comprising 1 day workshop scoping report and evidence review project plan, and stakeholder engagement	???	Awaiting decision on outcome of bid. Invited to next stage	Addt to DH WORK Approx £29,250	

National Social Marketing Centre

Summary of Key Achievements and Impact

October 2008

The National Social Marketing Centre's key achievements and impacts are summarised under the following headings:

1. **Capacity Development - Key Impact**
2. **Standards and Quality- Key Impact**
3. **Policy - Key Impact**
4. **Evidence and Research - Key Impact**
5. **Establishing and Sustaining Business Base - Key Impact**

1. Capacity Development – Key Impact

Social marketing becoming embedded in NHS and beyond

- To date, over 10,000 people have been briefed or trained about social marketing across the NHS, with high satisfaction ratings (85 per cent +).
- To date, over 2,000 people have been briefed and trained about social marketing in non-NHS sectors.
- **NSMC website** established providing access to our own and other social marketing-related material on the internet.
- **Social marketing e-Network** established with over 2,300 members, the largest dedicated network in the world. **The NSMC e-Bulletin** newsletter in its second year provides regular updates every two months on developments in social marketing.
- **12 Learning Demonstration Sites** and a further 12 PCT-funded schemes established to demonstrate impact of social marketing. A booklet has been produced capturing the learning to date from the 12 sites.
- **National academic reference group** established linking eleven participating universities.
- **Growing local engagement,** with 129 PCTs (out of 151 in England) and 20 local authorities having worked with the NSMC to integrate social marketing into locally funded programmes.
- **Growing regional engagement**
  - Ten NSMC Regional Social Marketing Development Managers appointed and embedded within Strategic Health Authority (SHA) teams.

- Four SHAs setting up dedicated social marketing teams and infra-structures (NW, NE, YH, London). The largest is the London Social Marketing Unit, whose work plan includes the successful strategic commissioning of three major campaigns, alongside regional development strategy and research strategy underway.

- **Two National Social Marketing Conferences** held, one in Newcastle (2006), and one in Oxford (2007).
- **The first ever World Social Marketing Conference**. The conference was held in Brighton with over 750 delegates and marshalling contributions from major players, including senior politicians, academics, and practitioners at all levels.
- The NSMC has been able to directly influence **effective resource use** across the NHS. Examples include Hull PCT (c£1million); Kensington and Chelsea PCT (c£250k); Blackpool PCT (c£2million), Y&H SHA (c£2million); and London SHA (c£6 million).
- NSMC membership of and contribution to a **growing range of key national policy and practice committees and working groups**, including Cancer Strategy Reform; People and Patients Involvement; Life Check; Life Check Evaluation group; Cancer Research UK prevention research; MSSSB Standards setting; Cancer; DH Life stage segmentation; NAO behavioural change review; Public Health workforce committee; DH PPI working group; Health Literacy group; Government Insight group; PMs Strategy Unit seminars; and Ofgem.
- Direct contribution to the **national DH obesity social marketing programme** with a national training and dissemination programme undertaken.
- The NSMC **growing international reputation** has helped it promote more widely the strong leadership shown in England by the DH and others. With well received sessions in Europe for the WHO Healthy Cities programme; China and Hong Kong, Qatar; Sweden; and Slovenia.
- **A growing range of stakeholder analysis and capacity reports** produced by NSMC. Reports include: *The North West Social Marketing Capacity and Capability Study, Sharpening the Spear* and *Social Marketing and Public Health.*

2. Standards and Quality – Key Impact

Social Marketing standards established (a world first) and NSMC recognised as the UK centre of excellence.

- **National benchmark criteria** accepted nationally and internationally as the most comprehensive check list for social marketing.
- First **national occupational standards** to be published in October 2008 (a world first) following an extensive engagement exercise.
- Two **national award schemes** established: HSJ award scheme and the Association of Healthcare Communicators award scheme.
- The second edition of **the NSMC's *Pocket Guide*** – the Guide to NSMC's approach to social marketing.
- ***Social marketing planning guide*** – A summary version published September 2008 for comment with an enhanced version being produced at the end of the year.
- **Ethics and social marketing guidance paper** to be published in late 2008.
- **Social marketing commissioning guide** being pre-tested, with a final edition being published in late 2008.

3. Policy – Key Impact

Social Marketing has entered the policy lexicon and is increasingly quoted in policy papers and reviews.

- Social marketing increasingly referenced in government reviews and guidance, notably the recent **Cabinet Office, Prime Minister Strategy Unit**, paper which specifically quotes and references NSMC work.
- Major landmark in the publication of **DH's *Ambitions for Health*** a social marketing strategic framework. The publication is a formal response to NSMC's *It's our Health!* a review report commissioned by DH. This represents the first national strategy for integration of social marketing into health policy anywhere in the world.
- DH change management and implementation resulting from the recommendations in *It's our Health!*.

- **Growing interest from other government agencies and departments**, now investing in social marketing projects, programmes and research including: HSE, DEFRA, MOD, MOJ, HM Treasury, FSA and DCSF.
- Major success with WHO's (World Health Organisation) adoption of social marketing (alongside inequalities) as one of its primary themes for the next phase of the **WHO Health Cities Programme.**
- NSMC supported the **NAO review of government action on behaviour change,** to be published November 2008.
- NSMC delivered for the FSA and HMT a **review of best practice on branding, launch and marketing of the new generic financial advice service**, published in May 2008, recommendations accepted.
- NSMC produced for the HSE a **review of evidence, case studies and recommendations for improving health and wellbeing at work**, published September 2008.
- Direct contribution to **developing LINKS public and patient involvement work.**
- NSMC commissioned by WHO Europe to assist with the **development of the recently published WHO Tribisi resolution.**

4. Evidence and Research – Key Impact

Evidence base for the development of social marketing, with insights increasingly being used to inform national and local strategies and related interventions.

- Growing range of articles produced, highlighting **different aspects of social marketing across a range of literature,** including both public and marketing sector arenas.
- The NSMC with a team from the University of East Anglia have developed a **comprehensive framework to assess the costs to society of a range of preventable conditions**. A report and academic paper are planned for November.

- The NSMC and DH are developing a **new and ground-breaking Healthy Foundations life-stage segmentation model.** This provides, for the first time, a national life-stage segmentation of healthy attitudes and behaviours which will significantly assist and inform development of both national and local social marketing-related programmes and initiatives.
- The NSMC has produced a **first review on people's attitudes to health** inequalities and the impact of social influences on health. This research is now helping to shape Government policy in this area.
- The ***Sharpening the Spearhead*** **review** makes recommendations about how Local Authorities can use the evidence from effective practice to improve their performance, the report is being used by spearheads to inform their forward plans.
- NSMC guidance to PCTs on **essential actions to tackle health inequalities.**
- The DH have commissioned the NSMC to develop a ***One-Stop-Shop*** **for audience and market research** in its development phase. This service will enhance accessibility to market research and related insights for DH, NHS and other relevant audiences. The One-Stop-Shop will directly assist with the targeting, planning and evaluation of behavioural intervention programmes.
- Initial **Case Examples Database** resource was launched in June 2007 and is currently being updated and improved, to be re-launched in March 2009.
- The NSMC is working with DH national policy teams to develop insight for the next phases of the **teenage pregnancy and alcohol harm minimisation programmes**. This research work will shape the new social marketing programmes for 2009 and beyond.

- The NSMC leads the **DH Health Literacy programme** and is working with a European consortium to develop a European Health Literacy Index. It will carry out the first European-wide health literacy survey. The survey results will be published in June 2009.

5. Establishing and Sustaining Business Base – Key Impact:

Dedicated and experience team established and growing funding base

- The NSMC has an **expanding core team and a growing number of associates (independent contractors),** with over 50 people currently engaged working for the organisation.
- Important **strategic partnerships with key organisations and academic bodies** in place including: Brilliant Futures; The Social Marketing Practice; Corporate Culture; Stirling University; Bristol Business School; Cardiff Business School; and Brighton University.
- **DH core Grant Agreement confirmed,** and also extended to cover enhanced range of additional work areas.
- **Securing growing NHS funds** via Strategic Health Authorities and local NHS organisations (PCTs).
- Profile in cross-Government discussions, with **repeated input to Cabinet Office,** notably the PM's Strategy Unit and Delivery Unit.
- **Growing portfolio of European and International business,** notably the WHO and EU.

28 Lessons learned

Foreword

This booklet sets out the progress of the National Social Marketing Centre's (NSMC) *Learning Demonstration Sites* programme. The NSMC is at the forefront in helping the Department of Health (DH) build expertise in social marketing and embed social marketing techniques into its health improvement programmes. The work carried out by the Learning Demonstration Sites exemplifies this approach and strengthens our status as the world leader in applying social marketing principles in health.

In July 2008, DH published *Ambitions for Health: A Strategic Framework to maximise the potential of social marketing and health related behaviour.* The Learning Demonstration Sites programme is an important facet of this strategic framework for building capacity and skills in the public health system. As such, we are delighted to report that good progress is underway and look forward to the successful completion of this work in Spring 2010.

Social marketing is not just the latest fad – it underpins our efforts to ensure that the consumer is always at the heart of policy-making and service delivery. The success of social marketing depends on its adoption at a local level by champions such as those involved in the development of the Learning Demonstration Sites.

Some great learning has already emerged from the sites, and key findings have been notified to policy teams at the Department of Health to inform future policy development.

I want to thank all those involved in the demonstration sites for their efforts as early adopters and champions for social marketing. I want to encourage all of you who read this booklet to go out and spread the word about the importance of developing a people-centred approach to public health.

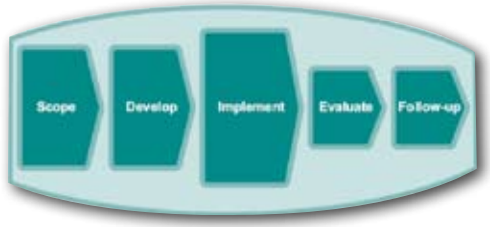
Sarah Hendry
Director, International Health and Public Health Delivery
Department of Health

Introduction

The National Social Marketing Centre (NSMC) builds capacity and skills in social marketing, by working with others to increase its use and understanding.

As the field of social marketing in England is still developing, ten learning demonstration sites were set up with Department of Health (DH) support. The aim is to help local areas apply and integrate social marketing into their programmes and strategies, while adding to the development of a robust evidence base for social marketing. They are also a key component of DH's *Ambitions for Health* strategic framework. Based in Primary Care Trusts (PCTs) and local authorities across the country, most of the sites are now in the development or implementation stage of the NSMC's Total Process Planning framework for social marketing. As social marketing gains status in England and more and more practitioners apply it to various social issues, this booklet aims to add to the knowledge base by providing an overview of progress achieved to date by the ten sites and sharing lessons learned.

Local ownership and resources



Each project is self-managed, with all key decisions made by the local partners. The NSMC's role is to support the local teams in understanding and applying effective social marketing principles in their work. This approach protects the local autonomy of partners and acknowledges that each site already has skilled and motivated staff whose engagement and ownership is crucial. In this way, each initiative aims to leave a 'learning footprint' rather than being a stand-alone project with no legacy.

The aims of the scheme are to:

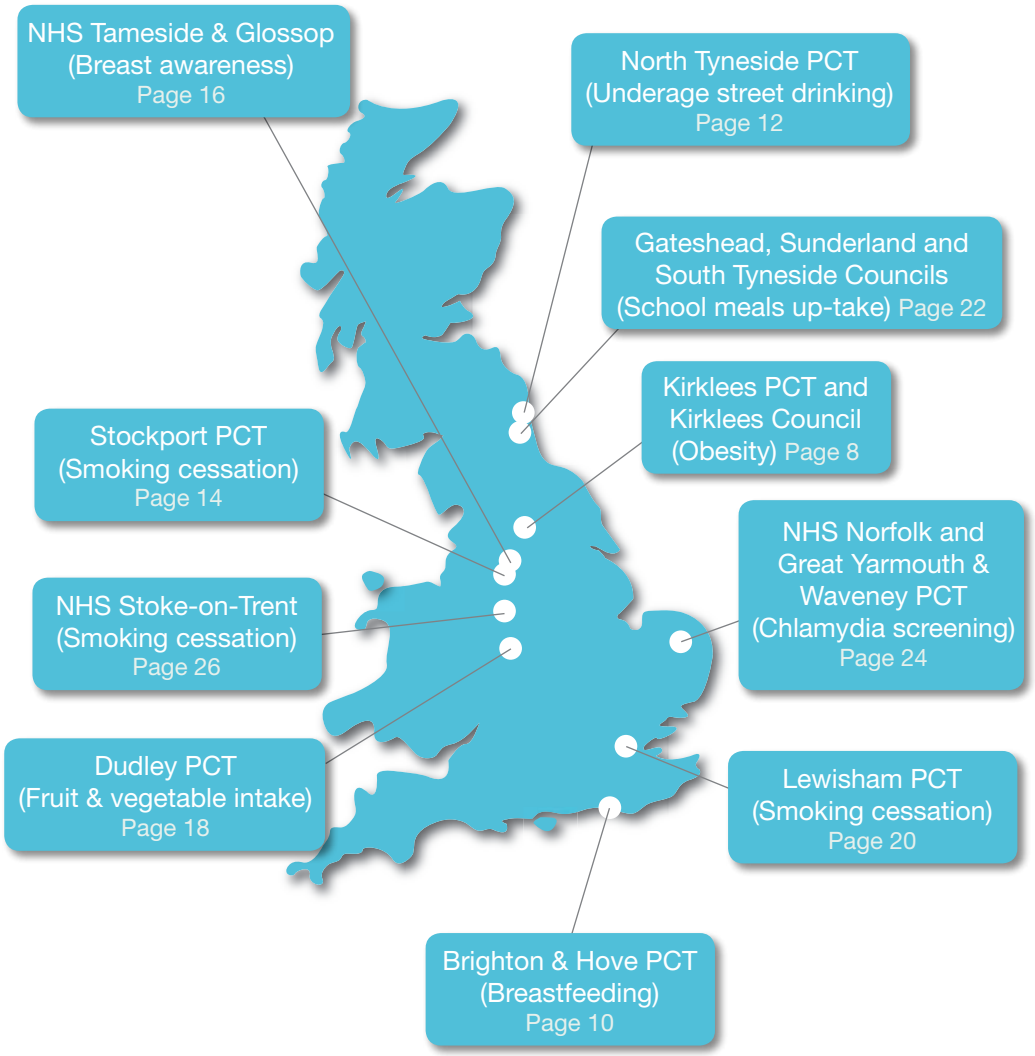
- Stimulate the use and integration of social marketing into local strategic and operational planning
- Build on and develop existing skills in using and applying social marketing concepts and approaches
- Capture learning and promote effective social marketing practice
- Inform and contribute to the development and testing of a growing range of NSMC's practical resources and tools
- Support the further development of the evidence base for effective customer-focused behavioural interventions and social marketing related work

Project development

Each site follows the social marketing process from start to finish, based on the NSMC's five-stage Total Process Planning framework. Each stage has the following characteristics:

1. **Scope:** describe the presenting issue or challenge; engage key stakeholders; examine relevant behaviour patterns and trends, along with key influences and influencers; consider initial audience focus and segmentation; agree basic behavioural goals; and examine and select a mix of intervention option(s).
2. **Develop:** develop the marketing mix; pre-test the intervention and refine as necessary.
3. **Implement:** roll out the chosen intervention(s), while ensuring active management of the process and effective stakeholder engagement.
4. **Evaluate:** examine and review the intervention in terms of impact, behavioural outcomes, process and cost-effectiveness.
5. **Follow-up:** ensure short-term impacts are built into ongoing or medium and longer term work.

Social marketing national benchmark criteria



Building on the work of Alan Andreasen[1], the NSMC developed the eight-point benchmark criteria for social marketing. Each of the learning demonstration sites has considered all eight of the benchmarks when developing their project, but for the purposes of this booklet we have selected three criteria to highlight from each.

National Social Marketing Centre benchmark criteria:

1. **Customer orientation:** develops a robust understanding of the audience, based on good market and consumer research, combining data from different sources
2. **Behaviour:** has a clear focus on behaviour, with specific behavioural goals set
3. **Theory:** considers behavioural theory and planning frameworks when developing the intervention
4. **Insight:** develops a deep insight into the target audience by focusing on what moves and motivates them
5. **Exchange:** understands the costs and benefits associated with the promoted behaviour
6. **Competition:** develops understanding of what competes for the time and attention of the target audience
7. **Segmentation:** appreciates that people are different. Groups together audiences by different characteristics (life stage, values, etc) to avoid a blanket approach
8. **Marketing mix:** considers the 'four Ps' of marketing (product, price, place and promotion) when developing interventions

Kirklees PCT and Kirklees Council

Lynne Cliffe, Phil Longworth and Spencer Robinson

Aim and target audience

This project aims to halt the year-on-year rise in overweight and obese 16 to 24 year olds attending further education (FE) and higher education (HE) institutions in Kirklees. FE and HE students with a body mass index (BMI) above 25 are the key target group, although students with a healthy weight will not be prevented from participating in the activities offered.

Current stage and timeline

The project is in the implementation phase. We launched the interventions by distributing 2,000 starter packs at university freshers' fairs at the end of September 2008. Throughout the 2009 spring term we are launching a series of activities to appeal to male and female FE and HE students. Evaluation has begun to assess what impact the starter packs have had on students' cooking behaviour.

Benchmark criteria

Exchange

Research with students suggests that while they appreciate that their current lifestyles are not healthy and need to change, they lack the motivation to do so.

Barriers include:

- time constraints
- lack of structure to the day and late nights
- low knowledge of food preparation or exercising
- stress, low self-esteem and depression among females
- denial of any weight problem among males.

Most students are also on a tight budget and perceive the cost of gym membership and fruit and vegetables to be too high. However, students do see the benefits of adopting a healthier lifestyle, such as looking fitter, boosting self-esteem, coping with stress, socialising with others, having fun and trying something new.

To overcome barriers and support healthy behaviours, the project will:

- offer free cooking ingredients, recipe cards and cheap vegetables and fruit
- deliver interactive cooking events in a sociable environment
- promote activities that appeal to males and females
- offer health MOTs and an exercise buddy system.

The underlying strategy across the interventions is to offer 'products' that are fun, engaging, appealing and motivating to students.

Competition

There are many factors that compete for students' inclination to be active and eat healthily. These include:

- study and work
- a hectic social calendar
- self-confessed laziness (particularly among males)
- spending time on the internet
- a strong takeaway and drinking culture, along with cheap drinks promotions
- a high concentration of pubs, clubs and fast food places in the town centre
- unhealthy food options in the college canteen.

To counter the competition, the project team has developed interventions that revolve around having fun and socialising with others, and television shows and films have inspired some of the project activities. An external marketing agency has been commissioned to create a cool, motivating brand and high-profile PR initiative to promote the interventions.

Marketing mix

Having pretested propositions and channels of communication with students, we are currently embarking on a multi-faceted approach to stimulate a social movement among students to adopt healthier behaviours. Working with an agency, we have developed a brand called 'Up For It' to support the various initiatives. Activities include:

- Giving out starter packs during Fresher's Week containing basic condiments, cooking ingredients, utensils and recipe cards
- A market stall on campus to improve access to fresh, affordable fruit and vegetables
- A Health and Wellbeing MOT and exercise buddy scheme
- A dodgeball tournament
- 'Take on the Takeaway' and 'Come Dine With Me' cooking events
- 'Dance Your Ass Off' competition
- A campaign micro-site and viral video competition to encourage students to eat healthily or exercise more. The winner will be the video that receives the most hits on YouTube
- Desktop pop-up messaging on FE and HE college websites to provide health tips and information on the various project activities.

Lessons learned

- It's important to win the hearts and minds of the internal team and to have an organisation that has the capacity to develop a sustainable approach
- It's important to have full stakeholder engagement and buy-in, and to give stakeholders the opportunity to help shape and develop the interventions
- Keep revisiting the insight with stakeholders and the target audience to help refine the interventions
- Always pre-test ideas, don't assume you've got it right
- Enhance your interventions with various innovative ideas

'Having consumer insight has opened up a whole new set of options that we wouldn't have considered using 12 months ago.'

Brighton and Hove PCT

Martina Pickin and Catherine Perry-Williams

Aim and target audience

The aims are to:

- increase exclusive breastfeeding at six to eight weeks among women who initiate breastfeeding
- increase the length of time that mothers breastfeed (exclusively and partially) to six months and beyond.

Phase one will concentrate on developing the required services and support for breastfeeding. The primary audiences for this phase will therefore be health professionals, including community and hospital midwives, maternity support workers, health visitors, early years visitors, nursery nurses and others in the community under-fives team.

Phase two of the project will focus primarily on mothers, their partners, families and friends.

Current stage and timeline

We are in the process of completing the development stage of phase one and are planning to move into the implementation stage in late Spring 2009.

Benchmark criteria

Theory

Breastfeeding has been called a 'bio-cultural phenomenon' because it is determined by both biology and culture. Biologically, breastfeeding is a physiological process governed by complex hormonal responses which change at different stages of lactation. The cultural influences at each of these stages are distinct, occurring in different settings and involving different people. For example, breastfeeding initiation is influenced by midwives and health professionals in the hospital setting, but continuation of breastfeeding is conditioned more by the influence of family and friends and public norms.

This means that different strategies tend to be required to support breastfeeding at different stages. Based on an understanding of both the physiological and behavioural aspects, distinct phases of breastfeeding have been proposed to improve clarity of objectives and provide opportunities for effective monitoring. These include:

- intention: plan to breastfeed
- initiation: give breast milk in the first 48 hours
- early breastfeeding: post-initiation and up to the first ten days
- establishment: breastfeeding beyond the early period and up to six weeks
- maintenance: breastfeeding beyond six weeks and up to six months during the milk-only period
- continuation: breastfeeding beyond six months, alongside feeding solids.

Insight

With breastfeeding behaviour, removing barriers originating in the health sector will need to be addressed first if interventions directed towards mothers are to have a good chance of success. Mothers' desire to breastfeed can be undermined by inadequate service provision regarding antenatal preparation, support post-delivery and early postnatal support. Thus the first phase of this project will focus on trying to increase the number of staff available to provide support and providing midwives and health visitors with effective tools, support networks and training.

Competition

A key competitor is formula milk. Formula manufacturers have extensive marketing, advertising and distribution mechanisms. The potential impact is that formula is perceived to be equivalent to breastfeeding and an acceptable alternative when breastfeeding problems arise.

Many mothers who switch to formula feeding are then sad that they gave up breastfeeding before they were ready to do so. The situation is exacerbated by the heavy workloads of midwives and health visitors, which means they do not always have sufficient time to discuss problems or provide continuity of care. Mothers frequently introduce formula or give up breastfeeding due to lack of support.

To tackle this we need to:

- educate health professionals and mothers about the differences between formula and breast milk
- give breastfeeding a higher visual profile through baby-friendly locations
- give health professionals the necessary time and resources to support breastfeeding
- help partners, particularly fathers, to understand the importance of their role and the types of support they can provide to encourage breastfeeding
- work with DH to address the marketing might of formula manufacturers.

Lessons learned

- It would have helped the pace and development of the project if we had appointed a dedicated project manager and engaged stakeholders earlier in the process
- Planning further ahead and securing funding would have made the project progress at a faster pace
- Many of the developments will take time to come to fruition because they are linked to other strategic developments such as the breastfeeding and maternity strategies

'We have all learned a lot from working together and now have a better idea of how we would approach social marketing work in the future.'

North Tyneside PCT

Jan Thompson and Louise Pinkney

Aim and target audience

The aim is to reduce underage street drinking in the pilot area of Wallsend in North Tyneside. While 13 to16 year olds in North Tyneside are the primary target audience, retailers, the community, and service providers (such as police, youth services and schools) are also target audiences.

Current stage and timeline

The project is entering the implementation stage. The proxy sales campaign was introduced to retailers in February 2009 and the youth activity pilot will run over a ten week period from April 2009, when both activities will launch simultaneously.

Benchmark criteria

Customer orientation

Primary research with young people who drink on the streets, their parents, local shopkeepers and trading standards was conducted to explore the recreational patterns of young people in North Tyneside, the motivational drivers of street drinking, and the activities and services that could be offered in exchange.

In developing the youth service intervention, young people themselves have been directly engaged through group sessions with students from Churchill Community College. Their views were sought on a range of topics, including the activities they would like and opportunities that would inspire them. Retailers were involved in the development of the proxy sales scheme.

Insight

The scoping research revealed three key motivational drivers for underage street drinking in North Tyneside:

- A shortage of affordable, appropriate activities and out-of-hours leisure services for young people in the area
- Peer pressure and the normalisation of drinking as an activity associated with being with friends
- The low cost and wide availability of alcohol, making drinking an attractive and easy option as a leisure activity. Retailers reported that the existing approach taken towards them by authorities could be antagonistic rather than supportive.

Marketing mix

This project uses a mix of interventions and a two-pronged approach to reducing underage street drinking. The first is a structured, rolling programme of attractive, exciting out-of-hours youth activities. The variety and location of activities allows easy access and there is no cost to participate. Young people are involved in choosing and programming what is on and the knowledge, skills and confidence they build through the activities rewards regular attendance.

To be sustainable, the programme is building on current activity at Wallsend Boys Club (a local youth charity) and extending the range and options for young people in the area. Partners include Extended Schools, Positive Futures, local arts organisations and Northumbria Police. The initial pilot programme will offer young people taster sessions from which a sustainable model can be created.

In conjunction, a scheme for retailers will offer a range of benefits such as police visits, staff training and monthly meetings to help them tackle illegal and proxy sales, including a voluntary ban on alcohol sales to under-21 year olds during certain evenings.

A volunteering and peer mentoring programme will offer the local community opportunities to get involved in the youth activities and support retailers who choose to implement the ban. Retailers will promote youth activities and volunteering opportunities in store, while the police and young people from Wallsend Boys Club will visit retailers to explain the scheme and encourage them to sign up.

The entire programme is branded ‘Sub21’. The brand needs to communicate to a diverse audience – young people, retailers and the community. The under-21 focus of the retailer scheme is captured, while young people associate with the messages around substituting street drinking for structured activities.

Lessons learned

- The success of the project depends on good partnership working, which doesn’t happen overnight. Building these relationships takes time, commitment and hard work
- People tend to work to their own agenda, so seeing the bigger picture can be difficult to communicate
- Limited funding has created long delays and required us to find low- or no-cost solutions that don’t compromise quality
- Negativity can be infectious, so steering group meetings should be scheduled with care. It is the enthusiasm, belief and determination of individuals within groups, rather than the group itself, that make things happen

‘The local police now have a tool to use with alcohol retailers, so they can address the problems raised’.

Stockport PCT

Sarah Clarke and Fiona Spotswood

Aim and target audience

The aims of the project are to apply a social marketing approach to:

- increase the number of target audience members accessing smoking cessation services
- redesign smoking cessation services for the target audience
- increase quit attempts and successes within the target audience.

Through scoping we identified men and younger women with children as the target audiences. The intervention will exclusively target the estate of Brinnington in the northern part of Stockport.

Current stage and timeline

The project is in the implementation stage. We have completed the scoping and development stages, including service redesign, branding, communications strategy, staff training and internal infrastructure design. The new services are ready and the communications strategy is due to be rolled out following a launch to press, major stakeholders and community members.

Benchmark criteria

Customer orientation

The target audiences are at the very heart of this intervention. A robust understanding of the context of people's lives was established through rigorous primary research, involving focus groups and interviews with various segments of the target audience and health professionals. Target audience members were also involved in the solutions group, which was convened to develop briefs for the creative development and service development stages. Community members working in the two new service partnership sites form the backbone of the new services, having been trained as Level 2 smoking cessation advisors.

Theory

The central theory used is the Transtheoretical Model (TTM)[2], which describes the stages an individual passes through on the way to adopting a behaviour: pre-contemplation, contemplation, preparation, action and maintenance. This intervention targets smokers in the contemplation stage, who are already considering their next steps towards quitting.

Another key facet of the TTM is perceived self-efficacy. Evidence suggests that people living in disadvantaged areas with little experience of success in smoking cessation may suffer from low perceived self-efficacy. This may reduce their willingness to make a quit attempt and their ability to sustain it, because they think that they will fail. A key part of the intervention, therefore, is breaking down barriers for people, with an emphasis on taking small steps towards change.

Marketing mix

The intervention is a mixture of *servicing/supporting* and *informing/encouraging*. The two key elements of the intervention are consumer-oriented services and communications. Two new services have been developed in partnership with the community-based solutions group and as a result of the primary research with the target audience. These services directly target the two key audience segments.

The communications strategy has a strong call to action in the form of a freephone number and text-back services. A community stop smoking worker will act as a broker for these incoming messages and direct the client to the most appropriate service, ensuring the service encourages them to attend as well. All communications materials will have the text and freephone numbers as their primary focus.

Lessons learned

The most important lesson learned is that the project design was a successful model. This involved significant amounts of early consultancy support by the NSMC followed by a gentle retraction of support as the project lead grew in confidence and social marketing expertise. There is no doubt that Stockport PCT's public health directorate will benefit from their involvement with this project and already dissemination further afield is taking place.

'The initiative ensures that the desires and needs of local people to get rid of cigarettes from their lives are central to our smoking cessation offer. We look forward to seeing real benefits for people in Brinnington who will be much better supported to make this important behaviour change.'

[2]Prochaska J.O. and DiClemente C.C. (1983). 'Stages and processes of self-change of smoking: toward an integrative model of change', Journal of Consulting and Clinical Psychology

NHS Tameside and Glossop

Gideon Smith and Denise Ong

Aim and target audience

The aim is to increase breast awareness in 35 to 50 year old women in areas of greatest deprivation in Tameside and Glossop.
The five-point code of breast awareness presented by the NHS includes:

- Know what feels normal for you
- Look and feel
- Know what changes to look for
- Report any changes without delay
- Attend full breast screening if aged 50 or over

The age group has been targeted to increase early cancer detection in younger women and to increase uptake of free breast screening once women reach the qualifying age. The ultimate outcome sought is a reduction in late presentations and death rates of breast cancer.

Current stage and timeline

The project is still in the scoping stage. Following completion of secondary research, a social marketing company has been commissioned to conduct primary research with target women and health professionals, and to develop and pre-test interventions by June 2009.

Benchmark criteria

Customer orientation

In the primary scoping work, stakeholders and partners will be engaged through online consultation and interviews to help us understand and map out the customer journey for breast awareness and screening. We will also conduct field research to gather quantitative baseline data, and focus groups with target women in April 2009 to explore lifestyles, attitudes, knowledge and behaviours related to breast awareness and screening.

Exchange

Through the secondary research, we identified several real and perceived costs and barriers that deter women from being breast aware. These include time, fear of pain or finding cancer, embarrassment, religious beliefs, language, and lack of awareness of symptoms or how to self-examine.

Perceived benefits that we want to promote to women include early identification of breast health problems; increased survival rate from breast cancer; feeling empowered about personal health; being informed and in control; and being there for their families.

Competition

Factors that may compete for women's time, attention or ability to be breast aware include: other problems or priorities at home; work and religious commitments; and confusing, inconsistent or misleading messages about breast cancer-related issues. This project will therefore seek to make breast awareness quick and easy, and will engage with health professionals, the media and other influencers to clarify messages around breast awareness.

Lessons learned

- There is a lot of confusion and mixed messages around the term 'breast awareness' and what it actually entails, making it difficult to identify the desired behaviour. Therefore, as a first step we will need to clarify the behaviour and messages
- Although health professionals are given practice guidelines relating to breast screening, anecdotal feedback suggests that GPs and nurses don't necessarily follow them and are themselves unclear of what behaviour to recommend. As key influencers for our target women, health professionals are likely to be included as a target audience in this project to ensure that they send out clear, consistent messages to their patients
- Social marketing requires sustained effort. Commissioning and procurement of social marketing work is relatively new to the NHS, takes time, and can require significant resource commitment. This project has already required commissioning and financial commitment over three years

'We're expecting to create a simple effective approach that takes root and lasts.'

Dudley PCT

Patricia Bussell, Lie Ping Tang and Alex Christopoulos

Aim and target audience

This project aims to improve fruit and vegetable consumption by addressing food access issues within a deprived neighbourhood of the Dudley Borough. The primary target audience will be parents of children aged four to eleven, with children, teachers and the wider community as secondary audiences.

Current stage and timeline

The intervention is being developed and will be tested over the next few months. It is scheduled to start in the 2009 school summer term.

Benchmark criteria

Behaviour

Behavioural goals for our primary target audience include:

- to consume more fruit and vegetables
- to consume a wider variety of fruit and vegetables
- to try different kinds of fruit and vegetables more frequently
- to purchase more fruit and vegetables
- to reduce reported levels of wastage.

Segmentation

We have taken a staged segmentation approach:

- We began by looking at Dudley as a whole.
- We then narrowed down the scope to three areas: Hawbush, Gads Green and Fatherless Barn. They were selected because they had poor access to fruit and vegetables, and are deprived areas with low fruit and vegetable consumption.
- Research with stakeholders and the target group identified the role of parenting in healthy eating. The chosen segment was therefore parents of primary school aged children who:
  - have a low level of fruit and vegetable intake
  - are anxious about fruit and vegetable wastage
  - have a low propensity to try new fruit and vegetables
  - have little knowledge of how to prepare fruit and vegetables
  - are likely to be without access to cars.
- Once the segment was defined, the steering group selected Hawbush. Reasons for this included:
  - it has the highest proportion of overweight and obese year 6 pupils
    the highest proportion of year 5 and 6 pupils who ate one portion of fruit and vegetables or less a day; and the highest proportion of children aged nought to 15 years
  - it is within the Brierley Hill ward which has one of the highest concentrations of fast food outlets
  - it has a relatively high proportion of households with no access to a vehicle
  - stakeholders were familiar with the area
  - links with schools and the wider community were already established.

Marketing mix

The project will take a two-pronged approach to increasing fruit and vegetable consumption through increasing the supply and demand of fruit and vegetables.

We will increase supply by setting up a fruit and vegetable stall at a local school to improve the availability of fruit and vegetables. The produce will be offered at competitive pricing compared with the favoured supermarkets and will include chopped vegetables and single portion vegetable packs. Recipe packs will be handed out and taster sessions held to provide opportunities for people to try new foods without the worry of waste or family members' preferences. New materials and flyers will be used to promote the stall. The launch of the stall will be tied in with a community event or other event such as a parents' evening. Other potential promotional initiatives include leaflets in the local area and advertising outside the school.

To increase demand, we will hold educational sessions with children and parents. The sessions will raise awareness of healthy eating and the health benefits of fruit and vegetables. They will also improve skills in preparing and cooking seasonal fruit and vegetables and provide suggestions on avoiding waste.

Lessons learned

Even though Hawbush is a small community of mainly white British residents they are not a homogenous group. They all have very different perceptions and experiences of diet and fruit and vegetables to each other.

'We are hoping that the Healthy Retail Project will provide our community with easier access to fresh fruit and vegetables. Above all, we aim to make fresh food an enjoyable, affordable and accessible realistic first choice for everyone.'

Lewisham PCT

Lyn Burton and Amelia Carter

Aim and target audience

The aim is to increase the number of smokers using, and quitting with, the NHS Stop Smoking Service (SSS) in Evelyn ward, which is estimated to have the highest smoking prevalence in Lewisham and the highest indices of multiple deprivation in the borough.

Three target groups have been identified: male and female smokers aged 35 to 44 expressing a desire to quit; smokers with children of primary school age; and adult smokers in routine and manual employment.

Current stage and timeline

The project is in the development stage. We are currently finalising the marketing mix, with a launch anticipated in Summer 2009.

Benchmark criteria

Customer orientation

Secondary research was completed on demographics, current service provision and smokers' motivations and barriers to quitting, based on national research. In order to understand why people smoke and what the local barriers to quitting and using NHS stop smoking services are, primary research was conducted between December 2007 and March 2008. Focus groups were held with 32 smokers, and six health professionals who currently provide the SSS in Evelyn ward were interviewed.

A solutions group, made up of community stakeholders with knowledge of and contact with the target audience, was established to review the findings of the research, identify key insights and develop interventions that meet the needs of the target audience.

Exchange

Helping people to give up smoking requires exchanging perceived benefits of smoking with other benefits, such as:

- concerns over weight gain as a result of quitting with signposting or additional provision of diet, nutrition and exercise classes
- the perceived stress relief provided by smoking with stress management techniques
- concerns about various issues such as money management and housing with tailored support and advice.

Marketing mix

The intervention will involve service redesign, including opening times and locations of services, as well as incorporating NHS Stop Smoking Services within an overall stress management programme offering free leisure and relaxation sessions. This was informed by the key insight that stress is the biggest reason why people start smoking, the biggest barrier to quitting, and the main cause of relapse among those who have quit.

Grassroots recruitment to the SSS will be undertaken at venues frequented by the audience, such as shopping centres, football stadiums, schools and other community venues where smokers gather.

Partnership working has been used to improve recruitment and service provision. Both internal (for example, the cardiovascular disease collaborative and service providers) and external (such as Millwall Football Club, the local leisure centre, local community organisations and local publicans) services and organisations have been engaged.

Lessons learned

- Practitioners often don't see themselves as part of a single service
- Recruitment and follow-up need to be planned as a whole
- While it is often desirable to 'go where people are', this can be challenging – the Evelyn ward area does not have an obvious location to use for recruitment
- Building community relationships is essential to gain widespread support

'A focus group member said, "You could have support set up in a supermarket, 365 days a year, so that when you're ready to quit and want help, there's someone to go to". Our challenge is to turn this idea into an initiative that is feasible for us.'

Gateshead, Sunderland and South Tyneside Councils

Ann Johnson and Emma Heesom

Aim and target audience

The aim is to use a social marketing approach to help Gateshead, Sunderland and South Tyneside local authorities increase school meal uptake. Our key audience is primary schools children at Key Stage 2 (aged seven to eleven), which is when children start to exercise choice over what they eat. However, primary research and interviews with stakeholders identified that the two most important influencers of school meal uptake are head teachers and parents. The first phase of this project will therefore focus on head teachers, who must be engaged in order to influence other stakeholders. Phase Two will focus on parents and children.

Current stage and timeline

The project is in the development stage. We plan to start implementation in April 2009.

Benchmark criteria

Behaviour

The behavioural goals set for each of the three target audiences are:

- for head teachers to implement the interventions in order to enhance the school meal offer as far as possible, and to reduce the competitive appeal of packed lunches
- for parents to sign up their children to school meals or continue to enlist their children with school meals if they are already doing so
- for Key Stage 2 pupils to eat healthy school meals instead of packed lunches.

Competition

Qualitative research conducted with head teachers, parents and children identified packed lunches as the primary competition for school meals. This is due to the following reasons:

- Packed lunches can cater for fussy eaters, allowing children to pick and choose their own options
- They offer a cheaper option and one parents know their children will eat, especially for families with more than one child who are managing a tight budget
- They are still seen as 'cool', especially when they contain popular recognised brands that can be swapped and traded between friends
- They can be eaten outside in the summer. Children can also consume them more quickly so that they can go out and play sooner
- Parents would rather have their children be full, even if the food is unhealthy, than sign them up for school meals, which they often claim children do not eat

Segmentation

We identified four key segments among local head teachers:

- 'Too busy': sees little benefit in being engaged with the school meals agenda; has other more urgent priorities to attend to; and commonly finds the 'Jamie Oliver effect' an annoyance as things were much simpler before
- 'Disengaged and confused': is not aware of the national standards; does not understand his or her role in school meals provision; and may often pass on inaccurate information to parents
- 'Trying within their field': believes that changes in school meals are needed and is open to new ideas and sharing learning with other head teachers. They know their remit and promote school meals to parents as far as they are able
- 'Engaged and passionate': at the forefront of the school meals debate in the region, and will probably have prioritised school meals before Jamie Oliver's campaign. Is commonly asked to pilot new ideas or marketing promotions, and will probably already have packed lunch policies and good dialogue with the caterer

This project will concentrate on working with those head teachers who are 'disengaged and confused' and 'trying within their field', but will look to the 'engaged and passionate' head teachers to act as ambassadors to influence other segments.

Lessons learned

- The timing of interventions must be carefully considered. For example, this project has to be timed to fit around the school calendar
- It is vital to engage with all your stakeholders at the beginning of the project
- Allow lots of time, everything takes longer to implement than you realise!

'The North East is passionate about the wellbeing of our young people, and we are always willing to try new things. The social marketing pilot has helped us to come up with some excellent interventions and I am looking forward to seeing them in place.'

NHS Norfolk and Great Yarmouth and Waveney PCT

Suki Dell and Denise Ong

Aim and target audience

The aim is to increase screening activity within venues that screen as part of the Norfolk and Waveney Chlamydia Screening Programme (NWCSP). The programme has been tasked with meeting national targets of 17 per cent (in 2008 to 2009) and 25 per cent (in 2009 to 2010) of 15 to 24 year olds accepting a chlamydia screen or test.

The programme is delivered by over 200 screening sites that include health, education, voluntary and community settings, many of which returned few or no screens at all last year. This project will therefore target existing screening sites to maximise opportunistic screening and support them in meeting rising demand for screening brought about by other initiatives.

Current stage and timeline

The project is in the development stage, with interventions scheduled to be piloted in Spring 2009.

Benchmark criteria

Insight

Qualitative research and stakeholder engagement with screening providers identified various insights:

- Low awareness of annual targets and NWCSP performance to date meant that providers neither felt urgency to increase their screening figures, nor that they were part of a larger initiative
- Some providers perceived a lack of interest and support from the Chlamydia Screening Office (CSO) once they signed up to the programme, which sometimes led to cynicism and the assumption that there was no real need for screening
- Chlamydia screening often becomes a low priority for providers whose main remit is not sexual health. Screening was also usually only offered when a young person presented for a sexual health-related reason
- Lack of monetary incentives affected many providers' propensity to screen. Arrangements are thus being made to offer financial incentives to providers so that they may dedicate more resources to chlamydia screening

Segmentation

We have segmented our group of existing screening sites by provider type (such as GP clinic, pharmacy, youth organisation), as well as ability and motivation to screen. While we will be looking to reach all existing providers, we intend to tailor our interventions for different segments. We are also seeking to collect data on how many 15 to 24 year olds pass through each site, so that we can also segment screening providers by footfall of young people and concentrate our efforts on those who can provide the greatest returns on investment.

Marketing mix

This project focuses on addressing service design and delivery, with an element of promotion:

- Redesigned sexual health training to help providers develop the confidence and skills to introduce chlamydia screening and sexual health issues to young people
- Personal catch-ups from the CSO to record any practice issues arising and to offer tailored advice and support to sites. The aim is to help maintain initial enthusiasm for the programme and the sense that screening is an ongoing priority
- Ongoing communication through existing information channels to provide general updates on the programme (such as chlamydia rates, screening performance in relation to targets, new initiatives and a spotlight on good practice). This will help keep the profile of the NWCSP high and motivate sites to screen more proactively
- Resource packs for providers that include top tips and materials to help providers promote screening within their sites and to provide a token of appreciation for their efforts
- Register-based pop-up reminders to prompt providers to offer DIY kits and help make chlamydia screening routine for 15 to 24 year olds

Lessons learned

- The scoping stage revealed a number of competing priorities for our interventions and there was a temptation to try and address them all. It was therefore necessary to identify the most important issue and target the audience most in need of our attention
- Roles and responsibilities of all those involved in a social marketing project should be clearly defined and agreed when planning work. Commissioners, programme coordinators and managers should also be fully aware of the impact the project will have on people's workloads, so that staff can dedicate time to the project from the start
- Communication was an issue as new terminology had to be learned. Marketing language is very different to that of public health, even though in many cases different terms have similar meanings

'Applying social marketing methodology has required self-discipline that will positively influence how we approach our work in the future. We have gained much from the experience.'

NHS Stoke-on-Trent

Deborah Richardson
and Vivienne Casey

Aim and target audience

Smoking in pregnancy rates in Stoke-on-Trent are higher than the national average. While the existing smoking in pregnancy service, 'Quit for a New Life', was making good progress, it was not achieving the results needed to make a significant impact.

This project aims to increase the uptake of stop smoking services among women of child bearing age in Stoke-on-Trent in order to reduce the number of women who smoke during pregnancy. The project initially targeted women living in two priority neighbourhoods, Meir and Bentilee.

Current stage and timeline

We completed piloting in Summer 2008 and are currently in the evaluation and follow-up stages. The evaluation is part of a continual cycle of development, improvement and performance management. We will be looking at the medium and long-term impact of the changes in service delivery during the next 18 months.

Benchmark criteria

Insight

Focus groups revealed that women do not want to be nagged into quitting smoking. They want health professionals to stop focusing on the negatives of smoking, which are familiar to them and do little to motivate quit attempts. The research also provided actionable insights into why these women chose to smoke – for a treat, because it gives them 'me time', and provides a chance to relax and take a break.

The project team designed new stop smoking group sessions to strengthen the core one-to-one support already available, responding to the following insights:

- women want a service that invites them in and is non-judgemental
- they want a service that is for them as women, not mothers
- they want groups run by people who understand how difficult it is to stop smoking
- they want a service that is located locally
- they use Children's Centres regularly and the centres are well regarded
- they appreciate one-to-one support from midwives

Exchange

The challenge was to make the perceived benefits of quitting outweigh the barriers preventing quitting.

Perceived benefits:

- self esteem – taking control of their lives
- stress management, which includes building 'me time' into their lives
- looking and feeling good
- saving money

Perceived barriers:

- the time and effort involved in attempting to quit
- peer pressure from family and friends who smoke
- influence of other women who continued to smoke during pregnancy and gave birth to healthy babies
- losing the enjoyment of smoking, which was perceived as one of the few opportunities to relieve stress

Marketing mix

In order to be resource ready and increase the capacity of the service, two support workers were recruited. The marketing mix included:

- Peer support group sessions based on other motivational clubs (such as Slimming World) focusing on the positive elements of quitting and on new ways of creating 'me time'. These sessions were branded the 'Me2 club' and had an open door policy
- Delivering 'stress busting sessions' in partnership with local providers
- One-to-one home visiting sessions
- Telephone support
- Small incentives for women when they joined the Me2 club, such as a welcome pack that included branded products which are attractive to the client group. A selection of 'gifts' were available once women reached their individual goals
- In-depth specialist training for the sales force including:
  - a new training package and DVD using role play actors to demonstrate an effective five minute brief intervention
  - new resources and professional packs
  - adapted referral pathways

Lessons learned

- A clear communications plan is essential to keep all parties on board
- You need to take the 'sales force' (professionals and other key partners) with you
- Taking the product to market is complex and requires buy-in from key players
- Evaluation needs to be built in at the outset
- Sometimes accepting you got it wrong is challenging

'The project has provided us with a product that is attractive and relevant to the client group – and a robust way to engage partners and the end user – and we are starting to see the benefits.'

Lessons learned

The learning demonstration site teams have identified the following key lessons that can improve the chance of success in social marketing projects:

Identify a dedicated and experienced project lead who has enough time to oversee the project and sufficient authority to unblock barriers as and when they arise.

It is important to get active support from senior management from the outset - otherwise you risk the project becoming marginalised and unsustainable.

Allocate sufficient time and resources to avoid the project team having to spend a considerable amount of time fundraising. Undertaking a social marketing project is not cost neutral, it should be seen as helping the organisation meet their core business responsibilities.

Ensure that the scoping exercise is robust and well informed, and don't be afraid to critically review the findings. Acknowledge that although the findings may feel intuitive, they are creating a baseline of evidence and credibility that will help to sustain the project. Don't forget to continually refer back to the findings to inform the project design.

Identify key stakeholders at the beginning of the project and show partners how being involved will help them with their own portfolio and goals. Make sure your sales and delivery force are involved from the start, and think laterally about who to include: have you considered the private and third sectors, the media and other partners who have a stake in the issue?

The scoping exercise may challenge your assumptions or professional assessment and yield surprises, particularly around existing services or interventions.

Develop an effective communication strategy. Feed back progress to stakeholders on a regular basis to ensure ongoing commitment. Highlight successes no matter how small, but also communicate the obstacles or frustrations as they may be able to help.

Capture and share experience and expertise gained. Try to develop a long-term strategy to embed the learning acquired from working with external consultants or agencies, which will help build local capacity in running effective social marketing projects in the future.

Plan evaluation from the outset and decide how impact will be measured. Seek expert advice and identify potential allies in academic institutions who may be interested in entering into an evaluation partnership with the project.

Public Health Action Support Team (PHAST)

The Public Health Action Support Team (PHAST) is a Community Interest Company. This is a type of social enterprise that is committed to using its surpluses and assets for the public good. Social enterprises are social mission driven organisations which trade in goods or services for a social purpose.[1]

PHAST is based at Imperial College, London. It has over 60 experienced and expert public health professionals whose aim is to improve the health of the population and reduce inequalities. Many have worked at high level in the NHS, the Department of Health or in academia. Quality assurance and due diligence processes are in place to ensure all associates work to the highest standard. PHAST also has associates with economic, ethical and legal expertise. For further details see www.phast.org.uk

Acknowledgment

The evaluators wish to thank all those who agreed to be interviewed from the individual demonstration sites, the Associates and representatives from the National Social Marketing Centre (NSMC) and the Department of Health.

We also wish to acknowledge the assistance of Denise Ong at the NSMC for organising the interviews; the staff of PHAST who facilitated the arrangements for transcribing the interviews; and all the transcribers at 'Way with Words' who efficiently prepared the transcripts.

Associate details

Ms. Tracy McFall-Austin

Mr. Geoff Wykurz

[1] Whereas conventional businesses distribute their profit among shareholders, in social enterprises the surplus goes towards one or more social aims which the business has. PHAST will invest any surplus into development of new products and working with charities. In line with this PHAST directors and shareholders receive no dividends for their work in managing PHAST CIC. PHAST CIC is also regulated by the CIC Regulator, based at Companies House, to ensure it fulfils its Social Enterprise objectives with a mandatory requirement for annual audit.

1. Executive Summary

Introduction

The National Social Marketing Centre (NSMC) commissioned the Public Health Support Team (PHAST) to undertake a process evaluation of the ten learning demonstration sites. The evaluation will be conducted in two phases. The first phase of the evaluation was carried out in the autumn of 2008. Interviews for the second phase are due to take place in April and May 2009.

The Phase 1 evaluation is an exploration of the 'how' and 'why' each site developed its project, and the learning achieved through applying social marketing approaches at the operational level.

Methodology

Each site in consultation with the NSMC identified three people to be interviewed. Those interviewed tended to be the project lead, the Associate assigned by the NSMC and another local stakeholder.

In addition, four strategic stakeholders were interviewed from the NSMC and the Department of Health (DH).

Topic guides were developed for the interviews in consultation with the NSMC. The two evaluators divided the sites between them and split the interviews with the strategic stakeholders in institutional pairs. Each interview was recorded and transcribed. The three interviews at each of the ten sites were analysed to identify specific issues and an individual report was written on each site as internal documents for the NSMC. This Phase 1 Report is a synthesis of the issues emerging from the individual reports on the sites and strategic stakeholders.

Emerging Findings and Issues

Embracing Social Marketing

- Many sites initially considered that social marketing was similar to the traditional methods applied in public health and health promotion. However, through their participation in the NSMC programme, the distinctive approach associated with social marketing has been recognised and has increased in its value. Many have enthusiastically embraced the model, which they judge to have provided a systematic structure for their professional practice.

- Social marketing is considered to be a valuable tool in helping to secure behavioural change in specific settings. However, it is also seen as a means to achieve wider goals that include adherence to the precepts outlined in the new commissioning agenda, promoting more effective community engagement, challenging professional practice and acting as a catalyst for organisational development.

- A few sites have engaged with community networks and have involved the community in the scoping and development stages, which has provided valuable 'insight' into the needs of the target audience.

- The importance of adhering strictly to the steps outlined in the benchmark criteria has been recognised by many of the sites.

Purpose of Demonstration Sites

- Analysis of the interviews suggested that there was a lack of clarity regarding the formal commissioning arrangement between the DH and the NSMC for the development of the learning demonstration site programme. This was mostly around the overall aim of the programme, which led to confusion over the national programme intent.

- The primary purpose of establishing the sites has become unclear. The aims of the programme state that the intention is that the sites should provide an opportunity to learn about the experience of implementing a social marketing project and to generate models of best practice with measurable health outcomes. However which of these should be the primary purpose of the programme appears to have shifted from the former to the latter.

- The emerging emphasis on the sites producing measurable outcomes appears to have shifted the agenda for some sites, placing greater emphasis on the delivery of results rather than an opportunity to capture learning through the process of implementing social marketing approaches.

Selection of Demonstration Sites

- Sites were recruited into the programme in a variety of ways. Some sites proactively contacted the NSMC, while others were invited to join the programme following a NSMC training event and others applied through a formal NSMC process. It therefore appears that the primary intention in the site-recruitment process was to attract projects from people who were enthusiastic about exploring the potential of the social marketing approach rather than a primary focus on their capacity to deliver a project that would provide evidence of its impact

- The criteria for selection appeared to be based on creating a balance of geographical distribution and a variety of topics with a focus on deprivation and health inequalities.

NSMC and Support to Sites

- The NSMC has grown its capacity to respond to local project needs and to assist projects by offering practical support and guidance through consultancy, training events, workshops, conferences and literature. The value attributed to these initiatives varies between the projects, but overall the assistance offered by the NSMC has been appreciated, with some elements considered to be of greater value than others.

- The resource most valued by the sites has been the allocation of consultancy support through a designated NSMC Associate. The involvement of the Associate is clearly crucial to the success of the programme.

- Many sites consider that the NSMC could play a valuable role in facilitating regional events to enable local projects at a similar stage in their development to share experiences and receive training.

- Some projects suggested there was a tendency for the NSMC to be 'London-centric'.

- The NSMC has taken over the management of one site due to organisational changes

Role of Associates

- Most of the sites valued the 'front-loading' of assistance through the allocation of an Associate that has helped get the project off the ground. Many of the Associates took on a crucial 'hands-on' role and helped to guide and support the establishment of the social marketing project.

- The sites reported that they valued the substantial increase in the number of Associate consultancy time offered by the NSMC and the additional support helped to drive forward the local projects. The initial allocation of ten days of Associate consultancy time for each site was considered inadequate by all of the sites.

- The sites all agreed that they needed Associates with a high level of experience and expertise in operationalising social marketing approaches. The Associates' involvement was useful to monitor the early implementation of the projects and provide local and individualised training as necessary. In the few cases where the Associate was less experienced and had less time to devote to support the sites the demands of other priorities on project leads contributed to project drift.

- Effective collaboration between the project lead and the Associate had undoubtedly been a key to success. Where a good working relationship has evolved, mutual respect has grown and it appears that the project has too.

- Associates who were contracted in a freelance capacity were generally more able to provide a flexible response to the needs of project leads.

Resources and Sustainability

- Most, but not all, sites were based in the Public Health Directorate of Primary Care Trusts (PCTs). The amount of time project leads could commit to managing projects varied but all considered that the time commitment far exceeded their original assumptions. The leads also reported that they felt that they could not rush the process if they were to achieve the desired results.

- The degree of senior management support from within a PCT varied considerably. The support and engagement by the Director of Public Health was regarded as important and particularly effective where the post was a joint appointment with the local authority.

- The support and involvement of senior management was considered crucial by many to overcome obstacles that emerged.

- Each project required additional resources to implement their project, the source of which varied between sites. For some sites the time required to identify and secure resources often detracted from the business of developing and delivering the project.

- In some cases the NSMC has been instrumental in assisting sites to access additional resources.

- A few sites are already looking towards the long-term sustainability of their projects with the hope that some may be embedded in the mainstream activity of their PCTs. A few sites have undertaken a risk assessment and acknowledge that if NSMC funding were to be withdrawn, they would be concerned about the commitment locally to sustain the programme. Others are hopeful that the NSMC can help to identify support as they plan their exit strategy when the NSMC terminates its involvement.

Commissioning and Working with Third Sector and Commercial Agencies

- The restructuring of PCTs to strengthen their commissioning role and create clearer internal separation from its provider status has implications for the commissioning and delivery of social marketing initiatives, particularly if they are to become a commissioning only entity and not a provider of public health programmes.

- A spectrum of relationships between PCTs, commercial agencies and the third sector appears to be evolving with the degree of PCT involvement varying from a close partnership to one that is more distant. However, such engagement is still in its early stages for many sites.

- If the PCT leads are to commission specific elements or the project management of the social marketing project as a whole to external agencies, a concern of many projects is how to ensure that experience and expertise of social marketing is not lost locally, but is embedded through the collaboration between the PCT and the commercial/third sector agency commissioned to undertake the social marketing project.

Working in Partnership with Stakeholders

- The sites worked with a variety of different stakeholders, which depended upon the nature of the issues that they were focusing on and the locality. Some sites reported difficulty in attracting and sustaining the involvement of relevant stakeholders for a wide variety of reasons.

- The degree of involvement of local communities and representatives of the 'target audience' varied between projects. Some worked very closely with the local community and other key partners as part of a shared enterprise, others were considerably less engaged.

Evaluation of Sites

- The majority of sites recognised the importance of an evaluation strategy, but many had not established one at the beginning of their project. Many reported that they required assistance with this aspect of the work and were grateful that this would be available from the NSMC. One project considered that the NSMC should have provided more support for this aspect of the project's work from the outset.

- A few sites raised concerns about the rigour of the local scoping exercise. Due to a lack of expertise in the area of research, a few leads voiced concerns about the ability of the sites to know what was robust and valid research for the scoping phase. For example, what was too much, what was too little, and what was the appropriate methodology?

- There were limited links made with academic institutions that could provide evaluation support and the sharing of knowledge with sites. One site had a strong partnership with a local university and valued the assistance provided by a local professor with expertise in social marketing.

What Helps and Hinders Implementation

- The sites have identified a wide variety of factors that have helped and hindered the development of their projects. These have been analysed under several categories which are summarised below and elaborated in the main report.

What helps	***What hinders***
• valuing and commitment to making the social marketing approach work locally	• scepticism about the approach and its ability to deliver innovative and effective interventions
• dedicated local project leadership with the necessary time and resources	• allowing the project to drift often due to a lack of local leadership
• support and engagement from senior management	• absence of support and engagement from senior management
• expertise of an Associate/consultant	• limited knowledge of and access to social marketing expertise
• adhering rigidly to the benchmark criteria	• using inexperienced researchers or other support staff when applying the benchmark criteria
• establishing a committed project steering committee with a clear SMART action plan	• a steering group that changed during the project and lack of a clear SMART action plan
• identifying and working effectively with key stakeholders. A stakeholder analysis undertaken at the beginning.	• resistance to involvement by key stakeholders, working ineffectively with stakeholders, which results in project drift. Lack of stakeholder analysis
• involving the local community and the target audience	• limited or late engagement with the community and target audience
• an effective communication strategy	• limited or nil acknowledgement and understanding of the need for a local communication strategy
• a rigorous scoping exercise	• a scoping exercise that is lengthy and not fit for purpose
• planning evaluation from the outset	• difficulty with conducting an evaluation due to lack of expertise and experience
• celebrating success – no matter how small	• trying to juggle the demands of the Department of Health national targets while responding to local needs

1. Purpose of the Document

1.1 This document provides a synthesis of the issues explored during Phase 1 of the evaluation of the National Learning Demonstration sites and strategic stakeholders.

2. Aims and Objectives

2.1 **Aim:** To assess the process for effective social marketing approaches in the scoping, development and implementation of the ten demonstration sites and with key stakeholders.

2.2 **Objective:** To undertake a robust process evaluation with the demonstration sites and strategic partners to identify models of effective practice.

3. Introduction

3.1 The National Social Marketing Centre (NSMC) commissioned the Public Health Action Support Team (PHAST) based at Imperial College to undertake a process evaluation with the national learning demonstration sites and strategic partners to 'capture learning surrounding the implementation of the national learning demonstration site social marketing projects'.

3.2 The evaluation comprises two phases; the first phase intends to capture learning from the scoping and early development phase, which has been completed. Six months later, the second phase evaluation will take place to evaluate the development and the implementation phases as the projects are coming to an end. This report presents the findings of Phase One.

3.3 The phase one interviews took place in October to December 2008 resulting in a series of individual site reports from which the main findings and issues have been identified and synthesised into this document. During the period of interviews, the projects were at various stages of development. One site had already implemented its interventions and was nearing the end of its activity as part of the national demonstration site programme. However, most had only just completed their scoping activity and were considering possible interventions. Consequently, the issues and learning that are identified in this report represent early experience.

3.4 The primary focus for the Phase One evaluation is an exploration of the 'how' and 'why' each site has applied the underpinning principles and features of the social marketing approach in their locality. In many ways this phase captures expectations of the potential of social marketing as well as the challenges of getting a project off the ground. However, the interviews at each site only represent a 'snap shot' of activity.

3.5 The evaluation has identified several key issues that have emerged during the scoping and development phase; those that have been enabling as well as those that have been more challenging. These elements have been summarised at the end of the report under the title 'What Helps and What Hinders'. It is anticipated that they will assist those who seek to establish a social marketing initiative in the future.

3.6 The intention of the evaluation was to gain an overview of the programme using the experiences of the sites, not to make a comparison of the sites themselves. In order to preserve anonymity the report does not comment on individual sites or refer specifically to individuals interviewed for the evaluation.

4. Methodology – process evaluation

4.1 PHAST was commissioned by the NSMC to undertake a 'process evaluation' of the programme. At such an early stage in its development the intention was not to make a judgement of its effectiveness, but to capture the ideas and expectations underlying the introduction of the programme and the reasons why the sites had chosen to get involved. The desire was also to discover what was being learnt at the sites as they familiarised themselves with a new concept and methodology.

4.2 In common with the general aim of process evaluation, the intention was to provide feedback to the administrators of the programme and other stakeholders about the progress of its implementation. It was hoped that knowledge gained through the evaluation would contribute to enhancing its on-going development and implementation, reflecting an action-research approach by creating an iterative cycle. It is hoped that what has been learnt through Phase 1 of the evaluation process will be of benefit to the programme overall and to the individual sites and will inform the focus of the second phase of the evaluation scheduled to take place in April and May 2009.

4.3 The NSMC had predetermined the format of the evaluation. Interviews were to be conducted with three representatives from each of the ten demonstration sites. The evaluators were not involved in the selection of the people to be interviewed. The local sites in agreement with the NSMC identified the representatives. For the majority of sites interviewees included the project lead, a local stakeholder and the Associate appointed to work with each site. In addition, four strategic stakeholders were interviewed from the NSMC and Department of Health. These representatives were identified by the NSMC.

4.4 PHAST appointed two people to undertake the evaluation who adopted a qualitative approach using semi-structured interviews. A generic topic guide for the site interviews and for the strategic stakeholders was prepared by the evaluators and the questions refined in consultation with representatives of the NSMC. The topic guide for the stakeholders and the Associate were slightly different. The guide for the interview with the project lead is presented in Appendix A. It should be noted that not all the questions were used at each interview, as the title suggests, they were used as a guide. The interviewing process adopted an approach that sought to maintain the flow of conversation to capture the narrative of the development of the project while highlighting issues judged to be significant for the individual site and interviewee.

4.5 Similarly, a topic guide was also developed in consultation with the NSMC for the interviews with the strategic stakeholders which is presented in Appendix B. This was also applied as a 'guide' with the flow of the interview influencing the issues that were explored in greatest depth.

4.6 The sites were divided between the two evaluators, with one interviewing the stakeholders and associates associated with six sites and the other four. The strategic stakeholders were also split, with one evaluator interviewing the two representatives of the Department of Health and the other the two representatives of the NSMC.

4.7 In most cases interviews relating to a specific site were conducted on the same day. Each interview was recorded on a digital voice recorder with the consent of the interviewee and the recording dispatched to a specialist transcribing agency through a secure internet link. The transcript of the interview prepared by the agency was sent electronically via the PHAST Office to the evaluator for analysis.

4.8 Each evaluator was responsible for the analysis of the interviews they had conducted. The process involved reading the three transcripts of the interviews associated with an individual site to identify the themes emerging from the combined material. Each transcript would be analysed separately to identify specific issues and the three compared. With only three interviewees at each site, the small sample made it relatively straight forward to tease out a narrative of the development of the site and identify any differences in perspective and complementary views. Although there was usually overlap between the interviews the analysis revealed that different interviewees may identify or give greater prominence to specific issues.

4.9 An individual report was prepared for each of the ten sites that synthesised the issues that had emerged specific to each project broadly in relation to the 'topics' associated with the original guide for the interviews. However the structure of each site report varied in response to the particular local setting, concerns and experience. Similarly, a separate report was written for each pair of strategic stakeholders. Initial drafts of the site reports were exchanged between the two evaluators to develop a shared understanding of the experiences of sites across the programme and to check for clarity and consistency.

4.10 The individual site and strategic stakeholder reports were prepared as internal documents for the NSMC. This Phase 1 Report derives from a synthesis of these twelve individual reports.

4.11 The findings and issues that have emerged from this analysis are discussed in the following sections.

Emerging Findings and Issues

5. Embracing the Social Marketing Approach

5.1 Interviewees were asked to summarise how they as local leads and the local projects understood the concepts associated with social marketing and have responded to its specific features.

5.2 While the majority felt that certain aspects of the approach were similar to other public health/health improvement models, there was a palpable enthusiasm for being involved in this innovative approach. The systematic methodology offered by the benchmark criteria and 'the total process planning model' was considered to be intrinsic to the success of the programme, and if used methodically, there was a belief that it would deliver what the local target audience wanted.

5.3 There appeared to be a mixture of motives for adopting the social marketing approach across the sites and interviewees. Some viewed its systematic approach as the means to secure behavioural change to achieve a specific health goal. Others saw its value as 'giving meaning to the commissioning cycle' whereby consultation fulfils its purpose and ceases to be a 'tick-box' activity, thereby facilitating more effective community engagement. One project hoped it would be a 'magic wand' to provide a solution to an issue they were seeking to address. It was also viewed as a catalyst for organisational development by encouraging individuals to challenge assumptions about their professional practice, which has led to a cultural shift within PCTs.

5.4 Project leads reported that the benchmark criteria emphasised the need for robust planning and scoping work before the development of an intervention. It validated the need for community engagement and for placing consumer insight at the heart of intervention design.

5.5 However, there were a few project leads that expressed a slight scepticism towards social marketing with an interrogation of the approach and its merits. They were unsure if it offered anything outwith existing health improvement models. One site felt that the true innovation would come as they began to use the principles of marketing in the development of the intervention and it was then that social marketing would come into its own.

5.6 It was emphasised that the approach was not 'a panacea for all ills' but a tool that had a specific emphasis on changing behaviour through the use of an innovative and structured methodology. It was clear that many sites see the validity of the approach and its relevance to the new PCT commissioning agenda.

5.7 A few sites expressed a tension between juggling the demands of meeting Department of Health nationally set performance targets and being responsive to the needs of their local communities. A social marketing approach may be labour and resource intensive and may only yield small results. However, these 'small' results may be improving the health status of those communities and individuals who are hard to reach and experience the most in terms of health inequality. The sites expressed that the prevailing culture of the NHS does not acknowledge or value the necessity of doing this type of detailed, targeted work which takes time.

6. Purpose of Demonstration Sites

6.1 The programme is seen, as an important vehicle to drive forward the social marketing approach within the NHS. However, it appears that a formal commissioning arrangement or extensive programme board was not in situ at the beginning of the programme development, which could have helped in the strategic development of the national programme.

6.2 The interviewees were unclear about <u>when</u> and <u>how</u> the Department of Health entered into either a formal commissioning or partnership arrangement with the NSMC for the development of the learning demonstration site programme.

6.3 There appears to be an existing tension in the expectations of the primary purpose in establishing the demonstration sites. Uncertainty has emerged as to whether the programme was primarily to explore what could be learnt from the experience of planning and implementing a social marketing project or to create models of best practice that demonstrate measurable health improvements through the application of a social marketing methodology.

6.4 Several of the local sites have conveyed concerns as the programme has shifted its emphasis towards more robust outcomes. This tension may be due to a lack of clarity in the initial agreement about the overall aim of the national learning demonstration site programme between the Department of Health and the NSMC.

6.5 The consequences of this 'tension' has caused ripples throughout the programme and has created unease for the individual sites who may have had to shift focus and not felt equipped to deal with these expectations. The change appears to have had an impact on the relationships between the NSMC and the individual sites, leading the NSMC to enhance its involvement to support projects to achieve their goals.

6.6 Since the programme's primary intent was not clear from the beginning, the majority of local sites did not commence with a robust evaluation plan in place, although some sites have now started this process.

7. Selection of Demonstration Sites

7.1 The way in which the individual sites were included in the programme has varied. Some were included through contact at a NSMC training event, others through a formal application process, while others took the initiative to approach the NSMC and were accepted on to the programme. Most, but not all, were proposed by Primary Care Trusts (PCTs)

7.2 In general, the NSMC appear to have selected the sites on the basis of a mix of criteria which include geographic distribution, a desire to focus on areas of deprivation and to ensure a variety of topics. This has led to the recruitment of the following sites and their selected topics:

• **Brighton & Hove PCT**	- breastfeeding
• **Dudley PCT**	- increasing fruit and vegetable consumption
• **Kirklees PCT and Kirklees Council**	- obesity
• **Lewisham PCT**	- smoking cessation support
• **NHS Norfolk and Great Yarmouth & Waveney PCT**	- chlamydia screening
• **North East Improvement & Efficiency Partnership**	- increasing school meal uptake
• **North Tyneside PCT**	- young people's kerb-side alcohol consumption
• **Stoke-on Trent Primary Care Trust**	- smoking during pregnancy
• **Stockport PCT**	- smoking cessation support
• **Tameside & Glossop PCT**	- breast cancer screening

8. NSMC and Support to Demonstration Sites

8.1 The oversight and support given to local site by the NSMC project team has been pivotal in ensuring local success and the team has acted as a critical friend to the local teams and their Associates. In one case the NSMC has taken over the management of a social marketing project.

8.2 Since the inception of the programme, the NSMC has grown its capacity to respond to the needs of the local projects, which have been particularly intense during the start up and scoping phase. This has included the employment of Associates to provide support and training as well as assistance for some projects to secure additional resources to support their local initiatives.

8.3 Overall, the sites reported positive working relationships with the NSMC team with some highlighting the role of key personnel who have been particularly helpful and supportive at the operational level.

8.4 The NSMC team was seen to respond effectively to local needs by providing training, theoretical guidelines on social marketing, conferences and networking opportunities. In addition, some of the documents and guidance produced by the NSMC were commented upon favourably. One site highlighted the value of a specific document, *A Simple Checklist for Commissioning Social Marketing Interventions*.

8.5 Some sites considered that they received most of the support they needed through their Associate. Some sites considered the NSMC could be more effective through facilitating more local networking and training opportunities. It was suggested that bringing together sites for shared learning events at both regional level and those at a similar stage of development would facilitate mutual support through sharing experience.

8.6 The experience of the sites has indicated that there is also a need for the NSMC to provide practical guidance on 'how to do social marketing at the operational level' in language that is accessible to those who may not have a public health or health promotion/ improvement background. Some of the sites felt that the approach guidelines were theoretical and there was a real fear by some sites that *"we may fail"* due to a lack of knowledge and expertise in using the benchmark criteria. Practical guidance in user friendly language on how to operationalise the benchmark criteria was felt to be an area worthy of further development by the NSMC.

8.7 Some projects suggested that there was a tendency for the NSMC to be somewhat 'London-centric'. A view perhaps reinforced by maps in its published documents that place some sites in different locations from where they are actually situated (e.g. Stockport is positioned south of Liverpool on the map rather than south of Manchester).

8.8 There was also a feeling conveyed by some interviewees that the in its eagerness to establish the programme, the NSMC appeared to have rushed its approach to recruit the sites. A formalised system of recruitment into the programme was considered by some interviewees to be appropriate, where the NSMC could have outlined the operational process in more detail. It would also have been helpful to ensure that each recruited site had significant engagement and necessary investment by their senior management team, to optimise success.

9. Role of the Associate

9.1 The NSMC developed an 'Associate' model where an individual with specific expertise and experience of undertaking social marketing approaches at an operational level would be allocated to each site. The majority of sites have evaluated this model of support as highly effective and have valued the expertise and contribution of their Associate.

9.2 At the start of the programme, the NSMC provided funding for ten days of external social marketing consultancy for each site through the appointment of an Associate. Most sites stated that the time and resources that the projects required was far greater than they had anticipated and they felt they lacked the capacity to undertake the work involved appropriately. Consequently, the majority of sites have emphasised the need for intense consultancy support in the early stages. It was evident that the original allocation was not enough to help develop the programme locally.

9.3 Some Associates hold a position within the NSMC and include their site-specific support duties as part of wider responsibilities. Consequently, they have more constraints on the time they can allocate to individual sites. However, they benefit from the mutual support that comes with being based with the core NSMC team. Other Associates were recruited by the NSMC on freelance contracts. For some sites, this provides greater flexibility and an improved responsiveness to the needs of local sites. Some Associates have to travel significant distances (e.g. the Associate supporting the Stockport sites travels from Bristol), while others are more local and bring knowledge of regional issues. There is a tendency for many projects to see their Associate as an independent resource that is generally disassociated from the NSMC.

9.4 For most projects the allocation of Associate support was rapidly increased - in one case from ten to thirty two days. In the early stages, many of the Associates played a significant role in supporting the scoping phase. Where there was limited input from an experienced Associate at the start of the scoping exercise, it appeared that some sites experienced project drift. Many Associates moved from a 'facilitative/advisory role' to a more 'hands-on' project management role. In some projects, the Associate has assumed a less intense role as the project lead has gained confidence and expertise in social marketing, particularly if the lead has been able to commit more time to their project.

9.5 For the majority of sites, the Associate is seen to be the cornerstone for making the project work locally. This is further enhanced if the Associate has previous experience of working on social marketing approaches at an operational level. Where the Associate has the dedicated time, skills and experience in social marketing, the sites appear to progress project development more effectively. Those sites that are supported by Associates without the necessary time, skills and experience appear to experience project drift at a much higher level.

9.6 One site emphasised the need for the local project lead to maintain overall control of the management of the programme. Allowing an external Associate to carry the project locally placed the sustainability of the work at risk when the external consultant eventually left with the learning. Consequently, such sites will lose that learning and will not have embedded social marketing capacity in the organisation.

10. Resources and Sustainability

10.1 The majority of sites are hosted within the Public Health Directorate of a PCT. However, there was a marked difference in the amount of time the PCT demonstration site leads could allocate to manage the development of the social marketing project. There was also a variation in the degree of enthusiasm expressed of the merits of the approach which in part may reflect the judgement of the value of investment of time and resources.

10.2 The majority of leads reported that involvement in the programme was very time consuming and that juggling the project development within an already over stretched portfolio of work. Many relied on the local Associate to provide additional project management support. This was often cited as a source of frustration and discouragement by the project leads who felt their lack of capacity initially slowed down project progress. Where the local project leads had dedicated time to develop the project, it appears that the projects progressed more efficiently and avoided project drift.

10.3 For some project leads they were able to devote increased time to the initiatives as the projects progressed. This seemed to be associated with their growing understanding and commitment to the social marketing process and the developing relationship with their Associate. Where the Associate was able to invest time and energy in the project and build a close working relationship with the project lead, local 'ownership' grew. Regular communication and participation in shared activities such as consultations with local communities and training helped to cement the collaboration

10.4 In some projects the commitment of the project lead to the social marketing initiative strengthened and their workload increased without any reduction in other responsibilities, which were sometimes significant. This meant that the local lead felt guilty or frustrated at not being able to drive forward the project in the way that they considered necessary.

10.5 Where sites had a project lead with previous experience of rolling out public health interventions, who had dedicated time and was "senior enough" to engage and elicit the necessary support from senior managers, the project was more likely to progress in a timely manner and avoid project drift.

10.6 The experience of sites varied in their relationship with the PCT senior management team, and the Director of Public Health (DPH). Some reported a significant lack of engagement, while others indicated that their DPH was instrumental in promoting social marketing throughout the organisation. At a few sites, the DPH was a joint appointment between the PCT and local authority, which clearly enhanced collaborative working.

10.7 Where senior managers were involved and supported the programme locally, the project leads reported greater access to financial resources, a structure for unlocking potential barriers in partnership working or other challenges locally, and a feeling that the PCT integrated the social marketing approach as part of their core business and not as an optional add-on.

10.8 Due to a lack of local resource for project implementation, several site leads and their Associates were involved in local fundraising activities, which often detracted from the business of programme development. Some leads felt that projects were being run on a 'shoestring' and were reliant on short term and non-recurring pump-priming monies from the NSMC. Sites also referred to the 'opportunity costs' associated with investing in social marketing initiatives in a specific area, which meant that other areas did not receive attention.

10.9 As well as addressing local funding issues to ensure sustainability, sites mentioned the need for the NSMC to negotiate appropriate exit strategies to ensure projects were left with adequate support. It was suggested by one site that if the NSMC was to disinvest its support of local projects, or if additional funding sites had secured was withdrawn, many projects would be unsustainable in the long term.

10.10 While some sites struggled with finding resources to implement their projects, several sites were already looking ahead to see how they might embed their programmes into the mainstream activity of their PCT and through joint initiatives with their local authority. One project saw the potential of social marketing as the primary vehicle to deliver 'World Class Commissioning'.

11. Commissioning and Working with Third-Sector and Commercial Agencies

11.1 Several PCTs commented on the significance of current restructuring within PCTs that has moved their role from a provider of services to strengthening their commissioning role. This has implications for the delivery of social marketing projects and building expertise and experience within the organisation.

11.2 There appears to be the development of a 'spectrum' of relationships and activity between PCTs and agencies commissioned to undertake social marketing projects. Some PCTs retain project management 'in-house' and only commission agencies to undertake a specific task (e.g. creative design of publicity) while others saw the potential to commission an agency to take on the whole project from scoping through to intervention. Enthusiasm for retaining project management within the PCT varied between the sites. This may reflect their understanding of the concept and methodology associated with social marketing.

11.3 For several PCTs, the NSMC sponsored initiative is not the only social marketing project in which they are involved, so the organisation as a whole and senior management more readily embraced the project. Nonetheless, even in such cases, it was suggested that not all involved in the PCT were committed to the approach. Developing an organisational culture predisposed to social marketing would take time and would be dependent upon evidence that it made a difference.

11.4 One project that favoured the use of external agencies emphasised that the long-term involvement of commercial organisations was not sustainable and that their appointment should be coupled with a strategy of building local capacity to ensure that experience and skills were embedded within the PCT. It is interesting to note that a least two PCTs consider that they have a responsibility to offer training on social marketing to other organisations. One PCT has appointed a social marketing lead to co-ordinate work across the organisation.

12. Working in Partnership

12.1 Working in partnership with a wide variety of stakeholders is intrinsic to the social marketing approach. The majority of sites were in the early stages of stakeholder engagement. Delays in progressing projects were attributed to the difficulty in engaging the relevant stakeholders, particularly those who were seen to be important in the delivery arm of the project, e.g. health professionals and local authority colleagues.

12.2 In one project, representatives of the stakeholder agencies tended to change and there was often a lack of adequate handover with consequent disruption. This necessitated investment in effective communication and constant attention to 'winning of hearts and minds'. Some sites brought together stakeholders who were local competitors in delivering a service. This required the project lead to exercise skill to avoid conflict and use the situation to encourage 'healthy rivalry', the exchange of ideas and the development of creative interventions. The design of a structured programme to test the impact of different interventions at different locations has offered the potential for each stakeholder to channel their competitive energy to optimise the success of an intervention to meet the overall goals of the project.

12.3 There was a tendency of many sites to engage in an approach to partnership working that focused predominantly on working with other public sector bodies and with health professionals. In some cases this was to the detriment of working with the third sector and other community and commercial networks, missing an opportunity to broaden their influence with other agencies and link the programme with the wider community.

12.4 Some sites still appeared to see the service as a 'health', or occasionally a 'health/local authority' service. The reluctance to engage with non-health partners risked a self-imposed limitation on creative opportunities in project design and delivery. This may reflect a prevailing attitude within the NHS system that inhibits innovation in stakeholder engagement. It may also have been due to a view that it was easier to start with a smaller, but defined focus and to broaden the settings in due course.

12.5 Some sites reported limited engagement and involvement of their consumers/target audiences in the strategic steering groups and occasionally in the scoping exercise. However, many recognised that this was a weakness and were taking steps to remedy the situation.

12.6 One site felt that they were limited by having to work through 'traditional partners' and often the people who came along to the meetings lacked the necessary seniority to make decisions relating to the project, which slowed down the process. They also reported that some partners were felt to be 'institutionalised' in that they were resistant to new methods of working and innovations. This was a source of frustration as the PCT policy suggested that engagement with these partners was important to the process, even though they were resistant or unwilling/unable to help with strategic delivery. The third sector may have been a more effective partner, but it was felt that the prevailing culture of the PCT prevented an exploration of this option.

12.7 Other projects had successfully established good relationships with local communities. For one project, the investment in a close partnership with the local community had softened local cynicism towards consultation and renewed confidence in working with the PCT. This commitment of the PCT to effect change in a neighbourhood and invest resources in a local project enhanced the pride of the local community. This was the product of tangible evidence that the PCT had listened to local people and were genuine partners in a local initiative.

13. Evaluation Strategy

13.1 The majority of sites recognised the need for an evaluation strategy, but many reported the lack of time, resource and skills to undertake this type of work, particularly those sites that may need to look at developing proxy indicators. One site emphasised their disappointment that the NSMC had not provided more support to the PCT in developing a robust evaluation system from the very beginning. The training that was provided was considered to be insufficient to meet local needs and delivered too late in the project's development.

13.2 There was a general lack of engagement with potential academic partners and most sites relied on their Associate for expertise to assist them in implementing the social marketing methodology and to provide advice on undertaking local research. One site lead acknowledged that they had limited research skills and she voiced concern about the robustness of the scoping report. She questioned its academic rigour, but felt that due to her lack of experience she could not challenge it effectively.

13.3 A few Associates highlighted that their core skills were not in the use of appropriate research methodologies. The NSMC may need to consider a system of quality control to ensure that local sites are engaging and using research methodologies appropriately and effectively. However, one site had linked into a local university social marketing professor and felt it had brought huge benefits to the project by providing access to a wider evidence base as well as 'insight' from the professor's previous work of delivering programmes at the operational level.

14. What Helps and Hinders the Implementation of a Social Marketing Project

14.1 The process evaluation has highlighted a wide variety of factors that interviewees consider have helped or hindered the introduction and application of social marketing during the initial development of the demonstration sites. These are listed later in this section. It is anticipated that by identifying those factors that have impacted on the process of local programme design that future projects will benefit from the sites experiential learning.

14.2 Inevitably some of the obstacles listed under factors that hinder implementation are simply the obverse of those listed as factors that have helped. Nevertheless, they reveal what the individual projects have identified themselves during the initial stages of the development of a social marketing project.

14.3 Some items that hinder are complemented by statements as to how these can be overcome derived from the experiences of the projects within the programme. This is indicative of the learning being generated within the projects as a result of their participation in the NSMC's social marketing programme.

What Helps

Appreciation of the Value of Social Marketing

- Encourage local stakeholders to view social marketing as an approach that will help to deliver the core business of the organisation.
- Recognise and communicate to the local system that it is a legitimate way of working and worth the effort, not an 'add-on' or experiment.
- Build learning and capacity in using the social marketing approach locally to ensure that it becomes part of everyday working practice and is embedded in the culture of the organisation.

A Project Lead for whom the project is their primary responsibility

- Allocate sufficient time for the role of project lead to take on overall responsibility for programme delivery within an explicit accountability structure. Don't short change the process by asking someone to do this with limited time.
- Ensure that the project lead has sound project management skills and experience of implementing public health programmes at the local level.
- Identify someone who has seniority within the local health system with sufficient authority to work politically within the organisation to unblock barriers as and when they arise.
- Encourage a close working partnership with the external Associate/Consultant who will bring expert knowledge and experience in social marketing to the project.
- Retain the experience of social marketing gained by the project lead and others locally. Ensure the learning is not experienced solely by the project lead, widen out the learning to other members of the organisation. This helps to build capacity and ensure sustainability of the approach.

Support from Senior Management

- Ensure that there is active support from the Director of Public Health and other senior managers within the organisation from the outset. Get this commitment before you start the project.
- Couple this with the commitment of resources.
- Secure the commitment of the senior management team to overcome obstacles that the project may experience and to assist in building upon the success of the local programme.
- Alert senior management to the fact that there may be resource or structural challenges that they will need to consider at an early stage.

- Make sure that there is an agreed system of monitoring and communication with and between senior management partners.
- Feedback progress on a regular basis to ensure ongoing commitment. Highlight successes no matter how small but also communicate the obstacles or frustrations as they may be able to help.

Expert Support from an Associate/Consultant

- Ensure there is access to external social marketing support if a local social marketing lead does not exist or if the organisation has limited experience in utilising the social marketing approach.
- Appoint someone who has expert knowledge of the theories of social marketing as well as previous experience of supporting local projects to operationalise the benchmark criteria.
- Negotiate flexibility in terms of the Associate's availability and the tasks to be undertaken.
- Front-load investment from the Associate at the beginning to build local knowledge and capacity in using the approach.
- Develop a close working partnership with the Associate, who should provide the team with an expert 'wrap-around' service.
- Consider how the local team will work with the Associate, if they do all the work, they leave with the learning and no capacity locally will be built.
- Retain ownership of the project and process - the site lead should always be in control and provide local leadership in partnership with the Associate.

Allocation of Sufficient Time and Resources

- Be resource ready - undertaking a social marketing project is not cost neutral, it should be seen as helping the organisation to meet their core business responsibilities.
- Plan ahead for any events that will require financial resources and communicate at the start to the senior management team about the potential costs. Additional costs may include dedicated project management time, external consultancy costs such as an Associate, an external communication strategist, costs of undertaking scoping research and developing an intervention such as service redesign.
- Communicate at the start to the senior management team that using the approach cannot be done without appropriate funding. Without financial commitment, there is a huge risk to the project.
- Ensure adequate funding to avoid the project team having to spend a considerable amount of time fundraising for additional resources that will probably be non-recurring, thus resulting in a cycle of continual fundraising activity for the project lead and Associate.

Establishing and Adhering to the Benchmark Criteria

- Ensure the project sticks rigidly to the benchmark criteria. A key role of the Associate is to develop local understanding of the social marketing approach and supporting its application at the operational level.
- Implement an 'action > reflection cycle' to build on what is learnt through activity to plan, research and reflect to inform future action.
- Learn from 'mistakes' and adopt a no blame culture and see every event as an opportunity for learning.
- Collate the evidence and then take the leap into development. There may be hesitation in taking the next steps but sites will have points where they will need to take that informed leap into the next stage. As necessary, the Associate should provide the necessary nudge and prompt to encourage the leads to take informed risks.
- Commit to the principles and methodology of the social marketing model with the expectation it will deliver.

Establishing a Project Steering Group

- Create a small strategic steering group that will be accountable for project delivery. This group will help to build a sense of local ownership and a shared commitment and enthusiasm to deliver.
- Appoint a designated lead who will act in a leadership role to ensure an agreed action plan with SMART objectives.

Identifying Key Stakeholders

- Undertake a formal stakeholder analysis at the beginning of the project and identity key players which should include strategic and operational personnel.
- Show the partners how being involved will help them with their portfolio and goals (i.e. 'ticking their boxes').
- Involve the right stakeholders from the beginning to avoid resistance in the future and enhance the potential for success.
- Be creative and think laterally about who to include, do not be bound by traditional stakeholder partners or limit your choice to public sector organisations and health/social care professionals. Consider the third sector, arts and recreation, the media and other partners who have a stake in the issue.
- Decide how and when stakeholders will engage in the process. Always ask if the 'right' people are around the table and if not, resolve the 'gaps' before proceeding.
- Invest time in building partnerships with stakeholders, it is a crucial part of the process and will save time, sweat and tears in the future.

- Make sure your sales force (i.e. those who will promote your intervention) and your delivery people are there from the beginning. They need to be engaged from the start and it is no good waving research findings at them at a later stage, this will only foster resistance.
- Organise regular opportunities for stakeholders to meet and share ideas.
- Ensure that there is a key action plan at the end of each meeting and make sure that points are actioned between meetings to reduce the risk of project drift. There should be an overarching strategy describing the work that you will undertake and what you hope to achieve.
- Communicate information and developments regularly to stakeholders to avoid partner disengagement. Stakeholders may lose their interest and motivation if there is no evidence of progress or tangible outcomes.

Involving the local community

- Invest time in building local community relationships to win trust. It takes time and effort, but if utilised correctly, community networks can help in delivery.
- Utilise the process of social marketing to give legitimacy to the process of consultation within the commissioning cycle and support those with who are already committed to active community engagement.
- Tap into community networks where they exist and make sure they are included from the start. As with other stakeholders, deliver tangible outcomes or risk losing interest and disengagement.

An Effective Communication Strategy

- Establish a communication strategy that runs in parallel to the wider work of the project. This may require commissioning an external communication consultant to provide expert guidance.
- Create a formal system and communicate regularly including the successes, no matter how small. Also communicate the challenges as partners may be able to unlock them. Communication keeps partner commitment to the project ongoing.

A Rigorous Scoping Exercise

- Appoint someone to carry out the scoping study that has an understanding of social marketing methodology and a history of undertaken robust research.
- Ensure that the scoping exercise is robust and well informed, do not cut corners. It can take time and is labour intensive
- Critically review the findings. Acknowledge that although the findings may feel intuitive and may not yield surprises, it is creating the baseline of evidence and credibility that will help to sustain the project. It should inform subsequent practice and project design.

- Resist being defensive and trust what the target audience is saying if the findings challenge your assumptions or professional assessment. The scoping exercise may yield surprises, particularly around existing services or interventions. Respond accordingly.
- Commit to a continuous process. Scoping should be seen as a tool that will be referred to and utilised at various points in the project. If the results are ambiguous, resist guessing and go back to the target group for clarification.
- Carry out a literature review on the topic - it may yield opportunities for academic partnerships or insight into existing interventions.

Planning Evaluation from the Outset

- Begin with the end in mind. Where possible, gather the baseline data and decide how the impact will be measured. There may be a need to use proxy measures.
- Identify potential allies in academic institutions who may be interested in entering into an evaluation partnership with the project.
- Seek expert advice - this may require additional resource.
- Create a clear and rigorous system for the collection of data and monitor collection to ensure validity
- Ensure that those individuals who will be collecting data have the appropriate training, which should increase the quality of data collected.

Celebrating Success

- Celebrate all wins, even the small ones with all those involved. The approach is unlikely to change the world or the issue but it can make a difference.

What Hinders

Lack of Time

- Avoid allocating the task of project management to someone who is already overloaded with commitments, otherwise both the individual and project risk being set up to fail.
- Resist short changing the methodology by setting unrealistic timescales. Contact may be made with other projects to design appropriate project plans.
- Don't underestimate the time it takes. Scoping can take up to twelve months to complete. Don't rush!

Limited knowledge and Experience of Social Marketing

- Avoid the assumption that social marketing is essentially the same as traditional public health interventions but under a different name. The approach demands the application of a rigorous methodology that is similar to other approaches but its underpinning emphasis on marketing approaches makes it different and innovative.
- Absence of expert support can undermine confidence and effectiveness and leave a project lead isolated. Access to an Associate should make it easier to acquire the necessary knowledge and skills to manage a project.
- Fear of failure can lead to inaction and a resistance to take risks, which are part and parcel of embracing the journey of learning a new approach. Challenge the project to take risks and to not get bogged down, particularly during the scoping stage.
- Don't anticipate that using a social marketing approach will be easy. It will be challenging but it has been described as liberating and invigorating by those who have used it successfully.

Absence of Support from Senior Management

- Lack of active senior management support and engagement from the start risks the project becoming marginalised, barriers will take longer to overcome and the potential for the project's sustainability will be diminished.
- Underestimating the importance of getting senior managers involved from the start.

Ignoring the Target Audience

- Ignoring the local community or their concerns will undermine the chances of success as they may reject an intervention as not relevant to their needs or concerns.
- Underestimating a community's cynicism towards invitations to be involved in projects initiated by PCTs and local authorities risks exacerbating their experience of 'tick-box' consultation.

Inexperienced Researchers

- Avoid using inexperienced researchers with a limited background in health improvement, health promotion, community engagement or public health. Understanding the theory and methodology can at first seem difficult for a novice.
- A poor quality scoping report will have missing gaps of information and is of questionable value and application. The scoping report is the baseline of data that will act as the foundation for the local programme development it needs to be robust.

Being Defensive or Resistant to Change

- A defensive attitude risks alienating your target audience. If you ignore what they say or consider that 'they've got it wrong' and do not act on their advice there is no incentive for them to share their views.
- Resisting change because scoping reports challenges practice and service delivery risks ignoring information that indicates that existing services are not targeting and meeting needs effectively.
- Believe that your consumers have the answers and act on them.

Loss of Experience and Expertise

- Allowing individuals to leave with the learning they have acquired misses an opportunity to build local capacity.
- The lack of a long-term strategy to embed the learning acquired from working with external agencies risks diminishing the PCTs potential to manage effective social marketing projects in the future when the external consultants/experts leave.

Taking Stakeholders for Granted • Without constant support and the delivery of strategic actions the stakeholders or members of a 'solutions group' will potentially lose interest and disengage. • The absence of an effective project management plan that provides tangible results risks undermining confidence in the project.
Project Drift • Insufficient attention to the development of a project plan or management of an initiative risks a project drifting for a wide range of reasons, which will undermine its effectiveness. If issues are not identified quickly and dealt with effectively the project may fold with consequent loss in confidence in future initiatives.

15. Study Limitations

15.1 This evaluation project report seeks to faithfully represent a synthesis of the views and issues that have emerged during the series of interviews conducted for this study, however there are inevitable limitations associated with this exercise.

15.2 The design of the study was essentially determined by the NSMC who commissioned the study, so a degree of objectivity may be compromised in that the evaluators did not choose who was to be interviewed. Nonetheless, the project lead and Associate would have undoubtedly been included in the evaluation of each site. It is in the selection of other stakeholders where there may have been more variation. The constraint of only interviewing one additional stakeholder at each site inevitably biases the perspective on the project and for that stakeholder to be chosen by the site in consultation with the commissioning client also risks bias in the evaluation. Only one site included a interviewee from the local community that represented the 'target audience' for a project.

15.3 Although the evaluation of the sites took place at an early stage of their development some projects had already experienced changes in the staff. In at least two projects key figures that had been instrumental in securing their site's inclusion in the programme had left the PCT or were on long-term sick leave. Consequently, the evaluation may have missed insights from individuals who could have shared their perspective on the 'how and why' a project was initiated.

15.4 Understandably the NSMC were eager to explore a number of issues through the evaluation. This generated a rather ambitious topic guide for the expected duration of the interviews. Originally interviews were planned to last 30 to 45 minutes, but virtually all ran for an hour with the consent of the interviewee. While this covered most of the planned topics, it was not always possible to explore each topic in depth.

15.5 Although the involvement of two evaluators offers advantages to such a project, by sharing the work and providing complementary perspectives, inevitable differences introduces a degree of variation in the application of the topic guide which could compromise reliability. It is possible that each interviewee has introduced a degree of bias in the priority they have given to following certain lines of inquiry as they have applied the shared topic guide.

15.6 The two evaluators have maintained close communication and cooperation throughout the process and shared the information they have obtained through the interviews. However, they have not shared a common experience across the sites. Consequently, some issues may have appeared more prominent within the selection of sites each interviewer has evaluated. Nonetheless, every effort has been made to ensure that findings have been appropriately synthesised without compromising key issues emerging from individual sites.

15.7 This evaluation represents a 'snap shot' in time at a particular point in the development of the NSMC's programme. However, each project has been at a different stage in its own development so the issue that have emerged reflect concerns that are relevant at a particular point that may not match that of another project. As a result, the issues identified in this report cover a relatively broad phase of development from those which have just completed their scoping activity and are contemplating possible interventions to one site that has completed its project.

15.8 The interviews took place during the autumn of 2008. However, by the time this evaluation is shared with the NSMC and its stakeholders the programme and the individual sites will have reached a new stage in their development. Consequently, the value of this report may lie in its record of the issues with which the sites have wrestled in the early stages of their implementation of a social marketing project and a basis for comparison with the findings of the Phase 2 evaluation when the projects are nearing completion.

16. Conclusion

16.1 Each site has approached the concept and discipline of social marketing with initial enthusiasm, valuing the insights they have gained through their participation in the NSMC programme. The degree to which social marketing is considered to be radically different from traditional methods in public health and health promotion has varied across the sites, but for those who have recognised its potential and applied its methodology with rigour it has been a positive experience.

16.2 The majority have been daunted by the time involved. Project leads in particular consider that the investment required has compromised their other responsibilities where their organisation has not reduced their duties to accommodate the additional work. This experience, coupled with the other demands associated with implementing a social marketing project, has highlighted the importance of allocating sufficient resources to undertake the systematic approach associated with the 'the total process planning model'.

16.3 Ensuring senior management 'buy-in' from the outset, particularly from the Director of Public Health is considered to be of key importance, not only in getting a project off the ground, but in overcoming institutional obstacles and sustaining its work in the long-term.

16.4 For many projects social marketing has radically changed the perception and practice of community engagement, shifting consultation from a 'tick-box', tokenistic activity to a process of active listening that has a genuine impact on the conception, design and implementation of interventions to influence behaviour change. Social marketing appears to have enhanced the relevance of 'the commissioning cycle'.

16.5 The majority of sites have valued the role of the Associate assigned by the NSMC. Their expertise and time have been instrumental in the development of the projects to ensure that the 'the total process planning model' has been implemented with rigour and that project leads have been supported throughout the process. However, the level of support they have provided had to be significantly increased during the early stages of the programme to respond to local needs and has led to the view that such projects require substantial 'front-loading' with such external expertise from the outset.

16.6 Many sites have been dependent upon external funding to undertake their projects which have required additional work. In a few cases the NSMC has been able to support sites in their efforts to secure additional resources dependent upon the issues they are seeking to address.

16.7 The evaluation also reveals the tension between the degree to which a social marketing approach should be managed 'in-house' or led by an external agency commissioned to deliver a project from inception through to intervention. A key concern is how to embed an understanding and the experience of social marketing in the culture and practice of a PCT for the long-term.

16.8 Evidence from the interviews reveals uncertainty about the expectations of the programme as to whether the emphasis is to provide an opportunity to learn about the experience of implementing a social marketing project or to generate models of best practice with measurable health outcomes? Some of the confusion and the tensions arising in the implementation of many projects may derive from a lack of clarity at the outset of the programme and the way in which the sites were selected. A more explicit statement of purpose coupled with a systematic approach to site selection may have led to a different selection of sites if the primary aim is to generate examples of 'best practice' to demonstrate the impact of social marketing on behaviour change.

16.9 A new programme will inevitably learn from its experience and it is hoped that this report will contribute to this process. It is clear that the NSMC and all the individual sites have invested a significant amount of time, energy and resources to create innovative projects to address pressing health issues in each of their locations. It will be fascinating to discover the impact of the interventions that have emerged when the Phase 2 evaluation is carried out.

17. Appendices

Appendix A

National Social Marketing Centre – Learning Demonstration Site Evaluation

Process Evaluation of Demonstration Sites – Phase 1 (Autumn 2008)

'Topic Guide'

REGIONAL LEADS

Aim:

- To capture learning surrounding the implementation of the social marketing projects

Objectives:

- To capture understanding and experiences of the 'how' and 'why' a project operates as it does
- To identify general indicators of intended outcomes for each site

Interviewees:

Three interviews at each site:

- The PCT lead/project manager
- NSM Centre associate
- Local stakeholder – to be agreed with assigned member of NSM Centre

All to be interviewed individually on a single day

Format: semi-structured interviews of 30-45 minutes

Interview: Generic Outline of Themes for Phase 1

Introduction

- Brief explanation of interviewer's background and role
- Invitation to interviewee to summarise their role in relation to the local Social Marketing Project
- Agreement on duration of interview/finish time
- Statement of purpose of the interview
- Brief summary of ethical issues re confidentiality etc

1. Attraction, Need and Motivation

1.1 Why did 'your organisation' wish to get involved in the Learning Demonstration Site (LDS) Initiative?

- What did you hope to get out of the relationship?
- What were your expectations of becoming a LDS?
- How did you expect the process to work?
- How has it compared to what you thought? PROBE: into whether this difference is positive/negative and why

If this project had not been a LDS, how would it have worked?

- What things would you have done differently?

2. Making a Difference

2.1 What do you hope will be achieved through the project's participation in the LDS programme?

Probe into what was expected from participation in the scheme in general

Possible supplementary questions:

- Clarification of aim(s) and objectives – drawing upon documentation received before the interview
- What local needs/issue(s) are you seeking to address through this project?
- What evidence will you be looking for to see if your project has made a difference?
- When do you hope/expect to see evidence of the impact of your project?
- Who is your target audience?
- What proportion do you expect to reach?
- What change do you expect to have?

Ask those who are in the intervention stage:

- To what extent has the program delivered as intended?
- Have there been any unintended outcomes?

3. Context

3.1 What have been the most important local factors that have influenced the way you have designed your project?
Also probe the important 'general' factors – rather than just local ones.

3.2 What makes these factors so important in determining the project's design and plans for implementation?

Areas to explore depending upon response:

- Elaborate on 'external' factors' – political, economic, social, cultural
- Elaborate on 'internal factors'- structures and relationships within the project organisation

4. The Influence of Social Marketing

If you were to explain social marketing to a colleague who had never heard of it, what would you say? How would you describe it?

4.1 What difference have the following concepts of the 'social marketing' approach made to the way you have sought to address the chosen topic of this project?

4.2 What social marketing concepts have you found useful or not useful?

- consumer orientation
- insight
- audience segmentation
- behaviour
- intervention mix
- exchange
- competition
- total process planning model

Were there any that you needed more guidance with?
Probe: Why and in what form?

5. Support from NSMC

5.1 What support have you received from the National Social Marketing Centre?

Possible supplementary questions:

- What was the most valuable support you received?
- Do you consider that they understood your needs?
- This is a new initiative, what advice would you give to the NSMC as to how they might have approached the programme differently?

6. Working in Partnership

Explain that 'partnership' can mean working with partners

6.1 Social marketing encourages a closer 'consumer-orientation' approach –
Who have you chosen to work with in the development of your project and what factors have influenced your choice of partners?

6.2 How does your project fit in with your local PCT's strategic objectives?

7. Making it Work – Resources & Support

7.1 Has the adoption of a social marketing approach generated additional costs in implementing your project that you might not otherwise have incurred?

If so what aspects of your project have required additional resourcing?

7.2 What specific obstacles or barriers have you faced in the implementation of your project?

7.3 What factors have enabled the success of the development of your project so far?

7.4 What is the most surprising outcome of the project so far?

8. Project Team

8.1 How do you feel you project team have worked together?

- Who is in charge
- Any issues?

Concluding the Interview

- What, if anything, have you learnt so far in the process?
- Do you have any questions of me or issues you wish to raise about the evaluation?
- Offer to send transcript for validation/comment

Appendix B

National Social Marketing Centre – Learning Demonstration Site Evaluation

Process Evaluation of Demonstration Sites – Strategic Stakeholders

Phase 1 (Autumn 2008) 'Topic Guide' (Draft)

Aim
To capture the learning surrounding the implementation of the social marketing projects and to identify the successes of the programme from a strategic point of view.

Objectives
- To capture understanding of the 'how' and 'why' a project operates as it does, particularly the relationship between the projects and strategic stakeholders.
- To assess if the national strategic expectations of the programme have been met by the demonstration sites.
- To examine the application of social marketing approaches by the demonstration sites.
- To explore the issues around the sustainability of the projects and the National Social Marketing Centre.
- To explore how the learning can be applied and disseminated to other sectors.

Interviewees

Four interviews will take place in each phase:
- Two representatives from the NSM Centre
- Two representatives from the Department of Health and/or another strategic representative identified by the NSMC

Format – semi-structured interviews of 45 minutes.

Interview: Generic Outline of Themes for Phase 1

Introduction
- Brief explanation of the interviewer's background and role
- Invitation to interviewee to summarise their role in relation to the Social Marketing Project
- Agreement on duration interview/time finish
- Statement of purpose of interview
- Brief Summary of ethical issues re confidentiality etc

1. Strategic Programme Design

1.1 Please describe your role in the design and implementation of the national demonstration site programme?

Possible Supplementary Questions:

- What factors influenced your decision when choosing the demonstration sites?
- What worked well during the strategic design of the programme?
- What was challenging?
- Do you consider that the management structures have been effective? If so, how?
- Overall, are you satisfied with the design of the national programme and the recruitment of demonstration sites?
- What did you anticipate the main outcomes of the LDS would be?
- What were your expectations of the LDS? What did you want to get out of them?
- How has the reality matched your original expectations PROBE: Why?
- How does this project work in comparison to other similar PROBE: Why/why this?

2 Local Programme Evolution

2.1 Please explain your role in the support of sites through the initial phase of the programme?

Possible Supplementary Questions

- What aspects of the technical assistance offered by NSMC do you view as particularly useful?
- Describe what monitoring and evaluation systems have been useful during the set up of the sites?
- What were the challenges faced by the sites? 'Disablers'.
- What were the components that led to success locally in this phase? 'Enablers'
- Overall, are you satisfied with the scoping and developing and general set-up phase?
- How could the initial phase of programme development been improved? How would you have done it differently?

3 Local Programme Implementation

3.1. How have you monitored implementation in the LDS?

Possible Supplementary Questions

- Was the technical assistance offered by the NSMC used as expected by the demonstrations sites?
- Have there been any tensions between the local sites and the NSMC? (*Probe: if one or more sites)*
- Describe the structure for performance assessment?
- From your point of view, have the services been offered in an effective way? *(Probe: in the right location and at the right intensity, correct times)*
- How would you judge the (1) quality and (2) impact of the programmes to date?
- What are the most surprising outcomes of the programme so far?

- Communication channels:
    - Are you happy with the amount of information you have about the LDS? Is this enough? How could it be improved?
    - How do you get this information?
    - The demo sites cover a number of health topics, how involved & informed do you think relevant DH teams are about the LDS?
    - What benefits do you think the DH topics teams would get from knowing about the LDS/ being involved with the LDS?
    - Who in the Department of Health has been made aware of the demo sites?

- Overall, have you been satisfied with the implementation of the programmes across the sites?

4 Applications of Social Marketing Principles

4.1 What difference have the distinct features/concepts of the 'social marketing' approach made to the local demonstration site projects? PROBE: Benchmark Criteria, Total Process Planning Model?

Possible Supplementary Questions:

- What elements do you think have been most effective?
- What do you think people have found difficult to understand? Why?
- What features are particularly challenging for the sites to put into practice?
- Are you satisfied with how the sites have engaged with their local consumers/communities?
- How have the sites addressed diversity issues within their programmes?
- Overall, how satisfied are you that a social marketing approach is being used? How could this be improved?

5 Strategic Programme Review/Context Analysis

5.1 What particular factors or events internally at the strategic level have affected the national programme?

5.2 What particular factors or events externally at the strategic level have affected the national programme?

Prompts:

1. Political – government structure/organization/policies, stakeholder needs/demands, commitment to social marketing.
2. Economic – central funding, 'pilot' status, lack of resource for sites.
3. Social – issues with organizational culture, morale, staff engagement, management engagement. Demonstration site expectations of the NSMC.

Possible Supplementary Questions:

- What are the strengths of the NSMC as an organization?
- What other organisations should have been involved?
- What factors at a strategic level could be improved to promote this approach to improving health?

6. Sustainability

6.1 What are the next steps for the development of local sites and the NSMC?

Possible Supplementary Questions

- How would the programmes be sustained if the NSMC/DH withdrew support?
- Have the necessary resources been allocated and 'ring-fenced' locally to continue programme activities?
- Do you have any concerns about the sustainability of the current programme nationally and locally?

7. Replicability

What strategies does the national programme have to promote national capacity building i.e. the expansion of the programme further?

Possible Supplementary Questions:

- How can the best models 'travel' better?
- Are local programme strategies still valid or should they be reformulated?

Concluding the interview

- What do you feel have been the most important issues that we've spoken about?
- Is there anything else that you'd like to discuss?
- Do you have any questions for me or issues you wish to raise about the evaluation?

Offer to send transcript for validation/comment.

Learning together

Evaluation and outcomes

Social marketing learning demonstration sites

nsmc
leading behaviour change

About The NSMC

Established by the British Government and the National Consumer Council in 2006, we are a centre of excellence for social marketing and behaviour change.

Our mission: to maximise the effectiveness of behaviour change programmes.

We do this for a growing list of public sector organisations through a broad range of strategic analysis, advice, support and training across all levels of the social marketing process. World leaders in our field, we draw on expertise from the UK, USA, Europe, Asia and the Pacific and adapt it to meet the needs of UK and international audiences.

Foreword

In 2007 the National Social Marketing Centre (The NSMC) set up the Learning Demonstration Sites scheme with funding from the Department of Health. At that time social marketing was relatively undeveloped in England. Three years on the profile of social marketing has increased dramatically, with many government and public sector organisations adopting its principles to ensure that the consumer is at the heart of policy-making and service delivery. This change has been driven largely by local champions such as those involved in The NSMC's learning demonstration sites.

The scheme concluded in March 2010. However, I am extremely pleased that the project teams have continued to use the skills and experience they gained to inform current and future work. Building local capacity and sharing knowledge were key principles of the scheme. We hoped to leave a legacy of learning and expertise that would enhance customer-focused behavioural interventions.

This report presents the journey of each of the projects, including final outcomes and lessons learned from across the sites. For those involved in the scheme, it is a record of your achievements and a gesture of our appreciation for your hard work.

Social marketing continues to be a practical and valuable approach to delivering behaviour change. Its focus on empowering individuals as well as influencing and measuring behaviours is in line with the Government's people-centric, evidence-based approach to public health.

I would like to thank those of you involved in the scheme for your efforts and for the courage and determination you showed in pioneering a new way of thinking and working. I hope you and others will use the experiences and lessons learned from this scheme to continue promoting a people-centred approach to social change.

John Bromley,
Director,
The NSMC

Special thank you note

A big thank you to local project leads and Associates for all your hard work and tenacity on the Learning Demonstration Sites scheme. It has been a great privilege working with you to integrate social marketing into your health improvement programmes.

We are very pleased that all ten sites that started the scheme back in 2007 remained with us throughout our three-year journey. All the projects followed the social marketing process but each one was unique in its task and situation.

Each team faced various challenges and obstacles. Some of these were overcome, some were not – this is the reality of putting theory into practice. However, your stories and experiences provide invaluable learning that can be shared to enhance future work.

The scheme would not have been a success without your involvement, so congratulations and thank you.

Rowena Merritt
Research Manager,
The NSMC

Denise Ong
Senior Researcher,
The NSMC

Introduction

The National Social Marketing Centre (The NSMC) is delighted to present this third and final report on the three-year Learning Demonstration Sites scheme, following its successful completion in March 2010.

The NSMC was established in December 2006 as a strategic partnership between the Department of Health (DH) England and Consumer Focus. We work with organisations across government and sectors to enhance behavioural interventions for a social good.

Use of social marketing continues to grow in England. In 2007, ten learning demonstration sites were set up with funding from DH. The aim was to help local areas apply and integrate social marketing into their programmes and strategies, while helping to develop a robust evidence base for social marketing. The learning demonstration sites are also a key component of DH's 'Ambitions for Health' strategic framework to build capacity and skills in applying social marketing principles to health interventions.

The learning demonstration sites were based in Primary Care Trusts (PCTs) and local authorities across the country and addressed a range of health issues.

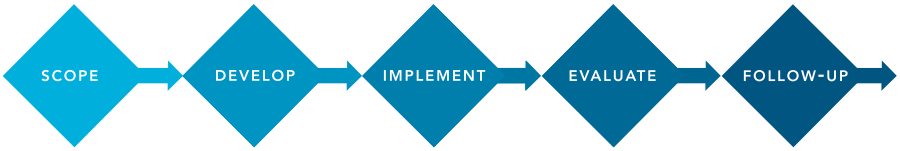
"It's been a real eye-opener and it's made me change the way I work and I think."

Aims of the Learning Demonstration Sites scheme

The aims of the scheme were to:



- Stimulate the use and integration of social marketing into local strategic and operational planning
- Build on and develop existing skills in using and applying social marketing concepts and approaches
- Capture learning and promote effective social marketing practice
- Inform and contribute to the development and testing of a growing range of The NSMC's practical resources and tools
- Support further development of the evidence base for effective customer-focused behavioural interventions and social marketing related work

Operating principles

Each of the learning demonstration sites considered all eight of The NSMC's social marketing benchmark criteria when developing their project:

1. **Customer orientation**
2. **Behaviour**
3. **Theory**
4. **Insight**
5. **Exchange**
6. **Competition**
7. **Segmentation**
8. **Methods mix**

Each site also followed The NSMC's planning process.

Further details of the benchmark criteria and an online planning guide can be found on The NSMC's website at **www.thensmc.com**.

"I would say, without a doubt,the best piece of work I've ever been involved in. I can't imagine not thinking about the process of social marketing when I'm planning, or even commissioning health improvement work in the future."

"It's felt like it's been an upward hill climb and sometimes quite a rugged hill … they've given us lots of useful tips and I look forward to the evaluation."

"This was a pure project and we went in with a blank canvas … We basically looked at all the past health promotion material, screwed it up in a ball and chucked it in the bin and said we're starting again, we don't know anything, we don't know what people's lives are like."

"The benefit of this work is that it has been going out to meet people, talk to them, to find out what ticks their boxes … they actually seem to value that you are asking, that they are being asked about what is going on. But the important thing is that we deliver and it isn't just sort of providing us with information."

"We're just starting with social marketing in our PCT and it's a gift that keeps giving."

Local ownership and resources

Each project used existing local resources and was self-managed, with all key decisions made by the local partners.

The role of The NSMC was to support the local teams in understanding and applying social marketing principles. This approach fostered a collaborative relationship between the local areas and The NSMC.

It also reinforced local leadership and built on existing expertise and skills. In this way, each initiative aimed to leave a 'learning footprint'.

Support from The NSMC

The NSMC provided support for the learning demonstration sites in a range of ways, including:

- Free consultancy days from a dedicated NSMC Associate
- Ready access to The NSMC team for additional support and advice as required
- Web access to NSMC resources and other project documents
- Training events on scoping, development and evaluation for local project leads
- Events for local project teams to discuss their work, share learning and network with other sites and key stakeholders
- Coordination and linking of work across the sites and with national policies, key stakeholders and sources of funding
- Independent evaluation advice and support

Evaluation

Two independent organisations were commissioned by The NSMC to conduct process and outcome evaluations for the scheme.

Process evaluation

In order to capture the projects' experiences and learning in effective implementation of social marketing, the Public Health Action and Support Team (PHAST) were commissioned to undertake an independent process evaluation.

Key strategic and operational stakeholders[1] involved in the design and implementation of the projects were interviewed at two points during the scheme: at the scoping stage (October to November 2008) and at the development/implementation stages (June to August 2009). The interviews focused on identifying factors that help and hinder local social marketing projects.

Findings from the process evaluation suggested the following key tips for enhancing success:

1. Securing dedicated local project management and senior support

Top Tip: Appoint a project manager with proven experience of delivering projects to time and budget who will dedicate sufficient time to the project. However, the success of a project should not rest on the shoulders of one individual. Staff changes and absences can cause the project to lose momentum, leading to huge delays.

2. Conducting a focused and rigorous scoping exercise

Top Tip: To increase efficiency during the scoping phase, first clarify with your 'sponsors', commissioners and key project staff what the priorities, timescales and resources are. This will help you concentrate your efforts on what is important and achievable. Make use of existing data where possible and check if these findings can be similarly applied to your area. In some cases, the reasons why people in one region think or behave a certain way are relatively similar to those found in another region.

3. Planning evaluation from the outset and drawing on external expertise

Top Tip: Partnering with an academic institute can be a cost-effective way of acquiring external research and evaluation expertise and capacity. They can help you design an evaluation strategy and draw on post-graduate students to collect and analyse data. Make sure you start planning your evaluation at the start of your project. This will help you define meaningful objectives and outcome measures and ensure that data collection methods are in place before you begin implementation.

4. Involving the local community and target audience

Top Tip: Tap into existing community networks of colleagues within your organisation or partner organisations, such as Community Development Teams. Try to avoid commissioning out the community engagement work so that local relationships can be developed with your organisation (rather than with a third party supplier). These relationships can then be leveraged for future initiatives.

5. Accessing expertise in social marketing

Top Tip: Be clear about where you need extra support and expertise. Marketing is a diverse discipline that requires a broad range of skills. Many professional marketers specialise in one particular area within marketing and it is unrealistic to expect to employ a 'marketer' who has expertise in all areas of marketing. As your project develops, seek the specialist skills as and when you require them. For example, market research and insight generation during the scoping stage, or creative development and media planning if you identify the need for a communications campaign.

6. Engaging key stakeholders and partners and developing an effective communications strategy

Top Tip: Be creative and think laterally about whom to include – consider the third sector, arts and recreation, media and other partners who have a stake in the issue. Don't forget your internal stakeholders. Make sure your sales force – who are the front-line staff who will promote your interventions – are engaged from the start. This ensures that you do not encounter resistance or delays when you reach the implementation stage.

7. Setting clear and achievable behavioural goals

Top Tip: Try to be as specific as you can in defining exactly who you want to adopt what behaviour and by when. Set short, medium and long-term objectives. Be realistic about what you can expect to achieve with limited budget and time – it is not feasible to change a social norm with £20,000 and six months!

These tips were also published in an article (entitled 'Sell your ideas in a buyers' market') in the July 2010 issue of the Health Service Journal, which is available online and in print.

[1] Key strategic stakeholders were DH and NSMC commissioners.
Key operational stakeholders included local project leads and NSMC Associates.

Outcome evaluation

The London School of Hygiene and Tropical Medicine (LSHTM) were commissioned to provide outcome evaluation support to the sites.

Since evaluation expertise within local project teams tends to be fairly limited, each site was offered up to five consultancy days from the LSHTM to help improve the quality of outcome evaluation and build evaluation skills. Three of the sites (Lewisham, North Tyneside and Tameside and Glossop) were offered more comprehensive support to complete full evaluations of their projects. Two sites (Stockport and Kirklees) were allocated funding from The NSMC to subsidise their own evaluation budget and commission local research companies to carry out the evaluation work.

Evaluation methods and outcomes for each site are detailed on the following pages.

DEDICATED LOCAL PROJECT MANAGEMENT AND SENIOR SUPPORT: *"You've got to put someone in charge of this who's done it before"*

FOCUSED AND RIGOROUS SCOPING EXERCISE: *"Don't take anything for granted, don't assume, ask the questions and find out and keep using your insight. And keep going back and going back. And I think really there's a lot of self reflection goes on."*

PLANNING EVALUATION FROM THE OUTSET AND DRAWING ON EXTERNAL EXPERTISE: *"She's very experienced at evaluation, both qualitative and quantitative, she knows exactly what we ought to be looking at... She knows what tools to use and what's feasible and what's not feasible and what you should be comparing. So, yeah, I think she's going to be great."*

INVOLVING THE LOCAL COMMUNITY AND TARGET AUDIENCE: *"The public sector has a short attention span and with community engagement you have to be in it for the long haul."*

ACCESSING EXPERTISE IN SOCIAL MARKETING: *"I think our project is showing that actually we wouldn't have benefitted nearly so much if we had just brought in an external agency to so this, because we wouldn't have built the same dialogue with the community at all."*

SETTING CLEAR AND ACHIEVABLE BEHAVIOURAL GOALS: *"They didn't have an action plan that was written down with clear actions and timescales. I'd turn up at the next meeting and we would be going over the same ground. Often no one has taken forward the agreed action points so nothing was done in between meetings. It was frustrating."*

North Tyneside PCT

Jan Thompson and Louise Pinkney

This project aimed to reduce underage kerbside drinking among 13 to 17 year olds in North Tyneside. The areas of Wallsend, Battlehill and Howdon were selected as the pilot sites due to the high prevalence of anti-social behaviour and alcohol-related incidents.

SUB21
something to say 'yes' to!

Heavy and harmful drinking patterns have increased among young people in the UK. In North Tyneside, two-thirds of young people drink alcohol and more than half drink at least once a week. Surprisingly, among ten to 17 year olds, girls regularly drink more alcohol than boys (73.3 per cent and 54.4 per cent respectively), a finding that contrasts with the rest of the UK. Consequently, North Tyneside has some of the highest rates of hospital admissions for under-18s due to alcohol-related causes and the teenage pregnancy rate is significantly higher than the national average. Alcohol-related crime and disorder, as well as residents' fear of crime and anxieties about young people drinking on the streets, is also on the rise.

In early 2007, North Tyneside's Alcohol Harm Reduction Strategy Group approached The NSMC to collaborate on a social marketing project to tackle underage kerbside drinking. An initial budget of £64,000 was allocated to the project by North Tyneside PCT.

Scoping

During 2007 and 2008 The NSMC carried out extensive scoping, starting with desk-based secondary research to identify existing information and knowledge about young people and street drinking. Primary research was then undertaken to explore the recreational patterns of young people in North Tyneside, the motivational drivers behind street drinking and the activities and services that could be offered in exchange. Research included interviews with youths picked up by the police for drinking on the streets, their parents, local shopkeepers, trading standards and residents, as well as an audit of out-of-hours youth provision in the local area. Comparative reviews were also conducted to identify good practice elsewhere, drawing on the experience and expertise of those working on similar projects.

The research revealed three main drivers for underage street drinking: lack of attractive and affordable alternative activities; cheap and easy supply of alcohol; and drinking as a social norm. It also found retailers wanted to reduce proxy sales and intimidation by groups of young people outside their shops in order to attract more business. However, they struggled to identify when an apparently legal sale might be a proxy purchase and perceived a lack of commitment and support from the local authority. It was clear that a two-pronged approach was needed: an exciting alternative to street drinking where young people could meet and spend time with friends; and support for retailers in tackling illegal and proxy sales.

The behavioural goals of the project were to reduce the number of young people drinking alcohol on the streets; the amount they were drinking; and the number of attempts to purchase alcohol illegally. The project also aimed to encourage local retailers to implement a ban on alcohol sales to under-21s during peak times.

"The local police now have a tool to use with alcohol retailers, so they can address the problems raised."

Development

The comparative reviews showed that successful youth activities had a developmental element to them and involved young people in the selection and design of activities. Through a series of workshops and focus groups, students from a local college helped to identify and design a rolling programme of free, accessible out-of-hours activities that would appeal enough to compete with street drinking.

Further desk-based research and interviews with local retailers, police, licensing and trading standards explored the feasibility of introducing a scheme to tackle illegal and proxy sales. Although retailers supported introducing a ban to under-21s, they wanted more supportive (rather than punitive or antagonistic) measures from police and trading standards. A scheme was therefore developed to encourage retailers to implement a voluntary ban on alcohol sales to under 21 year olds at peak times, with active support from the police, trading standards and licensing.

The entire programme was branded *Sub21*. This communicated the under-21 focus of the proxy sales scheme, while young people associated the brand with substituting street drinking for fun, structured activities.

Implementation

A ten-week rolling programme of out-of-hours activities was piloted in summer 2009 at local venues on Thursday, Friday and Saturday nights. As the main delivery partners, Wallsend Boys Club and Positive Futures offered a variety of activities to appeal to different segments of the target audience, such as nail art, cookery and street dance for girls, and graffiti, bike and ramp building and computer gaming for boys. A Programme Coordinator was hired to manage and promote the activities through schools, community venues, SMS and online.

For local retailers (generally small, independent, family-run businesses), a package of support measures was offered by Northumbria Police and North Tyneside Council to help them tackle illegal and proxy alcohol sales. This included a dedicated 24-hour Crime Line, training sessions on conflict management, resolution and authenticating ID cards and at least two police visits per week. In return, retailers were asked to implement certain measures, including no alcohol sales to anyone 21 years or under between 5pm and closing time on Thursday, Friday, Saturday and bank holidays and reporting any illegal and proxy sale purchase attempts immediately to the 24-hour Crime Line.

Evaluation

To evaluate the effectiveness of the intervention, the LSHTM conducted a survey among young people aged 13 to 17 years attending two schools in North Tyneside. Surveys were undertaken before and after the intervention. The surveys (conducted in April and October 2009) measured self-reported behaviour with regard to drinking and purchasing alcohol (including street drinking and proxy purchases) and the prevalence of negative consequences associated with alcohol consumption. Among the findings were that the proportion of female respondents who reported drinking on the street after the intervention was half that reported before the intervention. There was also a reduction in the most harmful types of drinking among females, including binge drinking and drinking to the point of being sick. However, female respondents were significantly more likely to report drinking at home post-intervention, although encouragingly there was a reduction in the proportion of female respondents reporting buying alcohol in off-licences.

Among male respondents, there does not seem to have been much change in self-reported drinking behaviour, but the findings suggest they are experiencing greater difficulty in accessing alcohol in the area.

Post-intervention, respondents were significantly more likely not to have asked anyone to buy alcohol for them. Of those who did, both male and female respondents most commonly reported asking a friend.

Efforts to raise awareness of and engage young people with Sub21 were very effective – most young people surveyed had heard of Sub21 and a third reported attending Sub21 activities.

Follow up

Sub21 is now hosted within Extended Schools in North Tyneside Council. The Director of Extended Schools, together with the Sub21 coordinator, is looking to secure future funding for Sub21 to continue. Funding bids are with Drinkaware and the Big Lottery Fund, though the programme currently has funding to run until March 2011. The programme of activities has been developed to include those that are most popular and offer best value for money. Key to this intervention was partnership with Wallsend Boys Club, which had the premises and energy to make the brand work. The Extended Schools Director championed this initiative in the local authority and the local police Chief Inspector supported the programme, both of which were pivotal to the initiative's success. Sustainability is always a challenge with new projects, but the evaluation has shown the success that can be built on.

Safe Durham Partnership has decided to roll out the Sub21 model in county Durham and discussions are underway to do the same in North Shields. Northumberland County Council has also expressed an interest in Sub21.

NHS Dudley

Trish Bussell, Stacey Jones and Alex Christopoulos

This project aimed to improve fruit and vegetable consumption in Hawbush, a deprived neighbourhood in Dudley.

Hawbush was selected for a range of reasons but most notably because it has the highest proportion of overweight and obese year six pupils; the highest proportion of year five and year six pupils who do not eat the recommended portions of fruit and vegetables a day; and the highest proportion of year five and year six pupils who only eat one portion (or less) a day. The primary target audience were parents of young children aged four to eleven years, chosen due to the integral role parents play in healthy eating. School staff, parents and the wider community on the estate were chosen as secondary audiences.

In the most deprived areas of Dudley, only 18.4 per cent of residents reported eating at least five portions of fruit and vegetables a day. Eating this amount of fruit and vegetables reduces the risks of cancer, coronary heart disease and many other chronic diseases, yet national and local research showed that some people have poor access to fruit and vegetables simply because shops did not stock them. This was because they have a shorter shelf life, yield lower profit, require special storage and are often perceived to be in low demand. In June 2007, the Food and Nutrition team at NHS Dudley successfully bid to the Big Lottery Fund for a healthy retail project receiving £59,750 and in autumn 2007 became one of The NSMC's learning demonstration sites.

Scoping

From September 2007, initial research and mapping exercises using a variety of software tools identified three areas which were likely to experience food access problems and the type of people that lived in these areas. To better understand these populations and provide information for segmentation, The NSMC carried out six focus groups in December 2007 and February 2008 with around 60 residents in Fatherless Barn, Gad's Green and Hawbush to explore the residents' daily routines, what influences meal times, food purchasing culture, perceptions of and barriers to eating fruit and vegetables and ways of increasing consumption. In addition, Food for Health Advisors interviewed various stakeholders including a headteacher, school health advisors, parent governors, local retailers, supermarkets and local primary care staff, exploring the views of professionals who worked in the areas and gathering ideas on increasing fruit and vegetable consumption among local residents. Various surveys were also used, including the Dudley Health and Lifestyle Survey which provided further information on the motivations behind fruit and vegetable consumption.

One key insight from the focus groups was the impact of parenting on fruit and vegetable intake. Factors such as 'pester power' tactics, quarrels at meal times and the parents' desire for their children to eat something meant that children exerted a high level of influence over what they ate. Parents were also concerned about the cost of fruit and vegetables and the potential amount of wastage produced. Therefore any interventions needed to help parents provide a desirable offer to children and stimulate demand from children for fruit and vegetables.

Other barriers which needed to be addressed were: poor local access to a variety of fruit and

"We are hoping that the Healthy Retail Project will provide our community with easier access to fresh fruit and vegetables. Above all, we aim to make fresh food an enjoyable, affordable and accessible realistic first choice for everyone."

vegetables of good quality; the price of fruit and vegetables; preparation time and food skills for cooking fruit and vegetables; ingrained habits of eating less healthy foods; and some uncertainty over the health benefits of fruit and vegetables.

The behavioural goals were to encourage parents of young children to consume more fruit and vegetables; consume a wider variety of fruit and vegetables; try different kinds of fruit and vegetables more frequently; purchase more fruit and vegetables; and reduce reported levels of wastage.

Development

The scoping research underlined the importance of a two-pronged approach to fruit and vegetable consumption: focusing on making it easier to buy fruit and vegetables (through availability, price and preparation) and increasing demand for them (increasing skills and confidence, using children's 'pester power' and reducing waste). Based on the research, the project team developed a number of different intervention models and tested them with members of the target audience.

Supply was addressed by setting up a fruit and vegetable stall at a local school to improve the availability of fruit and vegetables. The produce would be offered at competitive pricing compared with the favoured supermarkets and include chopped vegetables and single portion vegetable packs. Recipe packs were designed to be handed out and taster sessions were organised to provide opportunities for people to try new foods without worrying about waste or family members' preferences. To increase demand, educational sessions to raise awareness of healthy eating and the health benefits of fruit and vegetables were developed. They also sought to improve skills in preparing and cooking seasonal fruit and vegetables and provide suggestions on avoiding waste.

Implementation

A dedicated brand, *Bostin Value*, was created to promote the school fruit and vegetable stall run by a local greengrocer at the Hawbush Primary School. It was used on promotional material including vouchers, price lists and a leaflet sent to parents. The fruit and vegetable stall operated in the school playground on Tuesdays and Thursdays around school finishing time to capture the 'pick-up' market. A trial run of the fruit and vegetable stall took place in the week commencing 23 March 2009 and the stall began regularly operating in late April 2009 (after the Easter break) to continue until November 2010. To increase demand, a Food for Health Advisor was also employed from April 2009 to plan and deliver various skills seminars and awareness raising activities. These included educational sessions for pupils and practical sessions for parents and the wider community, focusing on preparing and cooking cheap meals using seasonal fruit and vegetables and leftovers, tasting new foods and budgeting for food shopping. Family cooking sessions also ran in December 2009, with parents and children cooking together after school.

Evaluation

The LSHTM evaluated the project using a variety of methods. These included a pre- and post-intervention survey of parents, carers and children to assess progress made, using a food recognition quiz, food and vegetables tried questionnaire and food diaries to assess the children's knowledge and current dietary intake. The pre-intervention survey took place in April 2009, the post survey in December 2009 and July 2010. A control school (no intervention) was identified and baseline data was collected in December 2009 to January 2010. This was repeated six months later with the Hawbush evaluation to assess whether changes were brought about by the project interventions. A regular termly audit of the fruit and vegetable stall was conducted to assess volume and type of sales and to profile buyers. The skills sessions were evaluated by the Food for Health Advisor to explore the extent to which they were seen as appropriate and useful by participants. Finally, in-depth interviews with key stakeholders (parents, staff and project workers) were carried out to explore the acceptability of the intervention and examine factors that may have helped or hindered it.

Encouragingly, 25 per cent of parents surveyed post-intervention say they have eaten more fruit and vegetables since the scheme began and 44 per cent say their children now enjoy a wider variety of fruit and vegetables. Pupils surveyed post-intervention have increased the variety of fruit and vegetables they have tried, although the ability to recognise a range of fruit and vegetables has not changed significantly. The audit indicated that purchases at the stall tend to be fruit (rather than vegetables), for snacks (rather than meals) and for the whole family (rather than just for children).

Results from the children's food diaries and stakeholder interviews are pending, but feedback from the skills sessions was promising. Seven out of eight parents reported they had increased confidence in their cooking ability and that their children are eating more fruit and vegetables. All reported that they now cook more, or intend to cook more, at home. Other feedback included the need for a crèche, fewer children to adults at the sessions and fewer recipes to cook, thus aiming for quality rather than quantity. These will be included in the second phase of the cooking course.

Follow up

The importance of having a brand and a logo to give the project an identity should not be underestimated. It gave instant recognition, promoted the project and increased 'hype', which in turn created 'pester power' from the children who encouraged parents to purchase fruit and vegetables from the stall.

July 2010 marks the beginning of the school summer holidays. For sustainability, phase two of the intervention will be implemented with supply further strengthened by supporting the five local convenience stores to sell fruit and vegetables to the local community, thus meeting the increased demand generated by the project. The greengrocer from the Bostin Value stall will deliver fruit and vegetables to the local convenience shops to sell throughout the school summer holidays. Sales at these shops will be monitored and compared to baseline sales prior to these deliveries.

NHS Kirklees and Kirklees Council

Lynne Cliffe, Phil Longworth and Spencer Robinson

This project aimed to halt the year-on-year rise in overweight and obese students aged 16 to 24 in Kirklees in further education (FE) and higher education (HE).

Obesity is an increasing problem across the country. Early adulthood is a key stage at which many people gain significant amounts of weight. According to 2007 data, 33 per cent of 18 to 24 year olds in Kirklees are overweight or obese, with males aged 18 to 24 having the highest rates of overweight and obesity in the country.

While work focusing on childhood obesity was underway, there was a lack of focus on the 16 to 24 year old age group. There was also untapped potential to address the challenge of obesity in collaborating with FE and HE organisations. Kirklees Council and NHS Kirklees invested £100,000 of Communities for Health funding and were supported by The NSMC to initiate a social marketing intervention to tackle obesity in FE and HE students in Kirklees.

Scoping

Desk research to scope national and local activities and understand student's lifestyles, attitudes and behaviours around nutrition and physical activity revealed that there was little existing insight on student obesity. To fill in the knowledge gaps focus groups were carried out and segmented geo-demographically as males aged 16 to 18 in FE; females aged 16 to 18 in FE; males aged 18 to 24 in HE; and females aged 18 to 24 in HE. All participants had a BMI of 25 or above and were attending the University or colleges within Kirklees. A number of workshops and interviews were held with stakeholders to gather insight and develop a wider understanding of the target audience.

The new insights revealed that although students did see the benefits of a healthy lifestyle and appreciated that their current lifestyles needed to change, they lacked the motivation to do so. Several factors competed for their time, attention and inclination to change: hectic study and social calendars; a strong takeaway and drinking culture; and hours spent with the television or on the internet. A lack of cooking skills, tight budgets and the perception that healthy food and gym memberships are too expensive also deterred students from eating healthily and exercising more.

As heavy consumption of alcohol was seen as a 'rite of passage' attempts to influence this would be poorly received and a waste of resources. The behavioural goals for the project therefore avoided alcohol consumption and focused on encouraging students to increase their physical activity; develop cooking skills; increase their knowledge of healthier lifestyles; and create an awareness of the calorific content of alcoholic drinks and takeaways. The project emphasised that this could be done while having fun, socialising and meeting new people, thereby appealing to the target audience.

Development

Key stakeholders helped develop and refine project ideas, a number of which were pre-tested with members of the target audience. Working with an external marketing agency, a 'stealth not health' approach was adopted and the *Up For It* brand identity was developed.

"Having consumer insight has opened up a whole new set of channels of communication that we wouldn't have considered using 12 months ago."

This promoted exercise and healthy eating in a fun and sociable way, fitting with students' lifestyles without 'preaching' about exercise and good nutrition.

Insight suggested that the best time to establish healthy behaviours in students was at the beginning of their studies, as older students would have already established some unhealthy lifestyle behaviours. Starter packs containing basic condiments, cooking ingredients, utensils and recipe cards were offered during Freshers' Week to encourage first year HE students to make their own meals. Fun activities designed to increase fitness levels and cooking skills were offered to encourage and support students to move more and cook quick and easy meals.

Implementation

The interventions were launched in September 2008, with 2,000 healthy eating starter packs distributed at the University Freshers' Fairs. Throughout the 2009 spring term, fun, engaging activities were offered on FE and HE campuses, beginning with a 'Dance your Ass Off' event at a local nightclub for HE students. This showcased the dance classes on offer in the club and introduced the Up For It brand. 'Come Dine with Me' and 'Take on the Takeaway' cooking events were held in May 2009 for FE and HE students on the University campus. Students were given packs to enter the 'Come Dine with Me' competition as a way of encouraging students to cook their own meals and socialise with friends. A 'Did You Know?' leaflet was given to students at the event which showed the calorific value of alcohol in relation to fast food. A dodgeball tournament was held in June 2009 for FE and HE students, to demonstrate that you don't have to be fit to enjoy physical activity and encourage the formation of dodgeball societies as an alternative to traditional sports. A viral video competition was offered to FE and HE students, encouraging them to make a fun video about healthy eating or exercise and post it on YouTube.

Evaluation

The interventions were evaluated using a mix of qualitative and quantitative methods. Focus groups and interviews with students who attended events and activities provided in-depth understanding of the target audience's motivations and behaviour in terms of lifestyle and weight management. A street survey of 372 students on FE and HE campuses provided overall healthy eating and exercise data and questionnaires collected after events and activities provided an indication of who attended and their thoughts.

Results suggested that the free starter packs were a success, with the majority of students saying they had used the recipe cards or devised their own meals with the ingredients. The 'Take on the Takeaway' competition also received positive feedback with respondents rating it highest for 'encouraging me to try cooking new dishes'. Female respondents in particular were enthusiastic about the starter packs and cooking events, reporting that the initiatives had given them the confidence and skills to cook more of their own food.

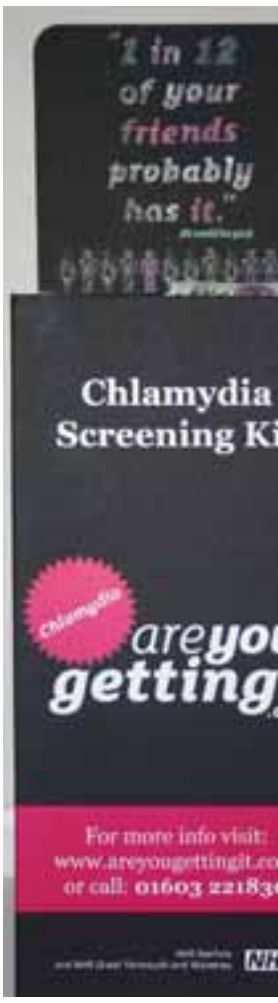
In terms of increasing the amount of healthier foods in students' diets, particularly fruit and vegetables, 96 per cent of the respondents to the street survey indicated that they ate at least one portion of fruit or vegetables in a typical day. However, only 18 per cent claimed to eat the recommended five plus portions a day, indicating there was still work to be done to improve students' diets. Encouragingly, 23 per cent of respondents reported that they ate more portions of fruit and vegetables a day than they did six months previously, but 67 per cent reported no change in the amount they ate.

The project also helped to improve take-up of physical activity. According to the street survey, 21 per cent of respondents said they did more exercise than they did six months previously, while 61 per cent said they did about the same amount. The 'Dance Your Ass Off' and 'Take on the Takeaway' competitions were most favourably received by the female respondents. Having seen the film 'Dodgeball', male respondents were particularly enthusiastic about the dodgeball tournament.

The project was innovative in its use of social media and text messaging as a way of engaging and communicating with the target audience. Between September 2008 and June 2009, the website received approximately 9,500 hits and 123 members joined the Up For It Facebook group.

Follow up

Targeting students for behaviour change can be complex as there is intense competition for their attention. It is crucial not to underestimate the strength of competition and social norms, as many students adopt unhealthy behaviours that they believe are part of a stereotypical student lifestyle. It is therefore advisable to focus resources on target group members who are already contemplating change, being realistic about what can be achieved with the resources available. Also, social media plays a big part in students' lives and should be used to its full potential.



Building on social marketing skills, knowledge gained and evaluation findings from the initial phase of Up for It, improvements have been made to the project in an ongoing second phase outside of The NSMC's scheme. This phase is intended to develop sustainable, evidence-based interventions that become embedded in FE and HE settings and explores the use of a business model to demonstrate that successful social marketing initiatives do not require an overspend in order to produce outputs. Initiatives have been developed to be self-funding for enhanced sustainability.

The insights will inform development of future services and robust commissioning specifications for consumer-led services, which should be embedded across all obesity activity. NHS Kirklees have redesigned their weight management provision and are implementing a primary care weight management service. Providers are now delivering a service that is consumer driven and meets the needs of the target group.

NHS Stockport

Sarah Clarke and Fiona Spotswood

This project aimed to increase local people's access to smoking cessation services in Brinnington, an estate in the north of Stockport with a particularly high smoking prevalence.

At local level, increasing the number of successful smoking cessation quit attempts among the 20 per cent most disadvantaged communities has been a joint PCT and local council Public Service Agreement target since 2006, directly leading to the development of the Brinnington initiative. Brinnington is among the top three per cent most deprived areas in England and Wales. 53 per cent of adults in Brinnington estate smoke, which is significantly higher than the Stockport average of 18 per cent and the national average of 24 per cent. In 2006 to 2007, only 203 people accessed the local stop smoking services.

Scoping

After the desk research phase, the team held a series of mixed gender focus groups in spring/summer 2007 with the local community. The groups included: hardened smokers with no intention of quitting; smokers who had tried but failed to quit; smokers who were contemplating quitting; successful quitters; and those currently in the process of quitting. The objectives were to explore: attitudes to services; experiences of successful quitters and those who have dropped out; and why current cessation services had achieved limited success. A series of interviews were also held with key health professionals in Brinnington to explore possible improvements to smoking cessation services to make them more consumer-centric. They found that the existing drop-in group for 'Quit for Life' appealed primarily to older women and so identified men and women with pre-school children as the target segments. In light of this, further focus groups were conducted with representatives of these segments, in order to gain additional insight into their lifestyles and what moves and motivates them.

After the focus groups and interviews were completed, two phases of consultation in March and May 2008 were held with key members of Brinnington's community, including health service providers and managers, ex-smokers, current smoking cessation service users, community group leaders and organisers and smoking cessation service providers. These workshops focused on developing creative communications concepts and involved brainstorming ideas on the creative proposition, branding and media. The sessions informed the creative brief which was sent to various design agencies.

Insights were gathered from each stage of the primary research and applied to the development of the interventions. It was clear that smoking is very much a part of Brinnington life and is at the heart of much social interaction involving families, neighbours and friends, for example while socialising at the school gate, drinking in the pub or waiting in queues for local services. Therefore to quit smoking would be to go against the social norm and to risk social ostracism. Brinnington smokers were tired of being 'nagged' into quitting and were unlikely to succeed or make an attempt because their support networks consisted of smokers. Furthermore, life on the Brinnington estate tends to be stressful. People often have to cope with financial strain, social unrest from noisy neighbours, unruly family members or caring for several children without the support of a partner. With little money, time or 'personal space', smoking becomes an emotional crutch on which people rely for stress management and a form of escapism.

"The initiative ensures that the desires and needs of local people to get rid of cigarettes from their lives are central to our smoking cessation offer. We look forward to seeing real benefits for people in Brinnington who will be much better supported to make this important behaviour change."

Despite this, there was a real drive to quit, primarily because of financial worry but also because of the fear of ill-health and desire to be a positive role model for children. For women particularly, family is the most important part of their lives and protecting and encouraging them is paramount. Low confidence was a considerable barrier to community participation so services in trusted, safe and familiar environments with familiar faces were crucial. Men were more likely to work, often in shift patterns, so out-of-hours access to support is essential. However, there was a huge stigma for men to admit they needed help and support and most men refused to do so.

The project's behavioural goals were to double the number of smokers accessing local smoking cessation services in Brinnington, increase the number of successful quits and decrease the number of smokers on the estate.

Development

Five creative themes were produced from the design agencies and all were tested with the community in a series of single-gender focus groups in August 2008. Each of the themes was discussed and tested with various stakeholders, and the *Lose the Fags* concept was agreed. However concerns were raised as to whether parents would find the strapline 'give smoking the two fingers' offensive. The photographs were therefore taken in a way that clearly portrays the 'two fingers' pose but gestured to an absent cigarette between two fingers plus added smoke.

The project focused on providing new services which best fit the needs of the two target segments. Men required an after-hours drop-in facility that would relieve them of the stigma of seeking cessation 'advice', while still providing the support they need for a successful quit attempt. Women needed an easily accessible and supportive service run by people they recognised, in a familiar setting which they could attend regularly without the problem of finding childcare. Stress management was also to be provided as an exchange via the two interventions.

For men, the service was implemented at the Lapwing Centre, the community gym, which enabled them to counter the ill-effects of giving up smoking by using exercise to manage their anger and stress. The Lapwing workers were conscious that anger management is a critical issue for men in Brinnington and so made efforts to introduce new members to methods for coping with stress and anger during their induction process. They also provided regular support in the guise of friendly 'banter' during work outs and in the reception area.

For the women, the intervention was held at the Children's Centre, the largest community nursery and part of Westmoreland School in the centre of the estate. They aimed to counter women's need for cigarettes as stress relief by providing support from a smoking cessation advisor in a warm and friendly environment with refreshments and a crèche where they could take a break away from their children. Attendees of the smoking cessation clinic were actively encouraged to participate in the Children's Centre's other groups, including a Confidence Club, massage, 'stay and play' and a 'women's group' aimed at building skills and confidence.

Implementation

As the intervention involved setting up new smoking cessation services in existing client-facing services in Brinnington at the Lapwing and Children's Centre, additional training was provided. Fitness instructors and Children's Centre staff were trained as smoking cessation advisors and some could deliver appropriate vouchers for nicotine replacement therapy (NRT) which could be exchanged at the local pharmacy. Fitness instructors offered advice on an ad hoc basis and when they were approached by customers as a result of seeing promotional material. They also offered advice at gym induction, where signposting and probing questions have been incorporated into the standard induction questionnaire. The Children's Centre offered a stop smoking clinic for drop-in/one-to-one appointments, as well as a free crèche for mothers with pre-school age children. A communications strategy was developed to underpin the promotion of new and existing services, using photographs of local residents taken in the area.

Evaluation

The project's primary aim was to double the number of smokers accessing local smoking cessation services in Brinnington. This was measured through returned data from each of the services that smokers from Brinnington could access. In the pre-intervention year (2008/09), 145 quit attempts were made. Figures for 2009/10 showed the decline reversing with 162 quit attempts supported in that year and a further rise is anticipated in 2010/11. Qualitative and quantitative evaluation will take place in September 2010 which is 12 months after all the elements of the intervention went live.

Follow up

The intervention in Brinnington has been a triumph of community partnership, with numerous community organisations having a genuine stake in the intervention. This approach also brought challenges, in that when management changed at the Children's Centre, the new Lose the Fags intervention was changed, causing problems with delivery. The Lose the Fags team reacted by having more team meetings and increasing communication between partners. It was also difficult for the fitness instructors and Children's Centre staff to adopt smoking cessation into their existing roles and considerable support was required to provide them with the skills and confidence to deliver the Lose the Fags intervention on the ground. However, the project is sustainable because existing, established community organisations have adopted smoking cessation as part of their core offering and the Lose the Fags project has provided a strong brand to support their efforts. Gradually, quitting smoking is becoming a social norm in Brinnington.

NHS Tameside and Glossop and Tameside Metropolitan Borough Council

Gideon Smith, Debbie Bishop and Denise Ong

This project aimed to increase early cancer diagnosis and reduce late presentation with symptoms and death rates of breast cancer by encouraging more women aged 35 to 50 to be breast aware.

This group was targeted to increase the possibility of early detection in women not yet eligible for free breast screening and to increase uptake of screening once they reach 50. The Ashton Hurst ward was selected as the pilot area since it is one of the most deprived communities in Tameside and both breast screening uptake and breast cancer survival rates are particularly low.

Breast cancer is the most common cause of death from cancer among women in Tameside and Glossop. Although the incidence is no higher than the national average, survival rates are lower, in part due to late presentation. In late 2007, NHS Tameside and Glossop and Tameside Metropolitan Borough Council (MBC) partnered with The NSMC on a £55,000 joint-funded project to increase breast awareness in women.

Scoping

First, desk-based research was carried out which found that the evidence around breast awareness, particularly among women aged under 50, was scant and no baseline existed (locally or nationally) around breast awareness. A street survey was therefore carried out by the LSHTM in Ashton Hurst (intervention area) and South Denton (comparison area), which was matched for age structure, deprivation and rural/urban mix. To further explore women's barriers and motivators for being breast aware, focus groups and interviews were carried out with women in both wards.

The findings from the street survey and qualitative research were largely consistent: women were aware of the dangers of breast cancer but few regularly examined their breasts or felt confident they were doing it correctly and knew what changes to look for, other than lumps. Barriers to breast awareness included a fear of finding breast cancer and a fatalistic view that early detection would not make much of a difference to the outcome. Most women had not been offered advice on breast awareness by their GP or nurse. While many women considered the nurse the most appropriate person to give breast awareness advice, they were also amenable to receiving health messages in the community from non-health professionals. Stakeholder interviews revealed that while GPs and nurses understood what it means to be breast aware, they were not spontaneously aware of the NHS's breast awareness five-point code: know what feels normal for you; look and feel; know what changes to look for; report any changes without delay; and attend full breast screening if aged 50 or over.

Given limited timescales for implementation, the behavioural goal of the project was to increase the number of women who are aware of their breasts and who examine them regularly. There was a clear need to promote the breast awareness five-point code consistently to the target audience and service providers to give women a full understanding of how to check, what to look for and why to act fast. The team therefore developed an approach that mixed communication, community-based and service-led initiatives.

Development

The creation of the communications campaign was to provide women with a compelling case for regularly checking their breasts

"We're expecting to create a simple effective approach that takes root and lasts."

and the information they needed to identify changes. Four creative concepts and ideas for community-based initiatives were tested using focus groups with target women. The creative concept that clearly struck a chord with the audience was 'Breast Expert'. Using images of strong, confident women, the campaign emphasised the flexibility and ease of becoming breast aware, which gives a sense of empowerment and control.

To support the campaign, the Health Improvement Team organised a 'well woman' event, where breast awareness and other health and wellbeing advice was offered, along with free gifts and fun activities. Efforts were also made to identify and recruit breast aware 'community champions' from the local population, who could help spread the message through peer networks.

Implementation

The three-month pilot campaign was launched in Ashton Hurst on 1 February 2010 with poster advertising at bus stops and on telephone kiosks. The posters encouraged women to visit www.breastaware.net for more details on why and how to be breast aware. An information leaflet was distributed in health and community settings (such as GP surgeries, shops and fast-food outlets) and mailed with an accompanying letter from the PCT to all women in the target group informing them about the campaign and local events. On 18 March 2010, the free 'well woman' event was co-delivered with other health and community stakeholders at Hurst Community Centre. Feature articles were placed in the local media to build awareness of the campaign throughout the area. GPs and practice nurses were briefed about the campaign and nurses were given information about breast awareness. Community workers also received face-to-face training from a Macmillan breast cancer nurse. Due to scheduling conflicts, training for practice nurses was postponed to autumn 2010.

Evaluation

Independent evaluation was conducted by the LSHTM and consisted of three components. To assess any changes in knowledge and behaviour, a case-control study comprising of face-to-face street surveys was conducted with women aged 35 to 50 in Ashton Hurst and South Denton. Around 100 women were surveyed in both wards before (April to June 2009) and after (June to July 2010) the campaign. Following the campaign, eight face-to-face interviews were conducted with stakeholders who were involved in the scoping, development and implementation of the campaign. Eleven telephone interviews were conducted with women who attended the community event in Ashton Hurst to gather qualitative feedback on the interventions.

When asked what the term 'breast aware' meant to them, the majority of post survey respondents had some knowledge and understanding of it. 42.5 per cent of respondents said it was about checking or regularly checking your breasts for changes and around 15 per cent acknowledged it was about being aware of your breasts more generally (rather than looking specifically for symptoms). However, no respondents referred to the other behaviours in the five-point code (namely seeking medical advice or attending for breast screening). This highlights the need for further work to promote all elements of the five-point code.

Disappointingly, following the campaign the proportion of respondents who reported examining their breasts at least once a month (as recommended by the NHS) fell in the intervention area. However, most of the women interviewed (9 out of the 11) said they checked their breasts at least once a month. Most women who reported checking their breasts are looking for lumps when they examine and are not so vigilant about other symptoms, like changes in breast appearance or feeling. However, compared to pre survey results, a greater proportion of respondents to the post survey mentioned looking for 'lumps and other abnormalities', rather than looking for just lumps.

A key objective of the campaign was to boost women's confidence in their ability to self-examine and to emphasise that there is no one right way to check. Compared to responses gathered before the campaign, the intervention area saw a drop in the proportion of women who were 'not at all confident' of noticing a change and compared to the comparison area, a greater proportion of respondents reported being 'very confident' of noticing a change.

According to the post survey, 40 per cent of respondents in Ashton Hurst had seen, heard or received something about breast awareness during the campaign period. Of these, 25 per cent said the information prompted them to examine their breasts more regularly and 41.7 per cent said the information made them clearer about what is normal for them and what changes to look for. As an added benefit, feedback from the community development team indicated that the campaign had prompted other positive health behaviours. For example, uptake of exercise activities, like health walks and keep fit classes, picked up in the weeks following the campaign and community event.

Follow up

Some of the interventions are still ongoing with the longer-term aim of building breast awareness into service delivery to ensure its systematic inclusion in all relevant primary care appointments. One prospective option is inclusion in GP contracts to ensure that breast awareness is routinely raised and discussed during cervical screening and family planning appointments. Despite efforts to engage GPs and nurses in the campaign, clinician involvement during the project was disappointing due to various reasons. Sufficient lead-in time needs to built in and senior level buy-in secured from the start to gain active involvement from GP staff.

Feedback from stakeholders and target women highlighted the importance of family and social networks as key avenues for encouraging women to become breast aware. In addition to print and online media, providing information and the option to discuss any issues or concerns in person would greatly increase women's confidence to self-examine and spot any changes. Greater use of word-of-mouth and face-to-face communication would help to motivate and support women to become breast aware, without requiring the expenditure of paid-for advertising.

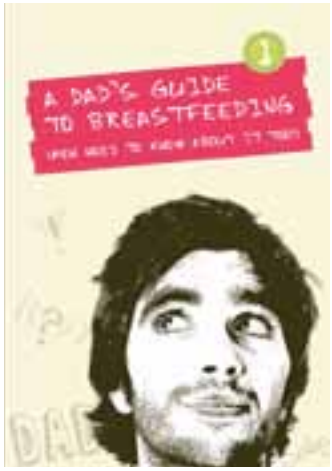
NHS Brighton and Hove

Martina Pickin and Catherine Perry-Williams

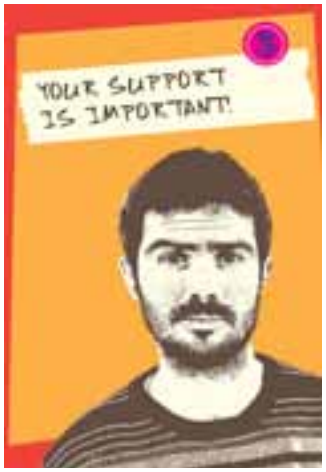
This project aimed to increase exclusive breastfeeding at six to eight weeks among women who initiate breastfeeding and to increase the length of time that mothers breastfeed (exclusively and partially) to six months plus.

Breastfeeding contributes to the health of both mothers and babies and the Department of Health (DH) recommends that babies should be breastfed exclusively for their first six months. While rates of breastfeeding initiation and continuation six weeks after birth in Brighton and Hove are higher than the national average, the proportion of babies who are entirely formula-fed is much higher in the Neighbourhood Renewal Areas (NRAs) than in non-NRAs. However, local data also showed that women from NRAs who initiated breastfeeding were no more likely to give up breastfeeding in the first six weeks than women from non-NRAs, suggesting that breastfeeding duration rates in the more deprived areas could be improved, thereby reducing health inequalities. The 2005 national infant feeding survey found that 90 per cent of mothers who stopped breastfeeding before six weeks would have liked to breastfeed for longer. Sustaining breastfeeding therefore aligns with health policy as well as the wishes of mothers.

In early 2007, NHS Brighton and Hove partnered with The NSMC on a pilot project to improve breastfeeding duration rates.



Scoping



The project team began by reviewing information and evidence from local, regional and national sources. Since breastfeeding initiation rates are relatively high in Brighton and Hove but start to decline around six weeks, the team decided to focus on maintaining exclusive breastfeeding at six to eight weeks among women who start to breastfeed.

As little qualitative research existed on sustaining breastfeeding, individual interviews were conducted with mothers in west Brighton (where there are pockets of deprivation) who were still breastfeeding at six weeks. A key insight was that they were unprepared for the realities of breastfeeding and wanted continuity of support and consistent guidance from health professionals. Indeed, focus groups and interviews conducted with health professionals revealed frequent staff shortages and fragmented services which prevented health visitors from spending much time with mothers and resulted in women receiving inconsistent advice from different providers.

The research also revealed that women perceived breastfeeding to be painful, tiring, demanding and a responsibility that could not really be shared. Mothers who had lots of support from their partners, family or friends were much more likely to continue breastfeeding. Individual interviews were therefore conducted with eight fathers to explore their knowledge and experiences of breastfeeding and what role they played in feeding. Fathers revealed that they felt largely sidelined in much other written information and in antenatal sessions run by professionals. They wanted specific literature about the practical issues and possible difficulties of breastfeeding and how they could help overcome them.

"We have all learnt a lot from working together and now have a better idea of how we would approach social marketing work in the future."

To meet the project's goal a range of tactics that addressed various barriers and target audiences was needed. With extensive input from key stakeholders, the project team developed the first PCT-wide strategy for breastfeeding which focused on redesigning the current service and retraining key health professionals to support women to breastfeed.

Development

From the scoping research instead of smaller interventions being developed a strategic approach was taken and the research was used to inform the development of a PCT-wide breastfeeding strategy which will be monitored by the recently established Brighton and Hove Child Health Strategy group. The team faced difficulties in securing additional funding so were not able to action all recommendations in the strategy before the end of the Learning Demonstration Sites scheme, but were able to deliver an information pack for fathers.

Based on the important role of partners in supporting women to breastfeed and the lack of targeted information on breastfeeding for fathers, the team developed an information pack designed specifically for this group. Comprising of ten brightly-coloured information cards and four coasters contained in an A5 cardboard box, the pack outlined the benefits of breastfeeding for both mother and baby, the importance of the father's role in supporting their partner to breastfeed and useful tips and FAQs to help make breastfeeding easier. To guide the content, tone and design of the pack, two further focus groups were conducted with fathers in Brighton and Hove. Views were also sought from individual fathers on three different design options before finalising the design of the packs.

Implementation

Fathers involved in the focus groups mentioned that they would like to receive the breastfeeding information packs directly from a health professional at the 20-week ultrasound scan or immediately after the baby's birth. This would be accompanied by a short discussion with the couple about breastfeeding facts and tips. However, given that the PCT had insufficient time to engage local health professionals about distributing the packs, this intervention was implemented by the LSHTM. In March 2010, an LSHTM researcher distributed the packs to 35 parents-to-be or new parents (fathers and mothers) as they attended a 20-week scan in the ultrasound department, or after delivery in the postnatal ward of the Royal Sussex County Hospital in Brighton. These individuals also agreed to be interviewed about their thoughts on the pack.

Evaluation

Given the small-scale and short-term evaluation of the father's pack, it was not feasible to measure the impact of this intervention on duration of breastfeeding. The evaluation, carried out in spring 2010, therefore aimed to assess the knowledge and confidence of fathers involved; describe parents' views on the pack; and gather their perceptions of its impact on breastfeeding. Of the 35 men and women who received the pack and initially agreed to take part in the evaluation study, 18 participated in a 20 to 40 minute follow-up telephone interview.

The guide was welcomed by participants, as most existing information and advice focused primarily on the pregnancy and birthing process, not what happens afterwards. Moreover, all participants thought it was very worthwhile to have information specifically for men. The pack was seen as being more successful in encouraging initiation of breastfeeding than in extending the length of time mothers breastfeed. It was also seen to be most useful for first time fathers and if provided early in the pregnancy. Even participants who had already researched and received advice about breastfeeding were reassured by the pack's contents. The most notable gains for men were ideas on how they could support and provide practical help to their breastfeeding partners and many liked the concept that feeding the mother was in turn feeding their baby. It also helped raise awareness of the importance of the father's role.

The design of the pack attracted the greatest controversy. While some liked it, others very firmly did not. For example, some of the participants liked the box and particularly appreciated that it was both 'different' and eye-catching, while others criticised what they saw as wasteful and excessive packaging. Opinion was also deeply divided about the pictures used. Several respondents welcomed illustrations of young, trendy looking men and appreciated a divergence from what was described as the normal 'mumsy' images used in pregnancy and baby guides. Others criticised the images for being too 'laddish' and 'blokey'.

There was a common feeling that the pack should clearly list the pros and cons of both bottle and breastfeeding. Other suggestions for improvement included: providing illustrations of men from different ethnic groups and ages pictured with their partners and babies in a caring role; more 'facts' and 'real life' case stories of how to address common problems; greater emphasis on the emotional and psychological needs of the breastfeeding mother; and a list of places where mothers could breastfeed comfortably outside the home.

Follow up

The project is ideally placed to build on the feedback from fathers. The additional information requested for the pack was developed during the course of the project and could be made available. Other feedback, about the pack's design and illustrations, could be used to inform further segmentation of fathers and guide the development of future interventions.

Overall, the project has produced a strong framework to build on. Compelling evidence and insights uncovered during the course of this project will be used to inform the development of future interventions that increase the prevalence of breastfeeding. In retrospect, the pace and delivery of the project would have been helped by a dedicated project manager, earlier engagement of stakeholders and partners and, crucially, robust budget planning and allocation. However, the project has made a significant contribution to breastfeeding strategy and interventions in the future.

NHS Lewisham

Lyn Burton and Gayle Wallace

This project aimed to increase the number of routine and manual smokers accessing and quitting with NHS Stop Smoking Services (SSS) in Evelyn ward, chosen for its high deprivation levels and smoking rates (42 per cent).

Smoking is the leading cause of preventable death and health inequalities. Public Service Agreements (PSAs) since 2004 have set targets to increase and support stop smoking attempts among all adults, particularly in routine and manual groups, with a reduction from 32 per cent to 26 per cent or less among this group in England by 2010. Smoking and its associated health problems is a particularly challenging issue in the ethnically-diverse borough of Lewisham. Lewisham's estimated prevalence of 26.8 per cent is higher than the national and London average and there is widespread deprivation. In 2006, 166 Evelyn residents used a stop smoking service to try and quit and 75 (45 per cent) of them succeeded.

Scoping

The behavioural goals of the project were for twice as many Evelyn residents to use SSS to successfully quit smoking. To explore why people in Evelyn smoke and the barriers and motivators to quitting or using SSS, focus groups with 32 smokers and interviews with six stop smoking service providers in the area were held between December 2007 and June 2009. A solutions group was formed with stakeholders such as Pepys Community Forum, Lewisham Refugee Network, Sure Start, health improvement team and a marketing agency working with Millwall Football Club.

Key insights into why this target audience smokes are that smoking is a core part of social interactions, a form of stress relief and a source of refuge. Giving up smoking may have an isolating impact on relationships and increase perceived levels of stress and anxiety in a deprived ward like Evelyn, where issues of debt, housing and money management contribute towards high stress levels. The intervention needed to focus on how to tackle these issues. Some smokers resented being 'lectured' all the time, expecting health professionals to be disapproving non-smokers who didn't understand how hard it is to stop. Those who had used a service mentioned the wait for a first appointment and sessions being too short, with no support 'to fall back on' in the longer term. An ideal service would be like a supermarket: open all day, every day. There was no perception of the current service as a unified whole with different options from which to choose, either by potential customers or advisors. People wanted a choice of intensity, model and location.

Mapping the ward's existing provision showed obvious gaps. There were two GP practices in the ward: one did not offer an advisory service and one had limited nursing time for this. Of the three pharmacies, one had no advisor in the shop on Wednesday (market day) and two did not open on Saturdays.

Development

Smokers' reference groups were held at a primary school and a local pub between September 2008 and June 2009 to test ideas and pre-test publicity materials.

People in routine and manual jobs, such as catering, often work long hours and have trouble accessing the SSS. This was particularly relevant on isolated housing estates where facilities and transport links are limited. Two recruitment and outreach workers visited local businesses and provided stop smoking sessions in the workplace. Stress was cited as one of the

"Someone from the focus group suggested, "You could have support set up in a supermarket, 365 days a year, so that when you're ready to quit and want help, there's someone to go to". Our challenge is to turn this idea into an initiative that is feasible for us."

main reasons why people smoke, are reluctant to give up and take up smoking again after quitting. The community advisors running the drop in and weekly clinics in GP practices advised people about using local welfare rights, social housing and voluntary sector organisations to alleviate some of the problems causing them stress. Two stress management workshops were offered to people attempting to stop smoking.

Research shows that another reason people (particularly females) continue to smoke is to control their weight. Outreach advisors encouraged everyone to take up some physical activity to help with stress management and weight management. The local GP exercise referral scheme changed its criteria to include people trying to stop smoking and GPs were happy to support referrals initiated by advisors.

Implementation

A number of interventions were made to respond to the research findings. To fill service gaps, weekly sessions were offered in both GP practices. One pharmacy increased its pharmacist advisor time. Another started to provide Champix stop smoking medication from February 2010. An evening session was tried in the Leisure Centre, but did not attract enough people to continue. The drop-in moved to the Waldron health centre and proved so popular that it extended its hours. A new pharmacy service opened in the same health centre, providing Champix from February 2010.

From April, outreach workers started a programme of visits to organisations, workplaces and key community staff in the ward. In May, they went to local schools to talk to parents at coffee mornings, school fairs and parents' evenings. In December 2009, outreach advisors visited the East London line workforce with a pharmacist who provided NRT directly to those setting a quit date. Millwall and Lewisham's service were featured in a national campaign and a second smokefree match in February 2010 raised the profile of the service and its link to healthy heart checks. A new Lewisham Stop Smoking website launched in January 2010 advertised Evelyn's services. In March 2010, two stress management workshops were run at the Waldron Health Centre in New Cross but were poorly attended. The plan is now to integrate this into the stop smoking programme, rather than offering a separate session.

Evaluation

The LSHTM evaluated the intervention using three methods. The first was a cross-sectional street survey with a pre- and post-intervention sample of people living and working in the Evelyn ward area. The second was an analysis of routinely-collected service data from Evelyn and New Cross wards for the periods January to December 2008 and January to December 2009. Finally, eight qualitative in-depth interviews with key stakeholders were carried out.

In the pre- and post- street survey, more 'pre' respondents had seen information about stop smoking services and were aware of help available. Most respondents in both groups said they received no help to quit. However, far more in the 'post' group said they had received help in the area where they lived, medicine from a GP or chemist or help from a stop smoking advisor, GP or chemist.

The service data indicated a notable increase (21.3 per cent) in the number of Evelyn residents using a service from 2008 to 2009. This was greater than the 12 per cent increase across Lewisham as a whole, suggestive of the project's impact. The proportion using pharmacy services and sessions run by the outreach advisors increased between 2008 and 2009, while the proportion using a GP-based service decreased. These services doubled the number of people quitting during this period.

Those interviewed considered that some of the lasting benefits of the project were improved knowledge of the target group and improved service provision. Most felt the principle of exchange was not adequately addressed. Extended services did not address barriers to behaviour change (for example, stress and weight management) and a system of incentives was not developed. Some stakeholders thought that the factors that kept the target group smoking (such as their socio-economic situation, social values and cultural norms) were too entrenched and beyond the project's scope.

Follow up

The initial scoping report was too wide – far-ranging, detailed and without a summary. Long delays at the start of the project lost both momentum and potential members of the solutions group. The baseline research was undertaken after activity in the ward had already begun, which skewed the findings of awareness about the service pre- and post-intervention.

Despite these challenges, the application of learning from the demonstration site to other areas is encouraging. Recent data shows that there are more smoking quits in the most deprived areas in Lewisham and that this trend has doubled in 2009 to 2010. Advisors in Bellingham in 2009, another deprived ward with high smoking prevalence, took advice from the project manager for Evelyn on who to consult and how to develop their work in Bellingham. They canvassed local people's views, met with community leaders and visited workplaces, organisations, businesses and shops in the area, before setting up an evening stop smoking drop-in at the leisure centre. This is promoted through their ongoing work in the ward and word-of-mouth from satisfied customers. Advisors have been invited into a bus garage, school and youth project, which increases interest and take-up in the area.

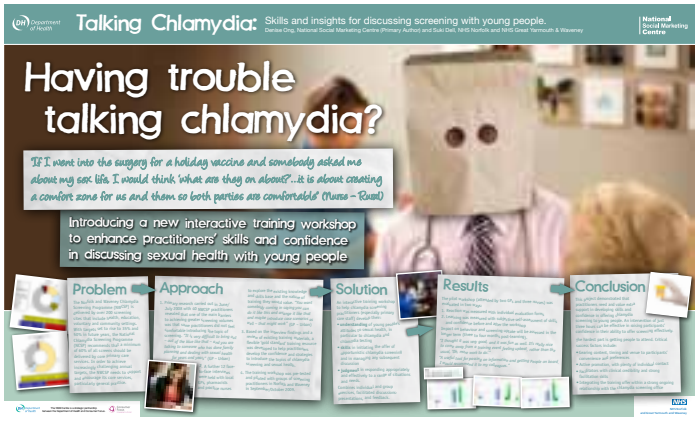
NHS Norfolk and NHS Great Yarmouth and Waveney

Suki Dell and Denise Ong

This project was initiated with the aim of increasing screening activity at screening sites that are part of the Norfolk and Waveney Chlamydia Screening Programme (NWCSP).

The NWCSP is delivered through over 200 sites which include health, education, voluntary and community settings. However many of them return few or no screens at all each year. Therefore, the project targeted existing screening sites, particularly GP staff, to maximise opportunistic screening and support them to deliver increasing and sustainable volumes of chlamydia screening in the longer term.

In 2007 to 2008, just 3.8 per cent of young people were screened for chlamydia in Norfolk and Waveney, far below that year's target of 15 per cent. With targets rising to 17 per cent (2008 to 2009) and 25 per cent (2009 to 2010), NHS Norfolk and NHS Great Yarmouth and Waveney, who jointly fund the NWCSP, partnered with The NSMC on a pilot project to help increase the uptake of chlamydia screening among 15 to 24 year olds with a budget of £60,000.



Scoping

The team began by reviewing existing data and literature and carrying out informal stakeholder consultations with the Department of Health (DH), NWCSP members, other Chlamydia Screening Office (CSO) leads and screening providers in Norfolk and Waveney. Analysis of NWCSP resources and screening figures revealed that while over 200 venues across Norfolk and Waveney had signed up to offer free chlamydia screening to young people on behalf of the NWCSP, most of these sites were returning few or no screens. Given limited resources, the team decided to focus on one target audience. Although this was initially anticipated to be young people, the news that DH was planning a national advertising campaign promoting chlamydia screening to young people prompted the team to focus their local resources on screening providers to avoid duplication.

To better understand this target audience, in-depth interviews were held with 40 NWCSP screening providers. Key insights were: a low awareness of annual targets and NWCSP performance leading to low prioritisation and lack of urgency to offer chlamydia screening; a perceived lack of interest and support from the CSO; and a perceived lack of opportunity, skills or confidence to offer chlamydia screening to young people, particularly where the provider's main service was not sexual health. They also revealed anxieties about raising the issue of screening in unrelated situations and limited understanding of the NWCSP, as well as barriers such as competing priorities, limited time and lack of staff.

To help providers overcome these barriers, the intervention needed to be easy, not too time consuming and improve skills and confidence around screening. In exchange, the intervention offered free screening kits and other collateral; involvement in an important national initiative; and professional development and networking opportunities.

Following the research, the target audience was further segmented into four groups: 'engaged and motivated'; 'interested but restricted'; 'low interest'; and 'low priority'. The interventions were to be targeted at the 'interested but restricted' or 'low interest' groups, as with the right encouragement and support they had the greatest potential to increase screening. They were also segmented according to provider type and the team chose to target core providers (namely GPs and pharmacies). This

"Applying social marketing methodology has required self-discipline that will positively influence how we approach our work in the future. We have gained much from this experience."

was because they offered the most screening opportunities and there was a national drive to improve health services. Therefore, the behavioural goal of this project was for existing screening providers (particularly in core services) to actively offer chlamydia screening to 15 to 24 year olds.

Development

A stakeholder event was held in November 2008 to engage PCT stakeholders and screening providers and to test and brainstorm intervention ideas. Following the event, five screening providers volunteered to form a solutions group to help develop, pre-test and promote the interventions.

A number of interventions were developed based on insight. First, improved, standardised induction sessions for new sites were introduced, so that they all received at least the minimum information required to successfully carry out screening, ensuring quality control and consistent messaging. Second, bespoke training to build providers' confidence and skills in introducing screening to young people was developed. This was because one of the main barriers identified was that some providers, particularly those whose main remit was not sexual health, were apprehensive about raising the issue of chlamydia screening. Low awareness of annual targets and NWCSP performance to date meant that providers neither felt urgency to offer screening nor that they were part of a larger initiative. Quarterly newsletters and ongoing, systematic contact from the CSO were therefore planned. They aimed to keep the profile of the NWCSP high and motivate sites to screen more proactively by providing ongoing updates on screening levels.

Some providers perceived a lack of interest and support from the CSO once they signed up to the programme, which sometimes led to cynicism and the assumption that there was no real need for screening. Offering sites ongoing proactive support from the CSO would help maintain initial enthusiasm for the programme and the sense that screening is an ongoing priority. For providers whose main remit was not sexual health, chlamydia screening often fell to the back of their minds. Screening was also often only offered when a young person presented for a sexual health related reason. By designing and piloting pop-up reminders, offering fresh promotional materials and with the enhanced 'Talking Chlamydia' training, the interventions aimed to keep chlamydia screening fresh in the minds of the providers and help them develop the confidence and strategies to introduce screening in unrelated situations. All the interventions, aside from the training, were developed by internal PCT staff. The training workshop was developed by the Central Office of Information (COI).

Implementation

The interventions were launched at slightly different times depending on how quick and easy they were to develop and implement. In June 2009, all new screening sites began receiving the improved induction session from CSO staff. Pop-up reminders were also piloted in three GP clinics between June and August 2009. In July 2009, the first newsletter was distributed to all screening sites and then at quarterly intervals. The Talking Chlamydia workshop was piloted by COI in October 2009 with six GPs and nurses. Based on positive feedback from the pilot, the CSO has continued to offer this workshop locally to providers interested in, or who may benefit most from, this additional training. A range of locally branded materials, including posters, flyers, shelf wobblers and dump bins, were produced and offered to all screening sites, but particularly to pharmacies, from December 2009. Although the CSO produced a new contact plan and enhanced their database with prompts to remind staff to contact each site personally at set intervals, the team has postponed carrying out systematic, targeted follow-ups with all sites until 2010 to 2011 due to staff shortages.

Evaluation

With support from the LSHTM, a three-part evaluation plan was designed. First, annotated time-series data was looked at which used routinely collected screening data to assess progress made by the interventions in increasing the volume of chlamydia screens. The findings were very promising. The improved induction training for new sites coincided with a threefold increase in chlamydia screening volumes. The dissemination of promotional materials to pharmacies from December 2009 was followed by a 300 per cent increase in chlamydia screens taking place in pharmacies during the period autumn 2009 to February 2010. The data also indicated that general practices (the main provider type targeted) achieved the biggest increase in the number of completed chlamydia screens between April 2009 and March 2010.

Second, post-intervention surveys were taken to explore the extent to which the improved induction sessions and Talking Chlamydia workshops were seen as appropriate and useful by attendees. Again, there were very positive findings: the sessions and workshops were rated very highly by participants for their relevance, delivery and for meeting their objectives. Furthermore, according to a self-assessment of understanding, skills and ability by participants before and after the Talking Chlamydia pilot workshop, all respondents reported improvements on all three measures. Finally, retrospective in-depth interviews were conducted by telephone with screening providers to examine their experiences and views of the interventions.

Follow up

The evaluation data is still being processed by the LSHTM, but there is optimism that the interventions around improving communication to screening sites are valued by providers and effective in prompting them to screen. Findings from the in-depth interviews with providers are pending, together with an assessment of all the long-term benefits of the individual and combined interventions and learning from implementing a social marketing approach. It is hoped that the most effective components can be usefully integrated into the whole NWCSP and provide a resource for other screening programmes elsewhere in the country. For example, the Talking Chlamydia training is currently downloadable from the National Chlamydia Screening Programme website for providers to access free of charge. The quarterly newsletter to all screening sites is currently on its fourth issue and all promotional materials are ordered by providers in all settings on a regular basis.

Gateshead, Sunderland and South Tyneside Council

Bill Kirkup and Emma Heesom

This project aimed to halt the decline in uptake of healthy school meals and to increase their uptake at Key Stage 2 (aged seven to eleven).

The key target audience was initially primary school children but following research and segmentation, headteachers were identified as the primary target audience, with children and parents as the secondary audience.

Following rapid and widespread changes to school meals across England, driven by Jamie Oliver's television campaign, uptake significantly declined. More and more students now opt for packed lunches, but there is a growing concern about their very varied, often low nutritional quality in comparison to school meals. School meals in primary schools make a vital contribution to the dietary intake of school children. The decline in uptake also undermines the financial viability of the school meals service, thereby threatening its ability to continue offering healthy options. In 2007, a collaborative of caterers from the North East, together with Healthy Schools and the local government office, approached The NSMC for guidance in adopting an innovative approach to this issue and were allocated £50,000.

Scoping

The behavioural goal was to increase the number of children in Key Stage 2 eating school meals one to three days a week. The team began in early 2007 by reviewing secondary data, including government policies and previous studies on school meals and healthy eating among children, as well as local, national and international interventions. Semi-structured interviews were held with professionals involved in promoting school meal uptake and healthy eating across schools in the North East, aiming to identify the main factors affecting uptake. A follow-up phase of interviews was carried out in January 2008 with headteachers to understand their attitudes and perceptions of school meals. Primary research was also carried out in spring 2008 with parents and children from the schools in the area. It aimed to investigate how parents and children perceived school meals, reasons for preferring packed lunches or disliking school meals and children's power in the decision-making process.

Key insights from the headteachers indicated there was communication clutter and confusion around school meals. They had been bombarded with information, legislation and advice since it became a government priority, yet there was confusion around who manages the catering services (headteachers or the local education authority) and what could or could not be included in the meals. They also cited a lack of dining hall management; little understanding of nutritional standards; poor customer service skills; poor quality and presentation of food; and a lack of cooking skills and knowledge of different foods on the part of the parents and children as key barriers. For parents, barriers included a loss of control over being able to provide something they knew their child would like and eat plus financial costs of school meals (particularly for families with more than one child). For children, barriers were that popular but unhealthy options (such as chicken nuggets and chips) were no longer offered at school and they were often confronted with food that was unfamiliar, unpopular and different from what they ate at home.

"The North East is passionate about the wellbeing of our young people and we are always willing to try new things. The social marketing pilot has helped us to come up with some excellent interventions and I am looking forward to seeing them in place."

Evidence showed that if a headteacher is engaged in the school meal agenda, uptake improves, so headteachers were chosen as the primary audience. Through the qualitative research, headteachers were segmented into four groups: 'too busy', 'disengaged and confused', 'trying within their field' and 'passionate and active'. The intervention was targeted at the second and third segments, as it was believed they would be both responsive to and would benefit most from the intervention. The main competition was a lack of time and competing priorities. Therefore, the intervention needed to offer an attractive exchange in terms of improving student behaviour and decreasing time required for disciplining; increasing concentration and academic performance; and contributing to better qualified and more satisfied staff by designing a more pleasant dining environment.

Development

After scoping, a solutions group was set up to help develop the interventions. It was comprised of catering managers, school cooks and dining room attendees, headteachers and health promotion specialists from the local health authority, as well as school clerks and dinner nannies (lunchtime supervisors). Findings from the secondary and primary research were presented to the group, who then helped develop a multi-pronged strategy that focused on engaging headteachers, encouraging children to eat school meals and training dinner nannies to provide a more supportive and pleasant dining experience.

The intervention needed to appeal to both the headteachers (so that they would implement it in their schools) and the children (in order to improve uptake of school meals). For headteachers, the product was improved student behaviour and organisation in the dining hall and the associated long-term health benefits of eating at least one nutritious meal a day; as well as improved communication with caterers and a lower kitchen staff turnover. A myth-busting card and case study compendium, which highlighted local successful initiatives and overcame misconceptions about the new school meal standards, was also designed. For the children a more relaxed, less crowded and noisy dining room experience was created, using queue management, lunchtime rotation and improved one-to-one management by dinner nannies. Children were considered customers, rather than passive recipients of a service, who made choices based on their own experiences and judgment. The team developed new menus to suit individual school meal tastes; used china plates and bowls as the plastic 'airline' trays were very unpopular; and introduced lunch break changes to ensure each class group is served first at least once a week. Kitchen and dining staff were essential in delivering the new dining room experience, so training in customer service skills, presentation of food, first aid, nutrition standards and positive behavioural management and motivational techniques were part of the mix.

Implementation

During the 2009 autumn term, three schools piloted the dinner nanny training scheme. Implementation was staggered in order to meet the needs of the pilot schools. Training for dinner nannies was completed weekly and took half a term in each school. The printed communication tools were piloted in another school during the 2009 spring term, although all schools across the boroughs could access the online communication tools. A networking and learning event was held at the start of the implementation phase. Finally, dining room changes were made. China plates and bowls were piloted in one school and changes to the lunchtime rota and menus were implemented in the three schools which received the dinner nanny training. Unfortunately, much of the original planned intervention needed to be scaled back due to funding.

Evaluation

The project was evaluated using various methods. First, by telephone interviews pre- and post-intervention with headteachers in the intervention schools and control schools. They were contacted in autumn 2009 and were followed up in February 2010 to complete a questionnaire on the school meals agenda. Second, the team looked at school meal uptake data in the pilot schools, collected from the local authority caterers in January 2009 and again after the intervention in January 2010. These were compared against control data, which is the average school meal uptake figure for the local authority. Finally, interviews and qualitative research was carried out with the dinner nannies who received the extra training.

Key findings were that headteachers reported better relationships with catering managers and the majority reported they now felt able to make changes to their menus. Most notably, school meal uptake in the three pilot schools rose by between 3.5 per cent and nine per cent, depending on which intervention mix the schools received. The dinner nanny training intervention has been accredited locally and used as evidence for a national training programme for lunchtime supervisors. As a direct result of the training, one pilot school has made changes to the dining room experience and another has introduced plates and bowls to replace the 'airline' trays.

Follow up

The interventions occurred during the hype around school meals and the national 2010 school meal figures show an increase, but not as high as some of the pilot schools. Several of the caterers have gone on to identify funds for schools to change their dining space, as has the national organisation, the School Food Trust. This pilot underlined the importance of a positive, customer-orientated dining experience – even at a relatively young age, children require a pleasant experience. The lessons could be transferred to many school-based behaviour change interventions. For example, selecting the right target audience (in this case headteachers rather than children) and further segmenting by attitudes and behaviour allowed the team to focus their efforts on those who are most likely to change and make an impact on the desired outcomes.

NHS Stoke-on-Trent

Deborah Richardson and Viv Caisey

NHS Stoke-on-Trent set out to reduce smoking in pregnancy rates in two high-prevalence neighbourhoods, Meir and Bentilee. The target audience was not just pregnant women but also women who were thinking about starting a family, women who were between pregnancies and women who had children under the age of five.

me2
Stop Smoking Club

Smoking in pregnancy is both a cause and effect of health inequalities and significantly contributes to worsening health outcomes of both mothers and children. Stoke-on-Trent is a designated 'Spearhead' area. This status recognises the extent of existing deprivation in the city, the entrenched nature of health inequalities and the impact this has on the health status of the local population. Smoking during pregnancy rates in Stoke-on-Trent are higher than the national average. While the existing smoking in pregnancy service, 'Quit for a New Life', was making good progress, work done on the Infant Mortality Floor Target Action Plan identified that it was not achieving the results needed to make a significant impact. It became clear that a better understanding of why women were not engaging with the existing service was needed.

In early 2007, The NSMC partnered with NHS Stoke-on-Trent to embark on a £30,000 pilot social marketing project to tackle smoking in pregnancy.

Scoping

The behavioural goal was to increase the number of successful quit attempts among pregnant smokers. To achieve this, the project aimed to encourage more women to engage with smoking cessation services (group or one-to-one) by providing a service women wanted to attend.

Two focus groups with target women were conducted in July 2007, one in Meir and one in Bentilee. The groups identified key barriers for giving up smoking while pregnant; explored women's experiences, attitudes and emotions to smoking during pregnancy; and gave an idea of their ideal local support service. Professional staff and other key partners were interviewed for their views on current interventions and services. Desk research was also conducted to identify local, national and regional campaigns that addressed smoking in pregnancy, which provided useful learning around what had and had not proved successful in the past.

Overwhelmingly, the key insight from the focus groups was that women chose to smoke for some 'me time' as it provided them with a chance to unwind and relax. Women stated that they didn't want to be 'nagged' into quitting smoking and they wanted health professionals to stop focusing on the negatives of smoking which they already knew and did little to motivate them to quit.

Other barriers to quitting smoking included the perceived time and effort involved, peer pressure from family and friends to smoke and the pleasure and enjoyment of smoking. To overcome these barriers, the intervention needed to provide compelling and appealing benefits. Importantly, these benefits should not focus on the health of the mothers' babies, but rather on her own personal sense of wellbeing, such as increased self-esteem, alternative 'me time', feeling and looking good and saving money.

"The experience of using a social marketing approach to a sensitive and important area of work has been enlightening and empowering. The project hasn't just been about a campaign and some leaflets, it has provided us with a product that is attractive and relevant to the client group. It has provided a robust way to engage partners and the end user – and we are starting to see the benefits."

Development

Based on these insights, the project team designed a new concept in stop smoking group sessions, which complemented the existing one-to-one visits and telephone support. The target audience's demand for an attractive service was one that was welcoming and encouraging, where they could relax and meet other women who had quit smoking successfully and those who were trying to quit. The new service therefore had to be inviting and non-judgmental and appeal to them as women, not as mothers or pregnant women.

Two further focus groups were held with target women in November 2007 to pre-test the proposed intervention and its brand identity and values. Following this, the Quit for a New Life service was re-branded and re-positioned to include a *Me2* Stop Smoking Club, which comprised free group sessions focusing on the positive elements of quitting and new ways of creating 'me time'.

Implementation

The Me2 Clubs were launched in summer 2008 as a six-week rolling programme and were refined to suit participant's needs. Sessions included a meet and greet, tips and techniques to help quit smoking, advice on managing stress, exercises to build self-esteem and, crucially, opportunities to relax, and enjoy some 'me' time. No appointments were needed and each session ran for around 90 minutes, with free crèche places provided and all sessions held locally at the Children's Centres. Small incentives, including Me2 branded products, were provided to members when they joined and when they reached their individual goals. The club had an open-door policy and women were free to return if they failed to quit at the first attempt, contributing to an environment where women were free from being 'nagged' and judged.

To attract women to the club, the team attended community events and provided taster sessions in the run up to launch. The clubs were promoted by word-of-mouth from midwives, as well as leaflets and posters that were displayed and distributed by local retailers.

The project also addressed the needs of the professionals who would be critical to service delivery. In-depth specialist training was provided for the 'sales force' of the service, including a new brief intervention training package and DVD using 'role play actors' to demonstrate an effective five minute brief intervention. To increase the capacity of the service, two new support workers were recruited.

Evaluation

Data on the percentage of women who smoke during pregnancy city-wide is disappointing. However, the data relating to Children's Centre areas is encouraging. The percentage of women reported as smoking during pregnancy in the Treehouse Children Centre area in Bentilee (where the pilot intervention took place) declined from 31.9 per cent in 2006 to 2007 to 29.2 per cent in 2007 to 2008.

Feedback from the pilot group sessions was very positive. The Me2 Club in Bentilee was especially well received, delivering an average conversion rate from quit date set to four-week quitter of 60 per cent. Group members also reported increased levels of self-esteem and wellbeing. At the end of 2007 to 2008 the service had delivered 121 four-week quitters compared with 38 in 2006 to 2007.

The club in Meir was not so successful due to a number of factors, including the day of the week it was held. Women who attended the focus groups during the scoping phase said they would prefer a Friday meeting but this did not appear to be the case.

Follow up

The Me2 Club in Meir is being re-evaluated in order to meet women's needs and the team are working with Children's Centre staff to assess the most appropriate way forward. Also, the activities offered by the club are now being further developed and rolled out to other Children's Centres in Stoke-on-Trent.

The team were delighted to win the Health Service Journal's Best Social Marketing Project Award and have shared their experiences with many organisations who wanted to test these findings in their own local areas. Key lessons include: be clear on the project's objectives and clearly define behavioural goals, but be flexible and ready to be challenged – the target audience may not be who you first think they are. It is also important to engage stakeholders from the outset and at each stage of the process. Finally, pre-testing intervention ideas is critical to the success of the project.

Lighting the Beacon

A profile of the ten Beacon Partnership Projects underway in England

Produced by the Regional Social Marketing Development and Support Programme

December 2009

The projects:

South Central:
Reducing smoking prevalence in Portsmouth 6

West Midlands:
Analysing shopping behaviour in the West Midlands 8

Yorkshire and Humber:
Inspiring teenagers in Whitby 10

South West:
Increasing breastfeeding duration rates across Cornwall and the Isles of Scilly 12

East of England:
Working with the Bangladeshi community in Suffolk 14

South East Coast:
Increasing physical activity in Kent 16

East Midlands:
Working with the takeaway industry in the East Midlands 18

North East:
Using football to improve men's health in Newcastle 20

London:
Reducing the demand for urgent care services in Ealing, London 22

North West:
Building partnerships in the North West 24

Introduction

The ten Beacon Partnership Projects for England were established by the National Social Marketing Centre and the Department for Health in early 2009. Their purpose is to demonstrate and showcase best practice in partnership working for social marketing, in order to improve public health outcomes.

The origins of the Beacon projects lie in the 2008 report, 'Ambitions for Health: A strategic framework for maximising the potential of social marketing and health-related behaviour'. This strategic framework sets out how the Department of Health plan to work together with key leaders in the public health community to embed social marketing principles into health improvement programmes. At the heart of this framework are four programmes of action:

1. Health Capacity
2. Health Insight
3. Health Innovation
4. Health Partnerships

One of the key deliverables for **Programme 4: Health Partnerships**, was the establishment and development

of ten Beacon Partnership Projects across England (one in each Strategic Health Authority region) which will become outstanding examples of partnership working, using social marketing to improve health.

All projects had to include two or more key partners and were required to address one or more public health priorities within their region. The focus for the projects could cover single issues such as reducing smoking prevalence, or focus on cross-cutting behavioural issues in target groups such as a poor diet, high alcohol consumption and low activity levels.

The development and delivery of the Beacon Partnership Projects was assigned to the Regional Development and Support team at the National Social Marketing Centre, in late 2008*. Applications were invited in early 2009, from which one project was selected for each of the ten Strategic Health Authority regions in England. Nine projects are now up and running across England, with ongoing evaluation. One project will be chosen in the North West in December 2009 and launched in early 2010. (see page 24).

Lighting the Beacon in… Portsmouth

The project: To reduce smoking prevalence and increase uptake of stop smoking services amongst females in routine and manual employment in Portsmouth.

Summary

Working with some of the city's largest employers, this project in Portsmouth aims to reduce smoking prevalence and increase uptake of NHS Stop Smoking Services amongst females in routine and manual employment within the city.

The project aims to understand why women smoke, how they feel when they smoke, barriers to quitting, preferred support and motivations to quit. This insight will enable the Portsmouth Local Strategic Partnership to develop Stop Smoking Services that are supportive, accessible and relevant to the target audience.

Why was this project chosen?

Tobacco use remains the number one cause of preventable death and ill health in Portsmouth* and is a major risk factor which contributes to the city's major killers – cardiovascular disease, respiratory disease and cancer. Smoking prevalence within Portsmouth is high, particularly in some communities where it is higher than the national average. Portsmouth is committed to reducing smoking prevalence and the associated burden of ill health.

Nationally, smoking prevalence among routine and manual workers is 29%**. Portsmouth has set a target to reduce this to 26% within the city.

What progress has been made?

As part of the Scoping phase of the project, professional researchers commissioned for the project have already spoken to over 60 women in their place of work whilst on cigarette breaks, held in-depth 'discussion picnics' with workers in two work places, circulated questionnaires and held further in-depth interviews to gain insight into women's smoking behaviour.

An event was held with local stakeholders, including ex-smokers and smoking service commissioners, to help co-design and develop propositions and recommendations to take the project forward.

The target audience has been segmented by behaviour and the steering group will now be setting measurable behavioural goals and will review the recommendations made following the research phase. The chosen recommendations – based on insight – will then be taken forward to the Development stage where potential interventions will be tested among the target segment groups.

* Smokefree Portsmouth – A collaborative strategy for health improvement 2008-2011
** Department of Health's Tobacco Control Marketing Communications Strategy 2008-2010.

"This project has enabled us to develop our partnerships across the NHS, local authority and the private sector within the city for the benefit of our local population. The development of a coherent approach to social marketing will enable us to share learning across other partnerships."

Jonathan Smith, Assistant Head of the Health Improvement and Development Service, Portsmouth City Council

Project start:
July 2009

Project end:
July 2010

Lighting the Beacon in… The West Midlands

The project: Exploring the link between obesity and food purchasing behaviour in the West Midlands.

Summary

This project will explore, through qualitative research, what influences us to buy certain foods – in particular, the drivers of 'unhealthy' food purchasing behaviour amongst distinct (vulnerable) consumer segments and their attitudes towards different support programmes designed to change their food purchasing behaviour.

Working with the University of Kent and using store card data, the project team will analyse consumer behaviour to understand attitudes towards diet and health. Previous research has been predominantly qualitative in nature, designed to explore awareness of, and attitudes towards obesity – its causes and how to deal with it – amongst different

social groups (e.g. individuals and families from different socio-economic and ethnic backgrounds). This project proposes to build on previous research by identifying how different the food purchasing behaviour of these different groups actually is, where the vulnerable groups are and how best to intervene for effective behaviour change.

Why was this project chosen?

Obesity is a problem of increasing significance in the West Midlands, which has the highest incidence rate in the UK. The causal factors are related largely to lifestyle and diet, yet changing the lifestyle and food consumption behaviour of individuals is a complex challenge. A recent report by the Department of Health* highlighted the importance of designing intervention strategies that are relevant to distinct (regional) communities, recognising that behaviour change is complex and interventions must be effectively targeted at specific consumer segments. This project will aim to address these recommendations.

What progress has been made?

An indicative unhealthy food list has been formulated, in consultation with regional public health topic leads and the Food Standards Agency. The analysis of basket data and the penetration of unhealthy food in vulnerable consumer group segments has started.

* Healthy Weight, Healthy Lives: A toolkit for developing local strategies (published by the Department of Health, 2008)

"Before investing resources into the development of a range of programmes to tackle obesity, we felt that we should gain a better understanding of food purchasing behaviour and how this relates to the incidence of obesity. This is an innovative and novel approach and it will be interesting to see what we find out."

David Elliott, Public Health Manager, Department of Health West Midlands

- National Social Marketing Centre

Project start:
September 2009

Project end:
March 2011

Lighting the Beacon in… Whitby

The project: Reducing the number of teenage pregnancies in Whitby, Yorkshire.

Summary

This project aims to reduce the number of conceptions in girls under 18 in Whitby and surrounding school catchment areas. Through research and working with the target groups, the partnership hopes to understand more about those most likely to engage in risky sexual behaviour and develop insight to inform the commissioning of services/ interventions that will support young women to make different choices.

Why was this project chosen?

Whitby has remained one of North Yorkshire's 'hot-spot' areas for some time. Streonshalh, in particular, has a teenage pregnancy rate amongst the highest 20% in England, with 61.8 under-18 conceptions per 1,000 females aged 15-17.

What progress has been made?

The project is currently in the initial Scoping phase. Over the winter months of 2009-10, a number of actions will take place including:

- Reviewing existing policy and evidence
- Developing a clear definition of the behavioural challenge and behavioural outcomes in relation to the overall project, based on the findings from the literature and policy review
- Conducting a situation/service provision analysis in the local area
- Developing an initial segmentation for testing and produce recommendations for subsequent qualitative research
- Identifying target areas based on geographic / demographic analysis within Whitby for pilot social marketing campaigns
- Producing initial recommendations for interventions based on the evidence review
- Developing initial benchmarking and evaluation measures, including proposals for an evaluation plan

Initial stakeholder engagement meetings have taken place over the last six months to ensure buy-in from all partners, enable all stakeholders to understand the social marketing process and ensure everyone is signed up to their roles and responsibilities. To date, one of the biggest success factors is collaborative working and forming partnerships to address community issues and putting into practice a possible model of how PCTs can approach partnerships in the future.

This Social Marketing project, though relatively small-scale, is important to us for three reasons. Firstly, it's an early opportunity to demonstrate the support we can offer PCTs; secondly, it's a chance to use some of the new tools under development by NSMC; and finally, through working with an external agency, The HUB, it's an opportunity to test one possible model of how we could support the Scoping phase of a project"

Jake Abbas, Assistant Director of the Yorkshire and Humber Public Health Observatory

Project start:
April 2009

Project end:
2011

Lighting the Beacon in… Cornwall and Isles of Scilly

The project: Increase the uptake and duration of breastfeeding in Cornwall and Isles of Scilly

Summary

The South West Beacon Partnership Project aims to increase breastfeeding duration rates (to 6-8 weeks) across Cornwall & Isles of Scilly. Evidence shows that maximising the uptake of breastfeeding is a key opportunity to help more children achieve and maintain a healthy weight, and establish good foundations for healthy lives.

Following a literature review, a strong evidence base has led to a very focused primary research phase which will aim to explore key areas with the target population, including:

- Impact of local communications (during pregnancy and after birth to 8 weeks)
- Impact of service and support provision/availability in Cornwall & Isles of Scilly
- Impact of health professionals on breastfeeding initiation/ duration
- Impact of key influencers (partner, family, friends)

Why was this project chosen?

Around 5,000 children are born in the Cornwall and the Isles of Scilly health community each year. Improving the health and wellbeing of children, enabling them to enjoy a happy and healthy lifestyle, is a priority for NHS Cornwall & Isles of Scilly and its wider community. This includes the allocation of additional resources to help children achieve a healthy weight

– one of the ten health outcome priorities identified by NHS Cornwall & Isles of Scilly for the next five years, and mirrored by the UK's national Healthy Weight Healthy Lives* programme to combat obesity.

The South West Beacon project also offers a wider benefit for NHS Cornwall & Isles of Scilly, as it will create a best practice model for how a social marketing and behaviour change approach can be taken from scoping to practical implementation. This learning will then be applied to other key public health topics in Cornwall and the Isles of Scilly.

What progress has been made?

The Steering Group was formed in April 2009 and project initiation and set-up was completed by early summer, with a review of available baseline data undertaken by the Steering Group. Over summer 2009, a secondary research brief was developed and work commissioned to an independent researcher, who undertook a literature review of the substantial evidence base available on this subject. The literature review was completed in August and findings presented at the Steering Group meeting in September. The project managers are now leading the phase II primary research, which is taking place in autumn/winter 09/10.

* Healthy Weight, Healthy Lives: A Cross-Government strategy for England (published by the Department of Health, January 2008)

"Becoming a Beacon Project has been a welcome boost to our existing partnership. It has enabled us to focus on a deeper understanding of our target audience and will support better commissioning of services. The social marketing approach has been embraced because it is highlighting opportunities to build sustainable change, for example, how best to develop our network of breastfeeding peer supporters."

Matt Lenny, Head of Social Marketing, NHS Cornwall & Isles of Scilly

Region:
East of England

Partners:
- Bangladeshi Support Centre
- NHS Suffolk
- National Social Marketing Centre

Project start:
March 2009

Project end:
September 2010 (estimated)

Lighting the Beacon in… Suffolk

The project: Improving health outcomes for the Bangladeshi communities in Suffolk.

Summary

This partnership project was set up to explore some of the health issues facing the Bangladeshi community in Suffolk, with a particular focus on cardiovascular disease (CVD). The project aims to reduce the risk of CVD in the Suffolk Bangladeshi community by trying to promote more healthy behaviours around exercise, healthy eating and smoking.

The partnership will explore achievable lifestyle behaviour change by first gaining insight into the community – how they live their lives, and what moves and motivates them. The insight gained will hopefully lead to responsive commissioning of health services that will meet their needs and reduce health inequalities arising from cardiovascular disease risk in the Bangladeshi community.

The budget for this project has been invested into the Bangladeshi Support Centre as the organisation best placed to deliver the project. This follows NICE guidance around behaviour change for harder to reach communities.

"The Bangladeshi community had clear ideas on how to tackle their health problems. Through the project, trust and friendship has grown between the PCT and this innovative and open community. The result is a tailored programme to improve health and a community which is helping to shape services"

Dr Peter Bradley, Director of Public Health, NHS Suffolk

Why was this project chosen?
The rationale driving the project is that the Bangladeshi community are at a high risk of CVD because of their lifestyle. Men are often working long hours in the restaurant trade and don't have much time for themselves or for healthy eating. Women may be isolated and face language barriers. They may find exercise culturally difficult and don't always know how to access services. This project will test the best ways to communicate with this ethnic group, learning from the good practice of the Support Centre which already has a strong track record of engaging with the target audience.

The East of England region is keen to focus on the needs of this community and other BME communities in the area, by addressing the health inequalities that might exist. A Joint Strategic Needs Assessment and a BME community health needs assessment has already taken place which shows a need to work with this community to help improve their health outcomes.

What progress has been made?
Two project workers, one male and one female who are both Bengali speaking professional interpreters and very experienced community development project workers, have been recruited to the project. The project workers have created an action plan which features a community launch, various engagement activities that will generate community 'insight', a marketing plan and lots of healthy living activities. The project workers will work with the community to set their own goals in order to make behaviour change achievable, working proactively within the community to develop this customer focused programme.

"I find the community so genuine. Mr Khan who runs the centre is the best social marketer I've met in my job up to now – he knows his own community and I'm learning from him."

Sam Revill, East of England Regional Development and Support Manager, National Social Marketing Centre

Lighting the Beacon in… Kent

The project: 'Naturally Active' provides and promotes activities for people in Dartford and Gravesham, utilising urban green spaces and adjacent countryside to improve both physical activity levels and mental wellbeing.

Summary

'Naturally Active' was started by the North West Countryside Partnership in 2008 and is a three year project providing outdoor activities such as walks, games and conservation activities for people living in Dartford and Gravesham.

The project team is now using social marketing techniques to explore the opportunities for the long-term viability of Naturally Active, based on understanding its role in changing behaviours through outdoor physical activity to improve mental wellbeing for existing and potential new audiences. A key objective is to improve referral rates from professional audiences such as GPs and primary care workers.

Why was this project chosen?

Naturally Active targets the resident populations of Dartford and Gravesham, specifically focusing on six wards which fall within the 20% most deprived wards on the health deprivation and disability domain within the Kent and Medway area. Levels of physical activity in both Dartford and Gravesham are significantly worse than the England average and people in Dartford lead less healthy lifestyles compared with the England average.

A number of significant and high profile policy drivers recognise the role that the outdoor environment is able to play in improving the

physical and mental health of individuals. This project also demonstrated evidence of an existing strong partnership with a diverse range of organisations involved at local, regional and national level.

What progress has been made?

At the project's mid-term point, Naturally Active has been successful in reaching over two thirds of its target number of beneficiaries, achieved in large part through the successful development of relationships with other local groups or communities.

The Steering Group for the project was set up in 2008 and a Social Marketing Sub Group was set up in July 2009 to ensure that social marketing principles and techniques are maximised by the project. Each group has its own terms of reference and there is a clear link between the work of the two groups. The Social Marketing Sub Group recently led a competitive tender process to secure an external agency to undertake the scoping, development and evaluation stages of the project. This was undertaken after a resource analysis to ascertain how best to allocate the Beacon funding.

"Naturally Active is targeting hard to reach groups and individuals who, as their very name suggests are 'hard to reach'. The project was able to save considerable time and resources by not having to start from scratch but rather working with partner organisations locally which were already engaging with these groups. Naturally Active provides them and their clients, at no cost, with a range of activities in local green spaces to help improve physical activity and mental wellbeing levels."

Lighting the Beacon in… The East Midlands

The project: Changing behaviour within the takeaway industry in the East Midlands

Summary

This project aims to change the behaviour of those who supply takeaway food to consumers such as cooks, food preparers and takeaway owners in a bid to provide healthier food options for consumers. This means looking at the supply chain – how they cook, what they buy and where it is sourced from. The project will explore the competition and the exchange that is needed to get establishments to cut the high levels of saturated fat, salt and calories found in popular dishes.

Primarily, the project will be working with the Indian restaurant and takeaway industry but, if successful, the project hopes to expand to look at other takeaway industries. The sharing and learning from the research and insight undertaken in Lincolnshire will be shared with other target areas across the East Midlands such as Leicester, Derby, Northampton and Nottingham, so they can test and pilot interventions to help change behaviour within the takeaway industry.

Why was this project chosen?

Obesity is one of the biggest health challenges we face. Almost one in four adults in England are currently obese, and if this continues 60% of men, 50% of women and 25% of children would be obese by 2050*.

Trading Standards East Midlands have undertaken testing and sampling across the East Midlands and found 92 of the 171 meals they tested (54%) fell into

amber or red categories when tested for saturated fat. 53 meals exceeded the daily amount of salt (6g) with 16 meals containing 12g or more per serving – double the daily recommended level.

What progress has been made?

The project is currently in the scoping stage. Researchers are carrying out 50 semi-structured telephone interviews with staff in Indian restaurants and takeaways across Lincolnshire, undertaking a series of 10 more in-depth qualitative discussions (face-to-face and telephone) with a cross section of Indian takeaway staff in order to create qualitative case studies, as well as carrying out face-to-face surveys with 500 regular eaters of Indian food across Lincolnshire. The project aims to test out some interventions in April 2010 once the research stage has concluded.

* The Foresight report, Tackling Obesities: Future Choices project, published in October 2007

"This project is innovative because it is trying to change the behaviour of those who supply the food rather than directly targeting consumers to ask them to cut down or cut out. If we can work with the industry to help them to produce healthier products for consumers we are one step closer to tackling the impact of a diet high in salt and saturated fat".

Dr Mandy Bretman, Director of Public Health and Partnerships, NHS Lincolnshire

Lighting the Beacon in…Newcastle

The project: Motivating men with poor health to improve their diet, increase their activity levels and quit smoking.

Summary

This project aims to engage men from targeted communities who are most likely to have health problems due to lack of exercise, poor diet and smoking. It will use the popularity of Newcastle United within the community as the motivational factor for the men to become involved.

Why this project was chosen

Regular physical activity of moderate intensity, such as brisk walking, can bring about major health benefits. Increasing levels of physical activity helps to reduce coronary heart disease and obesity, hypertension, depression and anxiety. Even relatively small increases in physical activity can protect against chronic disease and improve quality of life and can help us all to lead healthier and even happier lives, irrespective of age.

What progress has been made?

A specialist health trainer has already been recruited to the project to work with men in West Newcastle to encourage them to take up community football to improve fitness. The programme will follow the idea of a football 'season' and sessions are being planned at a variety of times including day, evening and weekends to maximise attendance. This project is being developed in conjunction with the targeted men, using focus groups to test assumptions about the key drivers which will incentivise this group of men to make a change in their lifestyle. The project will

then develop further to include staged incentives to address diet, smoking and possibly alcohol use.

Incentives for men to continue with the programme include free match tickets and visits to the ground. An end of programme 'friendly' game between the two groups involved has proved a popular inclusion. As the programme progresses, a Match Day MOT is to be offered and additional sessions on cooking, healthy diet and stopping smoking.

Already 20 Dads are involved in playing community football sessions on a Saturday morning, while their kids are looked after at the community centre.

Health trainers are now recruited and links with the communities to recruit onto the programme are well advanced. Focus groups have been carried out at the club with the target market to test assumptions and to start to design the programme module for delivery.

A pilot will be launched before Christmas which will offer men a choice of two regular timetabled sessions for football coaching. This will be followed by additional sessions on diet which will be linked to staged incentives such as free tickets to matches. If they complete the programme there will be a 'friendly' with the other group of men who are based in Ashington.

"This is a great example of positive partnership working. Our community workers are able to get the right kind of men on board and we are able to provide the design and direction for the programme to be successful."

Lighting the Beacon in… Ealing, London

The project: Reducing the demand for urgent care services in Ealing.

Summary

This project aims to work with a range of providers – statutory, provider and community – to reduce the use of the Emergency Department by people who attend with healthcare issues that do not need specialist input emergency care. Target groups include children and people from backgrounds or cultures where healthcare is mainly provided by hospitals. The project will seek to better understand the patterns of current behaviour and reasons for using the Emergency Department.

It will then develop a targeted approach using a variety of interventions, drawing on best practice from across the country and harnessing the knowledge and skills of all the partners to address the problem.

Why was this project chosen?

Currently around 40-50% of people who attend the Emergency Department at Ealing Hospital Trust have issues that could be managed elsewhere, for example, care and support in pharmacies, GP surgeries or even at home.

What progress has been made?

A preliminary working group has reviewed current pressures on the Emergency Department and have gathered information on attendance by ethnic groups and children under five years. This highlighted a need to undertake further work on data collection. A number of stakeholder engagement sessions are planned for the winter months.

"Improving the responsiveness of unscheduled care services for the people of Ealing is a priority for all of the partners in this project. Only by understanding more about the people who use our services and working together to design interventions which meet their needs, can we do this as effectively as possible."

Robert Creighton, Chief Executive, NHS Ealing

Lighting the Beacon in… The North West

Summary

Initially, the beacon project for the North West was one that focused on ensuring 16-19 year old women choose, access and use contraception that is effective for preventing pregnancy and matches their needs. The project focused on understanding the attitudes, beliefs and behaviours of 16-19 year old women when it comes to contraception. In particular, the project looked at how partners, peers, parents and professionals influence 16-19 year olds women choice of contraception and work with 16-19 year old women to develop approaches that enable them to choose, access and use effective contraception.

What progress has been made?

The North West partnership developed a social marketing strategy on contraceptive choice that focuses on enabling the target audiences to explore and discover for themselves a contraceptive that is right for them, explore care pathways and training for staff to deliver key messages at key points and to encouraging conversations between young women and their mothers.

A review of this strategy highlighted a need for regional and sub-regional organisations to concentrate on staff development needs to support a new national

campaign on contraceptive choice. The partnership group was disbanded in order for them to develop this work which means that resources will be released for a second new partnership project in the region – launching in early 2010.

Proposals are being invited in December 2009, with work commencing on the new project in January 2010.

"The project has demonstrated to me that working with the private sector can be particularly productive. They have provided research, intelligence, expertise and resources that we have put to good use."

The Regional Development and Support Programme

About the regional programme
The ten Beacon Partnership Projects were set up in 2009 by the ten Regional Development and Support Managers recruited into the National Social Marketing Centre by the Department of Health to work in the English regions with the NHS to help build capacity and capability in social marketing. One of their tasks was to establish a beacon partnership project in every region. As well as establishing these projects the regional managers have:

- Undertaken a review to establish the capacity and capability to embed social marketing at a local level within the NHS
- Collated its findings into a national report, A Review of Social Marketing within Public Health Settings (July 2009, available to download at: **www.nsmc.org.uk**
- Created a development and support action plan for each region (based on analysis of the Review findings).
- Created a comprehensive modular training programme that will take NHS professionals from novice social marketers to practitioners. The programme will deliver over 150 one day courses (4000 training places) from September 2009 to March 2010.
- Developed a Masterclass on social marketing for Directors, Senior Managers in the NHS and strategic partners which will be rolled out from January 2010 across the regions.

- Piloted support packages for the NHS – including a tailored package of support for Primary Care Trusts in the South East Coast region on how to design and implement behaviour change programmes for Change4Life
- Built relationships and partnerships with the regional and local NHS and its partners
- Assisted the development (and commissioning) of social marketing at a local, regional and national level
- Assisted the Department of Health (including the National Support Teams) and other government and statutory bodies on topic specific behavioural challenges such as smoking, obesity, alcohol misuse, cancer and sexual health.

Executive Summary

1.1 Background and context

In 2006, the National Consumer Council published 'It's Our Health!', which highlighted the links between social marketing and positive behavioural change, and called for the establishment of a National Social Marketing Centre (NSMC) to help build capacity and skills in social marketing in England. In its response, 'Ambitions for Health', the Department of Health (DH) focused on four key areas:

- increasing knowledge and skills among health professionals
- understanding what motivates people to change their behaviour
- finding innovative ways to improve people's health
- encouraging and supporting partnership working at local and regional level

The NSMC was established in 2006, with a remit that spans all four of these areas. By January 2009, the NSMC had appointed ten Social Marketing Regional Development and Support Managers (RDSMs) — one for each Strategic Health Authority (SHA). The RDSMs' role is to provide guidance and support for social marketing projects and initiatives, tailored to the specific needs of each region.

Their initial task was to undertake a comprehensive social marketing review of their own region, gathering evidence about existing social marketing activity and identifying gaps in knowledge and skills.

1.2 About this report

This report provides a summary of findings from the RDSMs' social marketing review across the ten SHAs. In the two regions which had not yet appointed a Regional Support and Development Manager, two interim freelance consultants were commissioned to carry out the reviews. It aims to give policy-makers, commissioners and health professionals a clear picture of levels of knowledge, understanding and practice in social marketing within the Primary Care Trusts (PCTs), as at early 2009.

It is aimed at policy-makers, commissioners and health professionals, to give an insight into how social marketing is understood, championed and delivered within the local settings.

This report provides a snapshot in time of how social marketing was being used within PCTs and in some cases with strategic partners.

This report provides a snapshot in time (between November 2008 and January 2009) of how social marketing was being used within PCTs and in some cases with strategic partners. The content is based on in-depth interviews with staff working in a range of different roles in the ten SHAs regions. Findings are grouped under the following headings:

- defining and understanding social marketing
- current social marketing activity
- support for social marketing
- resources
- barriers to social marketing

The report then provides a short summary of conclusions and recommendations – based on the insight gained during the reviews – on how barriers to the adoption of social marketing might be overcome, alongside a compilation of training and development needs across the regions.

1.3 Key findings

Defining and understanding social marketing

Across all regions, awareness of the term 'social marketing' is high, but levels of understanding vary. Some respondents confused social marketing with advertising and/or current health promotion work. Staff in public health and communications had a better level of understanding than those in commissioning.

Most respondents saw social marketing as a valuable way of gaining meaningful insights into customer needs, developing tightly targeted communications and bringing about lasting behaviour change (see Appendix 8). However, there were also negative perceptions, with people describing social marketing as too academic or 'difficult', or pointing out the difficulty of achieving measurable results. Others dismissed it as simply the latest 'buzz word'.

Awareness of the NSMC was very high. Most respondents had made use of the Centre's resources and taken part in NSMC developed training courses (see Appendix 6).

Current social marketing activity

Involvement in social marketing activities varied significantly from region to region

Involvement in social marketing activities varied significantly from region to region. Even in those areas with the highest levels of activity, almost all projects were still in their infancy, contributing to the lack of case studies and evidence cited by many respondents. Projects focused on a range of Public Service Agreement (PSA) targets (see Appendix 7). Overall, the commonest target was smoking cessation, but significant numbers of projects also focused on alcohol consumption, reducing mortality, maintaining a healthy weight, sexual health and MMR uptake.

Projects were assessed against the benchmark criteria developed by the NSMC (see Appendix 2) to measure how far they met a formal definition of social marketing. Projects were most likely to satisfy the criteria for behaviour, customer orientation and segmentation, and least likely to satisfy the criteria for competition, theory and exchange. Some regions were also making extensive use of the NSMC's 'Total Process Planning' Model (see Appendix 3), while others had adopted it for a small minority of projects only.

Support for social marketing

Commitment to social marketing was high. In most PCTs, social marketing was championed at a very senior level, typically by Directors of Public Health or Communication, and many either had already appointed or were planning to appoint people to dedicated social marketing posts. Several regions were in the process of setting up frameworks, steering groups or units to manage social marketing projects. Social marketing was most likely to 'sit' within public health or communication directorates.

Most PCTs had some staff who had taken part in introductory social marketing workshops run by the NSMC. Respondents also talked about topic-based training run by independent providers. National training was funded by the NSMC. Regional or PCT-specific training was funded by the SHA, regional government office or the PCT itself. For most participants, training helped raise awareness. There was strong demand for more practical training.

All regions had received visits from the DH's National Support Teams (NSTs). Some regions with Spearhead areas obviously received more visits and, therefore, were more aware of the feedback advice and guidance on social marketing. As a result of NST visits in some regions, PCTs had been prompted to start looking at how social marketing could help them meet their goals, and to source appropriate social marketing training and support.

In all regions, PCTs had worked with external agencies for all or part of their social marketing activity. There was some concern that this could act as a barrier to the

development of skills in-house. One PCT was addressing this by running a project in-house but using an external agency as mentor. Contact with agencies seemed to highlight a need for training in procurement and commissioning.

Most, if not all projects involved partnership working, most commonly with the local authority

Most, if not all projects involved partnership working, most commonly with the local authority. Other partners included community groups, youth groups, GPs, health workers, Connexions, local schools, acute care providers, football clubs and private sector employers. Regions also cited a range of existing networks, which generally represented either a sector (communications, public health) or a topic (tobacco control, sexual health, obesity). The consensus was that these should expand their remit to include social marketing.

Resources

Social marketing was being led — and championed — by PCT staff working in a range of areas and at different levels of seniority. All regions had either already appointed, or were planning to appoint, dedicated social marketers.

In the 2008/09 financial year, the vast majority of PCTs had used money from non-dedicated budgets, typically public health or communications, to pay for social marketing activities. For the 2009/10 financial year, a significant number, though not a convincing majority, were planning to either set up a dedicated social marketing budget or to allocate specific funds to social marketing projects, although this varied considerably from region to region. Amounts allocated also varied considerably, making it difficult to develop a clear, consistent picture of PCT-allocated funding for social marketing.

Barriers to social marketing

The following list provides a summary of the key barriers to developing and implementing social marketing, as cited by all or a significant proportion of the regions (see Appendix 4):

- lack of resources
- lack of capacity
- lack of awareness and understanding
- yearly targets
- lack of robust evidence and case studies
- organisational structure problems
- lack of support
- cultural and ethical issues
- external constraints

1.4 Recommendations for developing social marketing at Primary Care Trust level

Respondents made the following recommendations for overcoming barriers to working with and developing social marketing within the PCT settings (see Appendix 5):

Embedding social marketing within PCTs

- embed social marketing at a strategic level
- increase capacity
- increase budgets for social marketing
- allocate more time for social marketing

Provision of training and support material

- raise awareness and understanding of social marketing
- provide tailored training for staff at different levels and in different roles
- develop practical tools and resources
- make evaluation a priority and develop a robust evidence base

Networks and events to support social marketing

- establish a network for sharing knowledge and resources
- set up social marketing steering groups/regional hubs
- organise events and conferences – regional and national

Background and context

2.1 'It's Our Health!'

In 2006, the National Consumer Council (NCC) launched 'It's Our Health!', the first ever national review of health-related campaigns and social marketing in England. The review highlighted the need for a social marketing approach to encouraging positive behavioural change. Commissioned by the Department of Health (DH) as part of its 'Choosing Health' White Paper commitments, the report set out findings, along with strategic and operational recommendations, on how social marketing could be applied to improve the impact and effectiveness of health promotion at national and local levels.

One of the recommendations was the establishment of a National Social Marketing Centre

One of the recommendations was the establishment of a National Social Marketing Centre (the NSMC) to support the DH's National Health Improvement Social Marketing strategy, and deliver a work programme focused on building capacity and skills in social marketing. The NSMC was set up in 2006 as a strategic partnership between the DH and Consumer Focus (formally the NCC).

The review also confirmed the growing evidence that social marketing could help more people to live healthier lives. It highlighted gaps in capacity and skills in social marketing, and provided a range of practical recommendations for ways in which the government could build capacity and integrate social marketing into policy and practice. The review also showed where good practice could be built into future learning.

2.2 'Ambitions for Health'

In July 2008, the DH published its formal response to 'It's Our Health!', entitled 'Ambitions for Health: a strategic framework for maximising the potential of social marketing and health-related behaviour'. 'Ambitions for Health' sets out how the DH planned to:

- embed a social marketing approach to improve people's health and change behaviour
- work in partnership across government, and with industry and the voluntary sector, to support the changes people need to make to enjoy the best possible health
- take action on the key learnings from the Health Challenge England road shows and maintain the momentum by ensuring that social marketing is further embedded into public health systems

The new framework for social marketing is based on four key areas:

- **Health capacity:** increasing the skills and knowledge of public health professionals through a series of conferences, seminars and research materials
- **Health insight:** what motivates people to change their behaviour? A new 'Healthy Foundations Lifestage Segmentation Model', due to go live by winter 2009, will provide a 360-degree picture of the population and individual behaviour across issues including obesity, drug and alcohol misuse and smoking. A new 'one stop research shop' will also bring together a vast array of useful data in one place
- **Health innovations:** putting social marketing into action locally, regionally and nationally. Learning from the successes of programmes such as Health Trainers and Life Checks will inform future innovative ways to improve people's health
- **Health partnerships:** establishing a £1 million per annum capacity building fund to provide local and regional support for building partnerships

Social marketing has been moving steadily up the political agenda

Social marketing has been moving steadily up the political agenda. It is seen by both the Cabinet Office and the Prime Minister's Strategy Unit as an essential tool in the delivery of national strategy at a local level.

2.3 The National Social Marketing Centre

In 2006, the National Social Marketing Centre (NSMC) was established to support the DH's National Health Improvement Social Marketing strategy, and to deliver a work programme focused on building capacity and skills in social marketing and public health. It does this by working with others to increase understanding and practical use of strategic and operational social marketing at national and local levels.

The DH National Support Teams (NSTs) identified the growing demand for professional social marketing support to enable Primary Care Trusts (PCTs) to commission social marketing projects. With the NST input, the Health Improvement Directorate subsequently funded the NSMC to recruit, co-ordinate and professionally develop ten Social Marketing Regional Development and Support Managers (RDSMs), to provide local planning and project management support for the growing interest in social marketing initiatives and programmes at local level within each Strategic Health Authority (SHA) region.

2.4 The Role of the Social Marketing Regional Development and Support Managers

By January 2009, the NSMC had appointed ten RDSMs - one for each SHA. Their role is to provide guidance and support for social marketing projects and initiatives, tailored to the specific needs of each region.

Their initial task was to undertake a comprehensive social marketing review of their own region, gathering evidence about existing social marketing activity and identifying gaps in knowledge and skills. This report provides a summary of findings from those reviews and aims to give policy-makers, commissioners and health professionals a clear picture of levels of knowledge, understanding and practice in social marketing as at early 2009. It will provide a baseline for the RDSMs in building knowledge, skills and capability in social marketing within the regional settings.

Their second objective is to identify a potential or existing NHS social marketing project that has at least three partners and would benefit from strategic social marketing suppport. These projects will be given 'Beacon Partnership' status and specific support and funding from the regional budgets.

Their third and ongoing objective is to ensure that all PCT directors and commissioners of social marketing projects understand what social marketing is and are in a position to commission effective social marketing projects. Working from the evidence gathered

during the review, the RDSMs will identify local training and development needs, and then build regional capacity development plans, to be agreed with the Regional Directors of Public Health and linked to NSMC/DH national strategy for putting social marketing into action nationally, regionally and locally.

2.5 Linking national, regional and local policy

To ensure that the RDSMs are 'on message' and that DH policy and communications are consistent at regional and local levels, each RDSM has responsibility for a health-related topic, such as obesity or tobacco control. They work with the DH policy, communications, campaigns and NST leads responsible for the topics.

Purpose of this report

3.1 Aims

The aim of this report is to provide a snapshot in time (between November 2008 and January 2009) of how social marketing was being used within Primary Care Trusts (PCTs) in England.

It is intended to inform policy-makers, commissioners and health professionals about current levels of understanding, knowledge and practice of social marketing at different levels within PCTs and, in some cases, among their local strategic partners.

It also identifies current and future opportunities for Strategic Health Authorities (SHAs), the Regional Government Offices (RGOs) and the NSMC to support and develop knowledge, skills and capacity in social marketing and support programmes aimed at improving the delivery of services within public health.

3.2 Objectives

The report summarises findings under the following headings.

Defining and understanding social marketing

- How NHS professionals define social marketing
- How these definitions match the NSMC's benchmark criteria for social marketing

Current social marketing activity

- How, and to what extent, PCTs are using social marketing
- The extent to which these social marketing interventions reflect the NSMC benchmark criteria

Support for social marketing

- General levels of interest in and commitment to social marketing
- Whether and, if so, where social marketing is championed within PCTs
- Where responsibility for social marketing sits within PCTs
- Who has had social marketing training, and what impact this has had
- Priority future training needs

Resources

- Levels of human and financial resources available to support the development of social marketing

Barriers to social marketing

- Potential barriers to the development and implementation of effective social marketing interventions

It then provides a short summary of conclusions, before going on to consider how these barriers might be overcome and to set out some suggested next steps.

3.3 Methodology and approach

The content of this report has been informed by in-depth interviews with a range of staff in the ten Strategic Health Authority regions

The content of this report has been informed by in-depth interviews with a range of staff in the ten Strategic Health Authority regions. Some interviews were carried out face-to-face, while others were conducted by telephone. Interviews were semi-structured and lasted between 35 minutes and an hour. Most interviews were conducted individually. The interviews were carried out between November 2008 and January 2009. A standard questionnaire was used throughout, but interviews were not limited solely to the set questions. Wider issues arising were discussed and captured during the meetings. Interviewees included:

- Directors of Public Health or their deputies
- Public Health professionals (often with lead responsibility for PSA target areas)
- Health Promotion specialists
- Directors of Communication or equivalent
- Communication Managers
- Commissioning Managers

See Appendix 1 for a copy of the full questionnaire.

Key findings

4.1 Defining and understanding social marketing

How healthcare professionals define social marketing

In all the regions, awareness of the term 'social marketing' was high. Levels of understanding, though, varied significantly. Some respondents gave detailed, accurate definitions.

"It's a well-defined process which is about engaging with communities and individuals and understanding better how we can help them change whatever we want to work on."

"Applying the commercial marketing practices including planning and evaluating programmes which are about looking at the way people behave, focusing on target groups so we can improve the outcomes [health outcomes] for individuals and for everyone around them."

In one region, responses were measured against a widely-used academic definition of the term, 'the systematic application of marketing alongside other concepts and techniques to achieve specific behavioural goals for a social good' (French and Blair-Stevens, 2006). Just over half the respondents gave a description of social marketing that at least part-matched this definition.

Across the regions, a significant minority of people confused social marketing with conventional marketing and advertising activities.

Across the regions, a significant minority of people confused social marketing with conventional marketing and advertising activities.

"It's sophisticated advertising."

"Advertising for the good of the nation; using advertising to bang home health messages."

In one region, researchers found evidence of confusion between social marketing and health promotion. In some areas, the health promotion workforce saw social marketing as a threat to their traditional way of working, fearing that it could shift the emphasis onto communication and marketing, at the expense of client engagement and redefining services to meet client needs. In others, though, health promotion colleagues welcomed social marketing as a more systematic way of achieving goals they felt they had been working towards for some time.

Understanding varied according to level of seniority and job role. In the case of seniority, there was no consistent correlation: in some regions, leaders were more knowledgeable about social marketing; in others, operational staff and middle managers were better informed. However, in the case of job role, the findings highlighted a very distinct trend, with staff in communications and public health tending to have a better understanding of social marketing than those working in commissioning directorates.

Attitudes to social marketing

A very significant majority of respondents in all regions felt enthusiastic and positive about the potential of social marketing to help them achieve their goals. In one region, 99 per cent of interviewees said they felt there was a clear need for social marketing within their organisation as a whole and/or in their specific work area. Another region had a negative experience of running a high profile social marketing initiative, but their willingness to be open about the experience and learn from it had kept levels of enthusiasm high, and minimised disenchantment about social marketing.

Respondents identified the ability of social marketing to provide meaningful insights into the needs of the target audience, as its key strength.

"…It's more than just knowing how old they [target groups] are and where they live – it is about finding out how they tick."

Many also cited the potential advantages which social marketing offered for segmented, tailored communications that meet the needs of tightly defined groups.

"[It] puts us in touch with client groups we most need to work with. We can design services that most fit their needs. [It's] not just one message fits all."

Social marketing was also seen as a way of bringing about lasting changes to people's behaviour.

"It forces us to…change our work rather than [just] giving people a leaflet. It helps [us] understand the difference between raising awareness and changing behaviour."

See Appendix 8 for more quotes highlighting attitudes to social marketing.

Sensitivities

Respondents cited a need for practical toolkits to support the application of social marketing principles

The most common negative perception of social marketing was that it was somehow 'difficult' — a complex academic concept rather than a practical tool. Respondents cited a need for practical toolkits to support the application of social marketing principles and for evidence-based case studies showing how principles have been put into practice. In at least one region, respondents expressed concern that social marketing could be seen as failing to deliver measurable results.

There was also a sense that, while social marketing was good at providing insights, it was less good at translating those insights into action.

"Social marketing is strong on analysis and weak on providing tools for delivery that we haven't already got."

There was also some scepticism. Some viewed social marketing as just another buzz word. Even among those who were generally enthusiastic about the concept, there was a feeling that social marketing was something health organisations had been doing for years.

"It's just a new language for things we're already doing. It's the Emperor's New Clothes."

See Appendix 8 for more quotes highlighting attitudes to social marketing.

Awareness of the National Social Marketing Centre

Awareness of the National Social Marketing Centre (NSMC) was very high, ranging from around 75 per cent all the way up to 100 per cent in some regions. Most respondents who were aware of the NSMC had also made use of its resources, most commonly the website. See Appendix 6 for a summary of findings.

Significant numbers had also taken part in NSMC training courses and asked NSMC staff for information and advice. While feedback about the Centre was generally very positive, some respondents felt that its resources tended to be academic rather than practical. In one region, awareness was noticeably lower among commissioners than among those working in communications and public health.

4.2 Current social marketing activity

How Primary Care Trusts are using social marketing

The extent and nature of social marketing activity varied significantly across the regions. In one region, which describes itself as an 'early adopter', all PCTs were running social marketing projects and had allocated dedicated social marketing budgets for the financial

year 2009/10 (see page 15 for more on financial resources). In most cases, these projects involved PCTs working with a range of partners including local authorities, community groups and, in some cases, private sector organisations (see page 15 for more detail).

Most social marketing initiatives were either still being scoped or were in the early stages of implementation

Even in the 'early adopter' region, only two projects out of a total of over 50 had reached the evaluation stage. Most social marketing initiatives were either still being scoped or were in the early stages of implementation. One region described some of its PCTs as 'just beginning to look at how social marketing can help in service redesign and tackling public health issues'. This could explain the apparent shortage of case studies and evidence reported by many respondents.

Projects aimed to tackle a range of individual Public Service Agreement (PSA) targets; none were trying to address more than one target at the same time. Across the regions, the highest priority target appeared to be smoking cessation. Significant numbers of projects also focused on alcohol consumption, reducing mortality across areas including heart disease and cancer, maintaining a healthy weight, sexual health and increasing MMR immunisation uptake. In one region, several projects cited the promotion of emotional and mental wellbeing as a key goal. In those regions with spearhead areas — where health inequalities are a particular challenge — there was evidence of social marketing being used to target tightly defined communities. See Appendix 7 for further details of PSA targets.

Social marketing projects and the NSMC benchmark criteria

The NSMC has developed a set of benchmark criteria, (French and Blair-Stevens (2006), adapted from original benchmark criteria developed by Andreasen (2002)), designed to help identify whether a project or initiative can accurately be defined as 'social marketing'. The criteria were developed following a comprehensive independent review of social marketing methods and approaches. They aim to provide a robust framework to help those planning and developing interventions to ensure they are consistent with the best evidence-based principle and practice in social marketing. The criteria define social marketing interventions as having the following characteristics:

1. CUSTOMER ORIENTATION: Develops a robust understanding of the audience, based on good market and consumer research, combining data from different sources
2. BEHAVIOUR: Has a clear focus on behaviour, based on a strong behavioural analysis, with specific behavioural goals
3. THEORY: Is behavioural theory-based and informed. Drawing from an integrated theory framework
4. INSIGHT: Based on developing a deeper 'insight' approach – focusing on what 'moves and motivates'
5. EXCHANGE: Incorporates an 'exchange' analysis. Understands what the person has to give up to get the benefits proposed
6. COMPETITION: Incorporates a 'competition' analysis to understand what competes for the time and attention of the audience
7. SEGMENTATION: Uses a developed segmentation approach (not just targeting). Avoids blanket approaches
8. METHODS MIX: Identifies an appropriate 'mix of methods'

Appendix 2 sets out the benchmark criteria in full, including guidance on how to identify whether they are being met.

The social marketing projects identified in the course of the review varied considerably in the extent to which they met these criteria. Overall, projects were most likely to satisfy the criteria for behaviour, customer orientation and segmentation, although research in at least one region suggested that there was some scope for a more sophisticated approach to both customer orientation and segmentation. There was significant variation in the areas of *methods mix* and *insight*, with some regions very strong and others very weak.

Projects were least likely to satisfy the criteria for *competition*, *theory* (although in one region 'most projects framed their work with academic theory') and *exchange*. In another region, levels of knowledge and awareness of the criteria as a whole was low, and there was little understanding of social marketing as a systematic process.

The NSMC has also developed a practical tool, the 'Total Process Planning Framework'

The NSMC has also developed a practical tool, the 'Total Process Planning Framework', designed to guide health professionals through the five stages of creating effective social marketing interventions:

1. Scope
2. Develop
3. Implement
4. Evaluate
5. Follow-up

In some regions, the model was being 'widely used'; in others, it had been adopted by a small minority of projects. See Appendix 3 for further details of the Total Process Planning Framework.

4.3 Support for social marketing

Support for social marketing within Primary Care Trusts

General commitment

Generally, researchers found a high level of commitment to social marketing, although one region pointed to a mismatch between levels of commitment and levels of capacity and funding. Commitment to social marketing is reflected in the fact that, in the majority of PCTs, social marketing was championed at either senior management or board level or both, and that a growing number of PCTs had already appointed or were planning to appoint people to dedicated social marketing posts. In one region, six social marketers were already in post, with plans in place to recruit a further six.

Several regions were taking a collaborative approach to social marketing, setting up frameworks, steering groups or units to review projects, ensuring consistency and reducing duplication. Findings from the review suggest that, in future, more and more regions will be putting frameworks in place and developing strategic plans with the aim of embedding social marketing within their work in a consistent and systematic way.

Champions

The vast majority of respondents in all ten regions agreed that social marketing was being championed at a senior level — often board level — within their organisations and levels of awareness were high. Often, those acting as champions were Directors of Public Health and Directors of Communication, but interviewees also cited the following roles:

- Directors of Engagement
- Senior managers working in public health or communications
- Individuals working in commissioning and patient and public involvement

Where social marketing was championed by more junior staff, they often found it very difficult to exert sufficient influence to push social marketing up the agenda. In some cases, their lack of seniority was compounded by a lack of knowledge and experience.

Sometimes, social marketing budgets and projects were led by someone other than the social marketing champion. Respondents in one region suggested that this could contribute to a situation where the champion was committed to the idea of social marketing, but lacked knowledge and understanding of how to use it effectively. In another, respondents expressed concern that, although they had a champion, social

marketing had yet to be 'institutionalised' into their organisation, and suggested that champions might be supporting public engagement, rather than social marketing.

Where social marketing sat in Primary Care Trusts
Social marketing sat in a number of different places. Most commonly, it was handled by either public health or communications directorates or, in a significant number of PCTs, by both. In one region, it sat within the patient and public involvement directorate. Several regions talked about social marketing being a shared responsibility; in one case, between the public health, communications, commissioning, engagement and strategy teams. While this could create useful opportunities to share expertise, respondents talked about the risk that, without an accepted home within the organisation, social marketing could end up being 'nobody's child'. One region pointed to a 'consensus' among interviewees that social marketing should sit within the commissioning team.

Training

The current picture
Most of the training provided to date had been delivered by the NSMC. This introductory training, consisting of two workshops, aimed to provide an overview of the general principles of social marketing. Most participants came from specific delivery teams, notably Stop Smoking Services, with the remainder mainly drawn from health improvement and communications teams. The programme was developed in the light of feedback from the National Support Teams (NSTs), who had identified a clear need for social marketing training based on PSA topics.

Across the regions, there was significant variation in levels of both awareness of and participation in social marketing

Across the regions, there was significant variation in levels of both awareness of and participation in social marketing. In one, all public health and communications staff had attended the NSMC workshops. In another, training was described as 'ad hoc' and respondents claimed that only a 'handful' of staff had been given introductory training. In another, staff had not had access to the NSMC workshops and their only development opportunities had been occasional sessions at events and conferences attended by small numbers of people.

Respondents provided some examples of training run by independent providers, including 'masterclasses' and optional sessions focusing on specific topics or audiences. Three regions had run introductory sessions tailored to meet the needs of staff working on smoking cessation, perhaps reflecting the fact that this was the PSA target most commonly addressed by social marketing interventions. One PCT had commissioned a provider to deliver an advanced session on scoping. Some had run their own informal training in-house. Respondents cited a range of providers including government offices of the regions, SHAs and public health networks.

National training was funded by the NSMC. Regional or PCT-specific training was funded by the SHA, regional government office or the PCT itself.

The impact of training
Attendees agreed that the main benefit of training was heightened awareness of social marketing. In one region, 52 per cent cited greater awareness and 40 per cent said they had been able to apply their learning to a social marketing project. This was unusual, though. Generally, respondents were much more likely to say that they had not been able to put their knowledge and skills into practice. Only a small minority had applied their training to developing a social marketing strategy or commissioning social marketing services. One PCT observed that training had helped to build relationships between their communications and public health departments; an unexpected but welcome side-effect.

...some respondents expressed a need for further training in all aspects of social marketing...

Future training needs

Demand for further training is very high. The highest priority appeared to be practical training: guidance on how to apply the principles of social marketing to specific topics and issues. Linked to this was demand for training that incorporated case studies demonstrating the impact of social marketing initiatives. Despite the reasonably high uptake of general introductory training, some respondents expressed a need for further training in all aspects of social marketing, from scoping and development to implementation, evaluation and follow-up.

Other specific training needs included:

- understanding social marketing in the context of world class commissioning
- using social marketing to address health inequalities
- commissioning social marketing
- project management
- confidence-building
- influencing people

National Support Teams

All regions had had visits from the DH National Support Teams (NSTs). Typically, visits covered the following topics:

- tobacco control
- childhood obesity
- teenage pregnancy
- infant mortality
- sexual health
- health inequalities

Following NST visits, some PCTs had been prompted to start looking at how social marketing could help them meet their goals and to source appropriate training.

Working with outside agencies

In all regions, PCTs had involved external agencies in their social marketing activities. Often, this was for one part of the process only — usually scoping or generating customer insights — typically through focus groups. In at least two regions, though, there was evidence of agencies being commissioned to handle entire projects. It was felt that this might be acting as a barrier to the development of skills in-house. By contrast, one region cited a project which was being managed in-house by the PCT, with an external agency acting as mentor.

Several regions also stated that working with outside agencies had served to highlight the urgent need for training in procurement and commissioning. Staff were confused as to what agencies offered, lacked experience in managing external suppliers and felt uncomfortable about spending money on social marketing with 'no guarantee that it would work'. These staff wanted practical support, for example to draft briefs and assess tender responses, as well as access to a list of approved suppliers.

One region reported that agencies were targeting staff with 'products and services incorrectly branded as social marketing', pointing out that this could both threaten the development of a good understanding of social marketing, and lead to opportunistic rather than planned commissioning and procurement. Training would help equip staff to respond appropriately to these unsolicited approaches.

Local networks and partnerships

In almost all cases, social marketing activities involved some form of partnership working. Most commonly, this was with the local authority, but PCTs were also working with a wide range of public, private and voluntary sector organisations including: football clubs, community groups, youth groups, GPs, health workers, Connexions, local schools, acute care providers and private sector employers. Levels of formality varied. In one region, around half of all projects were headed by a multi-agency steering group; in most, such arrangements were in a distinct minority and partnership working took place on a more informal basis.

Most regions also cited a range of existing networks, which generally represented either a sector (communications, public health) or a topic (tobacco control, sexual health, obesity). There was little evidence of these networks engaging in social marketing, although one region stated that its public health network had provided some introductory-level training. The consensus was that there was an urgent need for social marketing networks at regional and local level, and that this would be best met by existing networks expanding their remit to include social marketing.

4.4 Resources

Human resources

As already described, findings showed that social marketing was being led – and championed – by PCT staff working in a range of areas and at different levels of seniority. All regions had either already appointed, or were planning to appoint, dedicated social marketers.

Financial resources

In 2008/09, the vast majority of PCTs had used money from other budgets — typically public health or communications — to pay for social marketing activities. For 2009/10, a significant number, though not a convincing majority, were planning to either set up a dedicated social marketing budget or to allocate specific funds to social marketing projects. This varied considerably from region to region: in one, all PCTs had identified money for social marketing projects for 2009/10 and in three-quarters of cases, this was specifically labelled as a dedicated social marketing budget; in another, just one out of eight PCTs had allocated dedicated funds, despite high levels of awareness and support for social marketing. Others intended to carry on using under spend or 'borrowing' funds from public health or communication budgets.

Actual levels of funding for social marketing varied widely. In one region, four clusters were planning to spend around £250,000 each on social marketing projects. One cluster had put in a bid for twice this amount. In another region, a PCT was planning to spend £1.4 million on social marketing. In another, 19 PCTs were expected to spend £30 million on social marketing between them over the next three years. The remaining four PCTs in the same region did not have specific budgets for social marketing.

In general, it was difficult to develop a clear, consistent picture of overall funding for social marketing

In general, it was difficult to develop a clear, consistent picture of overall funding for social marketing. A significant number of respondents were unsure about arrangements in their own organisation. There are a number of possible explanations for this: that funding was coming from a variety of different sources; that the person commissioning social marketing was not necessarily the budget-holder; discrepancies in methods of calculation and what was included in costs; and responsibility for expenditure being split across a number of directorates.

4.5 Barriers to social marketing

Potential barriers

The following list provides a summary of the key barriers to developing and implementing social marketing, as cited by all or a significant proportion of the regions:

- **Lack of resources:** respondents were clear that effective social marketing required both time and money. Some public health staff described their frustration at not having discrete social marketing budgets and having other planned budgets diverted to pay for ad hoc social marketing projects. This ad hoc approach was also seen as increasing the likelihood of social marketing projects not being fully developed, implemented, completed and evaluated.
- **Lack of capacity:** at an individual level, respondents cited cases of social marketing being added to the workload of staff who were already at full capacity.
- **Lack of skills:** there was a clear unmet demand for further training. Even where staff had already received training, this was too often theoretical rather than practical, leaving them unsure as to how to apply their skills to real-world situations.
- **Lack of awareness and understanding:** misconceptions about social marketing remained. Respondents talked about the difficulty of working with colleagues who mistakenly believed that they were already 'doing social marketing'. One highlighted a possible correlation between lack of understanding and a lack of management engagement and support.
- **Yearly targets:** the need to meet yearly targets was seen as inconsistent with the generally longer timeframes needed to bring about lasting behaviour change. Respondents felt that the funding cycle made it difficult to plan long term and to take a strategic approach to social marketing.
- **Lack of robust evidence and case studies:** there was a strong call for evidence to show that social marketing could deliver results. Respondents also spoke about the difficulties in generating 'hard' evidence.
- **Structural problems:** respondents felt that structural issues, combined with the lack of a natural 'home' for social marketing, led to confusion and lack of ownership and created barriers to effective partnership working and sharing expertise and lessons learned.
- **Lack of support:** respondents wanted more support from senior managers and/or board members, and a proactive social marketing champion.
- **Cultural and ethical issues:** some respondents saw a conflict between the NHS' 'traditional top down approach' and social marketing, where the emphasis was very strongly on consumers. Some identified a mismatch between those commissioning services and their target audiences. Others were concerned that social marketing was 'too directional'.
- **External constraints:** these included an antipathy towards using agencies, and the difficulty of dealing with multiple stakeholders.

Other potential barriers cited by fewer respondents included:

- The cost of commissioning social marketing
- The tendency of local PCTs to see their own circumstances as unique and, therefore, not to share customer insights
- Relying too heavily on one or two 'enthusiasts' and outsourcing social marketing work to commercial agencies, so that skills are not being embedded within the organisation itself

See Appendix 4 for further details.

Conclusions

- Broadly, the findings from the reviews suggest that around a sixth of PCTs were fairly well advanced with social marketing activities and faced few barriers to its further development. Of the remainder, roughly equal numbers either had very low levels of experience and skills, or had some experience and skills but needed significant levels of targeted guidance and support if they were to derive maximum benefit from their social marketing initiatives.
- Across all regions, there was an encouraging level of enthusiasm and demand for social marketing. This was demonstrated in a number of ways:
  - through respondents' attitudes to social marketing
  - by the number of social marketing projects that were already under way
  - by the level at which social marketing was being championed within organisations
  - by the extent to which people were beginning to develop social marketing skills both through formal training and also from informal learning gleaned by working with colleagues, partner organisations and commercial agencies
- Commitment to social marketing was also underlined by the high number of PCTs that had already established — or were planning to establish — dedicated social marketing posts. It was further reinforced by the growing number that were allocating dedicated social marketing budgets for 2009/10.
- The reviews also showed that work was needed to embed social marketing more deeply within PCTs, in particular in directorates outside communications and public health.

There was a need for better communication about, and a greater understanding of, social marketing

- There was a need for better communication about, and a greater understanding of, social marketing. In particular, evidence of its impact and effectiveness.
- There was a need for senior board level commitment and proactive champions who could provide leadership and vision on social marketing.
- Among those responsible for planning, developing and implementing social marketing projects, there was a clear demand for practical support in the form of tools, resources and training.

Increasingly, PCTs were looking for guidance and support in all the above areas. The ten RDSMs will have a vitally important role to play over the next year in working with national, regional and local colleagues to build capacity, encourage best practice and help PCTs to ensure that their social marketing activities are as effective as possible.

Recommendations

6.1 Overcoming barriers to social marketing

Each region had its own ideas about how best to overcome the barriers listed on pages 20 and 21 but, as with the barriers themselves, there was a high level of consensus.

The following provides a summary of the recommendations put forward by all or a significant number of respondents:

Embedding social marketing within PCTs

- Embed social marketing in strategy and in local, regional and national activities
- Increase capacity, for example by creating a roster of preferred suppliers, promoting the NSMC Associates Scheme, providing project management support, and building social marketing into job descriptions and core competencies
- Increase budgets for social marketing within PCTs
- Allocate more time for social marketing to be undertaken at local level

Provision of training and support material

- Raise awareness and encourage better understanding by using effective internal communications to 'market social marketing'
- Provide tailored training for staff at different levels and in different roles. There was significant demand for practical, topic-based training and training in procurement and commissioning (integrating the principles of World Class Commissioning). Coaching and mentoring to support training was seen as vital to ensure training is put into practice and was sustainable at working level
- Develop practical tools and resources to help health professionals develop and manage social marketing projects
- Make evaluation a priority and develop a robust evidence base. There is a clear need for case studies and other evidence to show that social marketing works

Networks and events to support social marketing

- Establish a social marketing network (possibly a virtual network) where health professionals and social marketers can share knowledge and experiences and access resources
- Set up social marketing steering groups/regional hubs with champions from each PCT
- Organise events and conferences for communications, public health and commissioning staff on the relevance and effectiveness of social marketing to their roles and working together to ensure best practice at all working levels

See Appendix 5 and Appendix 9 for further details.

Engagement considerations

7.1 Looking ahead

Following the regional review, each RDSM has developed a plan for embedding social marketing at regional and local level. These plans have been discussed with Regional Directors of Public Health, Communication leads, relevant colleagues and steering groups or forums before being compiled into this report. Whilst each region's plan and timetable is different, reflecting its own individual circumstances, there is once again broad consensus as to the priority areas for development.

The first step will be to analyse training needs before developing a comprehensive training plan

Training and embedding skills on all aspects of social marketing is clearly the top priority across the regions. The first step will be to analyse training needs before developing a comprehensive training plan (to include coaching and mentoring as well as formal learning) and providing access to practical tools and resources (see Appendix 9).

Regions are keen to start increasing capacity for social marketing, for example by identifying and recruiting champions from within PCTs (where these are not already in place), and to establish agreed routes for sharing information and good practice.

Social Marketing Regional Development and Support Managers

The regional reviews which form the basis of this report will also provide a baseline for the work of the NSMC's ten Social Marketing Regional Development and Support Managers during 2009/10. The RDSMs' overall remit is to increase capacity for social marketing in their region by providing wide-ranging support tailored to local needs and priorities. That support is likely to include advice on training, identifying opportunities for joint working, providing practical help with commissioning and promoting good communication. The RDSMs will be responsible for reporting on progress to DH against these original plans in March 2010.

Appendix 1: Standard questionnaire

Below is the template questionnaire which was used with respondents for the Review of Social Marketing in Regional Public Health settings.

A. Interview information	
1. Region	
2. Regional Lead	
3. Interview undertaken by	
4. Date of interview	
5. Interview with (name)	
5.1 Job title	
5.2 Department	
5.3 Organisation	

5.4 Organisation type

- ☐ Primary Care Trusts
- ☐ Local Authority
- ☐ Secondary Care Trusts
- ☐ SHA
- ☐ 3rd Sector
- ☐ Other Public Sector
- ☐ Government Office
- ☐ Private Sector

5.5 Main area of work

- ☐ Commissioning
- ☐ Communications
- ☐ Health Promotion
- ☐ Public Health
- ☐ Topic Lead
- ☐ Other

Notes if applicable

B. Social marketing – Knowledge and application

6. What do you understand by the term "social marketing"?
If they don't understand the term or have never heard of it, write down their response then give them a definition.

7. Do you feel there are barriers within your organisation to applying social marketing?

- ☐ External constraints
- ☐ Lack of a champion
- ☐ Lack of awareness / education / training
- ☐ Lack of capacity
- ☐ Lack of internal support / commitment from the Board or management
- ☐ Lack of resources
- ☐ Lack of skills
- ☐ Project timeframe vs. yearly targets
- ☐ Structural problems within PCT
- ☐ Other (please specify below)

7.1 What could be done to overcome these barriers?

- ☐ Clear objectives that relate to targets
- ☐ Dedicated time
- ☐ Help to manage projects
- ☐ Management buy in
- ☐ Money
- ☐ Support within organisation
- ☐ Mechanisms to share & learn from best practice
- ☐ Training
- ☐ Other (please specify below)

8. In your opinion, what are the strengths and weaknesses of social marketing?
If they haven't heard of it or have not grasped the common sense definition you gave them earlier, then skip this question.

C. Social marketing support and training

9. At what levels do you feel social marketing is championed within your PCT?

- ☐ Board
- ☐ Senior management/director
- ☐ Operational management/ topic lead
- ☐ None

10. Prior to this interview / meeting, were you aware of the National Social Marketing Centre?

☐ Yes (Q11) ☐ No (Q12)

11. How have you made use of any NSMC products or services?

- ☐ Visited website
- ☐ Downloaded resources
- ☐ Called for advice
- ☐ Attended training
- ☐ Used an associate
- ☐ Not at all
- ☐ Wasn't aware of any

12. Who in your team has had training on social marketing? *Roles, department (if nobody go to Q13)*

12.1 What was the title of the training and / or what was it about? *Notes if applicable*

12.2 Who funded it?	12.2.1 Who funded it?
12.3 Who delivered it? ☐ NST ☐ Brilliant Futures ☐ Dr Forster ☐ Healthy Weight Loss ☐ Barkers ☐ Demo site ☐ Don't know	12.3.1 Who delivered it? ☐ NST ☐ Brilliant Futures ☐ Dr Forster ☐ Healthy Weight Loss ☐ Barkers ☐ Demo site ☐ Don't know
12.4 When did it take place? ☐ Last 6 months ☐ Within the last year ☐ 2 or more years ago	12.4.1 When did it take place? ☐ Last 6 months ☐ Within the last year ☐ 2 or more years ago
How long was it? ☐ ½ day ☐ One day ☐ 3 days ☐ 5 days ☐ > 5 days	How long was it? ☐ ½ day ☐ One day ☐ 3 days ☐ 5 days ☐ > 5 days

12.6 Did the training make a difference? ☐ Yes ☐ No	12.6.1 Did the training make a difference? ☐ Yes ☐ No
12.7 If yes, how? ☐ Increased awareness and understanding ☐ Applied to project ☐ Included in strategy and commissioning ☐ Other (please specify)	12.7.1 If yes, how? ☐ Increased awareness and understanding ☐ Applied to project ☐ Included in strategy and commissioning ☐ Other (please specify)
12.8. If no, why not? ☐ Not relevant to my work ☐ Poor training ☐ Couldn't see how to apply it ☐ Didn't understand it ☐ Other (please specify)	12.9. If no, why not? ☐ Not relevant to my work ☐ Poor training ☐ Couldn't see how to apply it ☐ Didn't understand it ☐ Other (please specify)
13. Do you think there is a need for social marketing training in your team or organisation? ☐ Yes ☐ No	
13.1 If yes, what training do you think is required? ☐ Introductory level ☐ Research/Insight/Scoping ☐ Linking to PSA targets ☐ Redesigning existing services using ☐ Social marketing techniques ☐ Using / applying in particular areas ☐ Commissioning social marketing ☐ Other (please specify) ☐ Evaluating campaigns and interventions *Notes if applicable*	
14. How would you like to share and learn from best practice? ☐ Online ☐ Forum ☐ Publications ☐ Other (please specify) ☐ Dedicated events ☐ Network ☐ Masterclass ☐ Not a priority for me *Notes if applicable*	
Have you had a visit from the DH National Support Team? ☐ Yes (Q15.1) ☐ No (Q16)	
Were you offered advice or training about social marketing by the National Support Team? ☐ Yes ☐ No	

D. Current social marketing approaches and activity

16. Has your PCT had any social marketing programmes or projects running since June 2006?
Expect 3-4 examples, note a maximum of 5.

☐ Yes (Q16.1) ☐ No

16.1 How many?

16.2 Project name and main aims *List all the projects they can remember*	16.3 What was the name (and organisation) of the project lead? *Ask if they know phone no or email.*
SM Project 1	
SM Project 2	
SM Project 3	
SM Project 4	
SM Project 5	

17. What other marketing or communications projects have you run since June 2006? Please include public education campaigns, mass media campaigns, health promotion campaigns and other marketing or education initiatives.
Expect 3-4 examples, note a maximum of 5.

17.1 Project name and main aims *List all the projects they can remember*	17.2 What was the name (and organisation) of the project lead? *Ask if they know phone no or email.*
Non SM Project 1	
Non SM Project 2	
Non SM Project 3	
Non SM Project 4	
Non SM Project 5	

18. What is your PCT's budgeted expenditure on social marketing projects next year?
Note. Financial year runs Apr-Apr

☐ Less than £15 000 ☐ £15 000 - £50 000
☐ £50 000 – £100 000 ☐ £100 000 - £150 000
☐ £150 000 - £200 000 ☐ > £200 000
☐ Don't know ☐ Not willing to disclose

19. Do you have any other comments you would like to make?

Appendix 2: National Social Marketing Centre benchmark criteria

[French, Blair-Stevens (2006) adapted from original benchmark criteria developed by Andreasen (2002)]

1. CUSTOMER ORIENTATION

'Customer in the round'

Develops a robust understanding of the audience, based on good market and consumer research, combining data from different sources.

- A broad and robust understanding of the customer is developed, which focuses on understanding their lives in the round, avoiding the potential to only focus on a single aspect or features
- Formative consumer / market research is used to identify audience characteristics and needs, incorporating key stakeholder understanding
- Range of different research analysis, combining data (using synthesis and fusion approaches) and, where possible, drawing from public and commercial sector sources, to inform understanding of people's everyday lives

2. BEHAVIOUR

Has a clear focus on behaviour, based on a strong behavioural analysis, with specific behaviour goals.

- A broad and robust behavioural analysis undertaken to gather a rounded picture of current behavioural patterns and trends, including for both:
  - the 'problem' behaviour
  - the 'desired' behaviour
- Intervention clearly focused on specific behaviours, i.e. not just focused on information, knowledge, attitudes and beliefs
- Specific actionable and measurable behavioural goals and key indicators have been established in relation to a specific 'social good'
- Intervention seeks to consider and address four key behavioural domains:
  1: formation and establishment of behaviour
  2: maintenance and reinforcement of behaviour
  3: behaviour change
  4: behavioural controls (based on ethical principles)

3. THEORY

Is behavioural theory-based and informed, drawing from an integrated theory framework.

- Theory is used transparently to inform and guide development, and theoretical assumptions are tested as part of the process
- An open integrated theory framework is used that avoids the tendency to simply apply the same preferred theory to every given situation
- Takes into account behavioural theory across four primary domains:

  1: bio-physical *2: psychological*

  3: social *4: environmental / ecological*

4. INSIGHT

Based on developing a deeper 'insight' approach – focusing on what 'moves and motivates'.

- Focus is clearly on gaining a deep understanding and insight into what moves and motivates the customer
- Drills down from a wider understanding of the customer to focus on identifying key factors and issues relevant to positively influencing particular behaviour
- Approach based on identifying and developing 'actionable insights' using considered judgement, rather than just generating data and intelligence

5. EXCHANGE

Incorporates an 'exchange' analysis, understanding what the person has to give in order to get the benefits proposed.

- Clear analysis of the full cost to the consumer in achieving the proposed benefit (financial, physical, social, time spent, etc.)
- Analysis of the perceived / actual costs versus the perceived / actual benefits
- Incentives, recognition, reward and disincentives are considered and tailored according to specific audiences, based on what those audiences value

6. COMPETITION

Incorporates a 'competition' analysis to understand what competes for the time and attention of the audience.

- Both internal & external competition considered and addressed:
  - *Internal* - e.g. psychological factors, pleasure, desire, risk taking, addiction etc
  - *External* - e.g. wider influences / influencers competing for audiences' attention and time, promoting or reinforcing alternative or counter behaviours
- Strategies aim to minimise potential impact of competition by considering positive and problematic external influences & influencers
- Factors competing for the time and attention of a given audience considered

7. SEGMENTATION

Uses a developed segmentation approach (not just targeting), avoiding blanket approaches.

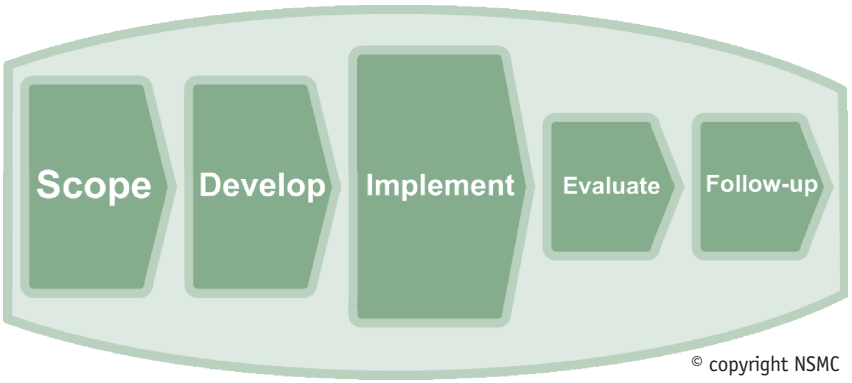
- Traditional demographic or epidemiological targeting used, but not relied on exclusively
- Deeper segmented approaches that focus on what 'moves and motivates' the relevant audience, drawing on greater use of psycho-graphic data
- Interventions directly tailored to specific audience segments rather than reliance on 'blanket' approaches
- Future lifestyle trends considered and addressed

8. METHODS MIX

Identifies an appropriate 'mix of methods'

'Intervention mix' = strategic social marketing

'Marketing mix' = operational social marketing



- Range of methods used to establish an appropriate mix of methods
- Avoids reliance on single methods or approaches used in isolation
- Methods and approaches developed, taking full account of any other interventions in order to achieve synergy and enhance the overall impact
- Four primary intervention domains considered:

1: informing / encouraging *2: servicing / supporting*

3: designing / adjusting environment *4: controlling / regulating*

Appendix 3: NSMC Total Planning Process Framework

A five stage process developed by the National Social Marketing Centre.

© copyright NSMC

Activities within each stage are rarely sequential and usually involve a much more organic and fluid process.

Scoping

Undertaking effective scoping is a critical success factor. Key aspects include:

- Examining and defining the presenting issue(s) with key stakeholders/partners involved
- Reviewing and assessing potential 'customer' or 'audience' focus and rationale
- Focusing attention on specific behaviours (and groups of behaviours) – establishing initial behavioural goals
- Developing a proposition (ideas and options) for how to move from current behaviours to the desired or target behaviours

Activities are likely to include:

- Engaging stakeholders and partners
- Reviewing relevant evidence and practice
- Clarifying aims and intentions
- Developing customer insights
- Resources review
- Relationship to other interventions
- Intervention mix
- Considering ethical issues
- Audience segmentation and focus
- Potential behavioural focus
- Influences/influencers
- Developing behavioural goals
- Developing an initial 'proposition' to take into next Development Stage

Development

Testing out the proposition and developing a specific social marketing intervention – key aspects include:

- Examining a range of social marketing activity and deciding what 'social marketing mix' to use
- Undertaking primary development work and ensuring that secondary development 'pre-tests' and refines work
- Determining appropriate indicators and how best to verify
- Effective stakeholder involvement and 'priming' are critical success factors to any subsequent implementation

Activities are likely to include:

Primary: Testing out 'the proposition'

- Social marketing options and mix
- Potential incentives and barriers
- Segmentation and targeting
- Further refining aims and objectives
- Indicators of success and verification (short, medium and long term)
- Evaluation research design
- Creative development and design
- Message(s) where relevant to approach

Secondary: Pre-testing/refining/adjusting

- Testing concepts, approaches, and related messages with relevant audience(s)
- Scheduling and phasing action
- Stakeholder supports

Implementation

The most immediately visible stage of social marketing – key aspects include:

- Handling a 'live' and dynamic process that needs to be actively managed to ensure both:
  - Potential new opportunities arising from the intervention are identified and rapidly capitalised on
  - Potential issues and problems anticipated, or rapidly identified and addressed
- Maintaining effective stakeholder engagement is critical – ensuring that "the potential sales-force" are fully informed and are able to actively input to developments as they occur

Activities are likely to include:

- Commence interventions/campaign
- Active live monitoring
- Spotting other potential opportunities
- Tackling possible issues or problems
- Live adjustment and refinement
- Maintaining stakeholder engagement

Complete current stage

- Recording and capturing
- Feeding back, acknowledging and thanking!
- Inputting into developing evidence base

Evaluation

Dedicated to examining and reviewing the intervention – key aspects include:

- Evaluating impact, outcome, process and cost-effectiveness
- Determining the actual impact on specific behavioural goals
- Ensuring relevant stakeholders and partner input – utilising effective participatory evaluation

Activities are likely to include:

Impact

- Assessing achievement of aims and objectives using short, medium and long term indicators
- Audience(s) knowledge, attitudes and particularly behavioural goals
- Opinions of others - parents, opinion leaders, stakeholders
- Wider societal reactions e.g.: media coverage
- Identifying any unintended impact - positive or negative

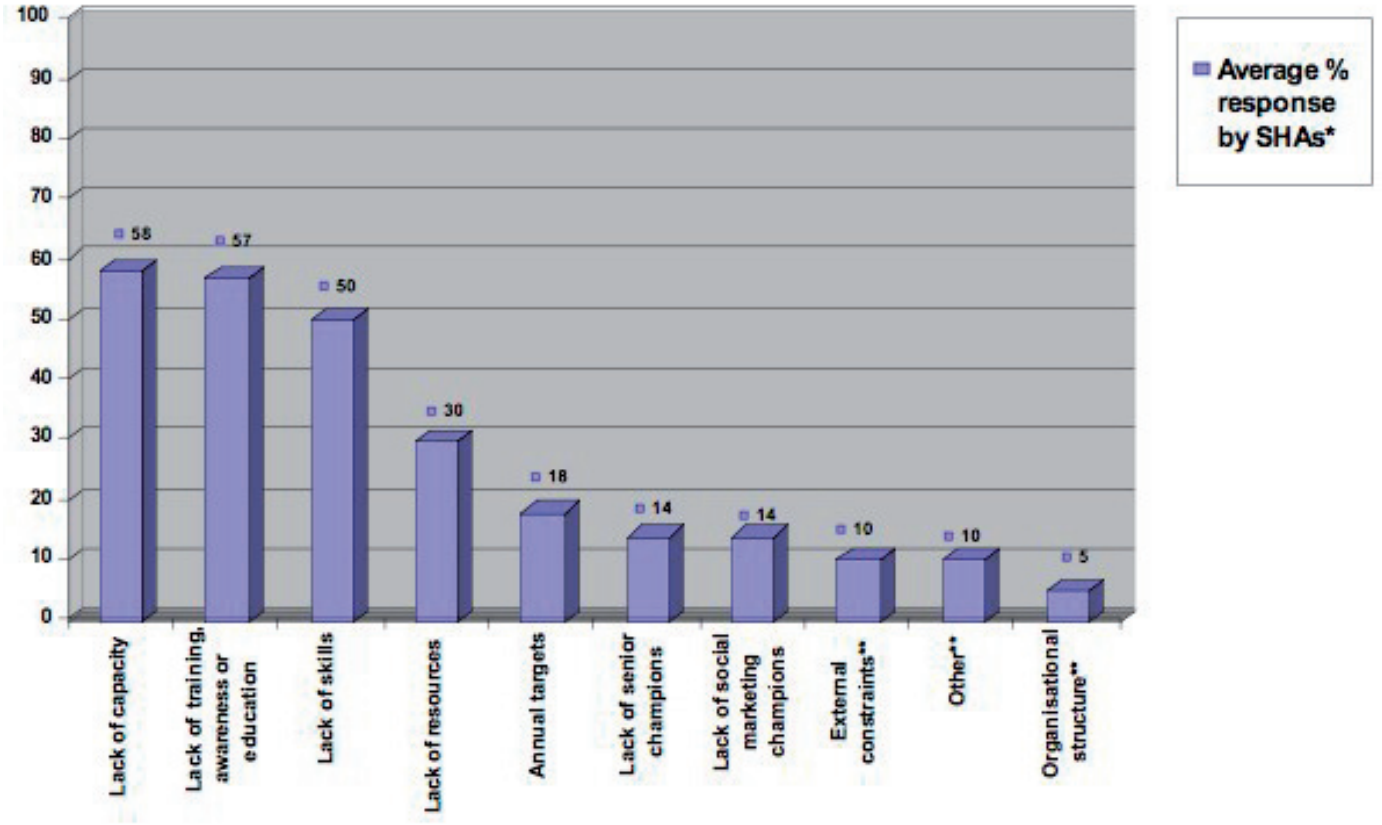
Process

- Learning from how the work was undertaken - efficiency, effectiveness, equity, quality, engagement, management process, etc

Cost assessment

- Potential cost-effectiveness/cost-benefit

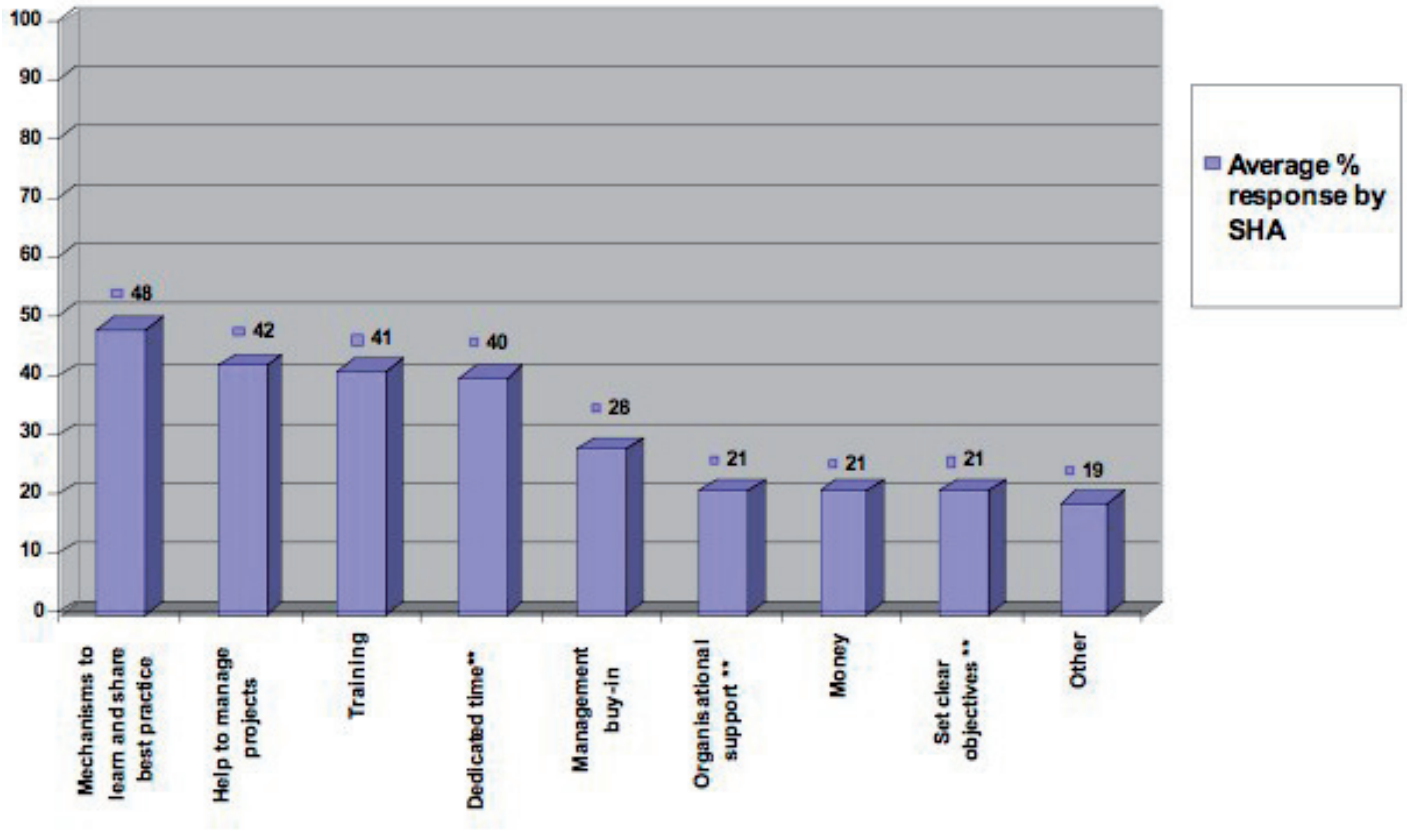
Follow-up



It is important to recognise this as a dedicated stage.

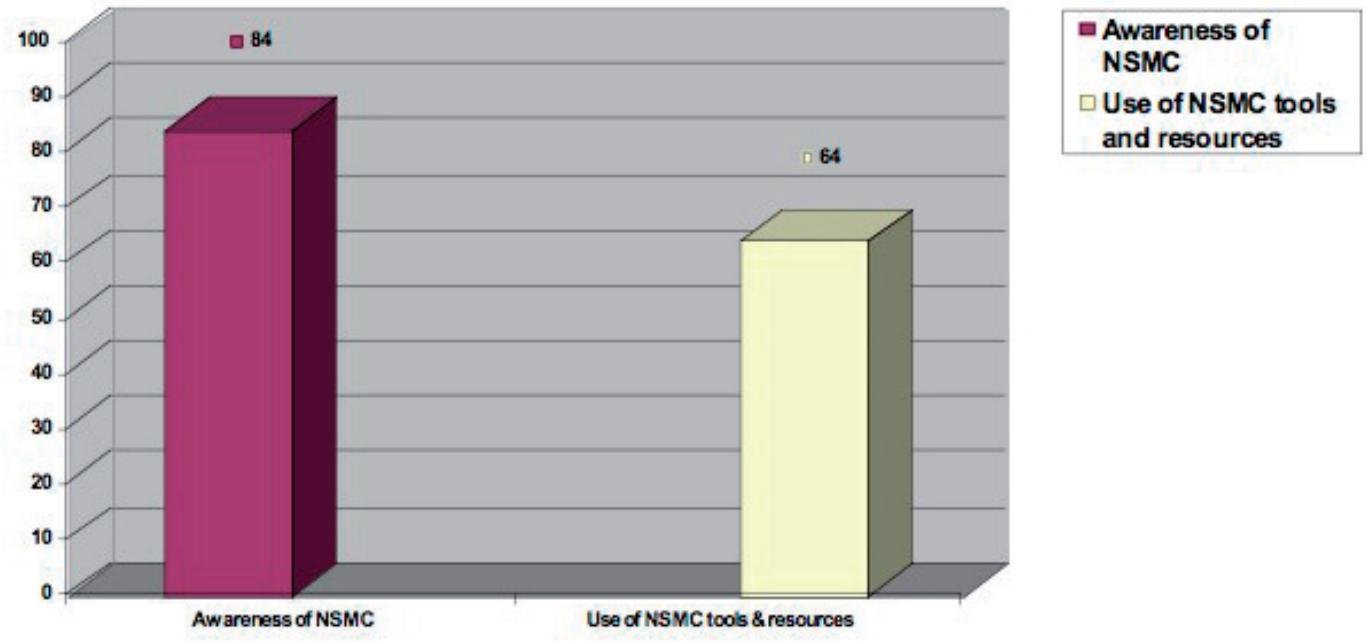
- Evaluation is often seen as the end stage of interventions. However, having a clear and dedicated follow-up stage is critical to ensuring short-term impact are built into on-going medium and longer term work
- The central purpose of this stage is to:
  - Actively consider the outcome from the evaluation stage (avoiding potential for findings to be left on the shelf)
  - To decide how best to capitalise on what has been achieved
  - To be clear about what remains to be achieved
  - To capture and record follow-on decisions to inform further scoping work for any follow-on activities
  - To directly inform further resource decisions for on-going work

Key activities are likely to include:



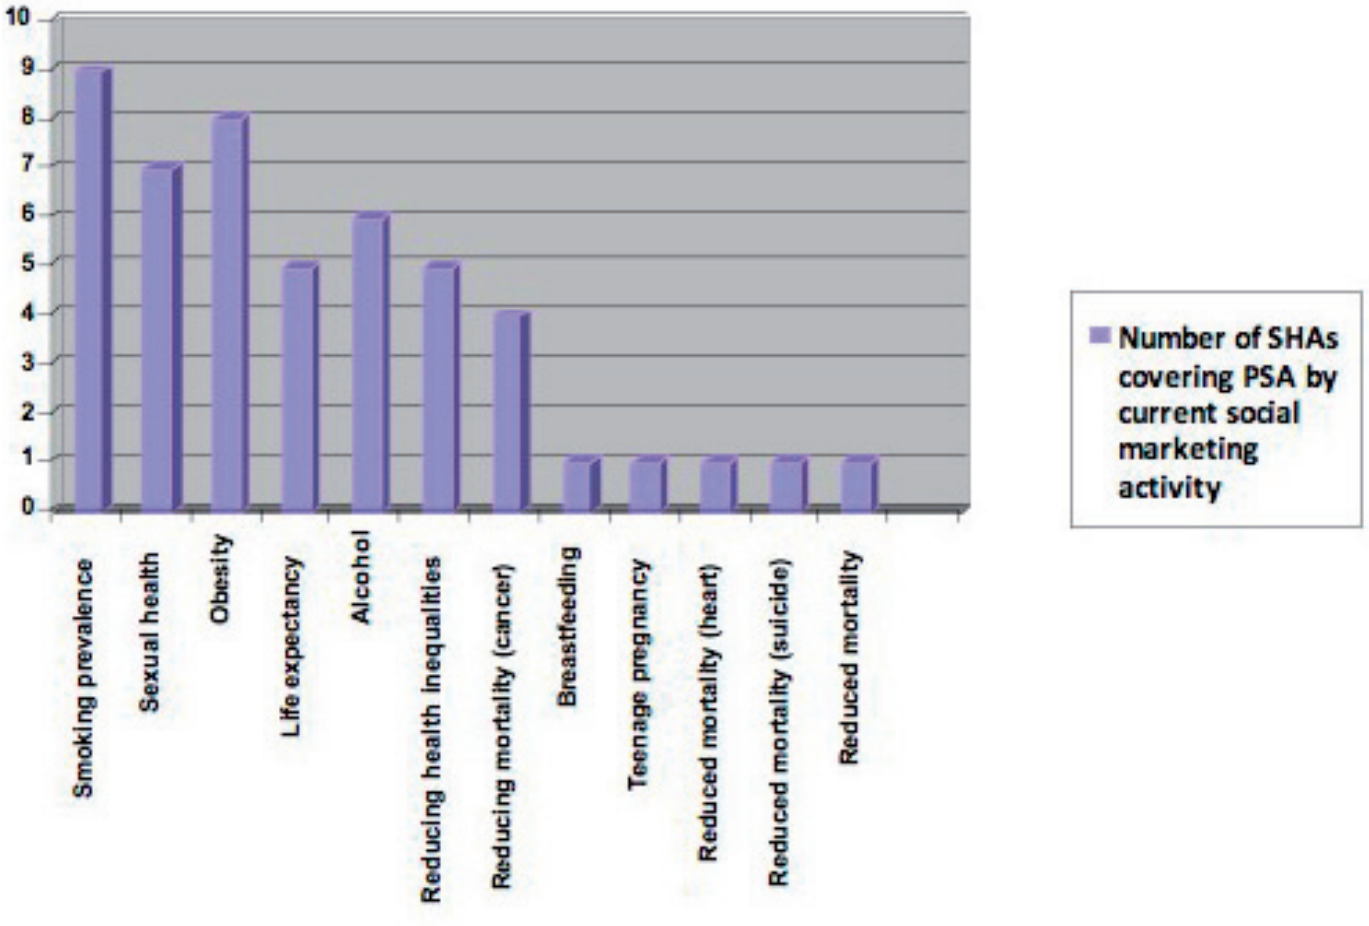
- Considering with stakeholders implications arising from evaluation
- Following up with relevant decision-makers and commissioners as relevant
- Capitalising on what achieved
- Following-up for medium and long term
- Reviewing in relation to other interventions (non-social marketing) outcomes
- Recording and capturing to inform any future scoping of work

Appendix 4: Barriers to adopting social marketing



*All % based on average of responses of six SHAs (with exception of ** based on average of responses of five SHAs)*

Appendix 5: Overcoming barriers to adopting social marketing



*All % based on average of responses of six SHAs (with exception of ** based on average of responses of five SHAs)*

Appendix 6: Levels of awareness of NSMC and use of NSMC resources

All % based on average of responses of seven SHAs

Appendix 7: Public Service Agreements (PSAs) covered by current social marketing activity

*Based on data provided by the Central Office of Information in a review of ten SHAs in England

Appendix 8: Attitudes to social marketing

This appendix provides a range of responses (which have been anonymised) to the following question in the standard questionnaire (Appendix 1):

Question 8: In your opinion, what are the strengths and weaknesses of social marketing?

The responses have been divided into two main sections: Strengths and Sensitivities. Each section has then been divided into groups with common themes.

Strengths of social marketing

Support for social marketing

"Social marketing has to be one of our key responses to the challenges of Wanless."

"There are no barriers. We have committed within the PCT and the council to using social marketing as a major part of our strategies. There is a high level of support and some good programmes running already."

"The national strategy legitimises and recognises work that people have already been doing."

"It's using traditional marketing techniques but for social good... in a sense, marketing better health."

Social marketing as a planned process

"Social marketing stops us from grabbing at a solution too early on the process: this is when we get it wrong, because we haven't had the time to fully explore the issue and frame the problem. When we have used social marketing in the past, often the behavioural goal is not what we thought it was, or that we have never really understood enough about competition and exchange."

"A key strength of social marketing is that it can be embedded into the business plan"

Using social marketing for insight, understanding and segmentation of target groups

"We can reach and engage with people in a way that is attractive to them – often the hardest to reach groups."

"It forces us to recognise our audiences, focus our work, change our work rather than giving people a leaflet. It helps understand the difference between raising awareness and changing behaviour."

"[Social marketing] Puts us in touch with client groups we most need to work with. We can design services that most fit their needs. Not just one message fits all."

"[Social marketing provides a] Better understanding of our local population. It's more than just knowing how old they are and where they live – it is about finding out how they tick."

"It helps us reach people we wouldn't normally reach and focuses on services, not just promotion."

"Insight and exchange are new concepts to us, and are very useful."

Producing targeted, customer-focused campaigns

"It [social marketing] gives our customers a voice."

"We can stop doing SOS communications (send out stuff)."

"[Social marketing provides an] Opportunity to develop customer-centric services."

"It's about putting the customer at the heart of everything, using insight to deliver behavioural change."

"[Social marketing means we can] ... start with the customer and work backwards."

Social marketing to reduce waste and drive efficiencies

"[Social marketing helps with] Really targeting the right people, getting good value for money…not wasting resources."

"[Social marketing] Encourages a joined up approach between departments in the NHS – an elimination of silo working and more matrix management."

"[Social marketing] Concentrates resources rather than using a scattergun approach, therefore using fewer resources and wasting less."

Social marketing to help address health inequalities

"Using the intelligence we have to greater effect [through social marketing]. Really targeting health improvement services. Looking at what people do and how they live their lives and how best to reach them - especially those we don't reach."

"Social marketing is a good tool for ensuring we are reaching our hardest to reach communities and tackling health inequalities. It means we smarten up our approach, set really clear behavioural goals and we use more effective means to touch people. It means we also look at wider community approaches and influences, such as policy and organisational change."

"Targeted interventions that will tackle high areas of deprivation."

"Social marketing helps address health inequalities and those 'hard-to-reach' areas that we traditionally have problems with."

World class commissioning

"The strengths of social marketing are its fit with World Class Commissioning and its positioning alongside partnership working activities, like producing the Joint Strategic Needs Assessment. Social marketing means we can begin to use all the intelligence we have more effectively, to target more effectively."

"It [social marketing] can contribute to strategic objectives around world class commissioning."

Service redesign

"Using social marketing has made us realise we need to redesign our services."

Sensitivities around social marketing

Confusion about/ resistance to the term, 'social marketing'

"'Marketing social marketing' within the PCT is a priority. We need to make sure frontline staff understand what it means. The term 'social marketing' itself is a negative. Health workers have very negative connotations with marketing. We need to present it very carefully."

"It's just a new language for things we're already doing. It's the Emperor's New Clothes."

"Social marketing is really public engagement. We have been doing this for a long time. Social marketing is not really new."

"Not sure it's different from research….we've been doing it for years – it's called public health!"

"We've always done social marketing – it's just now trendy – it's about needs assessment and identifying gaps."

"'Some people mistakenly belief it's a magic bullet."

"'It's still confused with social advertising."

"Social marketing has some negative connotations within public sector staff who perceive it as commercial marketing and sales. Patients could also perceive social marketing as 'marketing', therefore expensive, commercial and not necessary."

Stronger evidence base for success of social marketing

"Needs to be a strong evidence base that those [social marketing] tools are making a difference."

"There is a lack of robust case studies, evaluation and proof that it works."

"Lots of people in the NHS don't believe in health prevention messages. People need to see evidence that social marketing works."

Too academic

"Social marketing is perceived as academic and complicated."

"[Social marketing is] Seen as an entity in itself rather than integral approach."

"The language [used about social marketing] is off-putting and too academic"

Too focused on research/scoping and not on interventions/delivery

"Social marketing is strong on analysis and weak on providing tools for delivery that we haven't already got."

"The challenge for social marketing is moving from research stage into action. There is too much navel -gazing done already and yet more research could lead to inertia."

Pressure on resources

"Labour intensive to do social marketing."

"The costs of commissioning social marketing. Can we afford it?"

"Not always possible to deliver customer needs [through social marketing] in a limited resource environment."

"A weakness is that it's expensive and takes up lots of time."

Need for specialist training

"Not enough expertise to do social marketing. Lack of expert knowledge."

"People are frightened of it – they think it needs 'experts' to do it for them."

Long timescales to deliver/funding cycles

"If you do it properly, you don't get instant results."

"The [annual] funding cycle makes long-term planning difficult."

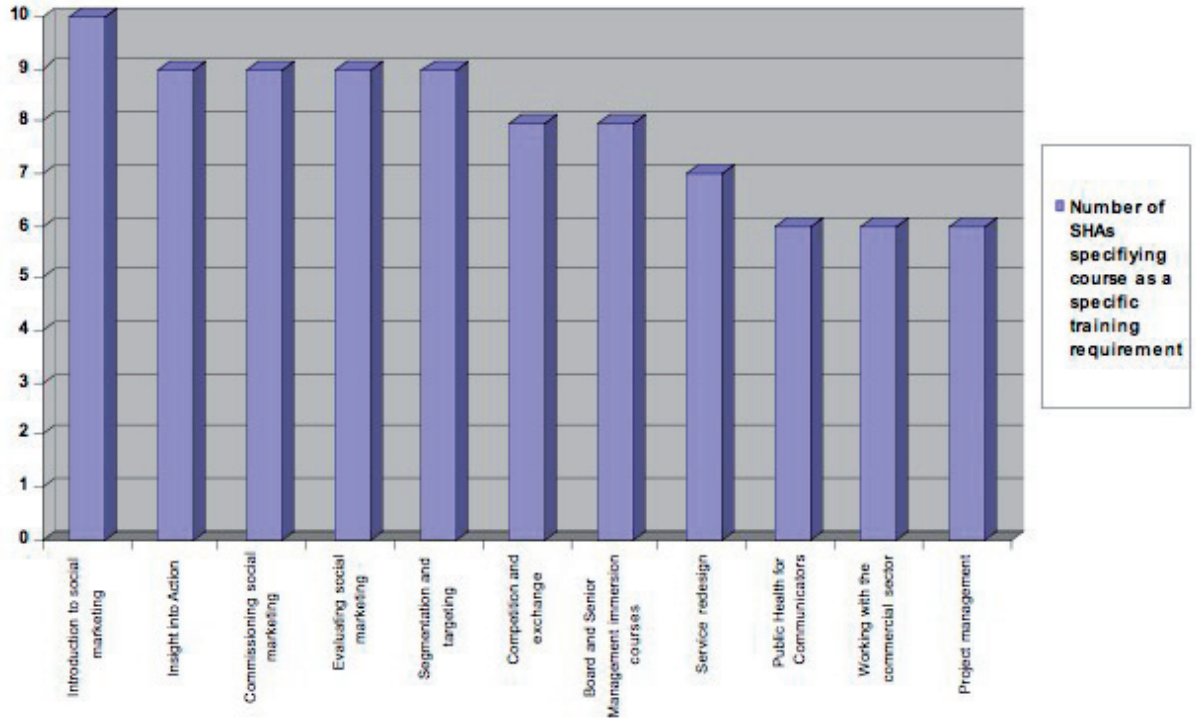
Ethics

"Do we end up selling things to people that they don't want to buy?"

Need for better commissioning of social marketing

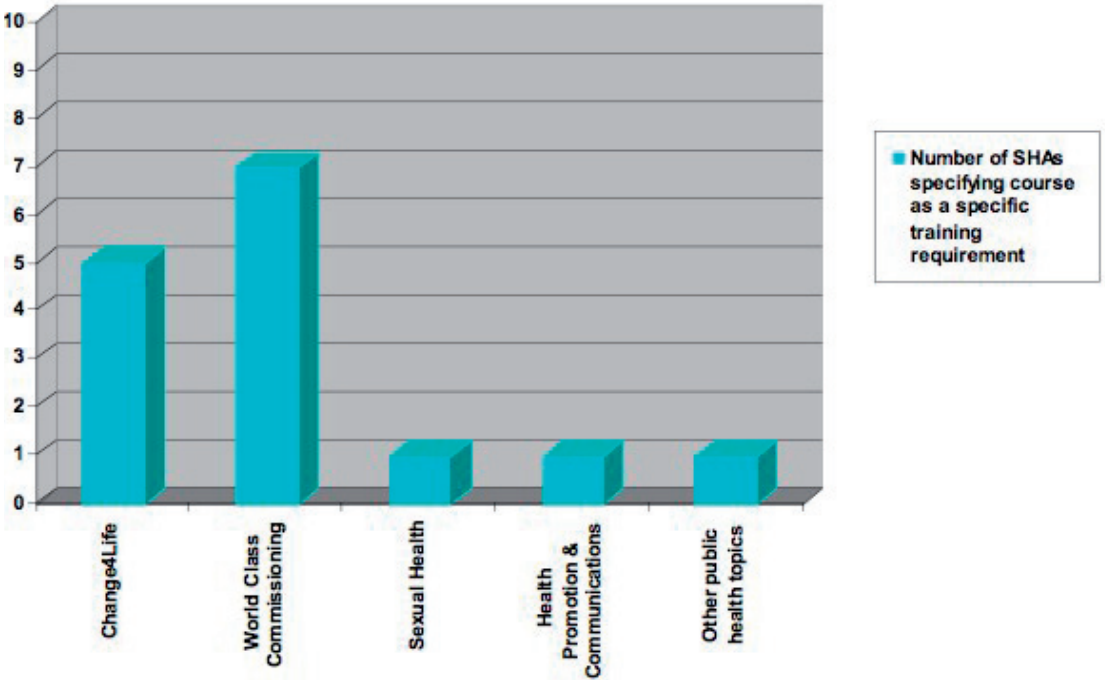
"Things are getting better, but to be honest, when we started using social marketing we didn't really know what we were doing. And the agency we engaged to help us to do it didn't know what they were doing either."

Need to embed more widely within organisations



"Relationships between communications and public health not always well established – public health think it [social marketing] belongs to them."

"It has the potential to become 'ghetto-ised' just like communications, whereas everyone needs to be using it or have an understanding of the principles."



Appendix 9: Regional training and development requirements

These charts summarise specific training course and publication/toolkit requirements identified by respondents to the review.

Foreword

The regional programme with the remit to increase knowledge, skills and capacity around social marketing at regional and local level, has been a valuable asset in terms of the growth of the National Social Marketing Centre (NSMC). At the time the programme started, in 2008, the NSMC had developed the concept of social marketing, established demonstration sites to test the model and raised awareness of social marketing in England and especially within the health arena.

By assigning a virtual team of ten Regional Development and Support Managers, aligned to the ten National Health Service (NHS) Strategic Health Authorities (SHAs) in England, but functioning centrally from the NSMC, it has allowed the Centre to understand the gaps in knowledge and skills around social marketing within the NHS, to plan and develop a specific training and capacity building programme for each region which has included mentoring and support to ensure that the new skills gained from the training were put into practice. This programme has certainly ensured that the NHS in England is aware of social marketing principles and the benefits offered in terms of behavioural change interventions.

As the programme closes, new opportunities are being explored by the NSMC, in terms of a Centre of Excellence, ensuring Quality Assurance for social marketing, bespoke strategy and development work for new Government bodies and other agencies, leading the NSMC into the next phase of development.

I would like to thank the Regional Team for their dedication and support for the NSMC, for successfully raising the bar for social marketing delivery in the NHS in England and wish the individuals every success for the future.

John Bromley
Director, National Social Marketing Centre

Executive Summary

Background and context

In 2006, the National Consumer Council (NCC) published the report, *It's Our Health*, which highlighted the links between social marketing approaches and positive health-related behaviour change. The report called for the establishment of a National Social Marketing Centre (NSMC) to help build social marketing capacity and skills in England. As a result, the NSMC was set up later in 2006 as a strategic partnership between the Department of Health (DH) and the National Consumer Council (now Consumer Focus).

The DH's formal response was published in *Ambitions for Health* (July 2008), setting out a strategic framework to maximise the potential of social marketing and health-related behaviour, focusing on four key areas:

i. **Health capacity:** working with public health professionals (such as those in the NHS, DH, local authorities and other public sector settings) to increase their skills, knowledge and competency in applying social marketing principles to health interventions
ii. **Health insight:** using public health consumer insight to inform local and national health improvement activities
iii. **Health innovations:** putting social marketing principles into action in local, regional and national settings, and creating a central resource for sharing knowledge on effective behavioural interventions
iv. **Health partnerships:** establishing effective local and national partnerships with the private and third sectors to promote good health

As social marketing continued to move up the health agenda, a need was identified for professional social marketing support for the NHS regionally and locally in England.

The Regional Programme

The NSMC was funded to set up a two year programme and appointed ten Regional Development and Support Managers (RDSMs) – one for each SHA region – managed by the NSMC Director of NHS Development, based at the NSMC headquarters in London. Each RDSM worked remotely, based in their region, working primarily in the field but with regular contact and updates. The full regional team met formally on a monthly basis to review regional progress, undertake planning and share expertise. The role of the RDSM was to provide guidance and support for social marketing projects and initiatives, tailored to the specific needs of each region.

Objectives for the Regional Programme

There were four main objectives set for the regional programme by NSMC and the Department of Health:

i. To undertake a review of social marketing in a public health context, in each region
ii. To establish a 'Beacon' social marketing partnership in each region, to showcase best practice in partnership working (or develop an existing example)
iii. To ensure that directors, commissioners and practitioners of social marketing in each region are trained, understand and can effectively commission social marketing
iv. To provide the link between national, regional and local social marketing programmes and policies, and provide support locally following National Support Team visits

Review of Social Marketing (2009)

The first key task for the regional team was to complete a comprehensive regional review of social marketing in a public health context. This included evidence about existing social marketing activity, barriers to social marketing uptake, and gaps in current knowledge and skills. The findings from the ten detailed regional reports were collated into the national report, *Review of Social Marketing within Public Health Regional Settings (*DH, 2009). The report provided a snapshot (November 2008 to January 2009) of how social marketing was being used within Primary Care Trusts (PCTs) in England.

The report outlines key findings, including:

- Defining social marketing
- Current social marketing activity
- Support for social marketing
- Resources available
- Barriers to uptake
- Recommendations

Each RDSM used the findings of their own regional review as the basis for a tailored regional social marketing development plan for the next 12 months and beyond.

Beacon partnership projects

One of the four core social marketing programmes set out by the Department of Health in *Ambitions for Health* (2008) was Health Partnerships. As part of this programme, the ten regional 'Beacon' partnership projects were established by the NSMC regional team in early 2009. The purpose of the 'Beacons' is

to demonstrate and showcase best practice in partnership working for social marketing, in order to improve public health outcomes. There is one 'Beacon' project in each SHA area in England, led by an RDSM. All projects have two or more key partners and address a public health priority within their region.

Training programme for England (2009-2010)

The *Review of Social Marketing* found that understanding and awareness of social marketing varied widely both between and within organisations. It also found that capacity and skills were significant barriers to the wider use of social marketing within most organisations. As a result, the *Review* made two key recommendations:

- To raise awareness and understanding of social marketing
- To develop and deliver a tailored training programme for staff at different levels

The main programme was grouped into four distinct levels, based on the level of pre-existing social marketing knowledge required for delegates:

- *Introductory:* overview of the key social marketing principles; for those likely to play a significant role in a social marketing project in the next six months
- *Applied:* for key stakeholders and managers who will be applying the principles of social marketing directly to their social marketing projects
- *Practitioner:* for those requiring more in-depth understanding of the technical aspects of social marketing and how to apply them
- *Executive:* for CEOs, directors and senior managers who require a strategic understanding of how social marketing principles can help them improve health outcomes for their local populations

Eight modules were then developed within these four levels:

- An introduction to the key principles of social marketing
- Overview of how to undertake a social marketing intervention
- Procuring social marketing services
- Getting started: scoping social marketing
- Turning insight into action: developing a social marketing intervention
- Understanding your audience: using research and customer insight
- Evaluating success
- Masterclass for directors and senior managers

The courses were developed by the RDSM team, working with the training team at the NSMC head office in London, in line with World Class Commissioning competencies and National Occupational Standards for social marketing. Alongside the main national training programme, a range of

bespoke training workshops were developed and delivered by all the RDSMs, in response to specific requests from public health leads within their regions (for example, bespoke courses on sexual health or alcohol social marketing). By March 2010, over 160 courses from the main programme had been delivered to over 3,000 delegates across the ten regions in England.

Working with Primary Care Trusts in England

A significant proportion of each RDSM's work was focused on supporting PCTs within their SHA area. This work was informed by the original social marketing review undertaken across the region, but also by ongoing requests from each PCT.

The PCT support work undertaken by RDSMs was wide-ranging and regularly included:

- Specialist social marketing advisory role
- Development of social marketing strategies
- Social marketing project set-up and development
- Membership of PCT project Steering Groups and Working Groups
- Assistance with funding applications and provision of funding assistance for social marketing projects
- Social marketing post recruitment
- Commissioning and procurement for social marketing projects
- Sourcing research data and case studies
- Provision of NSMC Associates to work on PCT social marketing projects
- Running social marketing workshops and training sessions

Supporting procurement and social marketing rosters

In the *Review of Social Marketing within Public Health Regional Settings*, the RDSMs noted a widespread need amongst PCTs for support in procuring social marketing services from outside agencies.

The RDSMs have addressed this need in three ways:

- Direct support by RDSMs, working with individual PCTs and regional teams from the beginning to the end of a particular procurement process
- Development of specific NSMC procurement tools for social marketing, including the Procurement Guide for Social Marketing Services (NSMC, 2009)
- Development of a specific course on social marketing procurement for the training programme

Networks

Networks are a long-standing way of communicating and sharing knowledge within the NHS. In the *Review of Social Marketing*, however, it was established that whilst most regions have a wide range of networks representing public health topics or a specialism such as communications, there was little evidence of these networks engaging in social marketing. As a result, in those regions where social marketing networks were wanted, the RDSMs worked quickly to establish them.

NSMC Associates

A key finding from the *Review of Social Marketing* highlighted insufficient in-house capacity as a barrier to using social marketing. In response to this, the NSMC developed an Associate framework. Social marketing professionals from across all regions were assessed and successful candidates were placed on a procurement framework. The framework was used by the RDSMs to procure additional support in response to need and also helped PCTs to build skills and knowledge in house through a transfer of skills from Associates to NHS professionals.

Supporting regional programmes

In addition to local PCTs, the RDSMs have also worked closely with the regional Government Offices and SHAs, providing social marketing expertise for priority work programmes.

Developing national social marketing resources

Alongside their regional work, RDSMs have collaborated with colleagues at the NSMC London office on the development of NSMC publications, reports, tools, web content and other resources. Three RDSMs sat on the Advisory Panel during the development of the NSMC's innovative new online Social Marketing Planning Guide and Toolbox, launched early in 2010. In addition, the RDSMs formed the core team which developed the 2009-2010 social marketing training programme for the NHS in England.

Conferences and events

Over the course of the regional programme, the RDSMs undertook a wide variety of speaking engagements at national, regional and local conferences and events. These engagements were in response to invitations from the Department of Health, NHS organisations including SHAs, PCTs and Mental Health Partnership Trusts; the Government Offices in the regions; Public Health Observatories, cancer and cardiac networks, partnership leaders, Local Authorities and many others.

Working with National Support Teams

An important deliverable for the regional programme was to establish links with National Support Teams (NSTs) to help build capacity and development in social marketing amongst PCTs across the country. The RDSMs worked with the recommendations of NSTs during their PCT visits. Additionally, the RDSMs each took responsibility for a health topic (e.g. obesity, cancer) and established links with the relevant NST and Department of Health Policy teams, to connect with local practice. The NSMC and RDSMs also worked with NSTs regarding specific social marketing training for NST teams.

DH policy and communications

To ensure a co-ordinated approach to public health topics — nationally, regionally and locally — the RDSMs were each assigned a policy area and established working relationships with policy leads and communications leads at the DH. The RDSMs attended key relevant policy and communications meetings with DH leads, to be briefed on current materials, programmes and future plans. This ensured that RDSMs were then able to brief NSMC colleagues on latest developments and also to ensure that local and regional teams were updated and could dovetail DH campaign schedules into their own planning.

The national-regional-local connection

An important role the RDSMs held was to ensure that a link was in place between national, regional and local social marketing projects, policies and initiatives. Using links established with National Support Teams and DH Policy and Communications leads, the RDSM programme was able to create a unique national-regional-local link for social marketing. RDSMs ensured that their local and regional teams had access to all available insight and research underpinning national behaviour change programmes, avoiding duplication and unnecessary local commissioning, and ensuring national resources were maximised and amplified. RDSMs were able to ensure consistency of branding, content and messages was maintained from national to regional to local campaigns. Finally, having one RDSM working across a region meant that they had a unique view of all work ongoing at regional and local level, provided a critical link to signpost PCTs to other similar projects in their region and to significantly reduce historic duplication of effort and commissioning.

Key learnings for the future

The regional programme has consistently met and delivered against the expectations and performance indicators agreed by the programme sponsors. A great deal of learning has taken place throughout the two year delivery of the programme, some of them are listed on page 50 and below is a short summary:

- **Longer lead-in time for the programme setup** – this would have allowed for better regional management engagement in terms of sharing the Key Performance Indicators and the 'virtual' team concept. It would also have meant more time to setup the internal infrastructure and support mechanisms to allow the RDSMs to work remotely.
- **Harnessing and directing expertise** – RDSMs were linked to a specific region which meant little time to share their particular expertise in other regions. Perhaps a 'central' virtual team, floating to meet the needs of the regions would have worked better and also allowed the RDSMs to be used collectively on a larger, national social marketing project.
- **Building on the positive** – working as a collective network of RDSMs there were some extremely positive gains from the programme:
    - Activity and learning from one region was quickly passed to other regions
    - Creating a national-regional-local link for social marketing has resulted in greater efficiencies and a stronger culture of collaboration between PCTs and regional teams for social marketing.
    - The ten regional 'Beacon' projects based on good social marketing principles and in particular partnership working have added to the NSMC 'Showcase' examples for reference of good practice in the future.
    - Delivery of the national/regional training programme on NSMC principles of social marketing means approximately 3,000 NHS employees are aware of good standards and principles for social marketing.
    - The development of an Associate framework to deliver training and support in the field has opened up another avenue for support from the NSMC.

Background and context

In 2006, the National Consumer Council — today, Consumer Focus — launched the report, *It's Our Health,* commissioned by the Department of Health (DH). The report presented the findings of the first national review of health-related campaigns and social marketing in England.

The review highlighted the need for a social marketing approach in order to effect positive behaviour change, setting out strategic and operational recommendations on how social marketing could be applied to improve the impact and effectiveness of health promotion at national and local levels.

One of the recommendations of *It's Our Health* was the establishment of a national centre for social marketing, to support the DH's strategy for national health improvement. The new centre would deliver a work programme focused on building capacity and skills in social marketing in defined population groups. The National Social Marketing Centre (NSMC) was duly established later in 2006 as a strategic partnership between the DH and the National Consumer Council (now Consumer Focus).

It's Our Health also underlined the growing evidence that, by effecting behavioural change through social marketing, more people could be helped to live healthier lives. In order to achieve this, the review identified the need to address gaps in current social marketing capacity and skills within the NHS, and the need to integrate social marketing into future NHS policy, planning, commissioning and practice.

In July 2008, the DH published its formal response in *Ambitions for Health.* It laid out, for the first time, a strategic framework and action plan, detailing how it would work with key leaders in the public health community to embed social marketing principles into health improvement programmes. This gave a clear steer on the next steps for social marketing, to build the increasing appetite for its wider adoption within public health.

The new social marketing framework in *Ambitions for Health* focuses on four key areas:

i. **Health capacity:** working with public health professionals (such as those in the NHS, DH, local authorities and other public sector settings) to increase their skills, knowledge and competency in applying social marketing principles to health interventions

ii. **Health insight:** using public health consumer insight to inform local and national health improvement activities

iii. **Health innovations:** putting social marketing principles into action in local, regional and national settings, and creating a central resource for sharing knowledge on effective behavioural interventions

iv. **Health partnerships:** establishing effective local and national partnerships with the private and third sectors to promote good health

In parallel to the publication of *Ambitions for Health,* the DH's National Support Teams (NSTs) identified a growing demand for professional social marketing support at local and regional level, to enable Primary Care Trusts (PCTs) to commission and deliver social marketing interventions.

As a result, the DH's Health Improvement Directorate funded a two year programme (until April 2010) for the NSMC to recruit, develop and manage a team of ten Regional Development and Support Managers (RDSMs). Their role would be to provide local and regional planning and project management support for social marketing initiatives and programmes within each of the ten Strategic Health Authority (SHA) regions in England. Their work would help to embed the four key areas outlined in the *Ambitions for Health* strategic framework and action plan.

The Regional Programme

Overview of the programme

By January 2009, all ten Regional Development and Support Managers (RDSMs) – were in post, one in each SHA region in England.

The ten RDSMs were managed by the NSMC Director of NHS Development, based at the NSMC headquarters in London. Each RDSM worked from their region, operating primarily in the field with regional and local teams, with regular contact and updates with colleagues via telephone and e-mail. The full regional team met formally on a monthly basis to review regional progress, to undertake planning and to share expertise. These monthly meetings were also attended, by invitation, by policy, programme and communications leads from the DH, and senior NHS directors, to review, discuss and agree key areas where social marketing expertise and support was required.

The role of each RDSM was to provide guidance and support for social marketing projects and initiatives, tailored to the specific needs of their region. Each RDSM had a regional budget of £100,000, of which £20,000 was ring-fenced for a regional 'Beacon' project focusing on best practice in partnership working. The remainder was allocated according to the needs of the region, such as support for particular social marketing projects or training.

Four primary objectives were set for the two year Regional Programme:

1. **To undertake a Review of Social Marketing in each region, with the purpose of:**
    - Establishing a data baseline, from which to develop a measurable regional action plan to develop social marketing knowledge and capacity at a PCT level
    - Introducing the role of the RDSM to regional and local stakeholders as a nationally-funded resource to support social marketing programmes at PCT and regional level
    - Mapping existing social marketing projects against the recommendations made by NSTs after visits to PCTs, to ensure co-ordination
    - Contributing to a national benchmark of social marketing projects

2. **To establish (or further develop) a 'Beacon' social marketing partnership project for each of the ten regions in England, by:**
   - Using the findings of the *Review of Social Marketing* to identify a NHS social marketing project — involving one or more external partner organisations — which had the potential to become a 'Beacon' example of best practice for partnership working in social marketing. The successful 'Beacon' project in each region would be awarded £20,000 additional funding from the RDSM's budget and tracked for evaluation
   - Agreeing the selected 'Beacon' project with the Regional Director of Public Health for each region and their team
   - Developing a business case for DH sign-off, to draw down the £20,000 funding allocation
   - Taking an active part in steering and delivering the project, including sitting on the project's Steering Committee, and providing social marketing consultancy and project management support

3. **Ensure PCT directors and commissioners of social marketing projects know, understand and can effectively commission social marketing, by:**
   - Using the *Review of Social Marketing* as a baseline from which to develop a measurable regional action plan
   - Developing good working relationships with regional directors and programme leaders, to support existing regional networks and development programmes
   - Developing and delivering tailored social marketing seminars and workshops for specific public health topic areas, organisations and networks
   - Contributing to the development of a national NSMC social marketing training programme, materials and resources for the NHS in England
   - Tracking delivery and progress by recording all training, materials, resources and events in order to evaluate outcomes and impact on social marketing skills and practice
   - Providing the DH and NSMC senior management with an evaluation report showing progress from the baseline *Review of Social Marketing* to the end of the programme

4. **Act as a national-regional-local link for NHS social marketing and provide PCT support following National Support Team (NST) visits, through:**
   - Establishing links with NSTs, to ensure RDSMs are briefed ahead of planned NST visits and on the subsequent NST recommendations for social marketing, following this up locally and reporting outcomes
   - Establishing links with DH policy and communications leads for regular team briefings on national programmes and planned campaigns, to ensure co-messages when RDSMs brief regional and local teams
   - Assigning each RDSM to a specific public health topic area (e.g. obesity, tobacco control, sexual health), to link specifically with the relevant NST and DH leads for detailed briefings, which are then relayed regionally and locally
   - Liaising with NST leads regarding specific social marketing training requirements from NSMC for their teams, to ensure good practice

Review of Social Marketing

The first key deliverable for the regional programme and the RDSMs was to undertake a comprehensive review of social marketing in each region, gathering evidence about existing social marketing activity and identifying gaps in current knowledge and skills.

The research phase was completed by January 2009 and the findings from the ten regions were collated into one national report, *Review of Social Marketing within Public Health Regional Settings* (DH, July 2009). The report provides a snapshot in time (between November 2008 and January 2009) of how social marketing was being used within PCTs in England. It highlights a number of key findings, outlined below.

Defining and understanding social marketing

Across all ten regions, *awareness* of the term 'social marketing' was high, but levels of *understanding* varied. Some respondents confused social marketing with advertising, public relations or health promotion. Most respondents saw social marketing as a valuable way of gaining valuable insights into customer needs. There were some negative perceptions of social marketing as too academic, too difficult or an empty buzz word.

Current social marketing activity

Involvement in social marketing activity varied from region to region. Even in those areas with the highest levels of activity, almost all projects were still in their infancy. Projects focused on a range of Public Service Agreement (PSA) targets. The most common target was smoking cessation, but significant numbers of projects also focused on alcohol consumption, reducing mortality, maintaining healthy weight, sexual health and MMR vaccination uptake.

Support for social marketing

Commitment to social marketing was high. In many PCTs, social marketing was championed at a very senior level — typically by Directors of Public Health or Communication — and a significant proportion had either appointed or were planning to appoint people to dedicated social marketing posts. Several regions were in the process of setting up frameworks, steering groups or units to manage social marketing projects. Responsibility for social marketing was most likely to sit within public health or communications directorates. Most, if not all, projects involved partnership working, most commonly with the Local Authority.

All regions had received visits from NSTs. As a result of these visits, some PCTs had been prompted to look at how social marketing could help them meet their goals and to source appropriate social marketing training and support. In all regions, PCTs had worked with external commercial agencies to deliver all

or part of their social marketing activity. There was some concern that this could act as a barrier to the development of social marketing skills in-house.

Financial resources

At the time of the review, only a minority of PCTs were planning either to establish a dedicated social marketing budget or to allocate specific funds to social marketing projects. There was considerable variation on this point between regions.

Barriers to social marketing

The following were cited as the main barriers to developing and implementing social marketing projects:

- Lack of resources
- Lack of capacity
- Lack of awareness and understanding
- Annual targets (preventing a longer term approach)
- Lack of robust evidence and case studies for effective social marketing
- Organisational structure problems
- Lack of internal support
- Cultural and ethical issues
- External constraints

Recommendations for developing social marketing at PCT level

The main recommendations included:

- Embedding social marketing within PCTs at strategic level
- Increasing capacity to deliver social marketing
- Provision of tailored training, and practical tools and resources
- Networks and events to support social marketing

Support and development plans

Each RDSM used the findings of their regional review to produce a detailed development action plan for their region. The plans were developed in partnership with regional and local stakeholders in social marketing.

CASE STUDIES

Development planning for the South East Coast region

In the South East Coast region, the RDSM used the insight and knowledge derived from the *Review of Social Marketing* to create a single regional vision, three key objectives and seven key strategic work programmes.

Social marketing vision
To improve the health and well-being of every citizen, and reduce health inequalities in the South East Coast using social marketing, alongside other tools and techniques.

Objectives

- To build capacity and develop social marketing in the region, linking at local level to NST visits
- To ensure all PCT directors and commissioners of social marketing have a good understanding of social marketing, and are in a position to commission effective social marketing
- To support PCT directors to integrate social marketing into normal workstreams and strategies

Seven strategic work programmes for social marketing

i. PCT support and capacity development
ii. National, regional and local integration
iii. Training and development
iv. Integration of social marketing and World Class Commissioning
v. Sharing best practice and resources
vi. Communications and stakeholder engagement
vii. Sustainability and evaluation

Beacon partnership projects

The second of the four key objectives for the regional programme was to establish and develop one 'Beacon' partnership project for social marketing in each of the ten SHAs in England. The purpose of the 'Beacons' (as also outlined in the *Ambitions for Health* Action Plan) was to showcase best practice in social marketing partnership working, for improved health outcomes. The selected project was required to include the NHS, working with at least one other public or private sector partner. It was also required to focus on a stated regional public health priority or Public Service Agreement (PSA) target. The ten 'Beacon' partnerships were selected by a process run by each RDSM, working with regional and local stakeholders. The chosen projects were then set-up by the RDSMs in spring 2009.

CASE STUDIES

Lighting the Beacon in Newcastle, the East Midlands and the West Midlands

Newcastle

In Newcastle, the 'Beacon' partnership project aims to engage men from target communities, who are most likely to have health problems due to lack of exercise, poor diet and smoking. Its partners included Newcastle United Football Club, building on its popularity within the community as the key motivational factor for men to become involved in community football. A specialist health trainer was recruited by the project to work with men in West Newcastle, encouraging them to take up community football to improve their fitness.

Over 100 men have now joined the programme, improving their fitness levels and learning about healthier diets, the impact of smoking and alcohol, and how to detect early symptoms of cancer. Incentives such as free match tickets, trips around the Newcastle United dressing rooms and signed footballs have proved so popular that the programme has held 100% retention.

To raise awareness of the success and methodology of this Beacon project, the former Government's Chief Medical Officer, Sir Liam Donaldson, joined twenty five senior NHS and Local Authority staff at the Newcastle versus Scunthorpe match in March 2010. Sir Liam described the project as 'a winning formula' and stressed the importance of sustaining the work and its clear benefits.

East Midlands

The 'Beacon' project in the East Midlands is an excellent example of partnership working, bringing together NHS Lincolnshire, the Food Standards Agency, Lincolnshire County Council, Consumer Direct, Government Office East Midlands and the Food Liaison Group. The project tackles a difficult behavioural challenge – changing behaviour in the takeaway food industry, such as reformulation and marketing of healthier alternatives to increase consumer uptake of healthier food. The team involved have, so far, dedicated time and resources to ensure the research and scoping stage of the programme is robust. From this, proposals are being developed on changes which the takeaway sector can make, to help change habits and behaviours. The project has already attracted national attention and is seen by professionals in health and local government as a promising and innovative project.

> "This project is innovative because it is trying to change the behaviour of those who supply the food rather than directly targeting consumers to ask them to cut down or cut out. If we can work with the industry to help them to produce healthier products for consumers we are one step closer to tackling the impact of a diet high in salt and saturated fat".
>
> **Director of Public Health & Partnerships, PCT in the East Midlands**

West Midlands

The West Midlands 'Beacon' project team is working with partners at the University of Kent to use Tesco Clubcard data to explore the drivers for 'unhealthy' food purchasing behaviour amongst specific (vulnerable) consumer segments. The project is also examining attitudes within these consumer segments towards different potential interventions designed to change their food purchasing behaviour.

Using the Tesco Clubcard data, the project team is analysing consumer behaviour to understand attitudes towards diet and health. An indicative list of 'unhealthy' foods has been formulated, in consultation with regional public health topic leads and the Food Standards Agency. The analysis of shopping basket data and the penetration of 'unhealthy' food into the baskets of vulnerable consumer group segments has started. Focus groups have been undertaken in line with the segments used nationally for Change4Life.[1]

The next stage of the project will build on previous research by identifying differences between the food purchasing behaviour of each of these groups, highlighting the most vulnerable groups and the most appropriate interventions for each, in order to effect positive behaviour change.

1 Change4Life is a society-wide movement that aims to prevent people from becoming overweight by encouraging them to eat better and move more. Visit http://www.nhs.uk/change4life

Training programme for England (2009–2010)

Background

The *Review of Social Marketing* highlighted a wide variation in understanding and awareness of social marketing between and within NHS organisations. The *Review* also found that lack of capacity and skills were a significant barrier to the adoption of social marketing within organisations. As a result, the *Review* made two key recommendations related to training:

- To raise awareness and understanding of social marketing
- To develop and deliver a tailored training programme for staff at different levels and in different roles

Some areas and organisations in England had already received social marketing training, either through the NSMC or National Support Teams, or commissioned directly from commercial suppliers. The NSMC regional training programme, therefore, needed to take account of this and create a tiered portfolio of courses, which enabled those with some foundation in the key concepts and principles, to progress to more advanced training.

The main programme

The main training programme for England was grouped into four distinct levels, based on the level of pre-existing social marketing knowledge required for delegates. It also took account of the extent to which delegates would be directly involved in the commissioning or management of social marketing projects. The four levels were:

- *Introductory:* for those requiring an overview of the key social marketing principles; for those likely to play a significant role in a social marketing project in the next six months
- *Applied:* for key stakeholders and managers who will be applying the principles of social marketing directly to their social marketing projects
- *Practitioner:* for those requiring more in-depth understanding of the technical aspects of social marketing and how to apply them
- *Executive:* for CEOs, directors and senior managers who require a strategic understanding of how social marketing principles can help them improve health outcomes for their local populations

Eight modules were then developed within these four levels:

- An introduction to the key principles of social marketing
- Overview of how to undertake a social marketing intervention
- Procuring social marketing services
- Getting started: scoping social marketing
- Turning insight into action: developing a social marketing intervention
- Understanding your audience: using research and customer insight
- Evaluating success
- Masterclass for directors and senior managers

The first seven courses were designed to run over a single day, with an emphasis on practical learning that could be used immediately in the workplace.

The training and development journey

The courses were developed by the RDSM team, working with the training team at the NSMC head office in London. The content was cross-referenced to ensure it was in line with the World Class Commissioning competencies and National Occupational Standards for Social Marketing. Sources for the training content including existing NSMC material and other respected sources, with additional material commissioned directly from experts in the field. A rigorous internal quality assurance process ensured that all the material came together to create a coherent and consistent modular training programme.

For the training delivery, a twofold approach was taken:

- Delivery of around one third of the courses was commissioned by the NSMC from experienced training providers, with a proven background in social marketing
- The remainder of the courses were delivered by NSMC Associates, who were identified and quality assured as trainers, and then trained to deliver the content (with a number of courses also delivered by the RDSMs themselves)

By March 2010, over 160 courses from the main programme had been delivered to over 3,000 delegates across the ten regions in England.

Masterclasses for directors and senior managers

For the *Executive* level of the training programme, it was critical to test the course content in the field, to ensure it was pitched at the appropriate level and the right messages were being conveyed. As part of this testing process, senior directors were used to provide feedback on the content during its development. This helped to shape the material before it was rolled out widely across the regions.

Bespoke training and workshops

Alongside the main national training programme, a range of bespoke training workshops were developed and delivered by all the RDSMs, in response to specific requests from public health leads within their regions (for example, bespoke courses on sexual health or alcohol social marketing).

In the South East Coast and South Central regions, the RDSMs worked with the chances4change (BIG Lottery) team to develop a bespoke *Introduction to Social Marketing* training package, which was delivered over two days. This was then followed up by a social marketing networking session for the 60 BIG Lottery-funded health and wellbeing projects across the South East.

> "Thank you... for the support and capacity you have provided to chances4change, I know from speaking to project teams that they have greatly benefitted from this training, educating them about the impact that social marketing can have on their work."
>
> **Regional Networks & Learning Manager, *chances4change* Programme**

In the North East, the RDSM developed a series of bespoke training workshops. Most of these started with an *Introduction to Social Marketing* where it was needed, then moved on to focus on specific public health topics and case studies, identifying target audiences, segmentation and finally developing an intervention. Examples of the topics covered included teenage pregnancy and contraception choices, cancer and alcohol. Other bespoke workshops focused on *Social Marketing and Stakeholder Management*, *Social Marketing for Organisational Change within the NHS*, and *Social Marketing for Partnerships with the Third Sector and Local Authorities*.

In the West Midlands region, the RDSM developed a number of bespoke social marketing training days at the request of regional leads in the Government Office and SHA, for delegates including specialist commissioners of sexual health services, PCT teenage pregnancy leads and heath trainers. The bespoke workshops proved to be very successful, resulting in a request for the RDSM to run additional sessions at regional conference events on each of the topic areas.

> "Thank you so much for your help in organising the social marketing training session for the Health Trainer Service Coordinators. I think that the co-ordinators enjoyed the session and took away practical ideas to support their work locally."
>
> **Consultant in Public Health, West Midlands Government Office**

Prior to the arrival of the RDSM in the North West, social marketing capacity and skills were being developed by the Strategic Health Authority and sub-regional Public Health Networks. It was, therefore, important for the RDSM to work collaboratively with these organisations.

CASE STUDIES

One example of this was the development of social marketing workshops with Greater Manchester Public Health Network, where a training programme had already been commissioned with a social marketing agency. The North West RDSM, therefore, worked alongside the team to develop content and provided financial support for a series of four workshops on social marketing strategy, analytics, research and creative development. Over 100 delegates attended these workshops during August and September 2009.

In the South Central region, the RDSM was asked to provide a bespoke workshop for the Health Improvement and Development Service at Portsmouth City Council. There are a large number of posts at the City Council which are joined with NHS Portsmouth, so this was an ideal opportunity to reach a wide audience and train them on the key principles of social marketing and projects underway in Portsmouth. The session was well attended and positively evaluated by delegates, particularly on the use of 'live' project examples.

> "The RDSM's course delivery was excellent and the workshop was very well presented - succinct, informative and relevant. It was delivered at just the right level and left the participants wanting to know more about how they could apply social marketing directly to their work.'
>
> **Head of the Health Improvement and Development Service, Portsmouth City Council**

In the East of England, the RDSM worked with the Eastern Deanery and members of the Eastern Region Trainees Action Group to create a bespoke, one day *Introduction to Social Marketing* for the region's Public Health Trainees. In early 2010, the RDSM also developed two bespoke social marketing workshops — in partnership with the region's social care leads — to support the East of England Transformation of Adult Social Care training programme. The sessions introduced social marketing to an audience of social care and NHS commissioners of adult services. It focused on the application of social marketing to develop the provider market, and how to segment and target audiences for more effective uptake of assistive technologies.

> "Our RDSM developed a brand new training module for the Regional Development Programme in Market Shaping and Market Facilitation. This is designed for Local Authority commissioners (and some PCT commissioners) and transformation leads, as one of our priority areas for development. The one day module focused in detail on the role of social marketing in the transformation agenda and how commissioners can use this approach to inform and influence their changing role and functions."
>
> **Regional Programme Director for Transformation and Personalisation, East of England**

Programme evaluation

The NSMC developed an evaluation framework for the complete training programme, based on the Kirkpatrick Model. This model sets out four levels for measuring the effectiveness of training:

1. The reaction of the learner
2. The increase (or otherwise) in knowledge
3. The impact on behaviour and performance in workplace
4. The organisational outcomes

The NSMC training evaluation draws on a number of sources, including:

- Online pre-questionnaires (before attending training)
- Feedback sheets (completed on the day of training)
- Follow up interviews with a sample of delegates from each region and course
- Online post-course questionnaire

The initial results of the evaluation are very encouraging, with all delegates consistently scoring all courses over 80% in feedback collected on the day. A complete evaluation report on the NSMC training programme will be completed by end of June 2010.

> “Since attending the training, I have spent more time on scoping and targeting the right audience for an awareness raising campaign for end of life care. I have now really thought about whether that is the best approach and if it will work.”
>
> **PCT Commissioner, London**

> “The information from the courses always jogs my memory and gives me ideas, when dealing with daily issues.”
>
> **PCT Teenage Pregnancy Co-ordinator, London**

> “The training gave me lots to think about. Social marketing isn’t what I thought it was, so it helped develop my understanding. The tutor was excellent and really demonstrated a passion for the subject, and explained the principles, theory and application with great care and understanding.”
>
> **PCT Health Improvement Manager, London**

"Being new to the NHS, I have found the training and support offered to be invaluable in developing into my new role. It is a fairly unique role in that the workload is split equally between corporate communications and public health. The help, support and advice from the NSMC programme has enabled me to develop a number of campaigns which have been based on what the service users want. It has been an invaluable learning experience which has given me many skills to embed social marketing into our PCT."

PCT Communications Specialist, East Midlands

"The NHS has a diverse and dedicated workforce, and certainly this was my experience when corresponding with the many delegates from the NSMC social marketing courses. From consultants in public health to comms managers and physiotherapists, the delegates have valued and benefitted from the courses and materials. I was even able to see this in practice, whilst attending four of the courses myself. The courses were extremely worthwhile and provided delegates with the inspiration, knowledge and support to apply social marketing to their role, whilst also providing them with a forum for discussion, networking, and sharing their learnings and experiences."

Training and Development Project Officer, National Social Marketing Centre

Supporting Primary Care Trusts in England

A significant proportion of the resources of the regional programme was directed at support for PCTs. From the perspective of the RDSMs, this involved working primarily in the field with PCTs, to develop and implement social marketing strategies and projects at a local level. This work was informed by the development needs identified in the *Review of Social Marketing* undertaken by each RDSM across their region, alongside local and regional public health priorities.

The PCT support work undertaken by the RDSM team was wide-ranging and typically included:

- Specialist social marketing advisory role
- Development of social marketing strategies
- Social marketing project set-up and development
- Membership of PCT project Steering Groups and Working Groups
- Assistance with funding applications and provision of funding assistance for social marketing projects
- Social marketing post recruitment
- Commissioning and procurement for social marketing projects
- Sourcing research data, policy reports and case studies
- Provision of NSMC Associates to work on PCT social marketing projects
- Running social marketing workshops and training sessions

CASE STUDIES

PCT recruitment for social marketing posts has been an area where RDSM support has frequently been requested. RDSMs have worked with PCTs to develop job descriptions tailored to specific local requirements, as well as sitting on interview panels. In the East Midlands region, for instance, there are now seven new dedicated social marketing posts within PCTs. In the South Central region, the RDSM worked closely with one PCT to interview and recruit a new social marketing manager, and subsequently took on a mentoring role with the new manager to provide support over their first year in post. This has enabled the post holder to develop within the organisation and become the sole lead for social marketing.

PCTs have also benefitted from the independence and impartiality of RDSMs, who have been able to work across multiple topic areas to support social marketing whenever required. As an illustration, in the East Midlands, PCT support by the RDSM included assisting NHS Derby with its alcohol agenda, Nottinghamshire County with tobacco control in Newark, engaging lorry

CASE STUDIES

drivers and ex-miners in smoking cessation in Bassetlaw, tackling obesity in Lincolnshire and teenage pregnancy in Leicestershire. The support of the RDSM has ranged from acting as advisors to PCT teams, facilitating meetings and workshops, drafting commissioning briefs, sitting on agency pitch panels, development of strategic and implementation documents, and working with teams on service redesign.

In the East of England region, the RDSM worked closely with one PCT on the procurement of a social marketing insight project, to inform a number of behaviour change interventions across a range of target audiences. The RDSM supported PCT staff in writing a specification for customer insight, then in the tender process for the project including assessment of proposals and sitting on the panel for agency pitches. Once the project was completed, the RDSM continued to provide support to the PCT by placing an NSMC Associate social marketer within the organisation to gather formal responses from multiple stakeholders to the insight findings, and to draw together common themes. This will enable the Executive team to incorporate genuine insight into the local population as part of their World Class Commissioning process and competencies.

> “Our PCT have benefitted immensely from the social marketing programme over the past 18 months. We commissioned 10 insight reports in a variety of areas and this enabled us to work with the commercial sector, engage with stakeholders and community groups that finally matured into a showcase workshop in October 2009. This event was attended by the leading social marketing organisations who presented their findings and recommendations to an audience of over 100 delegates. The insight from the workshop and insight reports are now being used to influence and inform the 5 year strategic plan as well as providing the Executive Board members with an overview of how social marketing could be embedded in to the organisations culture. The support and expertise received from our RDSM was instrumental in helping us achieving this.”
>
> **PCT Director of Public Health Improvement, East of England**

Supporting procurement and social marketing rosters

Procurement

The *Review of Social Marketing* highlighted a widespread need amongst PCTs for support in procuring social marketing services from a variety of public and private sector agencies.

The RDSMs agreed to address this need in three ways:

1. Providing direct support to PCTs and regional teams from the beginning to the end of a particular procurement process
2. Developing specific NSMC procurement tools for social marketing
3. Training for PCTs and regional teams in social marketing procurement

As a result, RDSMs have worked with PCTs and regional teams on procurement, from identifying specific requirements and writing a tender brief, through to managing the pitch process and contract agreements. The RDSMs also worked with the NSMC team in London to produce the *Procurement Guide for Social Marketing Services*, which was published by the NSMC in print and online in summer 2009. Procurement training was rolled out as part of the wider training programme.

CASE STUDIES

In summer 2009, the Peninsula Cancer Network in the South West region secured funding from the National Cancer Action Network for social marketing. The team approached the RDSM for the South West to guide them through the commissioning process to procure agency support.

The funding covered two distinct projects. The first project was focused on skin cancer prevention. The South West of England has the highest rates of skin cancer in the UK and the SHA had identified skin cancer prevention as a public health priority. This project was focused on embedding social marketing techniques into the way that the four PCTs across the Peninsula commissioned and delivered services. The second project involved a study of improving cancer awareness in the most deprived communities, particularly how best to raise lung cancer awareness and improve rates of early diagnosis.

The RDSM for the South West worked with the Peninsula Cancer Network from the outset of the commissioning process, leading them through the development of detailing project briefs, Invitation To Tenders (ITTs), agency shortlisting, pitching and selection.

CASE STUDIES

"The Peninsula Cancer Network has led two major projects funded by the National Cancer Action Team – a project on the role of a cancer network in raising awareness and prevention of skin cancer...and another to establish a Local Awareness and Early Diagnosis Initiative focused on lung cancer. Both of these projects were based around the procurement of a social marketing company to carry out an extensive programme of work in support of the projects. The RDSM from the National Social Marketing Centre played a pivotal role in providing guidance and support to the commissioning and procurement of the social marketing company. As project lead for both projects, I relied extensively on this expert advice to shape the tender document and to ensure that the process ... led us to the most appropriate company. With the RDSM's advice to me and my procurement team, the process went very well with 17 of the top social marketing companies vying for the tender. We made a very successful appointment of the social marketing company ....The support, advice and expertise of the RDSM manager was invaluable and directly led to the successful outcome of this work".

Consultant in Public Health, Peninsula Cancer Network

Social marketing rosters (supplier frameworks)

In spring 2009, The Central Office of Information (COI) developed and published an extensive national roster of marketing communications agencies, which included a list of agencies providing social marketing services[2]. In addition, a number of NHS commissioners were keen to develop the marketplace for social marketing services as part of World Class Commissioning programmes, and therefore supplementary regional rosters were explored by several regions.

2 http://coi.gov.uk/suppliers.php?page=37

North West

The *Review of Social Marketing* undertaken by the RDSM in the North West identified some uncertainty about how to procure social marketing services, including who to buy them from and how to get good value for money. In response to this, a roster was proposed, which would offer a provider framework of agencies offering social marketing services for the region. The benefit of this framework was that it would give PCTs and regional teams a list of providers which had already demonstrated breadth and depth of skills and experience in specific social marketing services.

The North West team undertook a rigorous process to appoint agencies onto the framework. The North West Collaborative Commercial Agency (NWCCA) facilitated a robust procurement process that met Official Journal of the European Union procurement rules. The evaluation criteria were developed by a multi-agency team including social marketing representatives from NHS North West, the National Social Marketing Centre, ChaMPs, Cumbria & Lancashire and Greater Manchester Public Health Networks.

121 agencies submitted a Pre-Qualification Questionnaire (PQQ), of which 45 agencies were successful in being given an Invitation to Tender (ITT). Of these, 38 agencies submitted a completed ITT, 27 agencies attended the final pitch (presentation/questions) and 19 agencies were appointed onto the framework.

> "One of the most important findings of the North West review was that even where there was enthusiasm for social marketing, organisations – especially public health and communications departments – often had little experience, little in-house capacity and were unsure how to commission social marketing services or where to commission them from. Establishing the framework means that NHS organisations can be confident they are commissioning from pre-vetted approved agencies and can do so with much of the procurement red tape already dealt with."
>
> **Associate Director for Social Marketing, NHS North West**

Yorkshire and Humber

In the Yorkshire and Humber Region, the RDSM worked with the commercial procurement network to produce a guide to informed options for buying social marketing products and services. This guide includes a range of options from the COI, access to other existing rosters and how to run procurement tenders through the region's own procurement network. The network successfully negotiated with the COI to produce a range of clear options for PCTs which now includes a £250 'one off' payment to access the roster. The COI option has since been extended on a national basis.

Networks

Networks are a commonly-used medium for communicating and sharing knowledge within the NHS.

In the *Review of Social Marketing*, it was established that whilst most regions already had a wide range of networks representing various public health topics (smoking, sexual health etc) and specialisms such as communications. There was, however, limited evidence of these networks engaging in social marketing.

Feedback from PCTs also underlined a need for social marketing networks to be established, as an efficient route to sharing new policy and best practice, addressing issues and organising training within regions. As a result, in those regions where social marketing networks were wanted, the RDSMs worked quickly to establish them.

CASE STUDIES

South Central Social Marketing Network

The *Review of Social Marketing* in the South Central region highlighted the need for a network mechanism to share best practice within the region and also to link together work underway, as many PCTs had similar priorities. All PCTs have representation at the network, whether that is the PCT's social marketing lead, or champions from public health or communications teams. The network meets face-to-face quarterly and has an email group and a shared site on the South Central Access Network. Provision has been made to ensure that the network will continue in the future and to enable the network to develop to include local authority and police colleagues.

East Midlands Social Marketing Network

The East Midlands Social Marketing Network has brought together over 100 professionals working in health and social care across different agencies to explore how the principles of social marketing can be used to facilitate behaviour change and put people at the centre of healthcare delivery. The network met twice in 2009 and there are plans to hold another event in 2010. Members can stay in touch online and link up with people in other organisations who are also undertaking social marketing projects. A number of speakers have attended the network to present new ideas, inform members of the latest developments and provide practical advice.

> “The network has made it possible to informally discuss, debate and test ideas and concepts, and begin to share our experiences and learning. Because the network had public health, communications and commissioning members, there was a wealth of experience but also an opportunity to think differently.”
>
> **PCT member of East Midlands Social Marketing Network**

The South West Social Marketing Network (virtual and ‘green’)

One of the development priorities for the South West was the establishment of a social marketing network. The network in the South West is a practical working group, serving the following objectives:

- **Social marketing developments -** to share information regarding current and planned social marketing activity nationally, regionally and locally, as well as public health and other relevant policy developments
- **Support -** to provide a practical support network for regional and local social marketing projects (discussing barriers and challenges; identifying capacity and resource issues; providing support and advice)
- **Learning** - to share learnings and examples of best practice between teams
- **Efficiency** - to identify projects where collaboration could maximise resources/ budgets and reduce duplication across the South West

Due to the large geographic area of the South West (the largest Strategic Health Authority in England) and also in line with the carbon reduction objectives of the region, the group meets monthly via conference call. Membership is comprised of one social marketing ‘lead’ from each of the 14 Primary Care Trusts in the region, who collectively represent their PCTs at the meetings and cascade information back to colleagues.

NSMC Associates

A key finding from the *Review of Social Marketing* highlighted insufficient in-house capacity as a barrier to using social marketing. In response to this, the NSMC developed an Associate framework to provide access to freelance resource with the right expertise to fill capacity gaps within PCTs and regional teams.

Adverts were placed nationally to recruit social marketing professionals from across all regions and candidates were put through an assessment process. Those who were successful were then placed on an NSMC procurement roster so they could be easily commissioned via RDSMs to provide additional support in the regions. This also helped PCTs to build expertise in-house, through a transfer of skills from NSMC Associates to NHS professionals.

CASE STUDIES

South East Coast

At the start of the regional programme, capacity and skills for social marketing in the South East Coast region were limited, as there were no specific social marketing roles within PCTs or at SHA level. The RDSM used the NSMC Associate framework to recruit a permanent Associate for the region, to support a variety of PCT projects including dentistry, cancer prevention and alcohol reduction. The extra capacity and support has been invaluable to PCTs, especially those new to social marketing and keen to build in-house skills through coaching from the Associate.

South Central

NSMC Associates were used in South Central to work with specific PCTs on a project management basis, and also to help embed social marketing within their organisations through the development of social marketing strategies. NSMC Associates were also used to handle additional social marketing training sessions, due to high demand. This brought an added benefit as the extra sessions enabled a number of Local Authority staff and other NHS partners to attend training, to help with partnership approaches across the region.

Yorkshire and Humber

The use of an NSMC Associate has been crucial to the success of a number of nationally acclaimed social marketing programmes in the Yorkshire and Humber region. The NSMC Associate managed a number of projects, resulting in two ***Health Service Journal*** award nominations for projects in Hull; one tackling domestic violence and another to address male obesity, NHS Hull's 'Fit Fans'. The domestic violence project is seen by the Home Office as groundbreaking, as it has a focus on the perpetrator and not the victim, and early evaluations are showing excellent results.

South West

The South West RDSM worked with the South West Health Weight Healthy Lives team to make a successful application for Department of Health funding for the region — in competition with other SHAs — to fund public relations and marketing activity to support the regional roll-out of Change4Life. Once funding was secured, a NSMC Associate was brought in to manage the planning and delivery of the additional programme funding for the region.

> “Over the last 18 months, the Department of Health South West and NHS South West have been working closely together to really bring the Change4Life regional programme into action. Our region is fully committed to creating a lifestyle revolution for the population, and where best to begin this journey than under the Change4Life Banner.
>
> “The recent additional financial support for the Change4Life programme has allowed some of the main strategic organisations to really see what is actually required to support a social movement of this size. Working with our NSMC Associate, it has also allowed us to make the right connections to drive the work, and has resulted in excellent progress in making Change4Life a locally owned movement that can really have an impact on the most disadvantaged communities in the South West.”
>
> **Healthy Weight, Healthy Lives Regional Manager**
> **Department of Health South West**

East of England

In the East of England region, the RDSM arranged for NSMC Associate support for a PCT Public Health Away Day, enabling the team to explore the place of social marketing in forward planning for the Directorate. Another NSMC Associate was also used to provide advice to regional stakeholders on the potential application of social marketing in behaviour change and removing barriers, in the context of end of life care.

East Midlands

The Associate appointed to the East Midlands in the final months of the programme has provided ‘booster support’ to five PCTs to help them progress their social marketing plans. This includes supporting them to write a three year strategy that will put social marketing principles at the heart of commissioning, a protocol which can be used internally to ensure projects are assessed against national standards and an assessment of project plans and how they can demonstrate a return on investment for the future.

Supporting regional programmes

In addition to local PCTs, the RDSMs have also worked closely with the regional Government Offices and Strategic Health Authorities (SHAs), providing social marketing expertise for priority work programmes.

CASE STUDIES

Yorkshire and Humber

In 2008, an agreement was reached between the regional SHA, Government Office and the PCT Chief Executives, to develop a collective approach to social marketing in the Yorkshire and Humber region. Work was already underway to establish a Marketing Collaborative ('The Collaborative') for Yorkshire and Humber PCTs, so it was decided to develop this further to create a social marketing 'Forum' for partnerships.

The Forum has representation from all 14 PCTs in the region, as well as the regional Government Office, SHA and Public Health Observatory. It oversees and makes strategic decisions about regional social marketing work streams and informs other social marketing work in the region. The Forum has become a central hub within the region for collecting learning from social marketing pilot projects and case studies. It also serves as a channel to disseminate information and knowledge out to the PCTs, as well as training and coaching.

This work is supported by **Health Intelligence Yorkshire and the Humber**, run by the Yorkshire and Humber Public Health Observatory to create and maintain a 'hub' of insight and data for the region, for commissioning and social marketing.

> "The Public Health Observatory is establishing itself as a key contributor to social marketing in the region, not only through support for the scoping and evaluation stages of pan-regional projects, but also as a central repository for key social marketing learnings and tools - an Insight Hub."
>
> **Assistant Director & Senior Analyst, Yorkshire & Humber Public Health Observatory**

The Yorkshire and Humber social marketing programme has three main workstreams:

1. **Learning and Development Programme:** a comprehensive programme of training and events including modules ranging from a basic introduction to social marketing through to in-depth sessions on the different aspects of the social marketing process. These are complemented by a number of topic-specific events and workshops on subjects such as alcohol, breastfeeding and sexual health.

2. **Delivering Healthy Ambitions**: there are a number of ongoing public health projects in the region which are overseen by The Forum and delivered by The Collaborative. The projects inform service delivery, commissioning, communications and strategic planning for the region, and provide vital insight that can also be applied at a local level. These projects include end of life, stroke, primary care access, mental health, tobacco control and cervical cancer screening.
3. **Marketing Services - a regional approach**: collectively within the region, considerable investment has been made in commissioning a range of marketing services, including social marketing. Given the potential for efficiency savings, this led to a review of the commissioning options open to PCTs. The findings were presented as a guide to the options for procuring marketing services, including COI offerings, access to existing rosters in other regions and how to run procurement through the Yorkshire and Humber procurement network.

> "The Yorkshire and Humber RDSM has been an integral part of a team that has shifted social marketing from the outskirts of NHS activities, to the central ground of how we commission services - placing consumer insight at the heart on this activity. The RDSM's work has helped to ... unify the approach we have toward behavioural change. Specifically the work done to bring together [social marketing] training and development, has left a lasting impression on the way the NHS does business here."
>
> **Director of Communication, NHS Yorkshire and Humber**

North East

In the North East region, the RDSM worked alongside regional teams to create and implement the North East Social Marketing strategy for Long Acting Reversible Contraception (LARC). The strategy was implemented from September 2009 onwards and had three phases:

Phase I: began in September 2009, with sexual health teams visiting all regional university and college Freshers' Weeks and student fairs, to raise awareness of LARC as an effective and reliable contraceptive. The sexual health teams also carried out surveys with young people at the events, finding low awareness of LARC and how to access it.

Phase 2: focused on supporting PCTs to effectively implement the national campaign '*Sex – Worth Talking About'*.

CASE STUDIES

Phase 3: the final phase focused on the development and launch of a pilot social marketing project by the NHS North East sexual health team, which targeted young women at the highest risk of pregnancy and the least likely to access sexual health services. It began with a series of bespoke social marketing workshops for local teenage pregnancy coordinators and the teenage pregnancy network. The training focused on identifying and understanding the target audience.

This was followed by a series of focus groups with young women to explore the barriers and benefits of trying LARC for the first time, and to identify incentives for them to do so. Key insights from the focus groups revealed that young women wanted emotional and practical support in sexual health services, which was ongoing and allowed for a rapport with the service provider to evolve, not just being given information and a LARC fitting.

> "We have been working with our RDSM, for over a year now developing a range of social marketing initiatives aimed at increasing access to and uptake of longer acting methods of contraception. The RDSM has been able to give us both a theoretical underpinning and, even more valuably, practical support in developing approaches and interventions. Thanks to this input, the SHA was the first to deliver a social marketing campaign on this topic".
>
> **Project Manager Sexual Health, Public Health North East**

The North East team are now taking the strategy forward with a particular focus on young people who are not in education, employment or training, and looked-after young people.

> "The RDSM was invited to run a training session for the teenage pregnancy team to introduce them to the concept of social marketing. It was a very informative and positive session. The team identified a particularly difficult group of young people to engage with and, from this, we developed work to try and engage with that audience. This will be carried out with support from the local FE college and is going to be an exciting project."
>
> **Teenage Pregnancy Programme Manager, Teenage Pregnancy Team North East**

Developing national social marketing resources

Alongside the regional programme, the RDSMs have collaborated with colleagues at the NSMC London office on the development of NSMC publications, reports, tools, web content and other resources. In addition, the RDSMs formed the core team which developed the 2009-2010 social marketing training programme for the NHS in England.

Developing the Social Marketing Planning Guide and Toolbox

The launch in early 2010 of NSMC's online Social Marketing Planning Guide and Toolbox marked the delivery of a much-anticipated resource for social marketing practitioners. The guide is designed to develop and deliver effective social marketing, by providing a resource that draws on the very best and most up-to-date ideas in social marketing planning and practice.

The Guide and Toolbox was developed in response to practitioners in the field who have called for more practical help and resources to enable them to apply a social marketing approach to their work. As RDSMs provided the key link between the NSMC and NHS practitioners locally and regionally, it was therefore vital that they had significant input into the content and design of the new Guide. Three regional managers sat on the Advisory Panel in 2009-2010 during the development of the site and in the lead-up to its launch.

> "The RDSMs provided valuable and welcome input to the Social Marketing Gateway's work on the development of the NSMC's Social Marketing Planning Guide and Toolbox. The Gateway developers were grateful for the chance to present an early version of the resource at a regional programme meeting in November 2009 and for the constructive feedback received. A small team of RDSMs also worked closely with the Gateway team, providing further advice and help over the project period. The Planning Guide and Toolbox provides an important resource to support social marketing practitioners. Feedback received from users has been very positive."
>
> **Managing Director, Social Marketing Gateway**

Developing the NSMC *Procurement Guide for Social Marketing Services*

The RDSMs were able to inform the development of the *Procurement Guide for Social Marketing Services* (NSMC, 2009) through observation and understanding of existing procurement practice in PCTs. In the *Review of Social Marketing* undertaken by the RDSMs in early 2009, many PCTs highlighted the need for support and guidance in buying social marketing services from a range of providers. In addition, RDSMs used their PCT contacts to review the draft *Guide*, collating comments and feedback back to the central NSMC team

to inform development. This was particularly important in the context of World Class Commissioning, work underway to develop regional rosters of social marketing suppliers, and regional market development programmes.

Lighting the Beacon

To promote the ten 'Beacon' partnership projects across England, a short booklet, *Lighting the Beacon* (NSMC, 2009) was produced by the regional team detailing the background to the programme and profiling each of the ten projects.

Conferences and events

Over the course of the regional programme, RDSMs undertook a wide variety of speaking engagements at national, regional and local conferences and events.

These engagements were in response to invitations from wide-ranging organisations including:

- Department of Health
- Strategic Health Authorities
- Primary Care Trusts
- Mental Health Partnership Trusts
- Government Offices in the regions
- Public Health Observatories
- Cancer and Cardiac networks
- Partnership leaders
- Local Authorities

CASE STUDIES

Yorkshire and Humber

In November 2009, the Yorkshire and Humber RDSM made a presentation to the national conference, *Tackling Obesity: Healthy Weight, Healthy Lives,* on the use of social marketing as a tool to combat obesity. The objective of the presentation was to increase stakeholder confidence in using social marketing as an effective campaign tool and extending its reach through communication technology. The conference audience included representatives from Local Authorities, SHAs, PCTs, universities and schools, trade unions and the third sector.

North East

As the topic lead for alcohol within the NSMC regional programme, the North East RDSM was invited to speak on social marketing principles and best practice at the National Alcohol Conference, *Turning Data into Intelligence and Harnessing Social Marketing,* held in London in June 2009. Independent delegate feedback indicated that this session was rated amongst the most informative and inspiring components of the conference.

CASE STUDIES

East of England

In the East of England, the RDSM gave a presentation on *'Competition Analysis in Social Marketing'* to the region's Public Health Conference organised by the Eastern Region Public Health Observatory. The RDSM also supported a regional social care seminar on '*Universal Services, Advice and Information*' as part of the Putting People First Agenda.

West Midlands

The West Midlands RDSM, at the behest of a number of regional programme leads, developed and delivered a range of tailored, parallel sessions on social marketing for regional conferences for stakeholders in physical activity, mental health and teenage pregnancy.

Working with National Support Teams

An important deliverable for the regional programme was to establish links with National Support Teams (NSTs), working with PCTs to help build capacity and development in social marketing, based on recommendations made by NST teams during their visits.

In addition, each RDSM established direct links with NST leads for an agreed health topic (e.g. obesity, cancer), providing a second channel of engagement.

Thirdly, the NSMC and RDSMs worked with NST leads on specific social marketing training requirements for NST teams.

CASE STUDIES

Health Inequalities National Support Team (HINST)
Two RDSMs worked with the Health Inequalities NST, following a request from the NST, to help them understand if PCTs were taking a social marketing approach to addressing health inequalities. The RDSMs, in conjunction with the NST, developed a set of social marketing indicators which could be used on visits to establish if work undertaken by the PCT was social marketing and if it had been used appropriately. These indicators went through a peer review process with the remaining RDSMs and were also tested by the alcohol team before being sent out to all NSTs.

> “The HINST made very useful links with two RDSMs from the NSMC Regional Programme. They were particularly helpful in working with our team to identify key issues that we could usefully explore with senior managers within PCTs and Local Authorities. They developed a useful framework of questions for us, which were helpful for developing feedback recommendations to the spearhead areas, suggesting ways in which a focus on social marketing approaches could be used effectively in tackling inequalities in health.”’

Associate Delivery Manager, HINST

CASE STUDIES

HINST developed a series of masterclasses for 13 spearhead PCTs across the country to help support their efforts to reach the 2010 health inequalities targets. Two RDSMs worked with the HINST on the masterclass around customer access strategies, attending the event and providing information and additional support on the day.

> “The two RDSMs provided a very useful handout and on-the-spot advice to the spearhead areas attending the HINST *‘Customer Access Strategies Masterclass’*. It gave practical examples of social marketing and links to addressing health inequalities that the spearheads could follow up afterwards. The handout has also been incorporated into the HINST Resource Guide which is available via the HINST web page on the Department of Health website, for a wider audience to download.”
>
> **Associate Delivery Manager, HINST**

Linking to Department of Health policy and communications teams

To ensure a co-ordinated approach to public health topics nationally, regionally and locally, NSMC RDSMs were each assigned a policy area and established working relationships with policy leads and communications leads at the DH.

The RDSMs attended key relevant policy and communications meetings with DH leads, to be briefed on current materials, programmes and future plans. This ensured that they were then able to brief NSMC colleagues on latest developments, and also to ensure that local and regional teams were updated and could dovetail Department of Health programmes into their own planning in a timely manner. The RDSMs linked to the policy and programme areas of tobacco control, sexual health, teenage pregnancy, mental health, alcohol, obesity, cancer, children and young people and health inequalities.

Alcohol policy lead

The RDSM for the North East took the lead for alcohol policy, liaising with the DH team and feeding back national policy developments to the other RDSMs and colleagues in the North East. The RDSM provided the DH team with regional feedback on communications campaigns and new social marketing initiatives such as new segmentation models. The RDSM also liaised with the new regional alcohol office, Balance North East, on alcohol strategy. In June 2008, the RDSM was invited to speak at the National Alcohol conference on social marketing and behaviour change, and how this relates to the alcohol field.

Tobacco control lead

The RDSM for the East Midlands was the NSMC tobacco control lead in 2009 and, during this time, ensured messages and feedback were flowing between local, regional and national teams. The RDSM established links with agencies also working on the tobacco agenda – such as EMO – and had input into regional plans, looking at how social marketing can make an impact and help achieve targets.

The RDSM for the West Midlands also contributed to the tobacco control advocacy pack which will be disseminated through the UK's tobacco control and NHS Stop Smoking Services, which highlights the importance of social marketing approaches, and embedding social marketing in regional alcohol and tobacco control QIPP plans.

The national-regional-local connection

The RDSM programme has delivered benefits for a range of DH, regional and local teams by creating a unique national-regional-local link for social marketing.

RDSMs ensured that their local and regional teams had access to all available insight and research underpinning national behaviour change programmes, avoiding duplication and unnecessary local commissioning, and ensuring national resources were maximised and amplified. RDSMs were able to ensure consistency of branding, content and messages was maintained from national to regional to local campaigns. Having one RDSM working across a region also meant that they had a unique view of all work ongoing at regional and local level, provided a critical link to signpost PCTs to other similar projects in their region and to significantly reduce historic duplication of effort and commissioning.

The importance of the RDSM role in connecting national, regional and local teams can be well demonstrated through the work undertaken around the Change4Life programme.

CASE STUDIES

South East Coast

In the South East Coast region, a pilot programme for the Change4Life programme was set up, with the aim of supporting the understanding and effective implementation of the national Change4Life campaign at PCT and Local Authority level. The pilot included six full-day *Introduction to Change4Life* workshops which took place across the South East Coast region. A unique resource pack (toolkit) was developed with the regional Healthy Weight Healthy Lives Lead, the RDSM and the DH Change4Life Healthy Weight Healthy Lives Social Marketing Regional Manager.

> “The RDSM team helped create good links into the regions for Change4Life, creating awareness of the campaign at a local level. In particular there was excellent input into the development of a Change4Life Social Marketing toolkit, which is being tested in three pilot projects in the South East Coast region. The NSMC regional training programme has also helped increase the capacity and understanding of social marketing in the regions and this will support interventions using Change4Life at a local level.”
>
> **Healthy Weight Healthy Lives Social Marketing Regional Manager, Department of Health Change4Life Partnerships**

For the second stage of the pilot, a robust and competitive selection process was managed by the South East Coast RDSM, which resulted in four projects from the region being chosen. These project teams received 100 day of social marketing consultancy, a series of tailored workshops and unique access to the Resource Pack.

"Resonant Media designed and created a bespoke resource pack for the NSMC regional training programme, working creatively within the Change4Life branding. The pack was made from recyclable polyproplene and comprised a branded USB stick, and a slipcase which held two folders. Resonant Media created durable colour coded dividers to enable end users to navigate through the document and colour coded each section."

Johnny Meredith, Resonant Media

East of England and South West

In the East of England and South West regions, the respective RDSMs worked with their Healthy Weight Healthy Lives teams and SHA Communications Directorates to develop successful applications for DH funding - securing £150,000 respectively - for the implementation of Change4Life activities in those regions.

South Central

The RDSM for South Central supported the national Change4Life initiative at a regional and local level. The South Central region has a 'Healthy Town'[3] with initiatives funded by the national Change4Life programme. The RDSM worked closely with the 'Healthy Pompey' social marketing project team, helping to procure a social marketing agency to undertake work in the city and provided advice and support. The RDSM ensured that learning from the 'Healthy Town' work was shared at a regional level through the Regional Healthy Weight Healthy Lives meetings.

"Our RDSM not only provided support for the Healthy Town project, but also provided us with the skills, knowledge and resources to be able to do similar work by ourselves in the future. The RDSM has built up a network with other NHS organisations and local authorities to share [social marketing] best practice, to learn from the experience of others and discuss opportunities. Having RDSM support has allowed the teams to adopt the approach of the National Social Marketing Centre for a variety of projects. In summary, our RDSM has built understanding of social marketing, the benefits of effecting long term behaviour change with a social marketing approach, built knowledge and expertise within the team and guidance to build capacity internally."

Head of Health Improvement and Development, Portsmouth City Council

3 For more information about 'Healthy Towns' visit http://www.dh.gov.uk

Key learnings for the future

The regional programme has consistently met and delivered against the expectations and performance indicators agreed by the programme sponsors. A great deal of learning has taken place throughout the two year delivery of the programme, a few of the key learnings are noted below:

- **Regional management engagement** – a lead-in period of two to three months, prior to the actual start of the two year programme, to allow for a longer period of engagement with regional stakeholders. This would have given time to talk through the 'virtual' team concept and central NSMC management, as well as engage regional colleagues with the programme prior to contacting staff at Primary Care Trust level.
- **Sharing Key Performance Indicators** – the Key Performance Indicators for the programme were set by Department of Health sponsors and presented in a 'Questions and Answers' format to Regional Directors of Public Health and Communications. Again, given some 'start up time' these Key Performance Indicators could have been more clearly agreed and defined at regional and local levels, to ensure absolute clarity on delivery by the RDSMs.
- **Harnessing and directing expertise** – whilst there were clear strategic reasons for linking an RDSM to a specific region, the downside to this meant that if there was a strong need for their expertise in another region, or PCT, there was little opportunity to second them due to demand for support in their 'home' region. With hindsight perhaps a central virtual team, floating to meet the needs of the regions would have worked better, although it would not have given the regional responsibility and ownership that resulted in RDSMs being assigned per region.
- **Working collaboratively at national level** – the RDSMs worked well with DH/NSMC national colleagues as well as regional and local colleagues and as each had a 'health topic lead', e.g. Obesity, which meant they were able to ensure that the national campaigns were delivered 'on message' at local level. However, given the range of expertise and talent within the RDSM team, it was perhaps a missed opportunity not to have used the RDSMs collectively on a larger, national social marketing project.
- **Infrastructure to support a virtual team** – ideally with more start-up time, it would have been good to ensure a better infrastructure for a virtual team, given that this was not the experience of the NSMC when the team started. Securing a better I.T. setup and response time, liaising with Human Resources and Finance staff, to ensure they understood the needs of a virtual team in the field would have meant better support functions for the programme and quicker solutions to practical issues.

- **Building on the positive** – working as a collective network of RDSMs, there were positive gains from the programme:
    - ***Activity and learning from one region was quickly passed to others***. RDSMs were able to facilitate information sharing between PCTs and regional stakeholders, thereby avoiding duplication of effort and securing significant cost-savings.
    - ***Delivery of excellent benefits for teams, by creating a unique national-regional-local link for social marketing***, sharing insight and research, avoiding unnecessary local commissioning and ensuring national resources were maximised and amplified. RDSMs had a unique view of all social marketing activity ongoing at region and local level and provided a critical link to signpost PCTs to other similar projects in their region. At the end of the two year programme, this has resulted in greater efficiencies, cost-savings and has contributed to a stronger culture of collaboration between PCTs and regional teams for social marketing.
    - ***Adding to the NSMC 'ShowCase' examples.*** The regional Beacon projects, based on good social marketing principles and in particular partnership working, have added another layer of good examples of social marketing projects in action.
    - ***Delivery of a national/regional training programme on the NSMC principles for social marketing.*** The volume and scale of the training programme based on the regional insight and knowledge, coupled with mentoring support and various on-line tools and resources, means that the NSMC have trained and advised approximately 3,000 NHS employees on social marketing – ensuring that good standards and principles are demonstrated.
    - ***An Associate framework for delivery in the field.*** This was another new method of working for the NSMC and one that needed careful consideration in terms of assessment of candidates, compliance and contract negotiations, as well as communication networks. The Regional Programme helped define the need, the clarification for using Associates in the field to deliver core NSMC training and social marketing project support. This will stand the NSMC in good stead for taking forward such programmes of delivery in the future.

Final Remarks

The regional programme had an ambitious aim in terms of increasing knowledge, skills and capacity in social marketing at regional and local level, within a very short time frame of two years (including the actual recruitment of ten new staff to act as the Regional Development and Support Managers). The RDSMs have also acted as Ambassadors for social marketing at national, regional and local level and worked alongside the Department of Health National Support Teams to ensure social marketing is understood at local level for service design and delivery.

The initial scoping as highlighted in the 'Review of Social Marketing in Public Health Regional Settings', set the baseline for the development of the regional training programmes, mentoring and resource tools to support frontline practitioners. It also allowed the RDSMs to liaise with the majority of the Primary Care Trusts and regional practitioners to develop social marketing networks and regional forums, as well as contribute to setting up numerous social marketing programmes and projects in the NHS across England.

The Beacon Projects as described in 'Lighting the Beacon' have added to the case studies for demonstrating good systematic planning, stakeholder engagement and partnership working and will add to NSMC's 'ShowCase' for demonstrating the effectiveness of social marketing in behaviour change.

Overall this has been a highly successful programme in terms of delivering key performance indicators and supporting regional and local stakeholders in considering and using social marketing for the delivery of services to meet client expectations/needs and deliver on behavioural change targets. Now the Regional Programme team hands over to DH, the NHS and the NSMC to continue the development of social marketing techniques to deliver services to meet client needs.

Thanks go to the Department of Health for the funding, to the NSMC for hosting the team and support from the central staff with initial training, research information and guidance, as well as the very crucial administration. Finally thanks go to the RDSMs who made this programme work in a very short timeframe, by grasping the urgency and the need to deliver within a virtual environment, combining professionalism and friendship within the team – well done to all.

19 March 2008

Dear Carlos

This is just a short letter to express our support for your case study research about our National Social Marketing Centre.

This research that you are undertaking is extremely important and will help us and others who are interested in how to set up such organisations to develop their plans. We have been happy to collaborate with you on this work and would like to thank you for the opportunity to be involved.

I would also like to thank you for the considerate and charming way that you have engaged with us. We hope that the work progresses well and we look forward to the final report.

Yours sincerely

Dr Jeff French

Annex A: Potential NSMC Organisational Form Options 12
Anaylsis 12
Risks 25
Conclusion 27

Introduction

1. The National Social Marketing Centre (NSMC) has been scoping options for the next five years:
   - the likely trends in demand for its services and products
   - the related income streams
   - the form of organisation best suited to operate in that environment

   This paper sets out the main conclusions from that work and proposes that the NSMC should move to become a free standing social enterprise (see the NSMC Five Year Business Plan).

2. The SMPB is invited to consider the options for change and to agree in principle to the way forward, following which the Consumer Focus Board will also be invited to make a decision in principle. Subsequent work will be needed to give practical effect to that change for which the NSMC is developing a full project plan. But it cannot proceed further without obtaining the views of the Department of Health (DH) as its corporate sponsor and formal agreement by Consumer Focus as its corporate host.

3. The NSMC was set up as a strategic partnership operating within the National Consumer Council (NCC). Consumer Focus has now been established (as of 1 October 2008) absorbing the NCC, energywatch and Postwatch. The NSMC is now part of this new organisation.

Background

4. When the NSMC was originally set up in 2006, it was a small organisation (with five staff) within the NCC. The NCC report *It's Our Health* highlighted the need for a social marketing approach to encourage positive behaviour change and recommended the establishment of the NSMC (also see agenda item *Ambitions for Health*). In March 2007, DH (Health Improvement and Protection Directorate) set up a three year core grant agreement to provide the NSMC with approximately £3.9m pa to fund its activities with an associated programme. Since then, DH has made a number of variations to the grant agreement increasing this amount to approximately £5m in 2008/09.

The NSMC Vision

5. The NSMC's vision is to work with others to strengthen efforts to improve people's lives – based on strong customer understanding and insights-driven approaches.
   - We work to ensure people – the public and service users – can be given a stronger voice in developing, delivering and evaluating interventions to bring about social good.
   - We work to embed a consumer driven approach to social issues, through setting standards and developing understanding and skills in effective customer-focused behavioural intervention and social marketing across the public, third and private sectors.

6. The NSMC is culturally from, and for, the public sector and shares its values. The public sector also forms its main customer base. A further key objective of the NSMC is to create strong links between sectors to deliver more effective programmes aimed at achieving social justice and improving people's lives.

7. The NSMC aims to be the recognised brand of, and a leader in, the field of social marketing, both nationally and internationally. It has a mix of funding sources totalling £7.4m for 2008/9 and the indications are that this level of funding can be maintained and supplemented by additional revenue streams into the medium term.

The NSMC Mission

8. To accomplish its vision, the NSMC will build a networked organisation with the capacity to work alongside others in delivering services to support the public, private and third sectors, focused on:
   - Ensuring that understanding and insight into citizen or consumer needs drives public sector, private sector and third sector policy, programmes and related interventions to promote social good.
   - Capturing learning and building understanding of what constitutes effective behavioural interventions and how a 'people-focused social marketing approach' can enhance public sector policy, strategy and operational delivery.
   - Helping ensure people get a greater voice and organisations better mobilise their contribution to more effective development, delivery and review of interventions designed to achieve 'social good'.
   - Developing and exploiting stronger links between sectors to deliver more effective programmes aimed at improving people's lives.

The NSMC's vision is that people can be given a bigger voice in developing, delivering and evaluating interventions to bring about social good.

The potential for the NSMC to outgrow the new organisation is real and could place a disproportionate number of demands on the corporate management and capacity of Consumer Focus.

The Need for Change

Organisational Change in the Corporate Host – Consumer Focus

9. The merger of the NCC with Postwatch and energywatch into the new 'Consumer Focus' (on 1 October 2008) raises issues in relation to a growing divergence between the NSMC's goals and those of Consumer Focus. While this divergence began when the NSMC was part of the NCC, it only increased when Consumer Focus began operating as its statutory body.

10. In the short term, there are also immediate issues in relation to the structure and internal functionality. The current and potential growth of the NSMC is placing a disproportionate number of demands on the corporate management and capacity of Consumer Focus at a critical stage in their own formation and development.

Potential NSMC Organisational Options

11. There are five realistic options for organisational change:

    A to remain as a division or arm of Consumer Focus
    B to become a free standing body
    C to be established as a discrete DH body, or as part of DH
    D to move to a new host body, possibly via a procurement exercise
    E to close down the NSMC from a forward date, such as April 2010.

    These options are examined in Annex A.

12. No fundamental barriers exist in pursuing any of the following courses of action if they were to be agreed:

- Option A involves the least change and potentially the least risk to the NSMC.
- Option B transfers the risk from Consumer Focus and DH to the NSMC while at the same time offering greater freedom the to NSMC.
- Options C and E would need the agreement of DH ministers
- Option D is only material if none of Options A, B or C are feasible.

However, Option C has been ruled out because it is very unlikely to command support within DH.

The Drivers for Change

Scale and Reach of NSMC Activity

13. Since the launch and grant agreement, the scale and reach of the NSMC has expanded tenfold and is forecast to grow well beyond the original parameters envisaged for the organisation. This is expected to continue as new funding streams become available (see NSMC Five Year Business Plan).

14. It is estimated that by the end of 2009, the NSMC could have 60 directly employed or contracted staff (including at least ten based in the regions) and 60 associates with an annual revenue income of approximately £8m; over the next five years, it could grow to 60 staff and 100 associates with an annual turnover of £6-8m. These trends reflect both a considerable and growing demand for support, advice and consultancy, and other services with social marketing expertise, as well as the relative lack of appropriate providers.

NCC / Consumer Focus Context and Constraints

15. While the NSMC remained as a small operation with a single customer (the DH), its support needs were modest and readily provided for by NCC. However, the expanding business needs of the NSMC created additional demands on the responsiveness and capacity of NCC's systems. Some of this pressure may be resolved through Consumer Focus' new arrangements. However, it is reasonable to assume that Consumer Focus will design or shape systems and internal governance and processes around the business needs of Consumer Focus rather than the needs of the NSMC.

16. The NSMC is increasingly acting as a trading organisation working to support its clients and has to be able to respond swiftly to these needs (for example, in the procurement of consultants from the market place, event and training organisers and short term risks and flexibilities). It needs to be able to respond to invitations to tender and bid for work swiftly and commence projects for customers as soon as a contract is placed. It can do this more efficiently and effectively if it has systems and functions designed to meet its needs and which it owns and manages.

DH Context

17. Increasingly, DH is moving away from the use of grant mechanisms to fund organisations and third sector bodies. It is currently anticipated that from April 2010, it will move to a contractual method for commissioning social marketing work from the NSMC (and other social marketing providers) or begin to taper the grant. Increasingly, DH and other government departments are looking at ways to commission work via third sector or social enterprise bodies, as this can allow greater flexibility and freedoms to deliver against policy goals.

    Current relationships act to constrain options for delivery and limit the ability of DH to benefit from contracting a third sector or social enterprise.

The NSMC needs to be able to respond to that change. And if it is to respond to a wider market and a more diverse range of customers, it needs to be in line with similar external provider organisations, to be able to operate in a flexible and responsive environment and not be unnecessarily limited or constrained. Increasingly, it operates in line with DH and government public service goals while not being constrained by having to operate within a statutory or formal government framework (that is limited in relation to options for accommodation, staff pay and conditions, annuality restrictions and carry forwards).

The NSMC is a trading organisation working to support its clients and needs to be able to respond swiftly to these needs.

18. The conclusions of Annex A are that the NSMC should remain with Consumer Focus or become a self-standing body, probably a form of social enterprise. The case for the NSMC as a social enterprise can be summarised as follows:

Policy and Market Drivers

- DH and government's desire for an expansion of the social enterprise sector and direct support and encouragement for this.
- Expected growth in the market for behavioural change consultancy and capacity development across government and internationally.
- Consumer Focus has a critical job over the next few years to bring itself together to form an effective organisation and has already indicated that it recognises the danger of the NSMC's development and expansion as being a distraction to this core purpose.
- Consumer Focus will seek to act as a critical advocate for consumer rights, while the NSMC will seek to provide supportive services to change organisational and personal behaviour.

Rapid expansion of the NSMC operations will make the NSMC bigger than the old NCC and potentially as big as or bigger than Consumer Focus.

Practical Drivers

- Rapid expansion of the NSMC's operations will make it bigger than the old NCC and potentially as big as, or bigger than, Consumer Focus.
- Accommodation, IT, finance, HR and general management servicing of the NSMC will grow and may have different requirements than those of Consumer Focus.
- The need for the NSMC to be able to operate in a competitive market environment in terms of both keeping costs down (for example, being able to source accommodation at lower rates from the commercial sector rather than the Crown estate) and the need to be able to source staff by paying market rates, including the payment of performance-related bonuses and the imposition of penalty clauses into contracts.
- The NSMC and DH desire for the NSMC to maintain a close working partnership with Consumer Focus.

Functional Drivers

- The ability to change focus and react quickly to a rapidly developing and changing business environment.
- Being able to receive and carry forward contract and grant income over several financial years, and to build up an operating surplus from year to year which can be re-invested for further social marketing activity and pro-bono work.
- The need for back office functions such as HR, finance, IT and procurement with different specifications to that required by Consumer Focus.
- The NSMC's need to work actively with the commercial sector may conflict with Consumer Focus' need to limit such partnerships given its standing as an independent consumer champion.

Timing of Change

19. The formal process for establishing a social enterprise, including the agreed sub form selected, need not be especially complex, nor very lengthy, once embarked upon.

20. There are a number of issues that would need resolving, particularly around HR and pensions of staff who may wish to transfer from Consumer Focus, and other employing organisations' contracts, to the new organisation; and the need for formal consultation, and the ownership and transfer of operating cash balances and other assets and liabilities accrued by the NSMC up to the time of incorporation.

21. It is the view of the NSMC that no change should happen before April 2009 but that the aim should be to position the NSMC so it could complete any change by the end of 2009.

Questions for the SMPB

22. The SMPB is invited to respond to the following questions, taking into account the NSMC's vision as set out in its Five Year Business Plan:
    a. Is organisational change necessary and desirable?
    b. Is a stand alone social enterprise the logical and best option?

Next Steps

23. These issues, along with DH's views, will be put to the Consumer Focus Board at its November meeting. If both bodies are agreed in principle to the direction of travel, more detailed plans will be prepared in consultation and agreed with the DH sponsor branch, Consumer Focus and the NSMC staff, to bring about the change by the end of 2009.

24. A formal process for determining that it is safe to proceed with the change will be put in place from April 2009 and formal consultation with the Consumer Focus staff affected by the change will need to be built into the timetable when structures and individual jobs are identified. The NSMC, with DH support, will also seek support from the DH Social Enterprise Unit, and will bid for social enterprise funding to establish the new organisation, if this direction of travel is supported.

Potential NSMC Organisational Form Options

1. Analysis

2. Risks

3. Conclusions

1. Analysis

1. This options appraisal is designed to compare the main organisational options available for the NSMC. It rests on the NSMC Five Year Business Plan and the assumptions that:
   a. there is sufficient potential and real business and associated revenue streams over the next five years to support the NSMC in one of these forms;
   b. the DH, as the key government sponsor for the NSMC, and as a policy decision, wishes to ensure that the NSMC continues in some form over that period;
   c. no change is not a realistic option given the new Consumer Focus remit and organisational form;
   d. Consumer Focus and BERR have no strong corporate or policy drivers that argue overwhelmingly for its retention within Consumer Focus; and,
   e. the NSMC will continue to be of, and from, the public sector in its core business with a strong health-related component whatever form is chosen.

2. It is not an exhaustive analysis (not all sub-forms of a social enterprise have been compared such as a company limited by share (CLS) or a PLC).

3. There is no objective scientific method for making such an assessment and the appraisal represents an informed judgment. The main options are:
   - **A. to remain as a division or arm of Consumer Focus**
   - **B. to become a free standing body**
   - **C. to be established as a discrete DH body, or as part of DH**
   - **D. to move to new host body, possibly via a procurement exercise**
   - **E. to close down the NSMC from a forward date such as April 2010.**

4. Several of these have sub-options, but in practical terms, A and B are the main alternatives, with C and D only coming into play if A and B are ruled out. Option C would infer a change of policy agreed by health ministers.

5. The criteria used for assessing these options are:
   1. Fit with policy
   2. Impact on key business and delivery
   3. Key Stakeholder views
   4. Value for Money
   5. Accountability
   6. Opportunities created

There is sufficient potential and real business and associated revenue streams over the next five years to support the NSMC.

The NSMC increasingly feels the need to be able to set its own strategic direction without needing overarching approval from Consumer Focus.

A. To Remain as a Division or Arm of Consumer Focus

Remaining as part of Consumer Focus involves the least change. It would be feasible within that to explore alternative organisational forms and governance that might obtain some of the benefits of other options.

Fit with Policy

This option would not be in conflict with broader policy, either in BERR or DH or with the role of Consumer Focus. However, it is possible that some future NSMC partnerships (such as with private sector bodies) might be perceived as conflicting with, or undermining, the independent role of Consumer Focus. There is a potential question mark over whether developing overseas and EU activities are within the Consumer Focus remit.

Impact on key business and delivery

One of the drivers of organisational change is the need for the NSMC to be free to operate as a business with rapid turnaround of customers' requests, which requires the ability to operate outside some of the Whitehall constraints, such as OJEC and HR rules. It also needs the freedom, as its business expands, to design, own and operate its own core functions. Both of these would argue, under this option, for an arms length relationship between the NSMC and Consumer Focus, perhaps even as a social enterprise (such as a company limited by guarantee) nested within Consumer Focus. But it would need to be clear whether such an arrangement would actually free the NSMC from any of these business constraints.

More profoundly, the NSMC increasingly feels the need to be able to set its own strategic direction without needing overarching approval from Consumer Focus, for whom the NSMC's activities may come to be seen as a subsidiary rather than core activity.

On the other hand, remaining within Consumer Focus involves no significant risk of business interruption or business and market failure for the NSMC. It provides a safety net.

Key Stakeholder views

Thus far, no significant corporate stakeholders have expressed strong views about the retention of the NSMC within Consumer Focus. Early indications from the new Consumer Focus Board suggests some scepticism about the value and need for its retention, but no formal view has yet been given.

The DH sponsors do not regard the present arrangements as originated from the old NCC as immutable, and have said they anticipate proposals for the NSMC to become a social enterprise moving away from a grant-in-aid funded mechanism to a more contractually-based one from 2010.

Staff in the NSMC, particularly those with some history of direct employment by the NCC, and now Consumer Focus, are however wary of change, and the retention of the NSMC within Consumer Focus would be more likely to find favour with some of them.

Value for Money

Broadly speaking, retention within Consumer Focus would limit the NSMC to operating within the systems and facilities available and which understandably have not been designed primarily with the NSMC's current and future business needs in mind. This was not material in the NCC when the NSMC was a small operation, and does not give the NSMC the freedom to test the market (for example, for accommodation). It also means the NSMC may sometimes be constrained from being able to offer the market rate for scarce skills in the marketing sphere which can be at the expense of quality and impact.

The NCC hosting arrangement was good value for money for DH as the hosting costs were modest (£150k pa). This will rise significantly under Consumer Focus (up to a factor of four) although the increase in the NSMC's size and business would also have driven up these costs.

Accountability

Formal accountability for the NSMC as part of Consumer Focus is through the board and the strategic partnership with the old NCC to DH, where the NSMC had its origins in *It's Our Health*. Consumer Focus has yet to establish or renew the DH partnership. This will be necessary even if the NSMC does not remain within Consumer Focus.

Increasingly, the NSMC's key stakeholders and accountability relationships are with a range of public bodies as customers – government departments and agencies, NHS bodies and local authorities – who are, in turn, accountable to their constituencies. The extent to which Consumer Focus yet feels, or is likely to develop, a matching sense of accountability is unclear, as is whether that would in any sense conflict with its independence as a voice for consumers and the wider public.

Opportunities created

It is unclear whether there might be some new or different opportunities for the NSMC arising from remaining as part of Consumer Focus. However, there might be opportunities for Consumer Focus arising from the connection.

B. To Become a Free Standing Body

This is the principal alternative to remaining as part of Consumer Focus. There are two main variants: a statutory body or a social enterprise. A trading fund or a public corporation are also possibilities, but they require Parliamentary approval and/or Treasury engagement and would have to overcome some of the same barriers that would be involved in setting up a new statutory body. There are also issues of scale to consider.

A social enterprise is a more appropriate form than a trading fund or public corporation given the relatively modest size, in financial terms, of the NSMC compared with some other public corporations and trading funds (such as COI).

This appraisal does not examine in detail the many sub-variants of social enterprise that could be adopted, but in general terms the most likely, given its business, is a company limited by guarantee – community interest company, and probably neither a charity nor a company limited by share. If a decision in principle is taken to move to a social enterprise then a more detailed appraisal of the precise form to adopt will be part of the change programme, in consultation with stakeholders.

A social enterprise is a more appropriate form than a trading fund or public corporation given the relatively modest size, in financial terms, of the NSMC.

Social enterprises take a number of different forms but the current options for the new NSMC are:

- **Limited liability company - a company limited by guarantee**
  Where there are no shareholders and the members give a 'guarantee' to cover the company's liability. In these companies, profits are generally reinvested back into the company.

- **Community interest company (CIC)**
  A new type of company, designed for social enterprises that use their profits and assets for the public good. CICs have all the flexibility and certainty of the company form, but with some special features to ensure they are working for the benefit of the community. Becoming a co-operative community interest company enables CICs to operate under co-operative principles.

- **Co-operative society**
  Run for the mutual benefit of their members, with any surplus usually being ploughed back into the organisation to provide better services and facilities.

For the NSMC, as a DH-funded and sponsored piece of capacity, to become a social enterprise would have a good fit with its policy generically, not just with public health policy.

Whatever form chosen, the governance arrangements will need to have the following attributes:

a. provision for participation and ownership by directly employed staff
b. provision for participation by key national partners and stakeholders (such as Consumer Focus and DH)
c. some form of independent external participation in governance (Chair NEDs etc) and to oversee audit and remuneration functions
d. strong stakeholder management arrangements

Fit with policy

There is currently no appetite or policy driver in government, particularly in DH, for creating new statutory bodies – mergers and amalgamations and the downsizing of existing arms length bodies are more common. Therefore, such a proposal for the NSMC is unlikely to find favour and officials would be unlikely to recommend such a course to ministers. **For these reasons, this sub-option has not been explored further.**

By contrast, in DH, there is a policy driver for the creation of new social enterprises aimed at delivering core health services to the public. The DH has set up a significant support fund and is adopting flexible approaches such as pension matters to encourage their establishment. For the NSMC, as a DH-funded and sponsored piece of capacity, to become a social enterprise would have a good fit with its policy generically, not just with public health policy. More widely, government is also supportive of such a trend.

Impact on key business and delivery

A key factor for the NSMC is the freedom to run and maintain its own business in an expanding, and thus far unsatisfied, market without being constrained by central government regimes which are not designed to support such business expansion.

To that extent, continued hosting by Consumer Focus (or any other body) would limit the ability of the NSMC to respond to the needs of customers and forming a social enterprise would be a way of side-

stepping those operational limitations. It fits with the expectations of its principal sponsor, DH, which wishes to move away from a grant-in-aid arrangement to a more mature commissioning-based and contractual one. The NSMC's main business and associated income streams are more likely to be derived from operating in that fashion with the ability to respond swiftly to tender and get new work underway as quickly as customers require.

Key Stakeholder views

DH is unlikely to support moving to a new DH arms length body and is anticipating proposals for the NSMC to become a social enterprise to be put forward.

Consumer Focus has yet to express a formal view but initial discussions suggest that it will not have any objections in principle to a separation. Its approval is essential as it is the body with the legal power to make such a decision or put it into effect.

Both DH and Consumer Focus will need to be involved instrumentally in the change on matters such as HR and TUPE, transfer of assets and liabilities and finance, including cash balances.

Staff in the NSMC, particularly those with some history of being directly employed by the NCC, and now Consumer Focus, are however wary of such a change and want to know what the implications are for them. Formal consultation, once structures and posts are identified to support TUPE in the lead up to change, will be necessary (as it would be for options C and D).

Value for Money

In operating in a market and trading environment, the NSMC will wish to be able to offer competitive rates to public sector customers, working on a not-for-profit basis, with surpluses being reinvested or used to support pro-bono work. As the Five Year Business Plan indicates, the fixed costs and staffing levels of the NSMC will continue to be small in comparison to the customer and project specific costs, which will be recovered from the income streams generated by those programmes.

Accountability

It is the strong wish of the NSMC for its governance arrangements to include all staff as well as key stakeholders. The precise form that would take will depend on the form of social enterprise adopted. For example, a governing board could include Consumer Focus and DH as well as staff representatives.

Opportunities created

One of the aspirations and objectives of the DH with regard to the NSMC is that it will become, among other things, a standard setter and quality assurance body for the practice of social marketing in the public sector, especially in health (but not a regulatory body). This will be better facilitated if the NSMC is an independent body free of a formal government sponsorship. It needs to be able to act as a critical friend in much the same was as the Faculty of Public Health and the Institute of Marketing.

Even within the present arrangements with DH and NCC, there have been occasions when some care has had to be taken over the presentation of views by the NSMC, such as to the Heath Select Committee, to ensure that it is not assumed to be speaking on behalf of DH or to avoid the appearance of one piece of DH machinery saying something slightly differently to DH itself. These problems have not been insuperable but a complete break would make the position much clearer and free of risk.

C. To be Established as Discrete DH Body or as Part of DH

For completeness, this option has been included, but in practice this is the least likely of the main options for consideration. The arguments against setting up the NSMC as a DH arms-length body are the same as in option B so will not be repeated here. The option of moving the NSMC to an existing one is explored in Option D.

To relocate the NSMC within DH itself would mean turning the NSMC into a branch or part of a branch of the DH, such as as part of the Social Marketing and Health-Related Behaviour Team in Health Improvement and Protection, or as part of the Insight Unit in Policy and Strategy. While there is precedent for doing this kind of thing, and DH has the power to take this action, there is no appetite for it and no headcount cover. Had the DH wished to set up the NSMC this way in the first instance as the response to *It's Our Health,* it could have done so in 2006. It did not then and does not wish to now, and officials would be unlikely to recommend such a course to health ministers who have supported the creation and funding of the NSMC as a body outside DH.

This option has therefore not been explored further.

D. To Move to New Host Body Possibly via a Procurement Exercise

Pursuing this option would rest on the premise that the NSMC ought not to be, or cannot be, retained within Consumer Focus and should not or could not, be set up as an independent or free standing body. A change of host is not otherwise necessary to consider except as a way of testing the market.

An assessment of the benefits of finding a new host depends heavily on the specific host organisation, which in turn is contingent on the method of selection and the specification. There are a great many unknowns to be resolved before this could become a definitive solution. For example, hosting the NSMC within an existing

One of the aspirations and objectives of the DH with regard to the NSMC is that it will become, among other things, a standard setter and quality assurance body for the practice of social marketing.

An assessment of the benefits of finding a new host depends heavily on the specific host organisation which in turn is contingent on the method of selection and the specification.

government body, as opposed to undertaking a procurement exercise, involves different considerations than a private or third sector option, although even then some form of expressions of interest exercise would be highly desirable.

Fit with policy

There are no overriding policy reasons why this could not be done. But if another government body were selected, the work of the NSMC would need to be reasonably consistent with the core functions and purpose of that body. The government sponsors of that body would need to be content that it did so and that it fell within the core purpose set out in its originating legislation, whether primary or secondary, and more importantly support the importation of this function.

Impact on key business and delivery

The impact on delivery would depend on the nature of the host organisation selected but many of the issues relating to the NSMC within Consumer Focus could as easily apply, and the management of transition would be no less complex and risky than forming a stand alone body. As the recent history of government bodies shows, locating a function within a government body is not a secure solution. Frequent mergers and dissolutions in the health field do not make this a safer course than option A and is not therefore a guarantee against future business interruption. Many of the restrictions on NSMC operations through being part of Consumer Focus would be equally likely to apply.

The process of change would be more protracted and uncertain in outcome than the other options, except possibly that statutory route.

Key Stakeholder views

To accomplish this change would require the active engagement and support of Consumer Focus and of DH, especially if a DH body were the new host. The NSMC could not lead this change for itself. NSMC customers would need to understand the changing position of the NSMC at a time when it is still building its relationships. So far the NCC hosting relationship, in these terms, has been generally helpful or at least neutral in effect. A private sector host would assume a contractual relationship with DH.

Value for Money

A procurement exercise would be based on getting best value, but compared with Options A or D, and it is not evident in advance of that whether value for money would be better than either of those options. University overheads and markups are high, as indeed are those of some trading funds such as COI, and private sector hosts would expect a reasonable return on investment and thus would be more likely to charge higher fees than a not-for-profit body. The tender or expressions of interest specification would need to be tightly drawn to ensure that operating costs were no higher than either Options A or B.

A government body would naturally wish to avoid cross subsidy but at the same time, as part of a larger structure, some economies of scale might be expected.

Accountability

This option would need to be broadly neutral compared with Option A, but depending on the host, selected accountability might best be exercised through contractual mechanisms or SLAs.

A private sector host could not be guaranteed to sustain and support the public sector ethos and orientation that the NSMC sees for itself, nor could staff aspirations be as easily secured. A public sector or third sector host would be more likely to satisfy these.

Opportunities created

This is difficult to asses without a specific body in mind, however a body operating in a similar field such as COI might well offer better access to markets and resources.

E. To Close Down the NSMC from a Forward Date, such as April 2010

This option has been included for completeness although there are no pressures to do this. Such a course would need to rest on a number of conclusions or assumptions. It could assume that the NSMC will have succeeded in its primary mission and was no longer needed as piece of capacity. It could conversely assume that the NSMC was not proving, nor will be likely to prove, a success. Or that the NSMC was not best value for money.

Fit with policy

DH still needs a quality assurance and standards setting institution for social marketing in the health field and the NSMC remains its preferred organisation, albeit that there are issues about pace and priority. Presently, no other body is likely to provide this function which is a unique selling point for the NSMC. Direct provision of training and other marketing delivery services for DH, the NHS and other public sector bodies can be sourced elsewhere and DH will wish to test the market at the national level for such centrally-funded commissions. *Ambitions for Health* – the DH response to *It's Our Health* – is explicit in describing the establishment of the NSMC as a key element in the strategic framework for social marketing and Health Ministers, as launched by the NSMC less than two years ago.

Impact on key business and delivery

The NSMC mission has not yet been delivered for DH and it is unlikely it will have been in full even by April 2010, nor is it likely that the demand for the kinds of services it can offer will have been exhausted. Early closure would not contribute to delivery.

Key Stakeholder views

DH has no fundamental objections to the NSMC being a player in the market provided that the NSMC delivers on its core purpose, as DH sees it, and that DH does not have to underwrite such market-based activity. It will not therefore be likely to support such a move in the short term. NSMC staff will not welcome such a move and early leavers will undermine completion of current work-streams, such as regional work.

Value for Money
There would be redundancy and other costs and liabilities for Consumer Focus and DH to meet if closure were to take place. The annual revenue cost to the DH would be saved. NSMC customers would need to go elsewhere in the market.

Accountability
Ministers would need to agree to the closure as they had originally approved NSMC's establishment, and have also endorsed it in *Ambitions for Health*. They would need to be convinced that, in such a short time since formal launch (less than two years), it had run its course and was not viable.

Opportunities created
There would be some, mainly through the release of recurrent revenue streams.

The DH still needs a quality assurance and standards setting institution for social marketing in the health field and the NSMC remains its preferred organisation.

2. Risks

Consideration of risk needs to be predicated with the question 'whose risk?' Is it to Consumer Focus, DH or the NSMC?

If the NSMC were to become a social enterprise, that would shift risk away from Consumer Focus and DH and towards the NSMC, setting aside the risks associated with transition itself which will be covered in the project planning documentation if it is agreed to proceed with any change.

Presently, Consumer Focus, *de jure* and *de facto*, underwrites the NSMC, and DH mainly *de facto*. If the NSMC were to fail, these two bodies would presently have to manage the consequences in HR, finance and other terms.

As an independent social enterprise, any continued support (such as through facilities management contracts and shared back office services or arrangements for more modest revenue support from DH) would be for those two bodies to agree but with much more limited exposure for Consumer Focus.

The transfer of the NSMC to a new host body would involve transfer of risk, especially from Consumer Focus, but the nature and extent of such risk would depend on the nature of the host.

And if, on becoming a social enterprise, at some stage in the future the NSMC were to cease trading, there would be no residual legal liabilities other than those of a contractual kind or relating to staff who might have been seconded to it.

There is policy and reputational risk for DH, in that ministers could be criticised for having set up a piece of machinery at public expense only for it to fail, with an inference that there had been fruitless expenditure and investment or that policy had been badly implemented. In that sense, and in the sense that DH policy is to want the NSMC to be successful in building capacity and raising standards in social marketing, DH will retain a considerable policy stake in the NSMC whatever the operational and organisational form adopted. These arguments also apply in respect of DH to Option E.

The transfer of the NSMC to a new host body would necessarily involve transfer of risk especially from Consumer Focus, but the nature and extent of such risk would depend on the nature of the host.

By remaining within Consumer Focus or within an alternative public sector host, the NSMC might be perceived as being more secure institutionally. However, it might be argued that recent history of government-created statutory bodies, especially in the health sector (and not least the NCC, Postwatch and energywatch), does not offer a particularly strong basis for that view. Many recently created institutions have lasted no more than five years and some even less.

3. Conclusion

Option A would need to be considered alongside other Consumer Focus issues around the management of trading activities and other specific but non-core and externally funded projects. Option A involves the least change and potentially the least risk to the NSMC.

Option B offers much greater freedom to the NSMC and transfers risk from Consumer Focus and DH to the NSMC.

Option C is not regarded as achievable in the current climate nor in the foreseeable future.

Option D is only material if neither Options A, B or C are feasible or desirable but is more uncertain of outcome.

Option E - has been included for completeness, although there are drivers supporting this and it is not recommended.

This analysis suggests that the realistic options for organisational change essentially come down to three:

1. **Retain the NSMC within Consumer Focus** but with the maximum delegation and freedom that it is permitted to grant

2. **Move the NSMC to become a free standing body** most probably a social enterprise

3 **If neither of those are favored, through a competitive process,** seek an alternative host

No fundamental barriers exist to pursuing any of these three courses of action.

Foreword from John Bromley,

Director of the National Social Marketing Centre.

The National Occupational Standards for Social Marketing are an important part of the work which is being undertaken by the NSMC to assure the quality of social marketing within the UK. They are a key part of the strategy to ensure that social marketing is both used effectively and that the workforce is properly trained in order to maximise its huge potential for effecting positive and lasting behaviour change.

By promoting and supporting these standards the NSMC is working to ensure that behavourial interventions are employed to the greatest effectiveness and to the highest standards across professions and sectors. Along with our development of our 'Social Marketing Planning Guide and Toolbox' and work with the British Standards Institute (BSI) to investigate possible methods to improve the quality of social marketing, the NSMC has been delighted to support the development of this work on the National Occupational Standards.

Executive summary

The NOS for social marketing are a valuable resource. Used properly, they can provide a structured way of linking job roles, employees, employers, and educational providers in a productive working relationship.

Key Facts

- Each set of NOS is both a stand alone resource for a field of practice, and a part of broader library of nationally accredited standards upon which employers and employees can draw.
- When using NOS to describe roles and functions, it is not necessary to focus solely on one suite of NOS as a source. The social marketing NOS can be used in combination with other suites of NOS, such as those in public health or marketing, so that the chosen combination accurately describes your function and role.
- NOS can be used by a range of different people: Employers may wish to use them for workforce planning; Human Resources for recruitment and retention; employees for CPD mapping; and educational providers for developing new course materials.
- NOS can be used for three distinct purposes:
  - To describe the skills sets required of the employee in order to perform their role effectively
  - To describe good practice in a role
  - To describe the coverage and focus of job roles
- Each individual standard defines a key function in a job role. A suite of NOS covers a range of functions within a field of practice. They are concerned with what people can do, not just what they know.
- NOS are not related to the context or the setting within which the function is carried out, but focus on the critical aspects of the role, demonstrating competence at work.
- By describing competent performance in terms of outcomes, NOS facilitate a clear assessment of required standards of performance across a range of workplace circumstances. They can help establish a link between the aims and objectives of the organisation and the skills of the workforce required to achieve these.
- Nobody is expected to meet the competence standards of all the units in a suite of NOS – only those that relate to the specific role in which they are employed.
- Units are not meant to be read in isolation. The liaison between the functional areas is a key competence requirement. Equally, the liaison between suites of NOS can be key to mapping roles accurately.

Nobody is expected to meet the competence standards of all the units in a suite of NOS – only those that relate to the specific role for which they are employed.

Introduction

National Occupational Standards (NOS) were first introduced in the 1980s. The vision was to ensure 'explicit, agreed, widely accessible, flexible, progressive and testable' standards of practice for the workforce[1] to improve efficiency and effectiveness. Representative bodies, such as the Marketing, Sales and Standard Setting Body (MSSSB), were established to set effective standards appropriate to the marketing, communications and sales sector and relevant to the current and future needs of the competent practitioner. Successive governments have continued to support the policy and by the end of 2009, there were 25 licensed sector skills councils, and eight standard setting bodies, covering 90 per cent of the workforce across the UK. At the time of writing, this is in the process of change. From 31 March 2010, the standard setting bodies will be replaced by standard setting organisations.

The MSSSB, which produced the NOS for social marketing, was established in September 2001. Its function was to develop world class standards of best practice for marketing, marketing communications, sales and telesales sector, working with employers, professional, academic and regulatory bodies to develop a national educational/training framework that supports people within these professions. It produced five suites of NOS (marketing, marketing communication, sales, telesales, and social marketing). MSSSB ceased to exist on the 31st March 2010. At the time of writing, it seems likely that the ownership of the NOS it produced will move to the Chartered Institute of Marketing.

The impetus to produce NOS for social marketing came from multiple sources. Stakeholders of the MSSSB, and the work of the NSMC on producing benchmark criteria[2] which defined best practice for social marketing, were critical to their development. Their activities supported and informed the work of the MSSSB and were influential in their decision to produce the NOS for social marketing.

The NOS were developed through the analysis of existing competency bases, drawing particularly from marketing, and were supported by wide scale development and consultation work involving UK and overseas representatives from across marketing, social, environmental, lifelong learning and health sectors[3]. This ensured that the NOS covered not only the technical aspects of social marketing, but also the breadth of practice[3].

The NOS for social marketing were published in April 2009[4]. They are the first NOS for social marketing in the world. Ensuring that they are embedded into delivery is essential if their full impact is to be achieved.

This document has been produced at the request of the Department of Health and with the help and support of numerous stakeholders. It provides an introduction to the NOS for social marketing and how they can be used to support professional development by employers, employees and academic bodies. It also provides an insight into the links between these NOS and other related workstreams.

National Occupational Standards (NOS) were first introduced in the 1980s. The vision was to ensure 'explicit, agreed, widely accessible, flexible, progressive and testable' standards of practice...

What Are National Occupational Standards?

National Occupational Standards 'specify the standard of performance an individual must achieve when carrying out a function in the workplace, together with the relevant underpinning knowledge and understanding. Essentially NOS are benchmarks of good practice'[5].

In general terms, each individual standard defines a key function in a job role. A suite of NOS covers a range of functions within a field of practice. They are concerned with what people can do, not just what they know, and address:

- Technical requirements, including the occupational skills and knowledge required to perform the function
- Managerial requirements of effective practice
- Communications and working relationships
- Environmental requirements, such as health and safety and ethics[6]

NOS are not related to the context or the setting within which the function is carried out, but focus on the critical aspects of the role, demonstrating competence at work. By describing competent performance in terms of outcomes, they facilitate a clear assessment of required standards of performance across a range of workplace circumstances. They can help establish a link between the aims and objectives of the organisation and the skills of the workforce required to achieve them.

This means they can be used for three distinct purposes:

- To describe the skills sets required of the employee in order to do their role effectively
- To describe good practice in a role
- To describe the coverage and focus of job roles

NOS also recognise that competent practice requires possession of knowledge and skills beyond the technical functions of that discipline – such as personal skills of communication, negotiation, management, and so on. These do not need to be developed separately for every discipline, but can be imported from other existing sets of standards, recognising that they may be core or generic, rather than discipline-specific.

The ability of NOS to refer across discipline and practice boundaries is important. Each set of NOS is both a stand-alone resource for a field of practice and a part of a broader library of nationally accredited standards upon which employers and employees can draw. This reflects and supports the flexible nature of practices because recognising comparable skills sets, and ensuring a common terminology is in use, supports the development of a more flexible workforce. This is important for four reasons:

- Most occupations will include functions which are pan-sector – such as management and leadership
- With multidisciplinary teams, which are common in fields such as public health, it is unlikely that a single set of NOS would describe all the functions of a team
- Some occupational groupings may fall between two sets of NOS. Their domain of practice may draw from the NOS developed by Skills for Health, and their occupational group, e.g. social marketing, may draw from a different standard setting organisation [MSSSB/CIM].[5]

The robust processes of development, which have been followed for each and every NOS, ensure they relate to practice within the field.

- It supports transferability of skills across sectoral and disciplinary boundaries, sustaining a flexible approach to workforce development.

This flexibility reinforces the overall purpose of the NOS suites, in that the focus remains on the critical functions, rather than the sector within which the functions are practiced. The robust processes of development, which have been followed for each NOS, ensure they relate to practice within the field. This means that each NOS individually is already recognised as a national standard, and is therefore a robust baseline to draw upon, when considering job roles and functions.

The NOS for Social Marketing

Purpose, functions and key areas of activity

The key purpose of social marketing, as defined by the NOS, is 'to apply marketing alongside other concepts and techniques in order to influence individuals, organisations, policy-makers and decision makers to adopt and sustain behaviour which improves people's lives[7]'.

The functional map (figure A) identifies the functions and key areas of activity undertaken in order to deliver the key purpose of social marketing.

It divides social marketing into five key areas (figure A). They are not proposed to be of equal size or complexity, as they reflect activities undertaken by individuals of varying levels of experience, responsibility and seniority.

Format

Suites of NOS follow a standard format. Each suite is divided into a series of key areas (for social marketing, there are five – see Figure A). Within the key areas, there are further divisions, known as 'Areas of Competence', which provide a high level descriptor of a critical activities of the workforce within this key area. These Areas of Competence are then sub-divided into a series of 'standards' or 'NOS', which describe a core part of someone's role. For example. The first area of competence of Key Area A of the social marketing NOS, A1 Carry out social marketing research, has six NOS. (see table 1 on next page)

Figure A: Functional Map for Social Marketing © MSSSB 2009

TABLE 1: Key Area A: taken from MSSSB NOS for Social Marketing

Area of Competence	Standards
A1 Carry out social marketing research	SMA 1.1 Plan, manage and evaluate social marketing research programmes SMA 1.2 collect data on the knowledge, attitudes and behaviours of the target groups SMA 1.3 Develop understanding of theories and evidence about what might influence the behaviour of target groups SMA 1.4 Analyse, interpret and synthesise data and research findings to inform social marketing strategy SMA 1.5 develop and define segments within target groups to inform social marketing strategies SMA 1.6 Develop social marketing propositions and test their potential to influence the behaviour of target groups

Each unit is then further sub-divided to provide:

- A description of the purpose of the unit, and its links to other units
- The target audience of the unit, e.g. people in managerial roles
- Performance criteria describing the outcomes of effective performance within the target role
- The behaviours which underpin effective performance
- The knowledge and understanding (general, industry and sector specific, and context specific) which underpins effective performance.

NOS units are not meant to be read in isolation. By grouping together units of NOS, into the key areas, you can specify the range of knowledge, understanding, skills and performance attributes required for a specific critical function or role. These attributes are often described as the 'knows how' and 'shows how' elements of a role, as they articulate both the background knowledge and the abilities which are required in order to perform the role to the specified standard. Nobody is expected to meet all the units in a suite of NOS – only those that relate to the specific role they are carrying out.

What do the NOS for Social Marketing Cover?

The NOS for social marketing provide a comprehensive functional map of the discipline. They describe the outcomes required from the functions, but do not restrict the ways in which the functions are carried out. (see above Table 1 for an outline. Full details can be found online at http://www.nsmcentre.org.uk

The standards within the functional map are levelled, so can be used to map activity at operational, managerial and strategic levels.

Functions which are carried out within social marketing may also be common in other disciplines, for example health promotion, or communications activity, management and leadership. For this reason, when using NOS, it is not necessary to focus solely on one set of NOS as a source. As described earlier, you are able to draw from across the entire library of NOS, looking for both specific specialised functions within a sector, as well as generic standards, for areas such as management, and leadership, which may be imported or tailored from another sector into your social marketing purposes.

Nobody is expected to meet all the units in a suite of NOS – only those that relate to the specific role they are carrying out.

Using the NOS for social marketing

Who are NOS for?

As explained above, the NOS describe:

- Criteria that define what you must be able to do in order to achieve the required outcome
- Indicators of the generic behaviours that you are expected to show
- Statements that define what you need to know and understand in order to achieve the required outcome

This means that they could be used by a wide range of people. They are useful for everyone who, in the course of their duties, may need to have an understanding of social marketing and how it can be applied within their specific sector. The next section considers how various stakeholders can use the NOS for social marketing, making links to other sets of NOS where appropriate.

Employers and Managers

The NOS provide a framework of tried and tested good practice, based on work with employees and within the organisational sector to identity what it takes to perform different roles effectively within social marketing. Because they were developed by, and with, the workforce, they are very much grounded in the reality of work[3]. The NOS structure enables easy identification of the relevant strands of each role, describing what needs to be achieved and the outcome required, rather than telling your workforce how to achieve the goal.

This means that NOS can be a useful tool to assist in developing a workforce, because they focus on critical skills. They can therefore be used as a platform for other management products. In particular, employers may find them useful for:

- Describing the functions required from the workforce to deliver the organisation's overall objectives
- Identifying and describing the skills and competencies needed in the workforce to perform the required functions
- Assessing the skills and competencies already in the workforce
- Identifying gaps in skills and competency sets
- Identifying where external sourcing of skills and competencies may be required
- Appraising existing workforce members
- Assisting with setting objectives and evaluating performance

Box 2 gives an overview of how the NOS could be built into a structured approach to workforce planning and development

Box 2: NOS and Workforce Development

Develop a common baseline workforce plan through:

- Identifying key functions of your organisation, and requirements of employees
- Mapping NOS against organisational objectives as well as individual objectives
- Identifying standards relevant to the job, including generic standards like IT, leadership and management, etc
- Enable job holders to demonstrate performance against objective measures/statements within standards
- Using NOS as a checklist, select only those relevant to role, to inform job descriptions
- Set SMART objectives to enable comparison of performance to clear goals*
- Ensure performance reviews are consistent and fair, using NOS as a diagnostic tool for any improvements

Plan for the future

- Update map of NOS against organisational and individual objectives
- Identify training and development needs for the organisation
- Feed into HR processes to develop training and recruitment plans to fill identified gaps and shortages
- Feed into procurement processes for outsourcing where required
- Ensure business plan for organisation is achievable, with existing capacity, or to identify areas for action to address shortfalls

*SMART objectives are specific, measurable, achievable, realistic, timebound

Because NOS provide a firm baseline which can be mapped against other organisations and groups, they can become a benchmark against which employers and managers can measure progress and identify areas for improvement within their workforce. This could be achieved in-house through staff development, however, the analysis may identify that alternative arrangements – such as recruitment of new staff or outsourcing arrangements - may be more appropriate. The use of NOS within Human Resources activity is considered within the next section.

Human Resources

NOS can play a key role in human resources processes. In particular, they can be used for:

- Recruitment and selection
- Job design and evaluation
- Training needs analysis
- Commissioning and designing learning programmes
- Performance appraisal

Box 3 provides a structured example of how an HR team could use NOS in the recruitment process.

Box 3: Using NOS in the recruitment process: a staged approach

1. Working with existing post holder and managerial team, identify the key purpose of the role
2. Using NOS as a checklist, identify relevant standards and use them as basis of job description
3. List the tasks and responsibilities of the role, using NOS as a baseline, with input from current job holder and managerial team
4. Develop a person specification, using NOS to identify knowledge and skills requirements
5. Complete the job description
6. Use the job description as the basis for the recruitment advert, using the job role identified in the original mapping
7. Use NOS as reflected in the job description to develop short-listing criteria
8. Use NOS as reflected in the job description to develop competence-based interview questions

The NSMC successfully used the NOS for social marketing in the recruitment of its regional associates. See box 4 (overleaf) for a case study.

...they can become a benchmark against which employers and managers can map progress, and identify areas for improvement within their workforce/team.

Box 4: – Case Study
Recruitment of Associates for the National Social Marketing Centre

The situation

In 2008, the National Social Marketing Centre (NSMC) recognised it needed to build its capacity to respond to increasing demand from Primary Care Trusts and other potential clients for expertise in social marketing. Rather than taking on additional core staff, the preferred solution was to develop a group of 'Associates' – freelance consultants with wide and varied experience and expertise, each of whom could be deployed with confidence to assignments which demanded their particular competence set.

Three generic roles were identified:

- Project Managers – to work side-by-side with clients to deliver social marketing programmes whilst developing the client's expertise
- Trainers – to develop and deliver training programmes in social marketing
- Researchers – to carry out research and develop insight into social marketing issues

The Management Standards Consultancy Ltd, which had worked closely with NSMC throughout 2008 to develop the Social Marketing National Occupational Standards (NOS), was appointed, together with HR consultancy, Linda Burke Associates, to design and implement a programme to recruit up to 100 Associates for NSMC.

The action

The Social Marketing NOS were used to create 'Role Profiles', identifying the functions Associates in the three roles would need to carry out, the standards of performance expected of them and the knowledge and skills they would require. These Role Profiles underpinned the recruitment and development processes and it is intended they will provide the basis for future accreditation of the Associates and other social marketing professionals (See Appendix).

Recruitment was carried out in three phases:

1. On line questionnaire

Potential candidates were directed to an in-depth questionnaire on the NSMC website which took between 30 and 120 minutes to complete. As well as collecting basic details, it asked candidates to upload their CVs and to provide two case studies of relevant projects they had managed or had been involved in.

Importantly, the questionnaire asked candidates to study the relevant Social Marketing NOS and assess themselves as 'Partially Competent', 'Fully Competent' or 'Expert' in each function described. They were also asked to provide evidence from their case studies or other experiences to justify their assessment.

Out of more than 200 candidates who started the questionnaire, around 150 completed it, of whom 125 were considered suitable to attend an Assessment Centre.

2. Assessment Centre

15 Assessment Centres were held in London and other major cities throughout England, attended by just over 100 candidates. The structure of the Assessment Centre for each candidate was as follows:

- A short written piece about their understanding of social marketing and the challenges it will be asked to address in the next few years
- The presentation of a case study of a project they had managed or been involved in and how this demonstrated they were competent in key Social Marketing NOS
- An in-depth interview to test assertions made by the candidate and explore areas which had not already been covered
- Self-reflection by the candidate on the competences they felt they had demonstrated well and any competences they felt they did not have the opportunity to show to the full

Each Assessment Centre had two pairs of assessors working with two streams of four candidates each day.

Decision and feedback

Throughout the Assessment Centre, the assessors used standardised forms to record their comments and to make judgements about the candidate's competence in respect of each of the relevant social marketing NOS. From these, an overall judgement of the suitability of the candidate for each of the three roles and their level (Consultant, Senior Consultant, Expert) could be made.

On the conclusion of each interview, the pair of assessors would arrive at a consensus judgement and draft some feedback to the candidate on their strengths and development areas. At the end of the day the two pairs of assessors would meet to compare their judgements on all the candidates seen during the day and moderate these against candidates seen at previous Assessment Centres. Candidates were informed of the assessment decision, and, where they were unsuccessful, provided with appropriate feedback.

The benefits

Although this was a resource-intensive recruitment process, both for the assessors and for the candidates, it proved to be both effective and efficient with little attrition at any stage. 200 candidates started the on-line questionnaire, 150 completed it,

125 were invited to an Assessment Centre, 100 attended and 80 were selected to be Associates.

The use of the social marketing NOS provided both credibility and rigour to the on line questionnaire. Feedback from candidates indicated that the NOS provided a clear picture of NSMC's requirements. Further, that the candidate's efforts in relating their experience and expertise to the NOS was helpful in identifying their competences and preparing for the Assessment Centre.

The NOS also provided a robust structure for the Assessment Centre. Based on the information derived from the various activities, assessors were able to make judgements as to whether or not candidates provided evidence of their competence in each of the functions described by the NOS.

Thanks to the NOS, it was relatively straightforward to give direct and specific feedback to candidates on their strengths and development needs, particularly important when giving feedback to unsuccessful candidates.

A by-product of the recruitment process was a detailed training needs analysis, based on the NOS, for each candidate and for the cohort as a whole. This has facilitated the design of the Associates' induction programme and indicated, for each individual, the areas where they need to invest in their own development in the medium term.

Further developments

NSMC intends to use the Social Marketing NOS wherever appropriate in the management and development of its staff and Associates. The Associates induction programme is the first such development, designed to develop the required knowledge and skills and offer opportunities to apply these under simulated conditions.

NSMC is currently also exploring how to integrate NOS into its plans for accrediting individual practitioners, organisations and social marketing programmes.

As the above example demonstrates, one of the key benefits of NOS for employers and the HR team is that they provide a firm, standardised baseline for both recruitment and staff development.

They can be used to identify the critical roles and functions of team members, and map these against the organisational functions and requirements to inform skills analysis and gaps identification. This can be used in a number of ways by employers and HR teams:

- To assist with the development of staff retention and development programmes to meet organisational and individual needs, by keeping a firm focus on the functions required by the organisation, both at the current time and into the future, in line with the business plan
- To inform a training needs analysis for the workforce
- To inform the content of commissioned development programmes, by specifying the outcomes, with a clear link back to the functions required
- To evaluate training which has been commissioned against the defined expected outcomes
- To identify areas where outsourcing may be an appropriate way to address functional gaps, and inform plans for this
- Where employees are new in post, or have perhaps been promoted within an organisation, the standards also provide a baseline which HR may wish to consider for induction processes.

Within a competitive market place, it is essential that employers are able to identify existing skills gaps within their workforce and also to identify areas for development. These areas may reflect company needs, and be more closely related to the development and retention of existing workforces, focusing on their needs, plans and aspirations.

NOS provide a firm platform upon which to build. They are, in essence, a set of building blocks, which can be used to describe current workforce needs, identify future workforce needs and map progress by acting as a benchmark.

Educational providers

The previous section considered the ways in which NOS could be used by

Within a competitive marketing place, it is essential that employers are able to identify both existing skills gaps within their workforce, and ways to address these...

employers and their HR teams to inform the development of a structured approach to workforce development. In particular, it highlighted the ways in which NOS could be used to commission training programmes, which would deliver targeted training, to fit with organisational and staff developmental needs. In this model, educational providers would respond to the stimulus of the organisation. An alternative model, which could exist alongside, is for educational providers themselves to 'own' the process, using NOS to develop a baseline understanding of emerging roles and areas which may provide a market for their courses.

In this model, educational providers can map their existing provision of courses against the market, using the NOS to identify gaps in provision and highlight where changes in practice may have outpaced existing course provision and curriculum development. As NOS are firmly based in practice, but have a forward-facing element, they provide a firm baseline upon which to develop new courses to ensure the development of appropriate knowledge and skills packages to match functional workforce requirements. They act as a ready-made curriculum and set of learning outcomes against which education providers can benchmark their current courses and learning materials, or develop new programmes. They can ensure that their programmes meet learners' needs and allow them to achieve nationally-recognised qualifications.

Educational providers can therefore use the NOS to identify areas where learning skills and needs in a sector or occupation have changed, and respond with the development of new learning packages which meet these needs. This can then be marketed to potential students as part of Continuing Professional Development strategies.

This is an area for future development. The consultation process[3], which underpinned development of the NOS, addressed this specifically. They found that there was no real interest in NVQ development based on the NOS within the consulted audience, but strong support for the development of professional qualifications. There are currently no known vocational or professional qualifications based on the social marketing NOS.

Employees

One of the key advantages of NOS for employees is that they '...allow individual workers to be perfectly clear about what is expected of them in their work, and check that they are doing a good job.[8]' They can also be used to identify knowledge and skills gaps, which individual workers may have. These can then be used as part of a structured, owned, approach to career development (see table 5)

Table 5: Ways in which employees can use the Social Marketing NOS

1. To undertake self assessment – measuring personal progress against the national standards, employees can develop self confidence and enhance personal and professional effectiveness in their roles
2. To track skills - by comparing their skills against nationally standardised requirements for an occupational area
3. To develop best practice at work for themselves and others
4. To ensure they are complying with statutory requirements which are reflected within the standards, where appropriate
5. To get constructive feedback from manager and others, by providing a robust baseline for discussion
6. As a foundation stone for Career development and CPD plans
7. To increase personal motivation to learn, as they see demonstrable progression against the standards, i.e. moving from operational to managerial level
8. To identify and develop new knowledge and skills to improve performance, etc
9. To identify new career paths

They act as a ready-made curriculum and set of learning outcomes against which education providers can benchmark their current courses and learning materials...

When job roles are developed using the relevant standards, including the generic ones from across other sets of NOS, employees are given a firm baseline against which they can assess their performance, and consider their career development. The NOS units provide a checklist of the knowledge and skills, which will be required in order to deliver a function effectively. Employees can use the functions on their role description to go through the associated lists and measure their own progress against the required elements. This means they can both assess their current competence, and identify any particular knowledge and skills gaps. This information can then be used to plan ways of meeting training and development needs. As the job roles will be linked to the overall organisational business plan, this also provides a firm foundation for discussions with line managers about training and development, as the functions will link into the organisational development plans.

The standards are also levelled. This means that employees can identify where they are currently performing at an operational level and the additional competencies they would need to develop in order to achieve career progression. This can also feed into their personal development plans and career planning.

How do the NOS for social marketing fit with other initiatives?

The NOS for social marketing are an important part of the work which is being taken forward by the NSMC to assure the quality of social marketing within the UK. Other related workstreams include:

PAS Development:

Work with the British Standards Institute (BSI) to investigate possible methods to improve the quality of social marketing and behavioural change programmes in England. An early recommendation is that the NSMC develop a publicly available specification (PAS). A key part of the 2010/11 work programme for the NSMC will be the development of this PAS as part of our quality assurance remit.

Standards

The NSMC are continuing to support work to embed the standards as part of their quality assurance remit.

Developing products and tools to support social marketing

The NSMC are continuing to develop and adapt a comprehensive suite of practical resources to aid commissioners and deliverers to plan and deliver effective social marketing programmes. Tools such as the 'Planning Guide and Toolbox', which was launched in 2009 and will be developed further in 2010, are key parts of this.

Stronger Together, Weaker Apart:

The NSMC have been working with the Royal Society for Public Health and the Shaping the Future initiative to look at the inter-relationships and links between social marketing and health promotion. The social marketing NOS have been a key resource for this process, and will continue to be influential in developing activity within this area.

The NOS units provide a checklist of the knowledge and skills, which will be required in order to deliver a function effectively.

Links to other policy initiatives

Agenda for Change

This is the process for modernising pay and conditions throughout the NHS. It consists of three strands:

- The NHS Knowledge and Skills Framework (NHS KSF) and its associated development review process
- Job evaluation
- Terms and conditions.

The NHS KSF defines and describes the knowledge and skills which NHS staff need to apply in their work in order to deliver quality services. It provides a single, consistent, comprehensive and explicit framework on which to base review and development for all staff.

The standards complement the NHS KSF by providing specific and detailed descriptions of the performance required by practitioners and the knowledge and skills they need. NOS can support the development of competence and can be used to provide evidence of the achievement of the NHS KSF dimensions and levels and help individuals progress through 'pay gateways' in the NHS KSF.

The social marketing NOS have been mapped to the NHS KSF. A copy of the final mapping has been appended at Appendix A.

Where can I get more information and advice?

While the NOS for Social Marketing provide the overall framework of the standards of performance required of individual practitioners knowledge and skills, they are not a training course and cannot provide detailed information practitioners need. This will be found in professional education and training programmes, with updated information on the latest best evidence-based practice from various websites.

Who this guide is for

This guide is for public health professionals, communication and public engagement leads and other public sector commissioners who intend to use social marketing in a behaviour-change campaign, but who don't have in-house capacity for delivery.

The guide provides support with the procurement of specialist providers. It should be used in conjunction with existing commissioning and procurement protocols where appropriate. In addition, the Department of Health's *Transforming Community Services & World Class Commissioning: Resources Pack for Commissioners of Community Services* provides several case studies of social marketing interventions in deprived communities.

The guide assumes readers are familiar with generic procurement processes, but for those who are not, the section on Further Reading may be helpful.

Executive Summary

This guide provides a step by step process for procuring social marketing services. This executive summary provides an outline of the key steps. A one page summary of the guide is available at www.nsmcentre.org.uk.

What is social marketing?

Social marketing is defined by the National Social Marketing Centre (NSMC) as 'the systematic application of marketing alongside other concepts and techniques to achieve specific behavioural goals'. The NSMC has developed the Total Process Planning Framework, which highlights the five key stages in developing a social marketing intervention.

The stages of a social marketing project

Scope ➜ Develop ➜ Implement ➜ Evaluate ➜ Follow-up

The NSMC recommends that an initial scoping phase is commissioned in the first instance. The results of this phase should be thoroughly analysed before any decision regarding which stages should be procured is made. However, before you start procurement there are a number of factors you may need to consider.

Before procurement: what you need to consider

The first stage of the procurement process is to define your objectives. There are also several practical considerations to confirm, including securing the support and resources for the intervention. Research what similar work has already been conducted and whether ethical approval will be required. Several checklists providing guidance on the stages of the procurement process are available on the NSMC website, www.nsmcentre.org.uk.

How to write a tender brief

The document should include: background context; rationale; intervention aims and objectives; budget; timescale; and contact period start and end dates.

Organising the tendering process and pitch meeting

Organise the selection process, from providing the agencies with the relevant information, arranging the pitch meeting and putting systems in place to debrief the candidates.

Assessing the pitch

Select companies to pitch according to their experience of delivering social marketing projects, and their organisational and financial capability.

How to manage an agency

Once the selection has been made, clear communication between the agency and your organisation will be vital to the intervention's success.

Other things to consider

Ensure good value through determining the level of investment required for a measurable impact. Make full use of free online resources. Other financial aspects to consider include: the declaration of any corporate gifts; confirmation of intellectual property rights; and the possibility of using a Payment by Results (PbR) contract.

Conclusion

The procurement of social marketing services is a cost-effective way to bring specialist knowledge to public or third sector organisations. However, commitment and resources must be available to comprehensively and systematically manage the selection and delivery process.

A brief introduction to social marketing

Social marketing is increasingly being used by public sector organisations to better understand individual and group behaviour. These insights can be used to develop programmes which have a positive impact on behaviour and help sustain long-term behavioural change.

The NSMC suggests that there are eight social marketing benchmarks. These benchmarks can be used as a tool for identifying, and planning for, best practice.

NSMC social marketing benchmark criteria[1]

1. Customer orientation
2. Clear focus on behaviour
3. Informed by behavioural theory
4. Insight into what moves/motivates
5. Exchange – increase benefits/reduce barriers
6. Competition – external/internal
7. Segmentation – targets specific audience groups
8. Mix of methods – information/services/rules

The criteria provide a useful reference point for those procuring a social marketing programme, or applying a social marketing approach to overall strategic development. ShowCase, the NSMC's database of social marketing case examples, features interventions that meet all eight benchmark criteria. ShowCase is available at www.nsmcentre.org.uk.

Social marketing is about more than targeted advertising campaigns. An intervention may involve improved training for public sector staff or redesigning existing services. Interventions are designed based on the information revealed by in-depth research into the target audience. Social marketing is not a 'magic bullet', but when used in a systematic and integrated way, offers significant potential to improve the health and wellbeing of the population, and in particular to address health inequalities.

Effective Procurement

Public sector organisations have two key roles when outsourcing service provision: to be an advocate for the people; and to be the custodian of taxpayers' or donors' money. Effective procurement should lead to:

- Improved quality, responsiveness and efficiency of service delivery
- Improved understanding of service users through building relationships and a deep understanding of target audience needs

The procurement of social marketing programmes, and other activities that put people at the centre of service delivery, is part of this wider set of responsibilities.

For further information on the practice and theoretical base of social marketing, see Appendix Two.

[1]See Appendix One for further information about the Benchmark Criteria.

Case Study: Food Dudes

Bangor University

Aim: to improve fruit and vegetable consumption in the UK.

Academic Research: a person's food consumption patterns are established early in life. To improve the nation's long-term health, the work has to start with children.

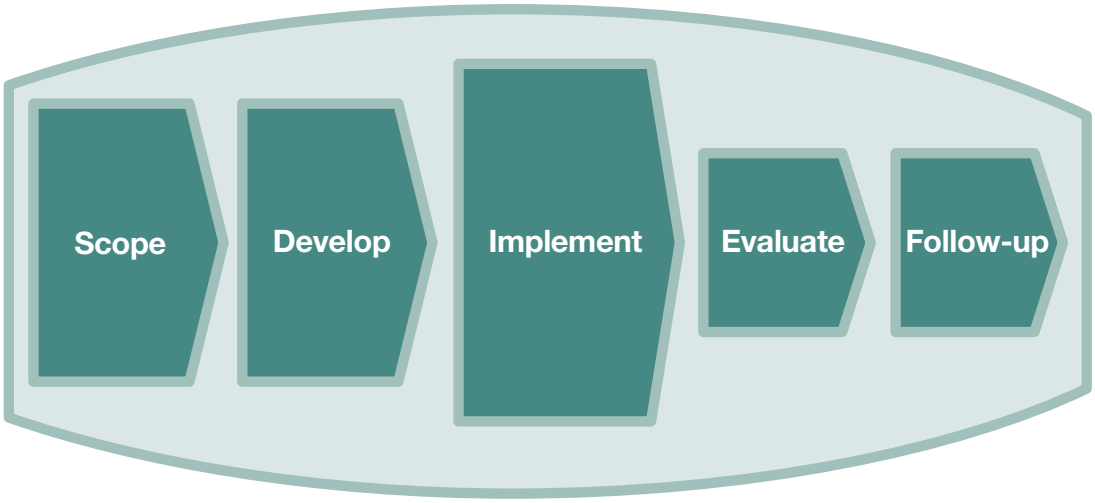
Objective: to increase the consumption of fruit and vegetables among four to eleven year olds in pilot schools.

Insights:

- Children are motivated by praise, recognition and rewards.
- Positive role models have a powerful influence over children's learning and value systems.
- The traditional approach of telling children what to do and what to eat is unsuccessful.

Intervention: The programme encourages children to taste fruit and vegetables repeatedly, so they develop a liking for them. In the process, the children come to see themselves as 'fruit and vegetable eaters'.

The programme borrows the idea of reward from commercial companies such as McDonald's, who present children with a toy when a Happy Meal is purchased. Food Dudes provides stickers and stationery as rewards for trying fruit and vegetables.



Results: During pilot trials in primary schools, fruit consumption of five to six year olds more than doubled, from 28 per cent to 59 per cent over six months, while vegetable consumption increased from eight per cent to 32 per cent. This was true even when popular sweet and savoury snacks were offered and demonstrates that children's learned preferences for unhealthy snacks can be overcome.

The programme is being rolled out in various locations around the United Kingdom. Further information about *Food Dudes* is available on the ShowCase database, at www.nsmcentre.org.uk.

The stages of a social marketing intervention

The NSMC recommends that a social marketing intervention follow a five-step process, as illustrated by the Total Process Planning (TPP) framework.

Total Process Planning framework

Big Pocket Guide NSMC 2007

Information gained during the evaluation and follow-up phases can be used in the scoping stages of future interventions.

The understanding and insights gained during scoping directly inform the selection of appropriate methods and a working proposition, that can be taken into the next development stage. Initial insights also provide a baseline by which interventions can be measured and evaluated.

Though all stages are important, investing time in the scoping stage[2] is critical. This helps to avoid crafting messages or interventions before an understanding of the target audience is achieved. It also ensures that a clear behavioural focus is identified from the start, and that relevant theory and ethical issues are considered.

It is not necessary to procure all stages of a social marketing intervention at the same time. It may be beneficial to initially procure the scoping stage in isolation and then analyse and consider the results prior to procuring any further stages.

[2]During the scoping stage, the issue is examined and an understanding of the audience and the behaviour involved is developed. The available human, financial and other resources are assessed, and the options that are most likely to have a positive impact on the lives of those being addressed are selected.

National Social Marketing Centre

Before procurement: what you need to consider

Careful planning at the start of the procurement process will save you time and money in the long run. Below is a list of questions you may want to ask yourself before starting the procurement process.

Preliminary questions

- Do you have formal sign off from your manager? Do you have the support of the Board/Chief Executive/ Director of Public Health if appropriate?
- Does the initiative align with your organisation's priorities?
- How does the initiative's timescale fit with your organisation's planning?
- Have you assigned a project manager?
- Are the available resources sufficient to initiate and manage a social marketing programme?
- Do you have systems in place to ensure the ongoing management and monitoring of the agency or provider throughout the contract period?
- Does the project need to be completed within a tight timeframe?
- Who else needs to be involved? Identify key stakeholders and secure their support. They should be involved as early on in the process as possible and consulted throughout.
- Has another organisation carried out similar work? Can the lessons learned from their experience be applied to your work?
- Investigate work which has been done in areas of the UK which are socio-demographically similar to yours. Would research from these projects be useful or is new research into your specific area or audience necessary? Consider whether or not there is a 'local effect' which needs exploring.
- Do you need ethics approval?[3] This can be a lengthy process, so you may prefer to secure it before hiring an agency. You could enlist local academic institutions to act as independent reviewers if appropriate. If formal ethics approval is not required, make sure this is documented in the event that your work is challenged.

Define your objectives

You should start by clearly defining your objectives.

- What exactly is it that you are trying to achieve? Be as specific as possible. 'To improve child health' is vague. 'To increase the consumption of fruit and vegetables among children aged four to seven from one portion per day to three portions per day' is a measurable objective based on existing data.
- Where are you now and where do you want to be at the end of the intervention? Do you have a baseline to work from or do you need to procure research to establish one? Do you have a specific and realistic goal for the provider to aim for? How will you evaluate your project once it has been completed?
- What are you looking to procure and why? Be very clear about what it is that you are buying. Do you need to procure new research about your target audience? Would the data you have already (from sources such as QOF) be sufficient if it were pulled together and analysed?

[3]The NSMC's Ethics Guide can be downloaded at www.nsmcentre.org.uk

Budgeting

The NSMC recommends that budgets are also allocated in stages where possible.

- An initial budget should be allocated for scoping the issue. By the end of this process you should have a complete understanding of the problem, and a report which sets out a clear statement of the problem and desired improvement. The report should identify target audiences, ascertain your assets and the obstacles to success. It should include a stakeholder and competitor analysis and a stakeholder engagement plan. A plan for the development phase should also be recommended.
- A full business plan should be developed after the scoping phase. This should form the basis of funding allocations to scale up and fully implement the recommended interventions. The business plan should also include: an evaluation plan; links to internal planning and procurement cycles; a revised stakeholder engagement plan; and a dissemination strategy.

Remember: you don't have to contract one company to manage the entire intervention. Different companies have different specialities, so it is prudent to look for specialist agencies to deal with each stage or different elements of each stage, and hire them individually. If, for example, the scoping stage reveals that existing services don't meet the needs of local people, then your intervention should address this issue. You should look to work with an agency which specialises in supporting service redesign, rather than advertising.

Case Study: What's Pants?

West Midlands NHS

Aim: to increase the number of women having cervical screenings by three per cent, especially in the 25 to 39 age group, and therefore reduce the number of deaths from cervical cancer.

Insights: Research with the target audience found that young women underestimated their risk of cervical cancer and believed other health behaviours were more important. Combined with the fact that many women found the services difficult to access, this meant that smear tests were not seen as a priority. It was also discovered that previous campaigns, which attempted to make cervical screenings attractive by offering free gifts and running promotional events, were a waste of time. Many of the young women interviewed described cervical screenings as 'pants', and said there was little prospect of making cervical smears appear attractive.

Intervention: Service provision was redesigned so clinics were open for longer hours and in more locations. The service was then re-launched using the slogan 'What's pants but could save your life?', which acknowledged the discomfort associated with cervical screenings but gently reminded women that cervical cancer is a life-threatening disease.

Results: The campaign generated an unprecedented increase in cervical screening uptake, with laboratories reporting a 15 per cent increase in the gateway age group during quarter one alone.

Further information about *What's Pants?* is available on the ShowCase database, at www.nsmcentre.org.uk.

How to write a tender brief

This section provides guidance on what to include in a tender brief. Tender documents will vary depending on the type of project you are procuring. Time spent developing the brief will save time and money in the long term and build a better relationship with your provider. You may not want to use all of the points outlined below. However, it is important that you take time to consider exactly what it is that you want to procure and write your tender brief accordingly.

General information

- **Background context and rationale for the project**
  This should include a description of the issue to be addressed, and should set out access to relevant research data evidence and related research.
- **A clear statement of the aims and objectives of the project or programme**
  This maybe a potential area of conflict between your organisation and the agency you work with, so it is essential that you are as explicit as possible. Include a description of your organisation's current and past work and research in the area.
- **Budget**
  Depending on your organisation's approach, you may or may not choose to give an indicative budget. Indicating the budget helps applicants tailor their proposals, but some organisations prefer not to do so in the belief that this will promote cost competition.
- **Project timescale, contract period, start date and end date**
  This should include anticipated outputs, such as reports, presentations or reviews, and dates for their delivery, as well as the timetable for application and decisions.

Scope of work

- **A detailed description of the work**
  This should include: specific activities expected; products to be developed and delivered; research; and evaluation. It is worth clarifying what the agency can expect from your organisation in terms of support: some agencies might expect that your organisation will carry out part of the work.
- **Reports and updates**
  You should specify whether you require progress reports and updates to be in writing. Would you be satisfied with telephone reports or do you require formal reports given in update meetings? A general rule of thumb is to get everything in writing, but flexibility can be advantageous. You may prefer daily telephone updates during the early stages of a project but once it is running, a monthly report is likely to be sufficient.
- **Follow up and dissemination activity required**
  You should specify whether you require any work to be carried out after the intervention to help promote and share learning.
- **Ethical considerations**
  Set out issues and processes that need to be addressed.

Requirements

- **Eligibility criteria**
  This section sets out who is eligible to apply.

You may have a requirement that the service is provided by a local supplier or one that has specific skills such as:

- language
- PR
- media buying and planning
- direct marketing
- merchandising
- new media
- creative development
- research
- survey design and delivery

You may require submissions only from agencies with certain experience, for example:

- marketing
- public relations
- market research
- specific black/minority ethnic (BME) group marketing
- youth marketing
- public education
- grassroots organising
- crisis management
- special events

Alternatively, you may wish to consider a supplier from the Framework for procuring External Support for Commissioners (FESC) list, agencies from other established rosters or suppliers who have carried out similar work in the public sector.

Your views on the acceptability of joint applications, or consortium bids

You may accept a lead agency affiliated with other agencies with specialised experience (for example, lead agencies without Black and Minority Ethnic (BME) marketing experience may still be considered, as long as they make it clear in their proposal which subcontractors with BME marketing experience they would partner with to create the plans for BME groups).

Check how this will be invoiced, as there may be duplication of costs. The ideal is one invoice from the winning bidder at a pre-agreed schedule.

Invoicing

Include requirements for invoicing arrangements, timing and process. Make sure you have established who will be working on the project and how they are 'charged' to you. Some companies charge an hourly rate which may incur additional costs. Will there be charges for 'extras' such as travel, printing and VAT?

Potential conflict of interest

You should require a statement of disclosure of affiliation or contractual relationships, direct and indirect, with any agency that you feel is incompatible with your organisation's values or the aims of the programme you are funding. You should also ask for details of any other form of current or previous relationships with such companies to be disclosed. This may include previous or current work for such organisations.

Most organisations will have protocols in place which need to be communicated to the agencies as required.

Applicant questionnaire

This should include questions regarding:

- agency mission and philosophy
- CVs of staff who will be working on the project
- agency years in business
- relevant social marketing experience
- public sector accounts, including pro bono work
- track record (examples and contacts for references, examples of accounts that demonstrate the agency's experience and skill in the area of the tender results)
- information about how the agency uses research in developing, executing and evaluating campaigns

Performance requirements

This section should stipulate performance requirements and the timeframe for delivery. Also set out any penalty clauses, incentives and contract break points. If you are including a Payment by Results element, make explicit the level of performance that results in payment or extra payment.

You may wish to include a 'risk sharing' element which protects both sides of the agreement: for example, that there will be a payment made to the agency if they deliver over requirements but also a refund to your organisation if they do not achieve all objectives. Advice should be available from your legal and/or procurement team.

Format for the proposal

Set out headings that you want the proposal to address. Again, they will differ depending on which stage of the process you are procuring. They may include:

- ideas for how the work will be developed and delivered
- proposed approach
- mix of interventions and tasks
- timetable
- stakeholder and partnering arrangements
- research and evaluation elements
- outline of budget allocations
- approach to ongoing tracking and reporting

You may also want to include examples (standard format for cover sheet, budget, action plan, and so on can be included as appendices). Supplier name and address, tax, and company reference numbers, and lead contact information should also be included.

A standardised approach to submissions will help prevent glossy or lavish applications that may distract from a systematic like-for-like assessment of the applications based on their content.

Additional materials entered into a 'bid' can be legitimately rejected if the tender proposal is clear on the expected presentation. For example, you can refuse to include a DVD presentation if this is not the format required by the bidders.

Process for proposal preparation and submission

Application deadlines

Include date and time of deadlines for letters of intent (confirming intent to submit full proposal) and complete proposal packages.

Key contact information at your organisation

This should include instructions for how to submit questions, ideally to the Project Manager, and how they will be responded to. It is essential that questions submitted and answers given are recorded and made available to all potential suppliers. It is also a good idea to include a Q&A sheet with the tender documentation, as this will help suppliers and reduce subsequent enquiries.

Instructions for how to submit application

A date and time for submissions should be clearly communicated. Any bids received after this time can be refused.

You should specify submission format (for example, whether fax or email versions are acceptable, and the number of copies required), and instructions for oral presentations, including time, date, location and form of presentation for pitch interview.

Most organisations will have a process in place for receiving and opening bids. If not, the NSMC suggests that two people open the bids, one being a CEO/Director or equivalent, the other recording the information and time of receipt. The original packaging may need to be retained for a period of time, as defined in your organisation's protocol.

Instructions for how to withdraw application

Reasons for disqualification

These may include incomplete or late submission; failure to meet requirements; submitting an application with false, inaccurate or misleading statements; and unwillingness or inability to fully comply with proposed contract provisions. Bids submitted in an incorrect format (for example, DVD instead of paper format) may also be rejected.

Review, evaluation and selection

You will need to set out the criteria for evaluation and ideally the respective weighting given to each one.

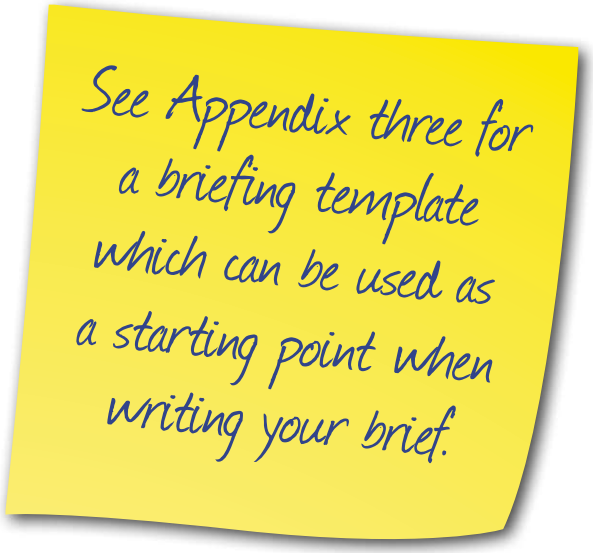


Table 1 gives a brief overview of the types of information you can expect to find in a tender for each stage of a social marketing project, and reflects the need to consider co-ordination and management of the process as an integral part of the tender. The stages may be combined in one tender or procured individually.

Table 1: Procuring tenders in social marketing

Scoping tenders

- Desk-based evidence reviews
- Desk-based data reviews
- Desk-based policy reviews
- Stakeholder surveys and interviews
- Target audience knowledge, attitude and behaviour surveys
- Target audience service experience surveys or observations
- Development of initial segmentations
- Development of propositions
- Competition analysis
- Review of existing social marketing case studies on similar topics and/or target audiences
- SMART objectives

Development tenders

- Development of intervention methods and materials
- Pilot of service changes, products and campaigns
- Development of segmentations and user understanding
- Development of insight and testing propositions
- Testing creative executions
- Coalition building
- Community engagement
- Development of evaluation plans and systems
- Risk analysis

Delivery tenders

- Service delivery contract
- Community engagement programme delivery
- Stakeholder engagement programme delivery
- Media campaign delivery
- Partnership building and coalition formation and management
- Policy lobbying
- Organisational change
- Programme management

Evaluation tenders

- Evaluation of intervention processes
- Evaluation of short term intervention impact
- Evaluation of knowledge and attitude change
- Evaluation of behavioural change
- Evaluation of physiological change
- Evaluation of partnership and coalitions
- Evaluation of specific programme and /or campaign elements
- Cost benefit analysis
- Return on Investment (ROI) analysis

Follow-up tenders

- Project publicity
- Project write-ups
- Conference presentations
- Publications
- Evaluation launches
- Political dissemination strategies

Things to consider

- Less can be more. Unnecessary background information can clutter the brief. A clear articulation of proposals for monitoring and managing the contract will ensure a strong two-way flow of information is maintained.
- It is good practice to ensure that key stakeholders have an opportunity to input into the brief.
- Choosing a procurement method is an important consideration: sealed bids don't offer the same flexibility as a competitive dialogue, which allows an agency to make an initial bid and then renegotiate.
- The tender should be sent out with a copy of the Benchmark Criteria (downloadable from the NSMC website) so agencies understand what will be expected of them.

Advice from an agency

Merchant Marketing Group

'The first step to commissioning the services of an agency is to focus on where you are now and where you want to go. The agency will work out how you could get there. Develop a clear and focused brief of not more than two sides of A4 that defines:

- Your objectives
- Your target audience
- What you want to say
- What you want to achieve
- How it will be measured

If you are unable to do this it is highly unlikely that the agency will be able to respond with an appropriate solution.

Make sure the agency is given a guide budget to work to so that they can tailor their response accordingly. Don't forget to set aside sufficient budget for research, including testing creative concepts with your target audience and putting in place benchmark research to evaluate the activity. This will ensure that you continually hone and improve your activity and ultimately make your investment work harder for you.

Above all, allow sufficient time for the agency to respond to your brief – allow a minimum of four weeks for an agency to respond to a tender.'

Adrienne Maidment, Merchant Marketing Group

Organising the tendering process and pitch meetings

The procurement of social marketing programmes may involve using approaches and tools which are new to your organisation. Critically appraising and assessing potential suppliers is crucial.

Checklist for compiling a shortlist for interview

Suppliers should demonstrate:	Score	Comments
1. A good understanding of social marketing.		
2. Experience of social marketing, especially in your specific area (NHS, environment).		
3. A clear approach to a social marketing procurement, based on the Benchmark Criteria.		
4. Sound company history (check references in person where possible).		
5. Adequate capacity (such as personnel and infrastructure).		
6. Capability of delivery.		
7. Financial competence.		

This checklist can be downloaded at www.nsmcentre.org.uk.

Scoring Guide

1. Poor - does not reflect requirements
2. Fair - meets some of the requirements
3. Good - meets all requirements
4. Excellent - exceeds requirements

Also consider the company's size, resources and position in the market, as well as the strength of the proposed project team and organisational management team. Sometimes a smaller company might be better suited to your requirements: bigger is not necessarily better. If possible, speak to former clients of the bidding agencies. You may also wish to refer to the criteria for assessing pitch meetings (page 22) to assist you in short-listing candidates.

Once you have compiled a shortlist, the companies on it should be invited to an interview or pitch meeting. A pitch is not a solo performance, but a dialogue and possibly the start of a long-term relationship. Remember that a company you do not select for the current project may be suitable for the next.

Again, your organisation may have protocols for pitch meetings which you must follow.

Selection

Once you have rated all the tenders, decide how many agencies you want to invite to interview. Agencies refer to interviews as 'pitch meetings'. It is usual to invite between three and five agencies to pitch their proposals, depending on the results of your checklist analysis and your organisation's procurement protocols.

Preparing for pitch meetings

Finding good suppliers of social marketing services can be problematic. There are many organisations that are skilled at pitching for work but comparatively few with a track record of successful delivery. To avoid falling victim to this, it is essential that companies bidding for work are interviewed consistently and rigorously. You must ensure that the company making the pitch has the capacity and capability to deliver your requirements.

It is not uncommon for agencies to send senior employees to pitch meetings and then allocate junior members of staff to work on the project. Insist on meeting the people who will be carrying out the work.

Points to consider when planning pitch meetings

- Do you need a facilitator for the meeting? Also, an administrator will be invaluable for tasks such as keeping time, assisting visitors with queries, directing visitors to the correct rooms, providing refreshments and so on. Taking the small practical details into account will help ensure the meetings run as smoothly as possible and make a good impression on those you are interviewing.
- Ensure you have allocated sufficient (and equal) time for each meeting. It is wise to factor in additional time for breaks between pitches. This is not only to allow the panel to have a break but also for panel members to debrief after each pitch.
- Did you answer all the agency's questions prior to the pitch?
- Have you provided all the research reports and other background material that the supplier might need?
- Are you going to hold a single meeting or a set of meetings before you make decisions? Make sure this is clear to all those pitching for the work.
- Have suppliers had a reasonable amount of time to prepare?
- Agencies may challenge or offer alternative suggestions to your brief. Consider in advance how you will respond to this.
- How will you evaluate the pitch process?
- Do you have a set of explicit written criteria that all those people on the selection panel will use to evaluate each pitch? Consider using a scoring sheet which will allow for a discussion at the end of the meetings.
- What system have you put in place to debrief all those who pitched?
- Are you putting a system in place for suppliers to give you feedback on the process?
- Have you invited key stakeholders to participate in the pitch meetings?

Case Study: Lessons learnt from the procurement process

West Essex Primary Care Trust (PCT)

'It's very powerful to admit that what you're doing isn't working.'
Adrian Coggins, Senior Health Improvement Specialist, Harlow Locality

West Essex PCT has procured the scoping stage of a project which aimed to address teenage pregnancy rates in Harlow. Few of the staff involved were experienced procurers and had to teach themselves the procurement process as they were doing it. Three key lessons of their experience are:

1. The importance of securing senior management support
Most PCTs are under enormous pressure to deliver quick results and are therefore unable to spare the resources needed for a comprehensive scoping stage. Staff in West Essex were able to secure senior management support for this vital stage by acknowledging the limitations of the existing strategy and arguing that continuing with an ineffective programme would not bring about the necessary results. They successfully argued the need to exit from the existing programme in order to develop a new one.

2. The need to be robust when defending your work
Opinion about the decision to conduct new research into the target audience was sharply divided. Some argued that analysing similar research from regions with a comparable socio-demographic make-up would be sufficient. However, the project team made a strong case for investigating if a 'local effect' was impacting on the social norms surrounding teenage pregnancy in Harlow. Primary research with teenagers in Harlow did reveal the existence of unique local attitudes. It is hoped that this insight will prove invaluable in developing future interventions.

3. Negotiating the quagmire of ethics approval
The experience of West Essex PCT shows that it is advisable to deal with the issue of ethics approval before proceeding with any project. It was unclear whether research governance alone was sufficient and no criteria for determining if formal ethics approval was required. Even identifying appropriate guidance was problematic and it became apparent that local requirements differed from national requirements. In the end, the PCT consulted the recently revised NHS Governance Framework and sought advice from local and specialist academic bodies.

Example questions to ask at a pitch meeting

These are some examples of general questions about social marketing which could be asked during a pitch meeting. Your organisation should have protocols for devising interview questions and you should also prepare specific questions which are pertinent to your project.

Q1) What is social marketing and how it can help us at a local level?

- The company should provide a clear description of social marketing theory and practice.
- A competent company will be able to talk about a social marketing case study, and discuss lessons learned from the example. The company will preferably have carried out their own social marketing programmes.
- For PCTs: ask the company how social marketing will help you aspire to achieve the World Class Competencies – this could be used when evidencing your activities for WCC Panels.

Q2) Describe the different stages of the social marketing process.

- If you are procuring the entire process, the agency should articulate the need for a planned process, including the importance of the front end 'scoping' stage and the evaluation stage to assess effectiveness.
- If you are procuring one stage of the process, the agency should be able to explain how that particular stage fits with the process as a whole.

Q3) How long do you expect the scoping/development phase to take?

- This question can be adapted depending on which stage of the process you are procuring.
- It is important that you agree a timescale for project completion which fits with your organisational planning.

Q4) What level of involvement will you expect from the procuring organisation?

- It is important that both you and the agency are clear about how involved you can be in the project.
- You should be realistic and candid about your level of involvement. Is the agency expecting more involvement than you have resources for?

Q5) Talk me through what you plan to do in the scoping phase and why.

- This question can be adapted depending on which stage of the process you are procuring.
- The agency should be able to provide comprehensive details about their work plan.

Q6) Talk us through your strategy for gaining insight into the target audience.

- The agency should describe which methodology they intend to use and the reasons behind this choice. They should demonstrate an understanding of the methods that work best with your target audience.
- Ask whether the organisation will undertake the research themselves or sub-contract to another agency. This is not unusual but could involve another set of contacts for you to manage.

Q7) Discuss your plan for ensuring that the project can be effectively evaluated.

- You should agree at the outset whether you intend to evaluate the process or outcome of the project and the form the evaluation will take (for example, quantitative, qualitative, using a control group).
- If you intend to hire a different agency to evaluate the project (recommended) it is important the agency for the project is aware of the criteria they will be evaluated on and the information they will be required to provide to the evaluators.

These example questions can be downloaded at ww.nsmcentre.org.uk

Assessing the pitch

In addition to checking the competencies and track record of suppliers, procurers will also need to scrutinise the specific proposals being put forward by the supplier. Some of the points will be irrelevant if you are procuring a single stage of the process, so you should adapt the list to suit your requirements. Again, ensure you comply with the protocols of your organisation.

Checklist for assessing the competence and track record of social marketing suppliers[4]	Score	Comments
Does the supplier understand your aims and objectives, and the strategy for achieving them?		
Has the supplier demonstrated a good understanding of your sector and the issues you are concerned with?		
Is the supplier committed to delivering against your targets and are they clear about the consequences of failing to deliver?		
Can they demonstrate an ability to use research techniques to segment, target, and design interventions that meet the needs of your target audiences? Are they subcontracting out a part of the process?		
If procuring the entire intervention, has a systematic scoping and development phase been included?		
Are there clear plans to involve the target group in programme development, implementation and evaluation?		
Have they provided evidence of audience and stakeholder engagement, partnerships, and collaborative delivery?		
Does the supplier have a track record of effectiveness? Were previous campaigns, projects or programmes fit for purpose? A dazzling or elaborate pitch may cover a lack of actual content. Look for evidence of clear behavioural change.		

[4]Drawing on www.comms.gov.uk/engage (2007) Government Communications Network and the Cabinet Office Engage programme. London.

Checklist for assessing the competence and track record of social marketing suppliers continued...	Score	Comments
Check for strong evidence of ability to customise solutions. Is there evidence that the agency understands your challenge? Or are they simply planning to replicate approaches used before?		
Do they have a history of collaborative delivery and a demonstrated ability to manage local stakeholders and partners? Ask for evidence of such work and for references. If possible, speak directly to former clients.		
Are there any conflicts of interest between your campaign and potential suppliers? This is particularly relevant where agencies work for both commercial and public sector organisations.		
Did you meet the team who will work on your project? Do they intend to subcontract any part of the project? To whom?		
Is the proposed programme complementary to the current policy and delivery environment?		
Is a comprehensive evaluation strategy proposed which covers process, impact and outcome?		
Is the proposed budget allocation realistic to develop, deliver and evaluate the aims and objectives of the programme?[4]		

Scoring guide

1. Poor - does not reflect requirements
2. Fair - recognises requirements but they are not fully understood or catered for
3. Good - meets requirements
4. Excellent - meets requirements and demonstrates added value

This checklist can be downloaded at www.nsmcentre.org.uk.

[4]See Appendix Four for an example of a budget.

Managing the agency

Remember: you are the customer! Your organisation is paying for this service and you need to show good value for public money.

Once you have procured work with an agency and agreed objectives for the programme, it will be necessary to ensure that the agency's performance is monitored and managed, and that a strong two-way flow of information is maintained over the contract period. Clear communication, and giving the agency positive feedback when they do things well, will foster a good relationship and encourage the agency to go the extra mile for your organisation.

Electing a single point of contact, usually the project manager, will be preferable for the agency, as it will help ensure that they receive clear instruction from a single source. Decide how the project manager can communicate the project's progress internally and who should be involved in approval procedures. Consider the availability of the project manager and other key internal stakeholders over the contract period and ensure deputisation over any periods of leave. For a large programme, you may wish to consider establishing a Management Committee to oversee the process.

The role of a Management Committee

- Consisting of key representatives from your organisation and the agency, it should meet at regular intervals to review and monitor progress and agree changes as the programme proceeds.
- The committee should work to an agreed set of terms of reference and report directly to the agency.
- Agree when and how you wish to meet and ensure these meetings are well attended by gaining high level buy-in before you start the project. If teleconferences are to be used, make sure they are well chaired.
- The committee should also be the forum for resolving issues and challenges that arise as the programme proceeds.

Effective communication will be vital to the success of the project. Resist holding back any information that an agency will require to carry out the project effectively. The agency should provide a programme schedule and report on progress to the project manager or at meetings of the management committee. Consider the necessary level of detail and frequency of the agency's reports. It is good practice to have key progress documented in writing, in addition to more informal updates. This flexibility can save agency time which can be better spent progressing the programme, rather than documenting every detail in written reports. On completion, a final meeting between the agency and your organisation to review the project can be a useful learning experience for future programmes.

Example of a programme for research into the eating habits of low income families

Pitch meeting	13 June
Sample, recruitment screener and pre-tasks	Completed by 18 June
Recruitment of families	w/c 19 & 26 June
Workshops with mothers	w/c 3 July
Workshops with children and mothers	w/c 10 July
Workshops with teachers	w/c 17 July
Family interviews	Completed by 2 August
Topline meeting	12 August
Recruitment for intervention workshops	Completed by 19 August
Intervention workshops	1-14 September
Final debrief end	20 September

The agency should be considered an extension of the workforce, rather then just a supplier. In turn, the agency should provide a service representative of their client's organisational values.

Utilise the agency's knowledge and experience, but be wary of any attempt to lead the intervention down a path which is not based on hard evidence or runs against what you, the procurer, wants. Programme procurers should be able to evaluate progress against the original brief, testing that the programme remains focused on the original aims and objectives.

If problems occur, a frank and honest dialogue between the procuring organisation and agency is required to establish how to get the programme back on course. In the unlikely event that the only solution is to end the agreement several issues need to be confirmed, including intellectual property rights of the material produced so far (see below) and any compensation for early termination of the contract.

Other things to consider

Add-ons

In pitching for your project, an organisation may add a few promotional 'freebies', contests for kids, free-phone information help lines and so on. While these ideas may appear to offer value for money, they may not actually help you achieve the results you want, so question how such add-ons will contribute to the overall programme. Any ‘gifts’ or ‘freebies’ must be declared in order to keep business relationships open and honest.

Avoiding panic buying

In circumstances where additional funds become available at short notice or there is a need to spend rapidly, try to avoid spending for its own sake. Rather, try to reinforce or increase effort in those areas that are demonstrating pay-back in terms of behavioural shifts.

If you have an under-spend at the end of the financial year, consider using the money to procure an extensive piece of research which can be used in an intervention in the following financial year.

Unnecessary costs

Review the existing evidence prior to procuring new research. Has something similar been done before? How would the new research expand the existing evidence base?

Also explore what resources could be secured for free. For example, NHS Evidence (www.library.nhs.uk) and the NHS Information Centre (www.ic.nhs.uk) have a wealth of evidence resources available for free to NHS employees. NHS Evidence also has a range of free medical images, which could be used to save on photographer or photo bank costs.

Threshold funding and sustainability

When investing in social marketing, a threshold point must be reached in terms of population awareness and action before any return on investment can be measured. In an increasingly competitive environment for attention and engagement, social marketing programmes are often not funded to a sufficient level that they are able to get ‘cut-through’ to their intended audiences. Low levels of investment are often compounded by stop-start approaches. Investors who are not able to commit sufficient funds over the required period must be made aware that the impact of their investment may be reduced

The amount of investment needed to achieve a measurable impact on behaviour is crucial and should be determined in the development phase of any social marketing programme. Procurers must be aware of the timeframe over which investment needs to be maintained. The issue of impact over time should be addressed when putting together a full business case for investing in social marketing.

Intellectual property rights

The contract should stipulate that you hold the intellectual property rights to the project and that the agency needs your permission to use or cite the material and results. An organisation is not required to share their methodology but the data they collect belongs to you. All data and output should be given to you at the end of the project.

Payment by Results

Some procurers of social marketing interventions mirror private sector marketing contracts by partly or fully introducing Payment by Results (PbR) into the contracting process. PbR involves agreeing a contract that provides funding to delivery organisations only if they meet the agreed targets set by the procurer. PbR often carries a premium over more traditional forms of activity-based contract as a greater level of risk is transferred to the delivery organisation. The potential increased rewards, and the possible loss if delivery is not up to agreed standards, can act as a powerful incentive to delivery organisations to perform. Such contracts also enable the procuring organisation to estimate returns on investment. The key issue in PbR-based contracts is to have clear and agreed levels of performance set out with verifiable means of assessing them.

Ensuring return on investment

One of the central issues facing managers is how to demonstrate that investment in social marketing makes a direct impact on the bottom line of their organisation.

Table 2 provides a simple illustration of a return on investment (ROI) analysis that procurers should include in their proposals for funding. Your finance team will be able to assist you. These kinds of assessments are also helpful as tools for tracking programme performance. They not only set out a clear economic case but provide senior managers with financial measures for assessing return on investment.

Table 2:
Example estimates of ROI on proposal to extend smoking cessation clinic opening times

Numbers of current attendances annually	1000
Percentage increase projected by increasing opening time	10%
Number of new clients	100
Percentage of new client expected to quit	25%
Number of additional quitters	25
Average cost saving per quitter	£3,000
Annual gross cost of savings (25 X £3,000)	£75,000
Annual costs of providing extended opening	£20,000
Net cost savings	£55,000
ROI £20,000 to £75,000	3.5 :1 OR 350%

Is it value for money?

Value for money (VFM) audits are non-financial audits to measure the effectiveness, economy and efficiency of investing in marketing. VFM reports only focus on efficiency and implementation as measured against the programmes goals and overall scale of the project.

VFM audits should be accompanied by cost-benefit analysis (CBA), a technique used to compare the various costs associated with an investment with the benefits that it proposes to produce or return.

Both tangible and intangible returns should be addressed and accounted for. Procurers should use CBA to assess the return they get in terms of behaviour change for each of the investments made in a programme. For example, what generated the most enquiries from the public about the stop smoking services? What was the cost of each of these contacts (that is, the number of contacts against the cost of providing the service)? Clearly, how the benefit is defined will be specific to the intervention.

Conclusion

Procuring social marketing services is a key activity for more and more public service workers. It is a straight forward process, but demands a systematic approach and the proactive management of prospective and successful suppliers.

Procuring social marketing can be a highly cost-effective way of bringing the necessary specialist skills to public or third sector organisations. However, procurement can be risky. Procurers need to dedicate sufficient time and resources to constructing a thorough and fair process and to actively managing chosen suppliers' delivery.

Appendices

Appendix One: NSMC National Benchmark Criteria

1. Clear behavioural goals

   Social marketing is driven by a concern to achieve measurable impacts on what people actually do, not just their knowledge, awareness or beliefs about an issue. Establishing behavioural goals requires going beyond the traditional focus on behaviour change to recognise the dynamic nature of behaviour within a whole population. It looks at both the positive and the problematic behaviours and relationship between them, and identifies and explores patterns and trends over time. An approach which focuses on the attainment of behavioural goals also describes the aim of an intervention in terms of specific behaviours, and considers manageable behavioural steps towards a main behavioural goal.

2. Understanding the customer through consumer research

   Social marketing begins and ends with a focus on the individual within their social context. Interventions respond to the needs and wants of the person, rather than the person having to fit around those of the service or intervention. In order to gain this understanding it is important that customer and market research is used, together with local intelligence, to inform the development of the work. This helps to avoid top down approaches and the tendency to start crafting messages or interventions before there is a real understanding of the customer.

3. Theory-based and informed

   It is important that the planned social marketing intervention actively assesses and draws from theory across different disciplines and professions. It should avoid applying the same theory or set of theories to every context, but focus on identifying those that offer the greatest potential for understanding the influences on behaviour.
   Example: Integrated Theory Framework, National Social Marketing Centre website www.nsmcentre.org.uk

4. Insight

   Social marketing is driven by actionable insights that are able to provide a practical steer for the selection and development of interventions. To develop such insight means moving beyond traditional information and intelligence (such as demographic or epidemiological data) to looking much more closely at why people behave in the way that they do. Consideration is given to the possible influences and influencers on behaviour, and specifically what people think, feel, and believe. Importance is placed on considering those things within and outside of an individual's control.
   Example: A mouth and bowel cancer initiative encouraging early attendance at health services. www.woscap.co.uk

5. Competition

   Social marketing uses the concept of competition to examine all the factors that compete for people's attention and willingness or ability to adopt a desired behaviour. It looks at both external and internal competition. External competition can include those directly promoting potentially negative behaviours but can also include other potentially positive influences that might be seeking to gain the attention of the same audience. Internal competition includes the power of pleasure, enjoyment, risk taking, habit and addiction that can directly affect a person's behaviour.
   Example: 'Truth', a youth-focused anti-tobacco campaign in the U.S. www.protectthetruth.org

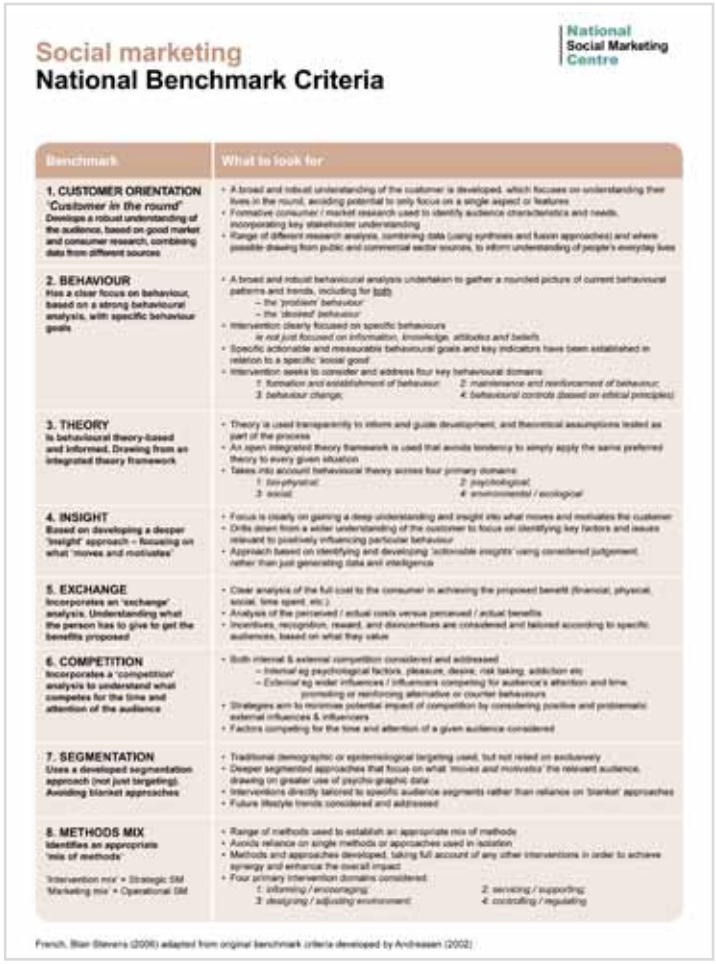
6. Exchange

   Social marketing puts a strong emphasis on understanding what is to be offered to the intended audience, based upon what they value and consider important. It also requires an appreciation of the full cost to the audience of accepting the offer, which may include: money, time, effort and social consequences. The aim is to maximise the potential offer and its value to the audience, while minimising all the costs of adopting, maintaining or changing a particular behaviour. This involves considering ways to increase incentives and remove barriers to the positive behaviour, while doing the opposite for the negative or problematic behaviour.
   Example: 'Think!', a national road safety campaign. www.thinkroadsafety.gov.uk

Appendices

7. Segmentation and targeting

Social marketing uses a developed segmentation approach. This goes beyond traditional targeting approaches that may focus on demographic characteristics or epidemiological data, by considering alternative ways that people can be grouped and profiled. In particular it looks at how different people are responding to an issue: what moves and motivates them. This is often referred to as psychographic research. It ensures interventions can be tailored to people's differing needs.
Example: 'Where's your head at?', an illicit drugs programme in Australia. www.drugs.health.gov.au



8. Marketing mix

Social marketing recognises that in any given situation there are a range of intervention options or approaches that could be used to achieve a particular goal. It focuses on ensuring that a deep understanding and insight into the customer is used directly to inform the identification and selection of appropriate intervention methods and approaches. As single interventions are generally less effective than multiple interventions, the issue is also to consider the relative balance or mix between interventions or approaches selected. Where this is done at the strategic level it is commonly referred to as the intervention mix, while at the level of a dedicated social marketing intervention the term marketing mix is more common.

Example, The national tobacco control campaign in England. www.givingupsmoking.co.uk.

Social marketing
National Benchmark Criteria

National Social Marketing Centre

Benchmark	What to look for
1. CUSTOMER ORIENTATION 'Customer in the round' Develops a robust understanding of the audience, based on good market and consumer research, combining data from different sources	• A broad and robust understanding of the customer is developed, which focuses on understanding their lives in the round, avoiding potential to only focus on a single aspect or features • Formative consumer / market research used to identify audience characteristics and needs, incorporating key stakeholder understanding • Range of different research analysis, combining data (using synthesis and fusion approaches) and where possible drawing from public and commercial sector sources, to inform understanding of people's everyday lives
2. BEHAVIOUR Has a clear focus on behaviour, based on a strong behavioural analysis, with specific behaviour goals	• A broad and robust behavioural analysis undertaken to gather a rounded picture of current behavioural patterns and trends, including for both – the 'problem' behaviour – the 'desired' behaviour • Intervention clearly focused on specific behaviours *ie not just focused on information, knowledge, attitudes and beliefs* • Specific actionable and measurable behavioural goals and key indicators have been established in relation to a specific 'social good' • Intervention seeks to consider and address four key behavioural domains: *1: formation and establishment of behaviour; 2: maintenance and reinforcement of behaviour; 3: behaviour change; 4: behavioural controls (based on ethical principles)*
3. THEORY Is behavioural theory-based and informed. Drawing from an integrated theory framework	• Theory is used transparently to inform and guide development, and theoretical assumptions tested as part of the process • An open integrated theory framework is used that avoids tendency to simply apply the same preferred theory to every given situation • Takes into account behavioural theory across four primary domains: *1: bio-physical; 2: psychological; 3: social; 4: environmental / ecological*
4. INSIGHT Based on developing a deeper 'insight' approach – focusing on what 'moves and motivates'	• Focus is clearly on gaining a deep understanding and insight into what moves and motivates the customer • Drills down from a wider understanding of the customer to focus on identifying key factors and issues relevant to positively influencing particular behaviour • Approach based on identifying and developing 'actionable insights' using considered judgement, rather than just generating data and intelligence
5. EXCHANGE Incorporates an 'exchange' analysis. Understanding what the person has to give to get the benefits proposed	• Clear analysis of the full cost to the consumer in achieving the proposed benefit (financial, physical, social, time spent, etc.) • Analysis of the perceived / actual costs versus perceived / actual benefits • Incentives, recognition, reward, and disincentives are considered and tailored according to specific audiences, based on what they value
6. COMPETITION Incorporates a 'competition' analysis to understand what competes for the time and attention of the audience	• Both internal & external competition considered and addressed – *Internal* eg psychological factors, pleasure, desire, risk taking, addiction etc – *External* eg wider influences / influencers competing for audience's attention and time, promoting or reinforcing alternative or counter behaviours • Strategies aim to minimise potential impact of competition by considering positive and problematic external influences & influencers • Factors competing for the time and attention of a given audience considered
7. SEGMENTATION Uses a developed segmentation approach (not just targeting). Avoiding blanket approaches	• Traditional demographic or epidemiological targeting used, but not relied on exclusively • Deeper segmented approaches that focus on what 'moves and motivates' the relevant audience, drawing on greater use of psycho-graphic data • Interventions directly tailored to specific audience segments rather than reliance on 'blanket' approaches • Future lifestyle trends considered and addressed
8. METHODS MIX Identifies an appropriate 'mix of methods' 'Intervention mix' = Strategic SM 'Marketing mix' = Operational SM	• Range of methods used to establish an appropriate mix of methods • Avoids reliance on single methods or approaches used in isolation • Methods and approaches developed, taking full account of any other interventions in order to achieve synergy and enhance the overall impact • Four primary intervention domains considered: *1: informing / encouraging; 2: servicing / supporting; 3: designing / adjusting environment; 4: controlling / regulating*

French, Blair Stevens (2006) adapted from original benchmark criteria developed by Andreasen (2002)

Appendices

Appendix Two: Social marketing theory and practice

Marketing techniques can assist public health work but it is important to understand that social marketing doesn't use marketing in an isolated way. It integrates and connects it with the best approaches from existing social sciences, public health and health promotion. This unified approach helps to achieve the greatest potential benefit and impact.

Behavioural goals

It is the focus on behaviour that is at the core of social marketing. Social marketing aims to achieve a measurable impact on what people actually do. It doesn't just focus on achieving changes in behaviour, but takes a much wider approach to focus on how to promote, establish and sustain changes over time.

Social or public good

The primary purpose of social marketing is to help achieve improvement in the lives of people. This helps to distinguish it from commercial marketing where the primary purpose is financial, in terms of profits or shareholder value. This should not be taken to mean that commercial marketers can't also contribute to a social or public good, but rather in social marketing this aspect is the primary focus.

Issues to highlight from the definition

Social marketing, like all good approaches, is dynamic and evolving. Increasingly, we talk of social marketing as having two parents. The social parent draws on the best learning and skills from the social sciences and social policy areas, including public health and health promotion. The marketing parent brings the best of both commercial and public sector marketing approaches.

Originally, in the 1960s and 1970s it was described as the use of commercial marketing in the public sector. However, in the last decade it has become a much more integrated and mature approach that harnesses the best of marketing alongside the extensive learning and experience from social sciences and social policy. This means that rather than competing with best practices in public health and health promotion it increasingly integrates with them.

The language of social marketing

Social marketing draws on some language that is more commonly used in the commercial sector, which can at first be off-putting to those who have been grounded in public sector language and culture. For example, traditional marketing commonly uses the four Ps of marketing: product, price, place, and promotion. In relation to purchasing behaviour this has proved a robust approach in helping to think through ways to market effectively to a given audience. However, in social marketing the behaviours being addressed are commonly more complex and can be influenced by a wider range of factors.

While the four Ps of commercial marketing can be useful as a starting point, in practice social marketing uses a broader analysis to inform development of appropriate interventions. It can nevertheless be very useful in public sector initiatives to ask some basic questions to help review what is being developed.

The use of the term customer in social marketing should not be seen as being limited to the public. It can just as well be applied to key decision-makers, planners or even politicians who it may be necessary to target in order to achieve a particular goal. Part of the effective scoping of a social marketing initiative identifies who the key audiences or customers need to be, and what behaviours are being focused on.

Social marketing can be used to inform and assist policy formulation, as well as strategic development and delivery. When considering how social marketing might be able to assist work, it is useful to distinguish between using it strategically and using it operationally.

Appendices

Strategic social marketing

Where social marketing concepts and principles are used to inform and enhance policy formulation and strategy development. In particular, where a strong customer focus directly informs the identification and selection of appropriate interventions.

Operational social marketing

Where social marketing is undertaken as a planned process and worked through systematically to achieve specific behavioural goals. Critical to this process is the initial scoping stage which examines and assesses issues.

Budget example

Appendix Four: Budget example

Sample budget for a home-based healthy eating programme developed for a project in the north of England

Interviews with expert panel	No cost
Preparation and literature review	£5,000
Staged pre-tasks:	
• 12 x meal time observations @ £250 per family	£3,000
• 12 x shopping trip observations @ £100 per family	£1,200
• 12 x family interviews ´£200 per family	£2,400
Family Workshops:	
• 6 x including accompanied supermarket trip@ £4500 per family	£27,000
• 6 x without supermarket trip @ £4000 per family	£24,000
Preparation of final report	£2,000
Topline meeting	No cost
4x intervention workshops @ £3000 per session	£12,000
Travel & subsistence out of London @ 8 x £700	£5,600
TOTAL INVESTMENT	**£82,200**

Foreword

This report has been developed by Professor Lynn Eagle from the Bristol Social Marketing Centre, Bristol Business School University of West of England with contributions from staff at the National Social Marketing Centre.

The increased profile of social marketing has led to calls for mechanisms by which ethical issues can be indentified and resolved. While there has been some work undertaken on the development of checklists and codes of ethics, there is a clear need for widespread and vigorous debate on the content of such resources and the means in which they can be implemented.

Firstly, there is a need to develop a common understanding of ethics within marketing in general and within social marketing in particular. There is then the need to recognise the range of ethical dilemmas that may occur in the development and implementation of social marketing interventions. These need to be considered together with the range of unintended effects already identified as occurring within the field, particularly in relation to health promotion.

There are several common frameworks that can be used to evaluate and debate ethical issues. The two most commonly used are based on intention-focused or on outcomes focused reasoning. The latter includes the often cited utilitarian perspective in which behaviour is regarded as ethical if it results in the 'greatest good for the greatest number'. Additional frameworks are founded on relativism, asserting that there cannot be a universal set of ethical principles; implicit social contracts governing the rights and responsibilities of members of society; and then we have those based on theories of justice.

Problems may arise when social marketing interventions aimed at helping one segment of the population may disadvantage others. They may also arise where marketing communications through mass media form a substantial part of an intervention. While ethical frameworks are not explicitly stated in the provisions of communications industry regulators, a recent ruling from the Advertising Standards Authority indicated that, even if positive outcomes for large numbers of the target population are achieved, psychological harm among those not part of the target group render an intervention unethical and thus unacceptable. This suggests the need to re-evaluate the use of fear appeals as part of interventions.

Checklists and codes of ethics aimed at the social marketing sector must be viewed within the context of existing professional and sector codes. Attention also needs to be paid to other regulatory mechanisms, such as the Research Governance Framework of the Department of Health which impacts on research and interventions conducted under the auspices of PCTs. While specific social marketing codes may have value in educating inexperienced practitioners and sensitising them to ethical issues, considerable development work is still required.

...all stakeholders must be involved in discussions regarding the development of ethical codes of practice within social marketing

In order to ensure adoption and support, all stakeholders must be involved in discussions regarding the development of ethical codes of practice within social marketing. A particular challenge relates to deciding on mechanisms by which breaches of codes should be identified and dealt with. This is necessary due to the diverse range of disciplines that are involved in the sector, and the lack of formal disciplinary mechanisms within social marketing compared to those found in other professions. Draft outlines of procedures and processes that might be appropriate have been included here, along with a draft code of ethics for social marketing.

We welcome comments and suggestions on this report from all those concerned with developing effective social marketing practice. The National Social Marketing Centre will consult widely on the draft code of conduct set out in this report, with a view to publishing a national code of practice for social marketing by the end of 2009.

Professor Jeff French
Director
National Social Marketing Centre

Note: the literature review section of this report is based on material prepared for the forthcoming text: Eagle, L., Dahl, S., Tapp, A., & Bird, S. (2009) Social Marketing: Principles and Practice. Material used with permission of the publisher.

Introduction

This report starts with a brief discussion of the definition of ethics and of the types of ethical dilemmas that may occur within social marketing activity. The major ethical frameworks that are evident within the academic literature are then discussed before an examination of specific issues relating to targeting, the use of fear appeals and the role of culture in establishing ethical standards.

The strengths and weaknesses of codes of ethics are then reviewed, with challenges in development, gaining acceptance and adoption highlighted. Mechanisms that could be considered in maintaining codes, providing advice on ethical dilemmas and possible disciplinary processes that might be appropriate within a sector that does not have formal membership and accompanying disciplinary procedures are then presented.

Before considering each of these topic areas, there is, of course the issue of who defines desired behaviour, which behaviours to target for change and the level of resources that should be allocated to this. Generally, behaviour change may be aimed at 'social good', such as improving overall population health and wellbeing, or minimising health inequalities and addressing obesity and exercise issues. Interventions aimed at minimising the adverse effects of behaviours such as smoking or unwise alcohol consumption may be seem as an infringement of personal freedoms, rights which need to be balanced against the actual or potential harm inflicted on others through these actions.

Additionally, consideration of potential harm to others that may arise as a consequence of a social marketing intervention should be a requirement in the development of any intervention. Indeed, in developing interventions, we must ask, "who has the mandate to represent large and diverse populations for the purpose of informed consent, and how can this be implemented?"[1, p. 537]. How are individual freedoms of choice and individual rights balanced against benefits for society as a whole? And, in communicating risk, who decides whether levels of risk that may be acceptable to different segments of society are acceptable to society as a whole[2].

How are individual freedoms of choice and individual rights balanced against benefits for society as a whole?

Some specific criticisms of social marketing have included the following[3]:

- The concept of exchange rests on the view that people act rationally when there is much evidence to suggest this is not the case.
- Social marketing is patronizing and manipulative with its focus on behaviour change,
- Social marketing appeals to people's base instincts
- Social marketing extends the power imbalance between the state and individuals in favour of the state.

A detailed analysis of these issues can be found in the original paper cited above. What is clear however is that social marketing, like all other interventions, needs to be guided by ethical standards. The checklist and draft code at the end of this paper sets out some of the key questions that social marketers need to address to ensure ethical practise is maintained

Ethics is a term which is debated vigorously, with multiple definitions evident, depending on the perspective of the discipline within which the debate is occurring.

For example, within philosophy, the focus may be on moral choices, i.e. those regarding what is right or just behaviour, as opposed to simply remaining within the provisions of the law in a specific situation and the nature of morals themselves. Within specific professions, such as medicine or accountancy, the debate may be more focussed on the rules or standards governing the conduct of members of their profession.

Ethics Defined

In terms of ethical choices that may be encountered in everyday life, the following example may help to illustrate the type of issues covered by ethical decision making:

"Ethics is about norms and values of a certain seriousness, about standards and ideas, i.e. ones that people cannot easily neglect without harming others"[4 (p. 15)].

A more expansive definition that captures some of the challenges within ethical dilemmas is:

"Typically defined as the study of standards of conduct and moral judgement. It is particularly useful to us when it helps us to resolve conflicting standards or moral judgements. It is not as simple as deciding what is right and what is wrong. The toughest ethical dilemmas arise when two seemingly right principles are in conflict"[5 (p. x)].

As with social marketing itself, there is no common agreement regarding a definition of ethics as it applies in the business/ marketing context

As with social marketing itself, there is no common agreement regarding a definition of ethics as it applies in the business / marketing context, although many definitions are similar to each other, as shown below:

"Business ethics comprises moral principles and standards that guide behaviour in the world of business"[6 (p. 6)].

"Ethics is about norms and values of a certain seriousness, about standards and ideals i.e., ones that people cannot easily neglect without harming others, or without being looked at disdainfully by significant others" [4 (p. 15)].

Ethics should be viewed within the wider context of formal government structures. Most communities have their own system of laws enacted by a central parliament. Member states of the European Union are also subject to endeavours to harmonise legislation and regulation across all members[7]. Beneath, and subordinate to, broad legislation are a series of regulations. These generally apply to a specific business sector or occupational category such as medicine.

There is a wide range of codes ranging from general guidance or best practice advice through to explicit requirements that, if breached, can lead to an ending of the right to practice a specific occupation, or even to criminal prosecution. Codes of professional practice exist to regulate specific professions such as doctors, civil servants, social workers etc. These contain specific ethical provisions and clear sanctions that will be incurred should these provisions be breached.

Within marketing, marketing communication is, in many countries, self-regulating[8,9], in that the various communication industry sectors, including advertisers, advertising agencies and the media have co-operated in drawing up codes of practice. In the UK, this operates via the Committee of Advertising Practice. A major regulatory body, such as the Office of Communication (OFCOM) in the UK, oversees the processes by which advertising conforms to the relevant codes. Supporting this structure, joint industry bodies, such as the Advertising Standards Authority in the UK, may exist, to maintain and administer the codes and ensure consistent advertising standards across media. Additionally, they may provide an advisory service, interpreting relevant statutes and industry codes and applying them to scripts of proposed ads and vetting completed ads prior to their first screening. For an example of current codes, see http://www.asa.org.uk/asa/codes/

However, these regulations do not explicitly state precise ethical principles, providing only general guidelines regarding activity such as decency and the circumstances under which fear and distress might be considered acceptable. Yet, the Advertising Standards

Authority's 2007 ruling on the Department of Health smoking cessation 'fishhook' campaign (discussed in more detail in Section 4), suggests that a de facto framework exists. Any consideration of social marketing ethics needs to be considered in the context of these frameworks.

The generation of fear is by no means the only dilemma facing social marketers, as the following section demonstrates.

Ethical dilemmas within social marketing

There is some evidence to suggest that some misgivings regarding the ethics of social marketing stem from a wider distrust of commercial marketing, particularly marketing communication/advertising[10]. The main ethical criticisms of marketing communication overall include allegations that it is inherently untruthful, deceptive, unfair, manipulative, and offensive. Other assertions relate to the creation and perpetuation of stereotypes, causing people to buy things they do not really need, and playing on people's fears and insecurities[11 (p. 62)].

anxieties have been identified regarding the appropriateness of tactics used for social marketing and the use of fear appeals

Concerns regarding the ethicality of social marketing mirror many of these perceptions. For example, while anxieties have been identified regarding the appropriateness of tactics used for social marketing and the use of fear appeals, issues have been also been identified relating to how competing needs might be judged and what information it is reasonable to seek from people in order to develop social marketing campaigns[12]. More recently, criticisms have been levelled, especially by opposition politicians, at the use of public money to fund documentaries that show government policies or funded activity in a sympathetic light[13]. While it could be argued that this type of activity is not social marketing per se, it highlights the perennial distrust of government interventions on the grounds that it is unwarranted intrusion and nannyism[14].

A surprisingly wide range of potential unintended effects of health communication campaigns have been reported in the academic literature; these have been summarised in Table 1 below.

Table 1 Unintended Effects of Health Communication Campaigns[15 (p. 300)]

Effect	Definition
Obfuscation	Confusion and misunderstanding of health risk and risk prevention methods
Dissonance	Psychological discomfort and distress provoked by the incongruence between the recommended health states and the audience's actual states
Boomerang	Reaction by an audience that is the opposite to the intended response of the persuasion message
Epidemic of apprehension	Unnecessarily high consciousness and concern over health produced by the pervasiveness of risk messages over the long term
Desensitization	Repeated exposure to messages about a health risk may over the long term render the public apathetic
Culpability	The phenomenon of locating the causes of public health problems in the individual rather than in social conditions

Effect	Definition
Opportunity cost	The choice of communication campaigns as the solution for a public health problem and the selection of certain health issues over others may diminish the probability of improving public health through other choices
Social reproduction	The phenomenon in which campaigns reinforce existing social distributions of knowledge, attitudes and behaviours
Social forming	Social cohesion and control accompanying marginalization of unhealthy minorities brought about by campaigns
Enabling	Campaigns inadvertently improve the power of individuals and institutions and promote the images and finances of industry, such as designated-driver campaigns which allows the alcohol industry to portray themselves in a positive light by supporting the campaign, deflecting attention from issues such as underage drinking and drink-driving
System activation	Campaigns influence various unintended sectors of society, and their actions mediate or moderate the effect of campaigns on the intended audience

Given the potential negative effects outlined in Table 1, there is a clear need for systems or structures to help present or resolve these issues.

Ethical Frameworks

While there are a number of potential frameworks available which are derived from the field of philosophy, there is no consistency in the literature as to which might apply in specific circumstances. Table 2 provides a brief overview of the main provisions of the most commonly cited frameworks. These focus either on intentions (deontology, from the Greek word for 'duty') or consequences (teleology, from the Greek word for 'ends'; also referred to as consequentialism), with the latter being broken down further into utilitarianism and egoism[5, 16, 6].

Table 2: Overview of Common Ethical Frameworks (adapted from Ferrell & Fraedrich, 1994: 54[6])

Key Provisions	Comments
Deontology (based on the work of 18th century philosopher Immanuel Kant): Means focussed	
Holds that there are ethical 'absolutes' that are universally applicable, with the focus on means or intentions.	Accepts that actions intended to do good may have unintended negative consequences
Teleology / Consequentialism.: Outcomes / ends focussed	
Focuses on the outcomes or effects of actions. Usually divided into: a) Utilitarianism in which behaviour is ethical if it results in the greatest good for the greatest number b) Egoism, in which the benefits to the individual undertaking action are stresses and the impact on other people is deemphasised	Difficulties arise when comparing alternative courses of action with different levels of potential impact, for example, a programme that provides minor benefits to all, versus one that provides major benefits to many but no, or negative impact on others.

Key Provisions	Comments
Relativism	
There is no universal set of ethical principles, individual cultures, societies or social groups may have their own ethical frameworks; no set of principles is superior to others and no group should judge the ethical standards of other groups.	Ignores the possibility that a) a group's principles are based on incorrect information and b) the implications of a group's principles being repugnant to other groups (e.g. sexism or racism)
Social Contract Theory	
Implicit contract exists between the state and / or organisations and individuals or groups regarding rights and responsibilities as a member of society	Given that the contract is implied rather than stated explicitly, there is no shared understanding of what rights and responsibilities apply to the various parties.

Thus a social marketing intervention that was driven by good intentions would be acceptable under deontological reasoning but not under teleological reasoning if unintended negative consequences occurred. If a deontological (means) perspective was used in developing a social marketing intervention, emphasis would be on ensuring that the methods used did not cause harm. However from a teleological (ends) perspective, the main issue would be ensuring that the outcome produced the 'most good' overall.

Other less commonly used frameworks shown in Table 2 suggest that there is no universal set of ethics that can apply across all sectors of society. This is due to the increasing diversity of society and different perspectives that may be held within cultures or groups and therefore each group's ethical viewpoint should be held to be equally valid.

...social contract theory, suggests that there is an implicit contract between the state and individuals within society.

An additional perspective is suggested by social contract theory, which suggests that there is an implicit contract between the state and individuals within society[17]. This is reflected in documents such as the UN Charter which makes reference to basic assumptions about the right of all citizens to health[18] and is consistent with the principle of exchange which is discussed in the next chapter.

Social Contract Theory is also used in discussions relating to social justice, i.e. the belief that every individual and group is entitled to fair and equal rights and participation in social, educational, and economic opportunities. However, while the aspirations of social justice are laudable, there are problems with the inconsistent interpretation of the term and whether opportunity or outcome is being discussed[19]. Coupled with this are also a range of theories relating to assumptions regarding universal human rights. These hold that everyone should have equal entitlement to the right to life, safety, truthfulness, privacy, freedom of conscience, speech, and private property[20].

A further problem is the lack of a clear and unambiguous statement of the ethical framework guiding decisions by regulators. For example, using the Ferrell and Fraedrich (1994) interpretation, the Department of Health (DH) fear-based smoking cessation 'fishhook' campaign (noted in Section 2) would be acceptable under deontological reasoning[21,22], given that its intention was to help smokers take steps to quit smoking. Others would argue that it is unacceptable to knowingly cause anxiety under deontological reasoning. Their argument is that, even though the intention was to help a specific segment of society, the methods used were likely to cause

harm (anxiety) for others. They would also hold that it violates teleology's utilitarian principle of resulting in the greatest good for the greatest number. A graphic from the campaign is shown below[23].

Thus, the issue of which frameworks could and should apply remains problematic, and must appear more than a little daunting to inexperienced social marketers. Many social marketing texts provide, at best, only brief discussions of ethical challenges; much of the material promoting the potential benefits of social marketing is devoid of any significant consideration of ethical issues[5, 24, 25] . One edited text focussing specifically on ethics in social marketing[5] does not provide a consistent framework across the various contributions.

Ethical Issues in Targeting

Some of the specific areas of social marketing activity that raise ethical issues are those which relate to targeting. A fundamental strategy for marketers is to "select target markets they can best affect and satisfy" [26(p. 7)]. This strategy, when applied to social marketing activity, may result in some segments of the target population being excluded because they are difficult, or comparatively costly to reach[27]. Exclusion of groups due to targeting may also be challenged when public services are required to provide universal and equal access.

Literacy Issues

Literacy issues tend to be largely ignored in the provision of health information material[28]. Varying definitions of literacy make cross-study comparisons difficult, however, there appears to be agreement that some 20% of the population of most developed countries have severe literacy problems and that a further 20% have limited literacy[29, 30]. The specific needs of these groups must be taken into account, acknowledging their difficulties but avoiding the appearance of condescending in the design and delivery of interventions1 .

Children

Where social marketing campaigns are directed at children or adolescents, additional factors must be considered, starting with data collection. Depending on the age of the potential participant in an intervention, parental consent may be required for the participation to commence or continue. An ethical dilemma may arise if the child or adolescent does not wish to participate. In such circumstances, they should not be made to feel that they are being coerced into taking part in research, treatment trials or social marketing intervention trials simply to please "parents or other authority figures", [31, p. 410].

Non-indigenous Populations

A factor that may also be overlooked is that of the needs of non–indigenous populations. These may retain substantial influences, including cultural values and language preferences, from their country of origin for a considerable time. As a result, they may be confused by messages such as those that recommend limiting intake of certain foods when these are not restricted in their home countries[32]. Further, failure to take their (culturally based) perceptions of health-related issues[33] into consideration may result in interventions not succeeding. The same is also true in situations where indigenous populations do not represent the most powerful cultural and economic groups in society, again there needs may be overlooked in favour of more dominant non–indigenous populations.

Methods

Issues also arise in relation to decisions around deciding when it is acceptable to legislate (such as seatbelt use or the 2007 smoking restriction legislation), when to focus on education, when to change service provision, and when to incentivise behaviour. For example, in the case of service provision, making a service available to a specific segment of the population may restrict access to others, such as women-only swimming or exercise classes. In the case of incentives, is it ethical to incorporate them into interventions that might be appealing but with qualifications that make it impossible for some people due to economic or social pressures? For example, smoking cessation campaigns using incentives[34] may be frustrating for individuals in low socio-economic groups who may want to give up smoking but who are not supported by family or friends[35]. In some communities, smoking prevalence may be sufficiently high as to constitute a behavioural norm[36]. Incentives can also have perverse effects by making the behaviour that is trying to be changed actually more attractive or rewarding. As an example, offering prizes or financial incentives to stop smoking could encourage some people to take up the habit in order to then gain the reward being offered for quitting.

Partnerships

Ethical issues arise when organisations enter into partnership to develop or deliver social marketing interventions. Community-based partnerships between non profit-making partners tend to be relatively unproblematic. However, concerns are particularly evident when partnerships involve commercial organisations, i.e. public-private partnerships. The latter term is currently receiving frequent exposure in international public health[37] and covers areas as diverse as waste management and care for the aged[38]. The nature and effectiveness of these arrangements has not been widely studied but it has been noted that such activity is "much copied but poorly researched", [39, p. 41]. More importantly, interest in the nature of these partnerships is tempered by questions regarding "when, if at all" such partnerships are necessary or desirable, [40, p. 771].

There may also be philosophical opposition to any involvement of the commercial sector in social marketing, as evidenced by at least one recent title "Social Marketing:

Why Should the Devil Have All The Best Tunes?"[41]. Recent policy documents[42] see, for example treat public-private partnerships aimed at addressing health-related problems as unproblematic and as such they appear to be encouraged. For example, the Department for International Development (DFID) cautiously endorses direct and indirect private sector involvement in activity such as health promotion through a range of rules, suggesting that the involvement can have a significant positive impact on intervention effectiveness. However, they add a caveat that the specific nature of private sector involvement must be clarified before an intervention is implemented[43].

It is easier for commercial organisations to engage in partnerships or alliances that support popular and media-attractive causes, such as breast cancer which has attracted over 70 commercial organisations. This is possibly because it attracts favourable publicity and is not associated with any controversial behaviour. However commercial associations are likely to be focussed on 'glamorous' aspects such as research rather than on mundane practicalities such as patient transportation[44]. The rationale for a commercial organisation becoming involved in other areas of activity may be radically different.

There are many advantages in establishing successful partnerships. For the public partner, these include access to skills, expertise and resources lacking in the public sector[45]. The private partner may obtain credibility, access to market intelligence and a way of associating the organisation with ethical business practice[46]. Reviews of successful partnerships have identified the following factors as necessary for effective partnerships:

- Agreement on specific goals
- Relevant complementary expertise
- Long term benefits for all stakeholders
- Equitable contribution of expertise and resource
- Transparent arrangements
- Agreed ethical codes[45, 46, 40]

The sustainability of activity if contributions by either partner cease should also be considered[47]. This raises the question of whether it is ethical for a partnership to run only for a short period of time, leaving potential beneficiaries unable to access an intervention when the partnership ceases and resources are withdrawn.

Even when the above factors are taken into account, there are differing levels of acceptability or perceived conflict of interest across different industry sectors. It is, for example, less likely that there will be controversy in insurance companies promoting the changing of fire alarm batteries than there would be about a pharmaceutical company promoting immunization[48]. Tobacco industry partnerships with any aspect of health appear to be universally unacceptable[46] . Alcohol marketers' involvement in responsible drinking promotion, while not universally condemned, has proven controversial[49], being compared by some to "fraternising with the enemy"[46, p. 72]. Given the power of cross-sector coalitions to impact on health and other behavioural challenges, the recommendations made by the National Social Marketing Centre in 'Its Our Health'(2006), and the recently published 'Ambitions for Health' (2008) strategy regarding the importance of partnership working, there is a real need to draw up guidance on partnership working based on ethical guidelines.

Easy to reach versus hard to reach

Is it ethical to target sectors of the population who are easiest to reach or who likely to be the easiest to reach? Is it ethical to target the most receptive to an intervention ('low-hanging fruit') rather than those who might benefit the most from changes to their behaviour?

The concept of 'low hanging fruit' is based on identifying target segments who are ready and able to make the changes being promoted by a social marketer. People classified as 'low hanging fruit' may come from different social, economic or political groups but what they share is a predisposition to change. What they need are prompts and support in the form of goods or services that make it easy and rewarding for them to effect that change.

The biggest problem with the concept of targeting such people is that often there is a correlation with material advantage and being ready and able to change. A social marketing strategy that crudely targets such people might run the risk, if it were successful, of increasing the gap between the better and worse off in areas such as health or savings. A key issue then from a deontological perspective is that social marketing programmes must consider the processes they employ and how these might encourage participation from different social economic groups in society. And, using a teleological perspective, they also need to consider what the overall impact on inequality might be.

'Hard to reach'could be viewed as groups who are difficult to contact, or who do not take part in research or actual interventions. They may also be groups that professionals have not traditionally worked with closely or for whom readily available channels are not in place, or have not been used. In this way they not be fundamentally hard to reach but are not reachable by methods traditionally used for other sections of the population.

'Hard to reach' can also be viewed as groups who can be contacted but who are less motivated or able to change.In this case the ethical issues are ones concerned with understanding the barriers to change and devising ways of addressing these. In cases of low motivation, a detailed understanding of why people hold these attitudes will be necessary before attempting to overcome the barriers. In cases where people are less able to change due to environmental or structural issues, such as poverty or lack of access to services due to poor transport links, the ethical issues are deontological i.e. action needs to be targeted at addressing these structural issues rather than blaming individuals for non-compliance.

If a 'hard to reach' group is targeted, but their intervention costs significantly more than interventions aimed at lower priority groups, is it ethical to focus resources on one specific group at the expense of others? Is it ethical to target their specific behaviours without considering the socio-economic or wider environmental factors that may drive the behaviours? For example, in interventions aimed at reducing the exposure of children to tobacco smoke in the home, recommended strategies such as smoking outside with the door closed may not be effective, given the environment in which some groups may live. Smoking outside may not be an option for multi-floor flats and apartments which do not have balconies[50]. Further, opening windows or doors may present an additional security risk, with dangers possible for both smoker and unsupervised children if a parent does leave the house to smoke[51]. These are not simple issues to resolve and the solutions will be specific to the situation.

An additional example of the type of challenge that needs to be considered relates to interventions aimed at improving medication compliance. Those who are least compliant with their medication regimen are also likely to miss hospital appointments or other forms of medical monitoring[52]. Thus, those who would benefit most from help may be difficult to reach or to persuade to participate in interventions aimed at improving their health and quality of life. Consider the arguments for and against allocating resources to try to reach them versus those who are easier to reach. The nature of proposed interventions also presents ethical challenges. As an example, adolescents with epilepsy do not want to meet others with complications or problems as they perceive these patients' problems as both frightening and depressing.

Therefore interventions that include peer support from others with the same medical condition are unlikely to be successful[53].

Fear Appeals

The nature of the appeals used in social marketing communication may lead to increased levels of public concern and, for some, possibly increased anxiety or fear[12]. The DH smoking cessation campaign (described earlier) is an example of this. Further, those who have responded to past fear-based campaigns appear to be better educated and more affluent than average, and thus better able to respond to the persuasive message[22]. As well as signalling the need for caution in the use of fear appeals for which less well educated sectors of target groups are a significant part, there would appear to be the need for research into the attitudes, information needs and message framing preferences of these sectors.

There may be a more pragmatic reason for caution in the use of fear appeals. In spite of several studies in which short term effectiveness was found, real-world effects do not show the same results[12]. Many of the unintended effects of health communication campaigns listed in Table 2 are directly, but not exclusively, attributable to fear appeals, i.e. dissonance, discomfort and distress, boomerang effects, epidemics of apprehension and desensitisation[15, 54]. Additionally, strong fear appeals are more likely to be regarded as unethical if the target populations do not believe they can readily undertake the recommended behaviour or that the behaviour will be effective in minimising the perceived threat[55].

Humour

Humour has been used in social marketing interventions as diverse a syphilis awareness[56] and smoking cessation, including the highly successful Florida 'Truth' campaign[57]. Humour is, however very culture-specific and what may seem extremely funny to one segment of the population may be seen as utterly offensive by another. Additionally, the humour may actually detract from the message content, resulting in high awareness but having no behavioural impact[58]. When is it acceptable to degrade certain behaviours? An example of this comes from a recent controversial use of humour in an Australian road safety campaign that implies that young men who speed do so because they have a small penis[59]. While this campaign has been controversial, it is also claimed to be one of the most successful[60].

Incentives and Penalties

Interventions that are based on rewarding people financially, or by the provision of goods may also raise ethical concerns, given that rewarding people for adopting new, socially desirable behaviours is perceived as being akin to bribery. In addition, it, raises the question of whether the behaviour will be maintained in the long term. Incentive-based smoking cessation interventions have shown promise for low-income pregnant women in the USA, whereby vouchers exchangeable for retail products were made available for those who successfully abstained from smoking, subject to biochemical verification[61]. 'Quit and Win' contests have been used in over 80 countries, however reviews of the success of these programmes have included the cautionary note that, unless closely monitored, there is a chance of deception through activity such as non-smokers entering the competitions, resulting in possible over-estimation of success[62].

Role of Culture in Establishing Ethical Standards

Acceptable behaviour is determined to a large part by socialisation. Yet the role of culture in establishing ethical standards is largely ignored within marketing literature[63]. It is suggested, for example, that the use of fear appeals is contrary to

Islamic beliefs[64]. Can social marketing interventions based on fear appeals therefore ever be acceptable? They are certainly unlikely to be effective with this sector of the population. Further, issues such as safe sex may offend some cultural or religious groups who, while they may not be directly targeted may still receive material relating to the topic[27]. So, when culture-based perceptions are at odds with prevailing perceptions of best practice, how should social marketers balance respect for minority cultural norms with the desire to challenge them in the interests of improving health and well-being[1]?

Culture may influence the acceptability of different ethical frameworks,. For example, some cultures that emphasise collective responsibility, i.e. the greatest good for the greatest number, over individual self-interest may find utilitarian perspectives preferable. Whereas a culture that emphasises individualism may display preferences for egoism-based frameworks [22,65] .

Successful intervention development depends upon consultation with stakeholder groups in order to help them define their needs and to develop and implement their own solutions. It is important to identify information gatekeepers and community leaders in order to start dialogue with individual communities[66] and to address any language and cultural barriers[67] that may arise. Community leaders who are willing and able to publicly support the activity are important to intervention success[68,69]. Failure to do so may result in interventions being perceived as unethical within target communities and result in the interventions being actively resisted.

An additional factor to consider is the effectiveness of different communication styles. It has been found that consumers in similar countries across Europe respond very differently to positively or negatively framed advertisements[70, 71]. Much of this work, however, was conducted only with university students and needs to be repeated with a cross-section of the populations of the countries studied. If the original findings hold true for the wider population, there may be a conflict between the economies of scale possible if material is used across as wide a range of target groups as possible, as against the possibility that material may not be as effective across cultural groups. This may also impact on the tone of message used, such as rational, information-based messages versus emotional appeals.

Service design may also be a factor that can result in delivery mechanisms that are substantially different for some segments of the population. In the US, African-American women who have been reluctant to use conventional health services for advice on issues such as smoking cessation or other aspects of healthier lifestyles have been reached effectively via hair and beauty salons[72]. The issues here are whether such activity should be tailored for other sectors of the population, whether this activity takes resources away from interventions with wider focus, and who should decide on behalf of each population segment?

Given the sample of ethical challenges reviewed so far, the next issue is how to provide guidance on identifying and resolving issues that may be faced by practitioners.

Research Ethics and the NHS

Before considering the role of specific social marketing codes, it must be recognised that there are numerous professional and sector codes and other forms of regulation or governance that may apply. Consultation with the developers of these codes is recommended in order to ensure that maximum benefit is provided for all members of the social marketing community.

A specific area that must be considered is the requirement for ethical approval of research-related activity. One of the most significant structures in this regard is the DH Research Governance Framework[73] which extends considerably beyond clinical trials for medicine. This covers all research and intervention activity involving existing or prospective patients and service users.

The requirements under this framework can take several months for approval[74] and there is currently no mechanism within the Framework to distinguish between low risk and high risk activity. However, a fast-track process is currently under development and is expected to be piloted in 2009. Where research involves collaboration between NHS, PCT staff and those from other organisations, ethical approval must be confirmed by all participating organisations.

Within the university sector, ethical approval will not be provided until NHS approval has been gained. If there is any doubt as to whether the NHS provisions apply to a particular project, advice should be sought from the relevant organisation such as the NHS Regional Ethics Committee (REC) or the PCT in whose catchment area the project is to be conducted.

Where funding is provided via the NHS or a PCT for activity that does not require full NHS Research Ethics Committee clearance, written confirmation should be obtained from the relevant NHS / PCT organisation that full clearance is not required. If in doubt, the NREC should be contacted for guidance and advice (queries@nres.npsa.nhs.uk).

Research areas that should be relatively unproblematic may include research using techniques such as questionnaires or focus groups on topics such as attitudes towards exercise or the use of sun protection. Activity that may require guidance from NRES would include topics relating to investigations of parental strategies to reduce children's exposure to tobacco smoke in the home, or family dietary habits. Activity that will require consultation probably culminating in the requirement for full ethics approval processes to be undertaken would include sensitive issues such as sexual behaviour.

The following extract from the 2008 National Research Ethics Service[75] should provide a useful checklist as to whether advice is needed regarding the requirement for NHS approval.

Table 3: Differentiating Audit, Service Evaluation and Research

Research	Clinical audit	Service Evaluation
The attempt to derive generalisable new knowledge, including studies that aim to generate hypotheses, as well as studies that aim to test them.	Designed and conducted to produce information to inform delivery of best care.	Designed and conducted solely to define or judge current care.
Quantitative research – designed to test a hypothesis. Qualitative research – identifies / explores themes following established methodology.	Designed to answer the question: "Does this service reach a predetermined standard?"	Designed to answer the question: "What standard does this service achieve?"
Addresses clearly defined questions, aims and objectives.	Measures against a standard.	Measures current service without reference to a standard.
Quantitative research – may involve evaluating or comparing interventions, particularly new ones. Qualitative research – usually involves studying how interventions and relationships are experienced.	Involves an intervention in use ONLY (the choice of treatment is that of the clinician and patient according to guidance, professional standards or patient preference).	Involves an intervention in use ONLY (the choice of treatment is that of the clinician and patient according to guidance, professional standards or patient preference).
Usually involves collecting data that are additional to those for routine care, but may include data collected routinely. May involve treatments, samples or investigations additional to routine care.	Usually involves analysis of existing data, but may include administration of simple interview or questionnaire.	Usually involves analysis of existing data, but may include administration of simple interview or questionnaire.

Research	Clinical audit	Service Evaluation
Quantitative research – study design may involve allocating patients to intervention groups. Qualitative research uses a clearly defined sampling framework underpinned by conceptual or theoretical justifications.	No allocation to intervention groups: the healthcare professional and patient have chosen intervention before clinical audit.	No allocation to intervention groups: the healthcare professional and patient have chosen intervention before clinical audit.
May involve randomisation.	No randomisation.	No randomisation.
ALTHOUGH ANY OF THESE THREE MAY RAISE ETHICAL ISSUES, UNDER CURRENT GUIDANCE:		
RESEARCH REQUIRES REC REVIEW	**AUDIT DOES NOT REQUIRE REC REVIEW**	**SERVICE EVALUATION DOES NOT REQUIRE REC REVIEW**

As noted in the above table, audit and service evaluations do not require REC review. It is probable that the majority of what are called social marketing research studies will fall into the category of audit and evaluation and not research as defined in table 3. However, REC can be approached, not for a judgement, but for comment and advice if this is thought necessary.

The following extract from Governance Arrangements for NHS Research Ethics Committees should also be noted (p. 18) in view of potential for overlap and for unforeseen costs.

"7.22 Not all medical, other health-related or social care research takes place within the NHS or public sector Social Services. All those conducting such external research should be encouraged to submit their research proposals to an NHS REC for advice, and the REC should accept for consideration all such valid applications that meet the relevant standards. In such cases, the REC should report to the appointing Authority the cost of its work so that the cost can be recovered from the outside body conducting the research, if appropriate".

Code of Ethics

In terms of the wider social marketing community, existing professional or sector codes of ethics may not capture all the ethical challenges that may apply to the development and implementation of interventions. To rectify this, specific social marketing codes of ethics have been proposed[77, 78], and similar mechanisms have been proposed for related areas such as health promotion[79].

Codes have several benefits both to individuals and to the sector overall. They may be successful in educating inexperienced practitioners and in sensitising them to issues they may face in the future. They also signal the commitment of an organisation or sector to establish credibility and to provide a 'moral compass' for members[80].

Most codes, particularly those developed with a research focus, contain common elements:

- respect for participants and target populations
- social and cultural sensitivity
- justice – a fair distribution of benefits and burdens, together with the duty to not neglect or discriminate against individuals or groups
- minimisation of infringement upon or harm (including psychological harm such as anxiety) to participating or targeted individuals
- informed and voluntary consent
- respect for privacy and confidentiality
- honesty and avoidance of deception
- avoidance of conflict of interest
- ability to publicly justify the intervention in terms of necessity and potential effectiveness[81].

Codes are not intended as censorship, but rather statements of norms and beliefs[82] and as mechanisms for driving good practice and protecting both professionals and the people they are seeking to assist. Organisations that have codes of ethics that are enforceable and which are enforced in practice have been shown to be more sensitive to ethical problems when they occur and to choose ethical alternatives in the decision process[83]. There appears to be no question that consistently high levels of ethical behaviour should therefore be expected of social marketers given the potential impact of interventions on individual and societal health and well-being. The potential negative consequences for ongoing social marketing activities where consumers feel that they have based decisions on incomplete information or have yielded to coercive activities on the part of social marketers may be severe12. However, codes are not a panacea as they are often broad statements of intent unable to cover every situation that is likely to arise or provide guidance on how issues such as cultural differences should be resolved[84].

While the discussion above suggests that there is an obvious willingness within the area to consider codes of ethics, social marketing activity occurs across a wide range of occupational sectors, including health, environmental planning, transport, social justice, marketing etc. Developing codes that can be applied across all sectors - some of which may have existing codes - is likely to be problematic. Where multiple codes may apply, they should be complementary rather than conflicting. Additionally, a mechanism needs to be developed and debated for managing the codes, dealing with complaints regarding perceived breaches, for enforcement, and for disciplinary action where necessary.

A further consideration is that many codes such as the American Public Health Association (APHA) have been developed for use within a specific context and may not adapt readily to use in others[85]. Professions such as accountancy have mechanisms by which adherence to professional codes of ethics can be enforced[86]. Sectors such as marketing that lack enforcement mechanisms, can codes of ethics ever be more than statements of desired best practice?[87] While marketers use the term 'profession', marketing does not meet the characteristics of a true profession, as summarised in Table 4.

Table 4: Characteristics of a Profession [88 (p. 1676)]

A profession possesses a discrete body of knowledge and skills over which its members have exclusive control
The work based on this knowledge is controlled and organised by associations that are independent of both the state and capital
The mandate of these associations is formalised by a variety of written documents, which include laws covering licensure and regulations granting authority
Professional associations serve as the ultimate authorities on the personal, social, economic, cultural, and political affairs relating to their domains. They are expected to influence public policy and inform the public within their areas of expertise
Admission to professions requires a long period of education and training, and the professions are responsible for determining the qualifications and (usually) the numbers of those to be educated for practice, the substance of their training, and the requirements for its completion
Within the constraints of the law, the professions control admission to practice and the terms, conditions, and goals of the practice itself
The professions are responsible for the ethical and technical criteria by which their members are evaluated, and they have the exclusive right and duty to discipline unprofessional conduct
Individual members remain autonomous in their workplaces within the limits of rules and standards laid down by their associations and the legal structures within which they work
It is expected that professionals will gain their livelihood by providing service to the public in the area of their expertise
Members are expected to value performance above reward, and are held to higher standards of behaviour than are non-professionals.

Many marketing organisations have codes of ethics for their members. For example, the American Marketing Association (AMA)[89] provides the following:

1. Marketers must do no harm
2. Marketers must foster trust in the marketing system (not mislead), good faith and fair dealing
3. Marketers must embrace, communicate and practice fundamental ethical values that will improve consumer confidence in the integrity of the marketing exchange system. These basic values are intentionally aspirational and include honesty, responsibility, fairness, respect, openness and citizenship.

The fragmentation of the marketing industry presents a further factor to consider. While many sector organisations have codes [(see, for example 90, 91)], there are no overarching industry mechanisms within individual countries, let alone cross-border initiatives, although there is evidence of some movement in this direction in sectors such as the European Association of Communication Agencies (EACA)[92] . Such codes are often little

more than statements of good intent, for example, the EACA's Code of Ethics states only:

"1 Society and citizens
We recognise our obligation to create advertising which is consistent with the social, economic and environmental principles of sustainable development. We further recognise that this obligation applies equally across the different societies that receive advertising that might not have been developed for them.

2. Consumers
We recognise that consumers are entitled to rely on our profession to operate not only within the law and within the letter and spirit of global, national and sectoral codes of practice but also within accepted ethical norms.

We accept that our understanding of the "average consumer" might not always be the standard, acknowledging that there are groups who are vulnerable, for example, and that we should adopt a sensitive approach to judging how advertising will be understood and acted upon by society in general".

A doctor, accountant, lawyer or member of an established, recognised, profession could potentially loose the right to practice if found guilty by their peers of a significant transgression of professional ethics[88]. Marketers are not subject to the same level of peer control. There is no current requirement that they be licensed and membership of sector organisations is voluntary. Marketers therefore lack the ability to enforce such codes in the way that professional groups are able to do[86].

If a marketer is found guilty of transgressing the standards of behaviour for any sector organisation to which they may belong, they may be ejected from that organisation, but this does not necessarily prevent them from continuing in employment in the sector. There are, however, less direct sanctions available to organisations, and, indeed to the industry overall in many countries. In the UK there is The British Code of Advertising, Sales Promotion and Direct Marketing. This is issued by the industry's self-regulatory body[93] and is administered by the independent Advertising Standards Authority[94]. It specifies provision for marketing communications in breach of the Codes to be withdrawn or amended. Adjudications are published on the ASA website (www.asa.org.uk) and, often in the media, as occurred with the Department of Health smoking adjudication[95].

Further, the industry regulators may request the media to deny advertising space or time to non-compliant marketers. Additional penalties may be incurred through the withdrawal of industry discounts such as those offered by the Royal Mail for bulk mailings. In the most serious cases, legal support to enforce discontinuation of unacceptable material can be obtained[93].

Other implicit sanctions exist in areas such as those undertaking social science research on behalf of the UK Government. There are specific expectations which include obtaining "valid, informed consent" from research participants and the requirement to take "reasonable steps to identify and remove barriers to participation" and to avoid "personal and social harm" [96 (page 8)]. While provisions for sanctions and redress are noted but not spelt out specifically, a logical conclusion is that consultants found to be in breach of the provisions would not obtain future commissions. This could readily be extended to include funding for social marketing intervention development and implementation as well as related research.

Four key principles from the medical sector are much more specific than the 'good intentions' for the AMA above and may be of relevance to social marketing, i.e.:

- Respect for autonomy of individuals or communities, requirement for consultation and agreement (i.e. effective two-way communication) and absence of deceit
- Beneficence, i.e. provision of net benefit to the target group or patient
- Obligation to ensure no harm is caused by actions
- Justice in terms of fairness in distributing resources, respecting of rights and for morally accepted law[97].

However, there are several differences between medicine and general public health, and social marketing. The focus of medicine is primarily on interactions with individual patients and often involves balancing patient choices with recommended treatment regimens. Public health and social marketing must reflect the specific challenges of interdependence between populations or specific segments, their communities and the wider environment. Actions of individuals may impact on others within the population[98].

To this, we would add the necessity of recognising the extent, and boundaries, of our expertise as marketers. Few of us are formally qualified in medical or related health fields, such as smoking cessation and exercise promotion programmes, in which a considerable amount of social marketing activity occurs. There is, however, a recognised role for social marketing communication expertise. As the following quote from a leading behavioural theorists indicates in relation to the effective communication within behavioural change-focussed interventions:

"…communications can attempt to increase the strength of beliefs that will promote healthy behaviours, reduce the strength of beliefs that promote risky behaviours, or prime existent beliefs that support healthy behaviours (i.e. increase their accessibility) so that these beliefs will carry more weight as determinants of attitudes, norms self efficacy and intentions. Behavioural theories do not tell us how best to design messages so that they will be attended to, accepted and yielded to. We would argue that this is the role of theories of communication. Although communication theory and research have advanced our understanding of factors influencing attention, it is just beginning to advance our understanding of what makes a message effective, that is of the factors that influence acceptance and yielding" [99 (page S14)] .

Ethical Tools

Two possible resources specifically for social marketing have been proposed. First is an ethical checklist and second, a specific code of ethics. A brief checklist is shown below:[78]

- Ensure that the intervention will not cause physical or psychological harm
- Does the intervention give assistance where it is needed?
- Does the intervention allow those who need help the freedom to exercise their entitlements?
- Are all parties treated equally and fairly?
- Will the choices made produce the greatest good for the greatest number of people?
- Is the autonomy of the target audience recognised?

The following is a more extensive checklist:[100]

1. Is there a law against it?
2. Is it contrary to accepted moral duties, including fidelity, gratitude, justice, non-malefience, and beneficience?

3. Is it contrary to any special obligations of the organisation?
4. Is there any intention to cause harm?
5. Is it likely that harm will result?
6. Is there a better alternative that would result in greater benefits?
7. Are any rights likely to be infringed, including property rights, privacy rights, and inalienable consumer rights including right to information, to be heard, to have a choice, and to have a remedy?
8. Is anyone left worse off and, if so, is this person already disadvantaged?
9. If the answer to any of the eight questions is 'yes', the action should be reconsidered.

A code of ethics that has been proposed for social marketing is as follows:[101]

- Do more good than harm
- Favour free choice
- Evaluate marketing within a broad context of behaviour management (giving consideration to alternatives of education and law)
- Select tactics that are effective and efficient
- Select marketing tactics that fit marketing philosophy (that is meeting the needs of consumers rather than the self-interest of the organisation)
- Evaluate the ethicality of a policy before agreeing to develop a strategy

While it is a positive step that these issues are being discussed, voluntary codes of ethics without commitment and support from those that the codes are intended to cover will be ineffective[102, 103]. One of the first priorities in developing and agreeing on a code will be to gain input from all stakeholders so that there will be a sense of shared ownership. Code development has been most successful "when accompanied by lengthy and strenuous debate engaging the entire professional community and not simply those with a special interest in ethics."[80]

However, as discussed earlier, codes can never be exhaustive and there will need to be mechanism by which those facing ethical dilemmas can gain advice and support. Coupled with this should be awareness raising and training to highlight the types of issues that should be considered at all stages of social marketing intervention development. A range of relevant codes have been included in the appendices as exemplars of structure and scope.

Code Development Recommendations

Development Processes

Once a code has been agreed and an organisation (e.g. the NSMC) identified as the management point, there will be a need to set up a process to publicise the functions that the organisation will fulfil. It will also need to define the working relationship with organisations such as the NHS and PCTs. For ethical issues that do not fall under the auspices of the NHS, university or funding body ethical approval and management systems, a process will be needed for dealing with complaints. Drawing on the processes used by other professional and industry bodies, the following may provide a useful guide to this stage of the development.

1. The NSMC should establish an ethics panel (drawn from academics and practitioners with suitable experience in dealing with ethics approvals and disciplinary issues), and including representation from the Department of Health, NHS and relevant professions. The panel should have responsibility for developing a code of practice for social marketing and engaging relevant stakeholders in developing it through to publication. The panel should also be responsible for developing systems on how queries and complaints will be dealt with, including convening of face-to-face meetings versus electronic communications.

The NSMC panel should:

2. Establish working relationships with other relevant organisations, especially the NHS, relevant professional bodies, universities and funding bodies, plus communications regulators such as the ASA.

3. Clearly establish what advice can be given by whom on ethical issues. This needs to be specific and timely.

4. Clearly establish who can make a complaint and on what grounds. Establish the time frame for investigating complaints (e.g. no longer than 6 months from the occurrence of the activity to lodging a complaint, no longer than 2 months from the complaint being lodged to a decision being made. It is recommended that anonymous complaints not be investigated.

5. Clearly establish how complaints should be lodged (e.g. with a specific person within the coordinating organisation) and the process by which complaints will be investigated, and by whom.

6. Decide on mechanisms by which ethics panel decisions will be communicated to the complainant, the individual or organisation against whom the compliant is made and other stakeholders including the social marketing community, funding bodies, media and the general public. Also decide on what range of actions might be requested in the event of a complaint being upheld.

In the event of complaints being upheld but the offending party being unwilling to amend material, the range of possible penalties and sanctions to be taken as a last resort needs to be decided. For example, some funding bodies will not consider new applications from an organisation in which there have been ethical problems unless there is evidence of action having been taken to prevent a repetition of the problem.

7. NSMC should provide an ethical advisory service to practitioners as part of its generic advisory service. This service could act as an external first port of call for those not sure about how to address ethical issues or for people needing advice about how to submit proposals for ethical approval.

8. Once agreed, the code should not remain static, but be regularly reviewed both on the basis of cases considered and on input from the social marketing community. As with code development and administration, mechanisms for consultation on revision and review need to be decided and put in place.

9. Given the need for clear guidance on the development and management of partnerships and delivery coalitions in the field of social marketing the NSMC should develop such guidance based on the proposed code of conduct. In due course additional specialist guidance may be required in other areas of practice such as research, community engagement and empowerment and organisational change.

Ethics Approvals: Guidance on Assessing Ethical Issues

Until formal mechanisms are in place to support members of the social marketing community, the following guidelines are proposed:

Formal ethics approval is a requirement for any research or intervention involving 'human subjects' that is funded via academic institutions or funding bodies such as the ESRC. In addition, the Research Governance Framework of the Department of Health - covering activity conducted under the auspices of the NHS and PCTs - must be taken into consideration and approval sought from relevant organisations with devolved responsibility for the administration of activity covered by this framework. For examples of 'good practice' applications under this framework, see UWE's Research Ethics web pages http://hsc.uwe.ac.uk/net/staff/Default.aspx?pageid=202

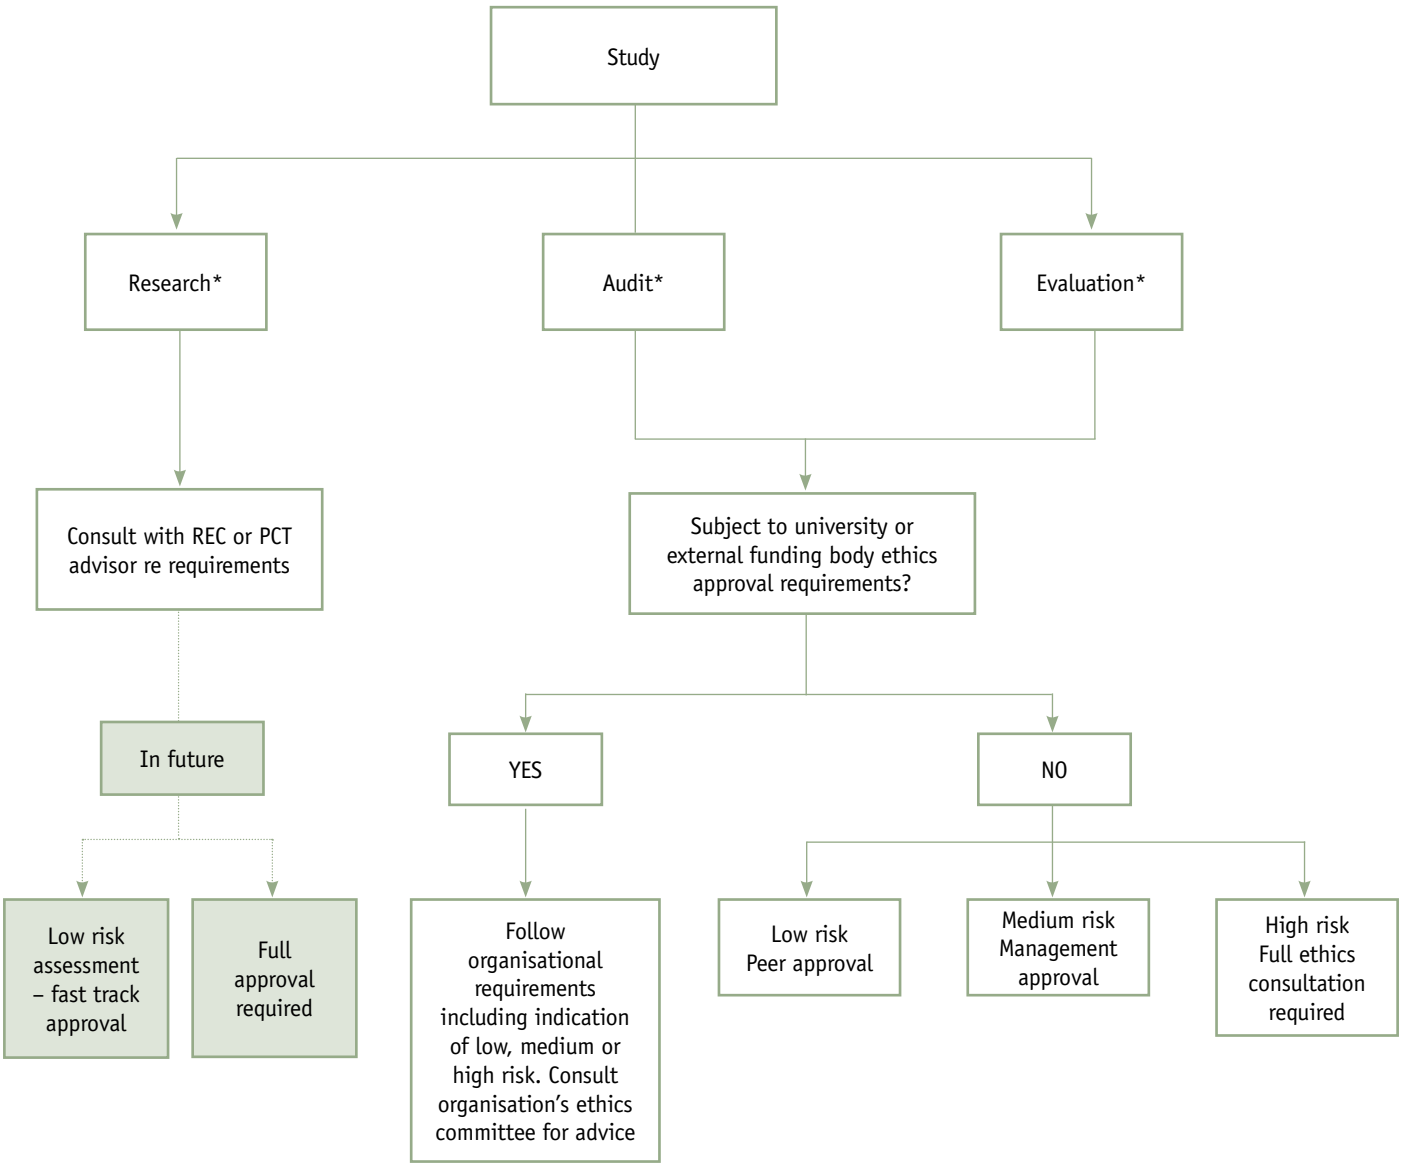
Similarly, external funding bodies such as the Joseph Rowntree Foundation

(http://www.jrf.org.uk/) or Leverhulme Trust (http://www.leverhulme.ac.uk/grants_awards/) or have specific ethical approval as part of their grant provision. These must be adhered to, with written confirmation of formal approval from relevant bodies stipulated in the grant provision.

While the above may cover a large amount of social marketing research and intervention activity, there is still lack of an advisory and regulatory mechanism for areas not covered by these provisions. We have therefore drawn on existing ethics approval mechanisms to provide a series of checklists. These that can be used where proposed interventions - that are funded by organisations without specific ethics approval processes - can be reviewed and guidance can be given to those developing and implementing an intervention.

A multi-tier approval system should be introduced, similar to that in use in many universities and other institutions.

Level 1: low risk: research and interventions that do not involve the collection of personal information from the target group(s) e.g. interventions aimed at encouraging greater use of parks, sporting facilities etc. Or, investigating attitudes towards environmental protection, or anonymous questionnaires regarding aspects of lifestyles. For this, the activity and any associated ethical dimensions should be discussed within the organisation at departmental or unit level, i.e. peer consultation and review. Using a simple checklist (drawing on the material in the appendices to this document) will ensure that all relevant issues have been considered. This will include such factors as information sheets, consent forms and discussion of consultation with relevant communities in the development of the activity. For examples of the use of low-risk screening procedures within university settings, see Brighton University's Virtual Research Unit link: http://staffcentral.brighton.ac.uk/vru/ethics_govern.shtm or, for a non-UK example, see the research approval web pages of Massey University (New Zealand) http://humanethics.massey.ac.nz/massey/research/ethics/human-ethics/approval.cfm



Level 2: Moderate risk: research and interventions that do involve collection of personal information from the target group(s) but which do not require respondents to divulge sensitive or extremely personal behaviour, and which do not permit the identity of any respondent to be identified. For example, interventions aimed at investigating recycling, dietary or exercise behaviours, which may involve focus groups or other forms of personal interaction. In addition to the information required for a low risk approval, research protocols, focus group discussion guidelines etc. should be provided and formal written approval sought from the senior management of the organisation in which the researcher is based.

Level 3: Full Ethics Clearance required: research and interventions involving any vulnerable groups such as children, those with low literacy levels and the socially disadvantaged irrespective of the nature of the research or intervention. Additionally, any research or interventions which involve investigation of personal behaviours such as speeding, excessive drinking or sexual behaviour should be subject to a full ethics clearance procedure.

Appropriate Ethics Approval Process

It is recommended that the appropriate approval processes be considered at the initial planning stages of any intervention to allow for the time that ethical approvals may require. The decision tree below (Figure 1) provides an overview of the process.

Figure 1: Ethics decision tree

* As defined in table 3.

Draft Code of Ethics

The following is a draft - intended for discussion and further refinement - of a specific Code of Ethics for Social Marketing. It draws on the earlier suggested framework and the ethics resources of relevant organisations as detailed in the appendices.

In developing interventions, social marketers will ensure that the following are taken into account at all stages of research, planning, implementation and evaluation:

1. Those planning interventions are competent, have a clear mandate to work on the issue and follow the national social marketing planning standards set out by the NSMC.
2. The actual problem, rather than its symptoms, has been identified. The initial scoping prior to the development of an intervention has identified the extent and the severity of the problem to be addressed.
3. Relevant ethical clearances have been gained prior to research, to identify target segments, the attitudes and beliefs underpinning their behaviours, and the actual or perceived barriers to behaviour change.
4. In developing the intervention, representatives of the identified target segments will be involved to provide advice on the potential impact upon their communities, any possible unintended effects, and how these should be resolved.
5. An assessment must be made of the predicted effectiveness of the intervention relative to other possible actions and of the impact on individual freedom and autonomy.
6. An assessment must also be made as to whether the benefits will outweigh any potential harm, whether any segments of the population are likely to be negatively affected by the intervention and whether any existing inequalities are expected to be positively or negatively impacted by the intervention.
7. In the event of any identified potential impacts on any target segment, or unintended negative impacts on segments of the population not specifically being targeted, the acceptability of the intervention should be reviewed.
8. Social marketers should demonstrate that they are up-to-date with developments in the field via recognised professional development, in-house training, or attendance at relevant conferences and seminars.
9. An ethics statement should be included in all planning records and should be required from agencies providing services, setting out any possible ethical issues and how they will be addressed.

Conclusion

This report has highlighted the challenges facing social marketers in raising awareness of ethical issues and the challenges inherent in developing and maintaining an effective ethical guidance and monitoring framework.

If the sector is committed to driving up standards of practice, there is an urgent need for the NSMC to act as the conduit through which practitioners, policy makers, related organisations and academics can work together to build on the material contained in this report to formalise a national code of ethics and the mechanisms by which it will be administered and maintained.

Appendix A:

Selected Resources for Consideration in Developing Codes of Ethics for Social Marketing: Sample Ethics Checklists

A1. Public Health Specific

Jennings, B., Kahn, J., Mastroiani, A. & Parker, L. (2003) Ethics and Public Health: Model Curriculum Health Resources and Services Administration /Association of Schools of Public Health http://www.asph.org/document.cfm?page=782

- Identify the ethical problem (s) germane to the decision
- Assess the factual information available to the decision maker(s)
- Identify the 'stakeholders' in the decision, including who will be affected and in what way
- Identify the values at stake in the decision
- Identify the options available to the decision maker
- Consider the process for making the decision and the values that pertain to the process.

As part of the evaluation process, Jennings also discusses the following:

- What is the nature, severity, duration of the problem behaviour being targeted and the
- probability regarding its future occurrence and impact on individuals in the wider
- population?
- What is the likelihood of an intervention being able to positively affect the problem
- behaviour?
- What are the economic (and other) costs?
- What is the burden on human rights?
- Is the intervention fair, including a just allocation of benefits and burdens?

Kass, N. E. (2001). An Ethics Framework for Public Health. American Journal of Public Health, 91(11), 1776-1782.

1. What are the public health goals of the proposed program?
2. How effective is the program in achieving its stated goals?
3. What are the known and potential burdens of the program?
4. Can burdens be minimised? Are there alternative approaches?
5. Is the program implemented fairly?
6. How can the benefits and burdens of a program be fairly balanced?

Public Health Leadership Society (www.phls.org): Principles for the Ethical Practice of Public Health (Adopted by the American Public Health Association)

1. Public Health should address principally the fundamental causes of disease and requirements for health, aiming to prevent adverse health outcomes.
2. Public health should achieve community health in a way that respects the rights of individuals in the community.
3. Public health policies, programs, and priorities should be developed and evaluated through processes that ensure an opportunity for input from community members.
4. Public health should advocate and work for the empowerment of disenfranchised community members, aiming to ensure that the basic resources and conditions necessary for health are accessible to all.
5. Public health should seek the information needed to implement effective policies and programmes that protect and promote health.
6. Public health institutions should provide communities with the information they have that is needed for decisions on policies or programs and should obtain the community's consent for their implementation.
7. Public health institutions should act in a timely manner on the information they have within the resources and the mandate given to them by the public.
8. Public health programs and policies should incorporate a variety of approaches that anticipate and respect diverse values, beliefs, and cultures in the community.
9. Public health programs and policies should be implemented in a manner that most enhances the physical and social environment.
10. Public health institutions should protect the confidentiality of information that can bring harm to an individual or community if made public. Exceptions must be justified on the basis of the high likelihood of significant harm to the individuals or others.
11. Public health institutions should ensure the professional competence of their employees.
12. Public health institutions and their employees should engage in collaborations and affiliations in ways that build the public's trust and the institution's effectiveness.

Naidoo & Wills (1994: 116)

1. Central conditions for working for health

- Am I creating autonomy in my clients, enabling them to direct their own lives?
- Am I respecting the autonomy of my clients whether or not I approve of their chosen direction?
- Am I respecting all people as equal?
- Do I work with people on the basis of needs first?

2. Key principles in working for health

- Am I doing good and avoiding harm?
- Am I telling the truth and keeping promises?

3. Consequences of ways of working for health

- Will my action increase the individual good?
- Will it increase the good of a particular group?
- Will it increase the good of society?
- Will I be acting for the good of myself?

4. External considerations in working for health

- Are there any legal implications?
- Does a professional code of practice suggest a particular course of action?
- Is there a risk attached to the intervention?
- Is the intervention the most effective and efficient action to take?
- How certain is the evidence on which the intervention is based?
- What are the views and wishes of those involved?
- Can I justify my actions in terms of all this evidence?

Bernheim et al., 2008: 362: Public Policy Ethics

1. Analyze the ethical issues in the situation:

- What are the public health risks and harms of concern?
- What are the public health goals?
- Who are the stakeholders and what are their moral claims?
- Is the source or scope of legal authority in question?
- Are precedent cases or the historical context relevant?
- Do professional codes of ethics provide guidance?

2. Evaluate the ethical dimensions of the alternative courses of public health action:

- Utility: Does a particular public health action produce a balance of benefits over harms?
- Justice: Are the benefits and burdens distributed fairly (distributive justice), and do legitimate representatives of affected groups have the opportunity to participate in making decisions (procedural justice)?
- Respect for liberty: Does the public health action respect individual choices and interests (autonomy, liberty and privacy)?
- Respect for legitimate public institutions: Does the public health action respect professional and civic roles and values, such as transparency, honesty, trustworthiness, promise keeping, protecting confidentiality, and protecting vulnerable individuals and communities from undue stigmatization?

3. Provide justification for a particular public health action:

- Effectiveness: Is the public health goal likely to be accomplished?
- Proportionality: Will the probable benefits of the action outweigh the infringed moral considerations?
- Necessity: Is it necessary to override the conflicting ethical claims to achieve the public health goal?
- Least infringement: Is the action the least restrictive and least intrusive?
- Public justification: Can public heath agents offer public justification for the action or policy, on the basis of principles in the Code of Ethics or general public health principles that citizens and in particular those most affected could find acceptable in principle?

A2. Social Marketing Specific

Donovan & Henley (2004)

1. Ensure that the intervention will not cause physical or psychological harm
2. Does the intervention give assistance where it is needed?
3. Does the intervention allow those who need help the freedom to exercise their entitlements?
4. Are all parties treated equally and fairly?
5. Will the choices made produce the greatest good for the greatest number of people?
6. Is the autonomy of the target audience recognised?

Note – the above implies utilitarianism which, as noted earlier, does not reflect the view of communications regulators (as in the ASA's Department of Health 'Fishhook' campaign ruling. The following extract from a forthcoming text (Truss & White) illustrates how thinking on ethical issues has evolved over time. The authors firstly cite the original Laczniak & Murphy (1993) checklist101, i.e:

- Is it legal?
- Is it contrary to society's generally accepted moral obligations?
- Is it contrary to moral obligations that are specific to that particular organisation?
- Is the intent harmful?
- Is the result harmful?
- Is there an alternative action that produces equal or better benefits, and by implications will cause fewer negative consequences?
- Will it infringe on the rights of the organisation's stakeholder?
- Will it leave any person or group poorer? Will it especially reduce the wellbeing of an already underprivileged group?

It is interesting to compare this proposal with more recent proposals by Laczniak & Murphy as shown below.

Laczniak & Murphy (2006: 157). Basic Perspectives for Evaluating and Improving Marketing Ethics.

1. Ethical marketing puts people first
2. Ethical marketers must achieve a behavioural standard in excess of the law
3. Marketers are responsible for whatever they intend as a means or ends with a marketing action
4. Marketing organisations should cultivate better (i.e. higher) moral imagination in their managers and employees
5. Marketers should articulate and embrace a core set of ethical principles
6. Adoption of a stakeholder orientation is essential to ethical marketing decisions
7. Marketing organisations ought to delineate an ethical decision making protocol.

Truss & White suggest that, while the original Laczniak & Murphy list provides a useful starting point, a more detailed checklist is warranted for social marketing, which they propose as (p.14):

What are the right behaviours for people?	Who decides, on what evidence, what are the counter-arguments (for example, freedom of choice)?
Who should we target?	For example, a small number of hard-to-reach, vulnerable society or large number of more accessible people?
Shouldn't the control group benefit?	What are the consequences re increasing inequality? What is fair?
Will the target group be stigmatised?	If so, what care should we take in messaging / targeting to minimise?
Should we deal with the voice of competition?	What are the dilemmas (ethical benefits and risks) of working with competition?
Should there be informed consent?	For regulatory actions and limiting behaviours by laws, how much should we enable consultation?
How does the intervention impact on inequalities?	Does the intervention have the potential to increase inequalities in health / access to services, for example? How can this be minimised?
Might there be any unintended or knock-on effects?	Will the intervention impact other areas that we need to be aware of; is it just displacing a problem?

Appendix B:

Selected Resources for Consideration in Developing Codes of Ethics for Social Marketing: Samples of Existing Codes of Ethics: Marketing / Health Promotion

American Marketing Association http://www.marketingpower.com/AboutAMA/Pages/Statement%20of%20Ethics.aspx

"2008 Proposed AMA Ethics Statement

The AMA Ethics Committee recently reviewed, evaluated, discussed, and now proposes moderate revisions to the AMA's 2004 Ethics Statement. The review committee was composed of representatives from the four AMA Division Councils plus two at large members (one practitioner and one academic). All members of the committee were active in the evaluation and review process. Please review the proposed Statement of Ethics and forward any feedback to byoungberg@ama.org ".

Ethical Norms and Values for Marketers

PREAMBLE
The American Marketing Association commits itself to promoting the highest standard of professional ethical norms and values for its members. Norms are established standards of conduct that are expected and maintained by society and/or professional organizations. Values represent the collective conception of what people find desirable, important and morally proper. Values serve as the criteria for evaluating the actions of others. Marketing practitioners must recognize that they not only serve their enterprises but also act as stewards of society in creating, facilitating and executing the efficient and effective transactions that are part of the greater economy. In this role, marketers should embrace the highest ethical norms of practicing

professionals and the ethical values implied by their responsibility toward stakeholders (e.g., customers, employees, investors, channel members, regulators and the host community).

GENERAL NORMS

1. Marketers must do no harm. This means doing work for which they are appropriately trained or experienced so that they can actively add value to their organizations and customers. It also means adhering to all applicable laws and regulations and embodying high ethical standards in the choices they make.
2. Marketers must foster trust in the marketing system. This means that products are appropriate for their intended and promoted uses. It requires that marketing communications about goods and services are not intentionally deceptive or misleading. It suggests building relationships that provide for the equitable adjustment and/or redress of customer grievances. It implies striving for good faith and fair dealing so as to contribute toward the efficacy of the exchange process.
3. Marketers must embrace, communicate and practice the fundamental ethical values that will improve consumer confidence in the integrity of the marketing exchange system. These basic values are intentionally aspirational and include honesty, responsibility, fairness, respect, openness and citizenship.

ETHICAL VALUES

Honesty — to be truthful and forthright in our dealings with customers and stakeholders.

- We will tell the truth in all situations and at all times.
- We will offer products of value that do what we claim in our communications.
- We will stand behind our products if they fail to deliver their claimed benefits.
- We will honor our explicit and implicit commitments and promises.

Responsibility — to accept the consequences of our marketing decisions and strategies.

- We will make strenuous efforts to serve the needs of our customers.
- We will avoid using coercion with all stakeholders.
- We will acknowledge the social obligations to stakeholders that come with increased marketing and economic power.
- We will recognize our special commitments to economically vulnerable segments of the market such as children, the elderly and others who may be substantially disadvantaged.

Fairness — to try to balance justly the needs of the buyer with the interests of the seller.

- We will represent our products in a clear way in selling, advertising and other forms of communication; this includes the avoidance of false, misleading and deceptive promotion.
- We will reject manipulations and sales tactics that harm customer trust.
- We will not engage in price fixing, predatory pricing, price gouging or “bait-and-switch” tactics.
- We will not knowingly participate in material conflicts of interest.

Respect — to acknowledge the basic human dignity of all stakeholders.

- We will value individual differences even as we avoid stereotyping customers or depicting demographic groups (e.g., gender, race, sexual orientation) in a negative or dehumanizing way in our promotions.
- We will listen to the needs of our customers and make all reasonable efforts to monitor and improve their satisfaction on an ongoing basis.
- We will make a special effort to understand suppliers, intermediaries and distributors from other cultures.
- We will appropriately acknowledge the contributions of others, such as consultants, employees and coworkers, to our marketing endeavors.

Openness — to create transparency in our marketing operations.

- We will strive to communicate clearly with all our constituencies.
- We will accept constructive criticism from our customers and other stakeholders.
- We will explain significant product or service risks, component substitutions or other foreseeable eventualities that could affect customers or their perception of the purchase decision.
- We will fully disclose list prices and terms of financing as well as available price deals and adjustments.

Citizenship — to fulfill the economic, legal, philanthropic and societal responsibilities that serve stakeholders in a strategic manner.

- We will strive to protect the natural environment in the execution of marketing campaigns.
- We will give back to the community through volunteerism and charitable donations.
- We will work to contribute to the overall betterment of marketing and its reputation.
- We will encourage supply chain members to ensure that trade is fair for all participants, including producers in developing countries.

IMPLEMENTATION

Finally, we recognize that every industry and marketing subdiscipline (e.g., marketing research, e-commerce, direct selling, direct marketing, advertising) has its own specific ethical issues that require policies and commentary. An array of such codes can be accessed through links on the AMA web site. We encourage all such groups to develop and/or refine their industry and discipline-specific codes of ethics to supplement general norms and values.

Department of Health / NHS

http://www.nres.npsa.nhs.uk/

see also Research Governance Framework for Health and Social Care (2005) available at: http://www.dh.gov.uk/en/Publicationsandstatistics/Publications/PublicationsPolicyAndGuidance/DH_4008777

In addition, the following links to a range of university websites provide access to research codes of ethics ad related material which may also be useful.

Cardiff University

http://www.cardiff.ac.uk/racdv/resgov/governance/index.html

Appendix C:

Selected Resources for Consideration in Developing Codes of Ethics for Social Marketing: Useful Links / Resources

This is not intended to be an exhaustive list of resources, rather a range of organisations, websites and other resources to illustrate the types of codes and ethics resources that have been developed by diverse disciplines. While some of the listings may appear to be very narrow in focus, they provide useful material, including case studies and discussions regarding the ethical challenges facing practitioners. These may be useful in generating an active debate regarding appropriate frameworks for the development and administration of specific codes of ethics within social marketing.

Advertising Standards Authority (Codes) (http://www.asa.org.uk/asa/codes/)

The Advertising Standards Authority is the independent body set up by the advertising industry to police the rules laid down in the advertising codes. The strength of the self-regulatory system lies in both the independence of the ASA and the support and commitment of the advertising industry, through the Committee of Advertising Practice (CAP), to the standards of the codes, protecting consumers and creating a level playing field for advertisers.

American Marketing Association (http://www.marketingpower.com/Pages/default.aspx)

The American Marketing Association (AMA) is the largest marketing association in North America. It is a professional association for individuals and organizations involved in the practice, teaching and study of marketing worldwide. It is also the source that marketers turn to every day for information/resources, education/training and professional networking. AMA members are connected to a network of experienced marketers nearly 40,000 strong and include leading marketing academics, researchers and practitioners from every industry.

Association of Schools of Public Health (ASPH) http://www.asph.org/document.cfm?page=100

ASPH promotes the efforts of schools of public health to improve the health of every person through education, research and policy. Based upon the belief that 'you're only as healthy as the world you live in,' ASPH works with stakeholders to develop solutions to the most pressing health concerns and provides access to the ongoing initiatives of the schools of public health.

The ASPH website contains a range of resources, including a model curriculum for ethics and public health, and a range of publications covering a diverse range of public health topics. In the model curriculum (see also Appendix A), there is a useful overview of the historical development of public health interventions, including discussion of the now infamous US Tuskegee Syphilis Study and the resultant ongoing distrust of government-sponsored health interventions among minority populations.

Module 4: Community-based practice and research: collaboration and sharing power is comprehensive and includes checklists and 'best practice' material. Module 6 Ethics of health Promotion and disease prevention is less comprehensive and lacks the range of resources in other more developed modules.

Australian Association of Social Workers (http://www.aasw.asn.au/) Provides a specific code of ethics (36 pages), by-laws and, importantly, a complaint form and information for potential complainants

Business ethics.com (http://www.business.com/directory/management/business_ethics/organizations/)

Provides a comprehensive listing of professional, commercial and academic organisations involved in business ethics throughout the world.

Canadian Marketing Association (http://www.the-cma.org/?WCE=C=47%7CK=225849)

The Canadian Marketing Association (CMA) is the largest marketing association in Canada representing the integration and convergence of all marketing disciplines, channels and technologies. CMA's 800 corporate members include Canada's major financial institutions, insurance companies, publishers, retailers, charitable organizations, agencies, relationship marketers and those involved in e-business and Internet marketing. Examples include companies such as Microsoft Canada, The Shopping Channel, Reader's Digest, the Bank of Montreal, Xerox Canada, and Bell Canada.

Centre for the Study of Ethics in Professions at Illinois Institute of Technology (http://www.iit.edu/libraries/csep/).

This site contains one of the most comprehensive collections of codes of ethics from a range of disciplines, including marketing and health care. Of particular interest are the resources relating to both writing and using codes of ethics. The website also contains links to other institutions, case studies and cases heard by industry ethics committees and a range of other resources.

Direct Marketing Association (DMA)(http://www.dma.org.uk/content/Abt-Introduction.asp)

The Direct Marketing Association UK is Europe's largest trade association in the marketing and communications sector. The DMA was formed in 1992, following the merger of various like-minded trade bodies, forming a single voice to protect the direct marketing industry from legislative threats and promote its development.

Enterweb (http://www.enterweb.org/ethics.htm)

ENTERWeb is an annotated meta-index and information clearinghouse on enterprise development, business, finance, international trade and the economy in this new age of cyberspace and globalization. The main focus is on micro, small and medium scale enterprises, cooperatives, community economic development, both in developed and developing countries. ENTERWeb lists and rates Internet resources in these areas, and complements search engines by providing shortcuts in identifying important sources of information.

In other words, ENTERWeb acts as a single dispatching window of information which will direct anyone looking for information related to enterprise development, business and international trade to the best places on the web most likely to respond to their needs.

The website contains a number of useful links to other organisations.

EthicsWeb.ca (http://www.ethicsweb.ca/)

This site is maintained by an individual, rather than an organisation. It provides an extensive listing of, and links to, various ethics-related websites. Much of the content relates to Canada, but it has relevance to the wider community as well, particularly in relation to the Applied Ethics Resources section..

European Association of Communication Agencies (http://www.eaca.be/)

The European Association of Communications Agencies (EACA) is a Brussels-based organisation whose mission is to represent full-service advertising and media agencies and agency associations in Europe.

EACA aims to promote honest, effective advertising, high professional standards, and awareness of the contribution of advertising in a free market economy and to encourage close co-operation between agencies, advertisers and media in European advertising bodies."

The website contains a number of useful position papers relating to marketing communication effects and regulatory provisions.

Government Social Research (http://www.gsr.gov.uk/)

GSRU is the Chief Government Social Scientist's supporting office. It provides strategic leadership to the Government Social Research service and supports it in delivering an effective service. It has a broad role in promoting the use of evidence in strategy, policy and delivery and leads on strategic social research issues and standards for social research in government. Resources include:

- GSR Professional Guidance: Ethical Assurance for Social Research In Government
- Graham, J., Lewis, J. & Nicolaas, G. (2006). Ethical Relations: A Review of Literature on Empirical Studies on Ethical Requirements and Research Participation, ESRC / University of Manchester
- Graham, J., Grewal, I., Lewis, J. (2007). Ethics in Social Research: The Views of Research Participants Government Social Research

International Chamber of Commerce (http://www.iccwbo.org/policy/marketing/id857/index.html)

ICC is the world business organization, the only representative body that speaks with authority on behalf of enterprises from all sectors in every part of the world. ICC promotes an open international trade and investment system and the market economy. Business leaders and experts drawn from ICC membership establish the business stance on broad trade and investment policy as well as on vital technical and sectoral subjects. ICC was founded in 1919 and today it groups thousands of member companies and associations from over 130 countries. Within a year of the creation of the United Nations, ICC was granted consultative status at the highest level with the UN and its specialized agencies.

About the ICC Commission on Marketing and Advertising: ICC has been a major rule-setter in international advertising self-regulation since 1937, when the ICC Commission on Marketing and Advertising first issued the ICC code on Advertising Practice – one of the most successful examples of business self-regulation ever developed.

The Commission on Marketing and Advertising is composed of policy experts from ICC member companies from the marketing and advertising industry, including legal advisors from industrial and commercial enterprises and lawyers in private practice, representing a wide range of national backgrounds and business representative organizations.

ICC's Commission on Marketing and Advertising works closely with international nongovernmental and intergovernmental organizations involved in marketing and advertising policy-making, such as the World Federation of Advertisers (WFA), the European Advertising Standards Alliance (EASA), the International Advertising Association (IAA) and the Organization for Economic Cooperation and Development (OECD) through its Business and Industry Advisory Committee (BIAC).

The website contains a consolidated code of practice (54 pages) and a range of other resources relating to marketing and advertising.

Institute of Business Ethics (London) (http://www.ibe.org.uk/)

The IBE was established in 1986 to encourage high standards of business behaviour based on ethical values.

Our vision: To lead the dissemination of knowledge and good practice in business ethics.

What we do: We raise public awareness of the importance of doing business ethically, and collaborate with other UK and international organisations with interests and expertise in business ethics.

We help organisations to strengthen their ethics culture and encourage high standards of business behaviour based on ethical values. We assist in the development, implementation and embedding of effective and relevant ethics and corporate responsibility policies and programmes. We help organisations to provide guidance to staff and build relationships of trust with their principal stakeholders.

Institute for Global Ethics (http://www.globalethics.org/index.htm)

American organisation, 'Founded in 1990, the Institute for Global Ethics (IGE) is an independent, nonsectarian, nonpartisan, 501(c)(3) nonprofit organization dedicated to promoting ethical action in a global context. Our challenge is to explore the global common ground of values, elevate awareness of ethics, and provide practical tools for making ethical decisions.'

The International Business Ethics Institute (http://www.business-ethics.org/)

A private, nonprofit, nonpartisan, educational organization. The Institute was founded in 1994 in response to the growing need for transnationalism in the field of business ethics. The Institute is located in Washington, DC, with an affiliate office in London.

The Institute promotes business ethics and corporate responsibility through two key program areas. First, it works to increase public awareness and dialogue about international business ethics issues through such educational resources and activities as the Roundtable Discussion Series, the International Business Ethics Review and this website. Second, the Institute works closely with companies to assist them in establishing effective international ethics programs. The Institute is dedicated to disseminating business ethics information to demonstrate the positive, tangible changes that responsible business can generate.

The Public Health Leadership Society (PHLS): American organisation headquartered in Florida. (http://phls.org/home/)

PHLS is a membership organization comprised of the alumni from national, state and regional public health leadership institutes, and the Robert Wood Johnson State Health Leadership Initiative. Members of PHLS are senior public health professionals, whose expertise range from local, state, national, private sector, and the academic public health arena. Extensive resource base includes:

- (2002) Principles of the Ethical Practice of Public Health
- Thomas, J. (2004). Skills for the Ethical Practice of Public Health

Plus a number of links to organisations such as the American Public Health Association and the Public Health Foundation

Healthy Foundations Life-stage Segmentation Model Toolkit

October 2010

DH Reader information box

Policy HR/Workforce Management Planning/Clinical	Estates Commissioning IM & T Finance Social Care/Partnership Working
Document Purpose	For information
Gateway Reference	14183
Title	Healthy Foundations Life-stage Segmentation Model Toolkit
Author	DH, HIPD Social Marketing and Health Related Behaviour
Publication Date	28 April 2010
Target Audience	PCT CEs, NHS Trust CEs, SHA CEs, Care Trust CEs, Foundation Trust CEs, Medical Directors, Directors of PH, Local Authority CEs, Directors of Finance, Communications Leads, Public Health Observatories
Circulation List	
Description	The Healthy Foundations Life-stage Segmentation Model uses consumer insight to inform local and national health improvement activities, and deliver interventions that will support the achievement of the key public health priorities. The deeper level of understanding of both motivations and environmental influences provided by the Healthy Foundations survey can also be used when developing LAA, DH, NHS and LA capacity to deal with identified local health needs, and can be a key tool in delivering "NHS 2010-2015: from good to great."
Cross Ref	Ambitions for health: A strategic framework for maximising the potential of social marketing and health-related behaviour
Superseded Docs	N/A
Action Required	N/A
Timing	N/A

KEY TO ICONS

Smoking

Drugs

Alcohol

Fruit & Vegetables

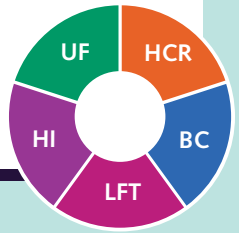
Exercise

Mental Health

Full descriptions of the five segments and their key health behaviours (as highlighted by these icons) can be found in the '**About the project**' on page 4.

Navigating the toolkit

Contents list



Click any of the sections listed above to go straight to that section or page of the guide.

Document navigation

- Clicking on '**Main contents**' at the bottom of each page of the guide will return you to this contents page
- Clicking the directional arrows (**< >**) at the bottom of each page will take you to the previous or next page.

Hyperlinks

- Where there is a mention of a specific section within the text (highlighted in bold), click on these and it will take you to that page
- Clicking on any web addresses will enable you to visit external websites

Welcome

Welcome to the Healthy Foundations Life-stage Segmentation Model Toolkit.

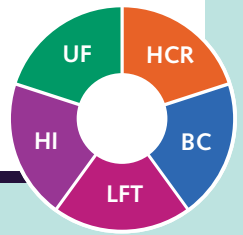
Healthy Foundations is a lifestyle segmentation project which sets out to ensure that all public health interventions are informed by our understanding of what motivates people and how these motivations are affected by their social and material circumstances.

The DH, working with academic and commercial research agencies, has developed a segmentation of the adult population of England based on behaviour, attitudes and lifestyles.

Originally aimed at social marketing and behaviour change practitioners, the project set out to map the key drivers of behaviour across six public health priority areas:

- Smoking
- Obesity
- Alcohol
- Substance misuse
- Sexual health
- Mental health

In addition, the survey also measured physical activity.



The Segmentation Model, which builds on existing research and knowledge, is one of the most rigorously constructed public sector segmentation models to date. It offers social marketing, behaviour change and public health practitioners insights into the needs, lifestyles and motivations of different individuals and groups within society.

Its ultimate aim is to create a powerful insight tool to help understand subgroups of the population and focus resources where they are most needed. The Segmentation Model offers a fresh and nuanced approach to the development and use of insight. When added to demographic, behavioural and epidemiological data, it will be a vital tool for ensuring that people are at the heart of policy-making and service delivery. The Segmentation Model makes it possible to tailor interventions or services to particular 'segments', with a view to improving effectiveness and efficiency by promoting a more targeted use of resources.

This toolkit shows how to use the Segmentation Model to achieve a deeper understanding of local audiences and devise health behaviour change interventions that have more impact. Providing background information, case studies, implementation tips and more, it is a key resource for practitioners looking to meet local needs and deliver successful and cost effective interventions.

Acknowledgments
We would like to thank the following people for their contribution to this toolkit:
- Ewen MacGregor, Project Manager, DH
- Dominic McVey, Research Advisor, DH
- Forster
- Vincent La Placa, DH
- Damian Wilcock, DH
- Lucy Gate, DH

Please note that the video, audio material and other tools accompanying this toolkit are included as research materials for internal use only. They have been produced to help those working on health behaviour change, and may not be used outside of the organisation. Please get in touch with the Healthy Foundations team if you have any questions about the usage of any of the tools.

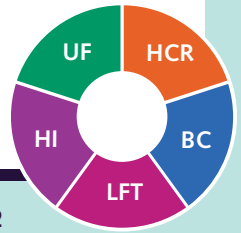
Background and methodology

Segmentation can be a powerful tool to help understand population subgroups and focus resources where they are most needed. Moving beyond demographics and factoring in attitudinal and psychographic data (a person's overall approach to life, including personality traits, values, and beliefs) provides a rounder picture of individuals and is a good starting point for developing tailored interventions.

When segmenting populations, the aim should be to define a small number of groups so that all members of a particular group are as similar to each other, and as different from the other groups, as possible.

A good segmentation should:

- Build on current knowledge;
- Provide a language for understanding people;
- Add value and greater sophistication when developing and targeting interventions;
- Not be too complicated and be accessible to local practitioners who should be able to re-create the segments in their own research.



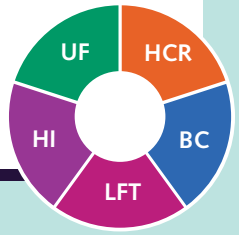
With these guidelines in mind, DH has developed a segmentation of health-related attitudes and behaviour.

Over the past two years, a number of research studies have been conducted to develop the segmentation. They included:

1. A literature review and consultations with internal DH staff, Strategic Health Authority (SHA) and Primary Care Trust (PCT) representatives, public health research experts, marketing segmentation experts, statisticians and social researchers from the public and private sectors.

2. A large scale quantitative survey to construct and size the segments. A random sample of 4,928 people aged 16-74 years old were interviewed for one hour in their homes using computer assisted personal interviewing.

3. Large scale qualitative research and ethnography, comprising 52 focus groups and 45 immersion interviews to explore in depth their lifestyle, motivations and the behavioural intervention approaches that might work.



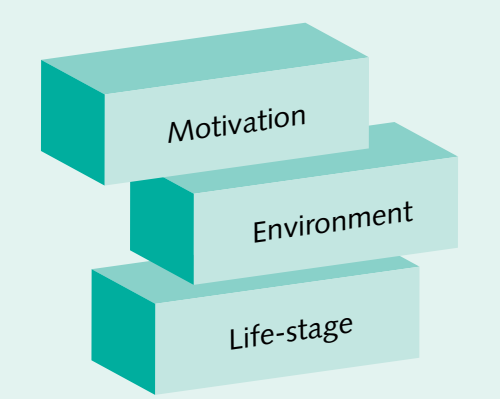
What the Segmentation Model is here to do

The Segmentation Model is a powerful strategic tool that can help planners, managers and commissioners to identify the Healthy Foundations segments to understand their needs, develop policies and allocate resources.

It gives a detailed strategic view of target audiences, drawing on data from a range of sources, and an understanding of their needs and motivations that goes beyond just health issues. This insight can be used to inform communications, shape effective policies/interventions and bring about service changes.

The Segmentation Model was originally designed to inform commissioning at national strategic level, but has since been developed and refined for local application. Stable and replicable, the Segmentation Model allows people to identify and target local segments, and is aimed at those involved in planning, designing and developing social marketing and behaviour change programmes.

Senior managers and commissioners will be crucial champions of the programme and can help embed it across mainstream health interventions. Local communications teams will also play a key role in raising awareness of the Model and disseminating results and good practice.

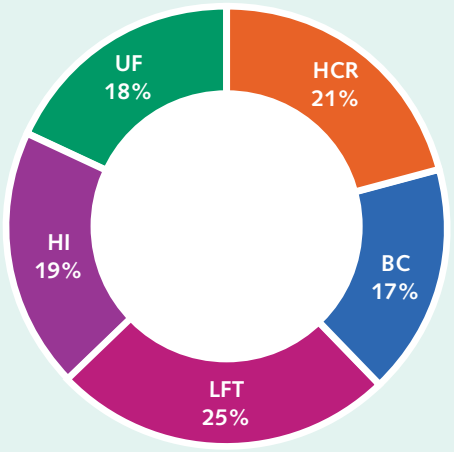


The Healthy Foundations Life-stage Segmentation Model: Pen portraits

The Segmentation Model consists of **five core motivational segments** which can be further divided by different levels of social and material deprivation (see **Analysis by deprivation**). These groups can be found within every social stratum in society – from the most deprived areas to the most affluent areas.

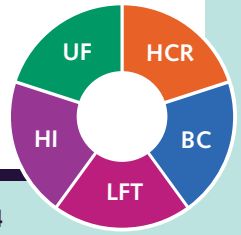
The full Segmentation Model captures the complex dynamics between an individual's personal motivation to live healthily (the *motivation* dimension) and how these vary within the context of their social and material circumstances (the *environment* dimension of the segmentation). The segmentation also captures the variation by life-stage i.e. the *life-stage* dimension of the segmentation (see **Analysis by life-stage**).

The adult segmentation aims to provide a number of 'building blocks' that can be used to understand attitudes or behaviour. The blocks can be used individually or together.



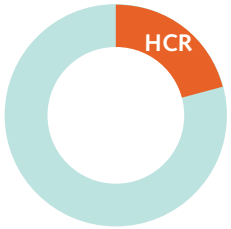
The building blocks:

Based on in-depth research (see **Background and methodology**), these three dimensions have been identified as important influences on health behaviours. It is not intended that they be communicated directly to the audiences, but act as a guide to service and intervention planners.



The core of the segmentation is the "*motivation*" dimension of the work. Using cluster analysis methods, a range of psychosocial attitudes and constructs – such as self esteem, locus of control, fatalism, short termism, goal setting and self efficacy – we created five segment types.

Nationally, the five core motivational segments break down as follows:



Key:

- Health Conscious Realists **(HCR)**
- Balanced Compensators **(BC)**
- Live for Todays **(LFT)**
- Hedonistic Immortals **(HI)**
- Unconfident Fatalists **(UF)**

Health Conscious Realists (HCR)

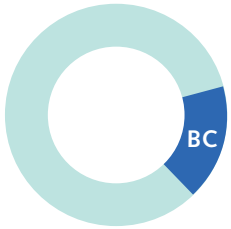
What are they like?

They are motivated people who feel in control of their lives and their health. They generally feel good about themselves, but have more internally focused aspirations to better themselves, learn more and have good relationships, rather than just aspiring to looking good. They tend not to take risks and take a longer term view of life, and that applies to their health too. Their health is very important to them and they feel that a healthy lifestyle is easy to achieve and enjoyable. They also take a realistic view of their health: of all the segments they are the least fatalistic about their health, and don't think they are any more or less likely than other people to get ill.

INSIGHTS

Segment size

21% = 8.0 million adults



Profile

- Female bias in this segment
- They are more likely to live in less deprived areas but significant numbers do live in deprived areas
- Segment with an older than average age (47 compared to 43 years for the study sample)

Behaviours

- Display positive health behaviours
- Highly motivated
- In control of their lives and their health
- Low prevalence of smoking and drug use
- Eat healthily

Balanced Compensators (BC)

What are they like?

They are positive and like to look and feel good about themselves.

They get some pleasure from taking risks. However, they don't take risks with health. Health is very important to them, and something they feel in control of. A healthy lifestyle is generally easy and enjoyable.

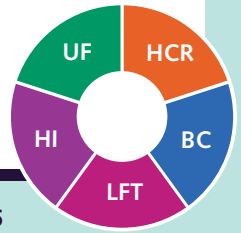
They are not fatalists when it comes to health and understand that their actions impact on their health both now and in the future.

If they do take some health risks, they will use compensatory mechanisms to make up for this, such as going for a run in the morning having eaten a big meal or drunk too much the night before.

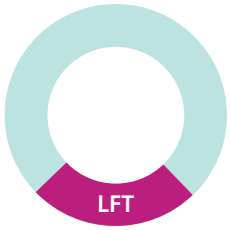
INSIGHTS

Segment size

17% = 6.5 million adults



Profile



- Stronger male bias within this segment
- Highest proportion of people in full time work
- Segment with a slightly younger than average age (41 compared to 43 years for the study sample)

Behaviours

- Generally positive health behaviours
- Exercise regularly
- Eat healthily
- Low prevalence of smoking and drug use

Live for Todays (LFT)

What are they like?

They definitely like to "live for today" and take a short term view of life. They believe that whatever they do is unlikely to have an impact on their health, so what's the point? They tend to believe in fate, both where their health is concerned, but also for other things in life.

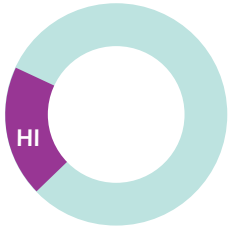
They value their health but believe that leading a healthy lifestyle doesn't sound like much fun, and think it would be difficult. They don't think they are any more likely than anyone else to get ill in the future.

They tend to live in deprived areas which gets them down and they don't feel that good about themselves, but feel more positive about life than the "Unconfident Fatalists". They are the segment who are most resistant to change and don't acknowledge that their health needs to change, unlike the "Unconfident Fatalists".

INSIGHTS

Segment size

25% = 9.5 million adults



Profile

- Tend to live in more deprived areas
- Segment average age (42 compared to 43 years for the study sample)

Behaviours

- Exhibit fairly poor health behaviours
- Hold short-term view of life
- Fatalistic about life
- More likely to smoke and drink heavily
- Little concern for their future wellbeing

Hedonistic Immortals (HI)

What are they like?

They are people who want to get the most from life. They do not mind taking risks – as this is part of leading a full life. They feel good about themselves and are not that motivated by material wealth or possessions.

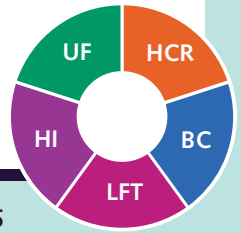
They know that their health is important to avoid getting ill in the future, but feel pretty positive about their own health at the moment and don't think they will be getting ill any time soon. Maybe because of that they do not really value their health right now. They do not have a problem with leading a healthy lifestyle: it would be fairly easy and enjoyable to do so, and they certainly intend to live healthily.

However they feel that anything which is enjoyable, such as smoking and drinking, cannot be all bad.

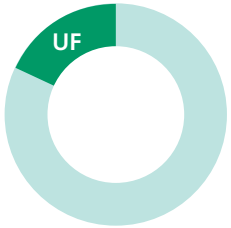
INSIGHTS

Segment size

19% = 7.2 million adults



Profile



- Segment with a younger average age
- More likely to come from less deprived areas
- Segment with a younger than average age (36 compared to 43 years for the study sample)

Behaviours

- Motivated by enjoyment and taking risks
- Display lack of concern for their health and wellbeing
- Most likely to drink heavily
- Higher-than-average incidence of drug taking

Unconfident Fatalists (UF)

What are they like?

Overall, they feel fairly negative about things, and don't feel good about themselves. A significant proportion feel depressed.

They feel that a healthy lifestyle would not be easy or in their control. Generally they don't feel in control of their health anyway. They are quite fatalistic about health and think that they are more likely than other people of the same age to get ill.

Their current lifestyles are not that healthy, and their health isn't currently as good as it could be. They know their health is bad, and that they should do something about it, but they are demotivated.

INSIGHTS

Segment size

18% = 6.8 million adults

Profile

- Segment with an older average age (47 compared to 43 years for the study sample)
- Tend to live in more deprived areas
- Least likely to be in paid work
- More likely to be retired

Behaviours

- Exhibit the most negative health behaviours
- Hold negative perceptions of a healthy lifestyle
- Often fatalistic about their own health

Summary of motivational differences between the Motivation Segments

	Health Conscious Realists	Balanced Compensators	Live for Today	Hedonistic Immortals	Unconfident Fatalists
Value health	High	High	Med	Low	Med
Control over health	High	High	Med	Med	Low
Healthy lifestyle is easy/enjoyable	High	High	Low	Med	Low
Health fatalism	Low	Med	High	Low	High
Risk taking	Low	High	Med	High	Med
Short termism	Low	Med	High	Low	High
Self esteem	High	High	Med	High	Low

Key:

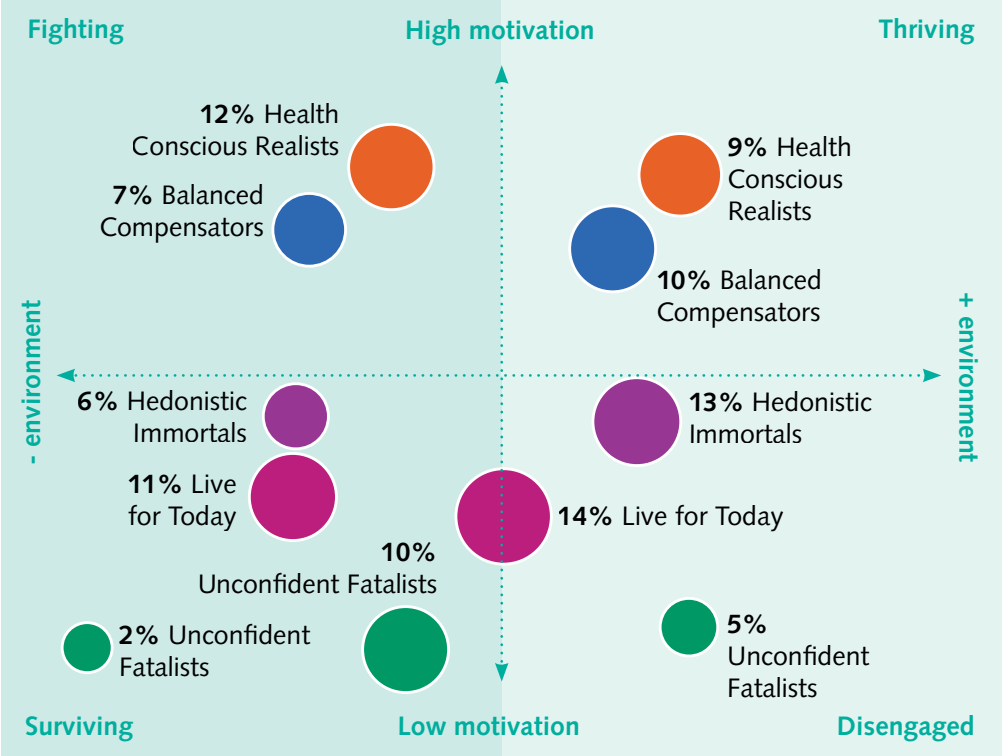
More positive motivation

More negative motivation

For a more detailed description of the five segments please refer to the Healthy Foundations presentation that can be found both online at **www.dh.gov.uk/socialmarketingportal** or on the USB drives.

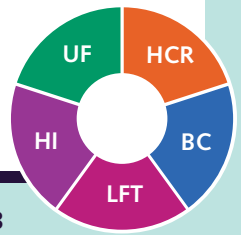
Analysis by Deprivation

These five segments are present in all areas of England including the most affluent areas and the most deprived areas. The five segments have been divided by levels of deprivation using the Indices of Multiple Deprivation (IMD) resulting in 11 distinct segments.



The percentages next to each segment bubble represent the adult population in England. Even the smallest segment – Unconfident Fatalists living in the most deprived areas of England – represents approximately 800,000 adults aged 16-74 (2% of the adult population).

The segmentation captures the dynamics between an individual's personal motivation to live healthily (the *motivation* dimension of the segmentation) and how these motivations vary within the context of their social and material circumstances (the *environment* dimension of the segmentation).



The segmentation also captures the variation in these measures by life-stage.

Looking at the segmentation chart, the quadrant names "fighters", "survivors", "thrivers" and "disengaged", summarise the general state of the segments within each quadrant.

Dividing the motivation segment by IMD (indices of multiple deprivation)

Note: A complex statistical procedure was used to split each of the segments into distinct groups, which maximised the differences in behaviour between the groups whilst capturing the different circumstances in which people live i.e. those living in more deprived areas and those living in less deprived areas. Most of the segments split into two distinct groups with the exception of the Unconfident Fatalists which split into three distinct groups. Unconfident Fatalists are represented in three places on the horizontal (environment) axis, while the other segments are shown only in two places.

Survivors

Hedonistic Immortals, Live for Todays and Unconfident Fatalists living in more deprived areas.

These tend to be people living in negative health environments who have a low level of motivation to look after their health. Within this group there will be many people with unhealthy behaviours, and a higher proportion than average will have poor health. Their position on the motivation scale indicates that they feel less in control of their health and have less confidence in their ability to do anything about improving it or preventing ill health. Their position on the environment dimension indicates that they will be living in more deprived circumstances, which will make it more difficult for them to change their lifestyle.

Moreover, in some of the most deprived communities in England, the social norms make it difficult for those wishing to change. For example, smoking prevalence can be over 50 per cent in some areas, making it harder to give up. If one of the main purposes of segmentation is to target resources where they are needed, these segments would clearly be a priority for appropriately tailored interventions and services.

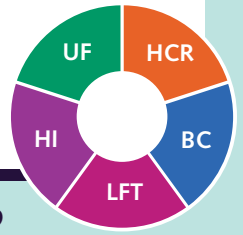
Fighters

Health Conscious Realists and Balanced Compensators living in more deprived areas.

They live in negative health environments but rise above their norms, and have a higher level of motivation to look after their health.

These segments live in the same conditions as the "surviving" group; indeed, some of them may be in the same family. There may be a number of reasons why they have managed to maintain a healthier lifestyle and exhibit a degree of resilience to the deprivation surrounding them. Whatever the reasons which emerge from research, this group has potential to influence their "survivor group" peers.

Disengaged



Hedonistic Immortals, Live for Todays and Unconfident Fatalists who are living in less deprived areas.

These people live in more positive environments and for a range of reasons have a low level of motivation or ability to look after their health.

Thrivers

Health Conscious Realists and Balanced Compensators living in less deprived environment.

People in this group are more motivated to look after their health and feel more able to do so. They tend to be surrounded by the resources and positive norms to make that happen.

Analysis by Life-stage

Discovery Teens

Freedom years < 25

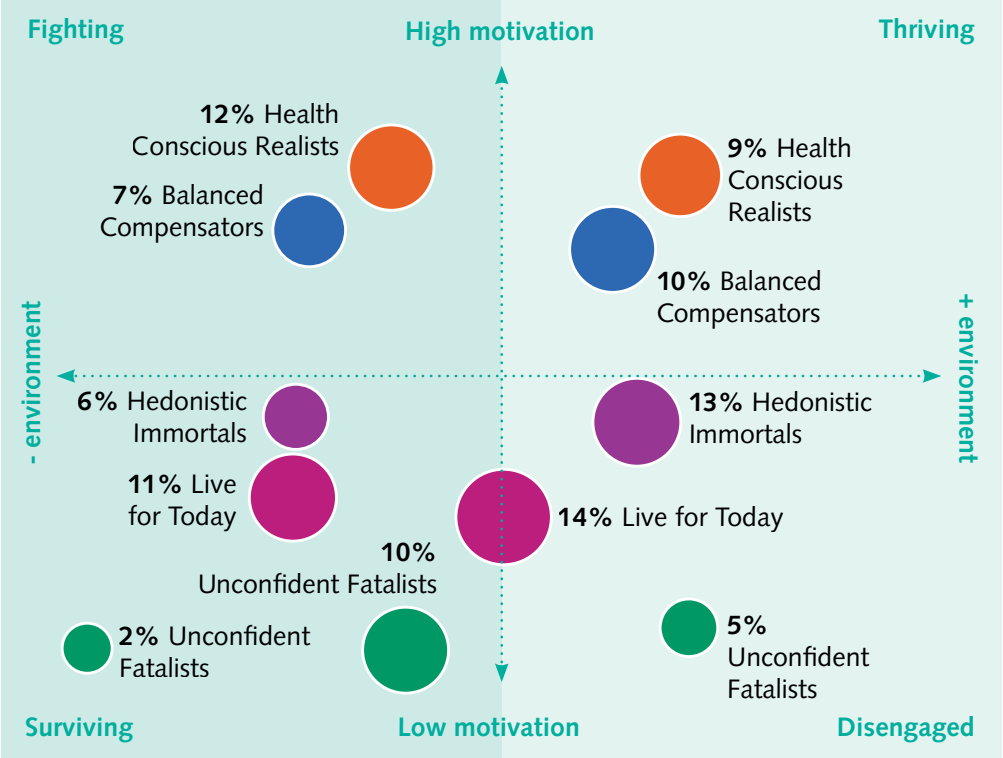
Freedom years 25+

Younger settlers (no dependents)

Younger jugglers (dependents)

Older settlers (no dependents)

Older jugglers (dependents)

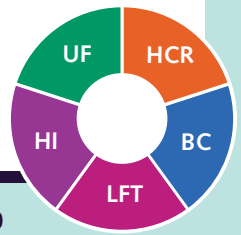


Alone again

Retirement with partner

Retirement no partner

As a person travels through different life-stages, there are numerous events and opportunities associated with that life-stage which can encourage healthy or unhealthy behaviours. In this segmentation, life-stage has been defined by ten groups. Within each group the distribution of the segments can be calculated. For example, the "Freedom years under 25" life-stage will have its own distribution of Balanced Compensators, Unconfident Fatalists, and so on.

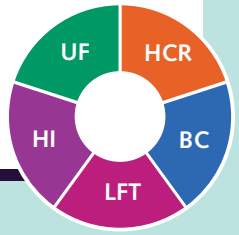


Dividing the motivation segment by IMD (indices of multiple deprivation)

Further information about the Segmentation Model will be available online at **www.dh.gov.uk/socialmarketingportal**. This includes:

- Contact details for local 'superusers', who will provide technical support in each region
- Regional contacts
- The qualitative and quantitative full and summary reports
- The Healthy Foundations survey
- The 'profiling tool' – see **A profiling tool**

A full explanation of the life-stages is available in the **Appendices**.



A profiling tool ('golden questions')

The Healthy Foundations profiling tool is intended to provide health practitioners with a means to develop a deeper understanding of their local population. It is a robust and reliable tool that can be used to segment respondents to a high degree of accuracy (c. 88%) using just 19 'golden questions' on a local health survey.

Respondents are asked to rate, or agree or disagree with statements on a range of topics, from the control they have over their own health, the extent to which they enjoy a healthy lifestyle, or feel that it is important.

Practitioners can ask the 'golden questions' at ward, PCT or any other level to segment a particular audience and obtain further insight into a local community and the behaviours that shape health outcomes. Employing such insight will result in a more holistic way of helping people to change their unhealthy behaviour or to maintain healthy behaviour – rather than always taking a disease- or issues-based approach. There is rarely a 'one-size-fits-all' solution that will work across the population. It is hoped that future social marketing and health promotion programmes will be built on shared insight into audiences, clearly defined through segmentation analysis.

The profiling tool will shortly be available online for you to try out.

How practitioners are using the Segmentation Model

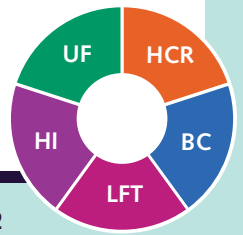
Here we provide first-hand accounts from some of the PCT 'early adopter sites' that are already using the Segmentation Model.

"The idea is that the segmentation is based mainly on primary care and other health and social care data."

NHS Tower Hamlets

"At Tower Hamlets we've been working with Experian, the information services company, to produce a bespoke segmentation for the borough. Our aim is to link Experian's classification tool, MOSAIC, which provides in-depth understanding of consumer behaviour, with the Segmentation Model in order to provide a detailed picture of our local population.

The idea is that the segmentation is based mainly on primary care and other health and social care data, supplemented by other lifestyle and commercial data used by Experian. We will also link it in with data from a Health and Lifestyle survey carried out by Ipsos MORI in Tower Hamlets in 2009.



Our area has very high levels of deprivation, and health issues can rarely be solved by traditional medical interventions. We are looking at behavioural drivers to better understand the health inequalities, needs and potential for change among local people.

We know that there will be little motivational data within the bespoke Tower Hamlets MOSAIC, so our plan is to link the data contained in the Healthy Foundations Life-style Segmentation Model with our local segmentation using the TGI hooks that will be present in both datasets. We can then see how well the Healthy Foundations segmentation matches the MOSAIC segmentation, which should help us to identify motivational and attitudinal types.

From there, we will map our motivational insights against service use and assumed service preference. If the match appears valid, we can begin using the motivational data to design interventions that are targeted, tailored, and hopefully very effective."

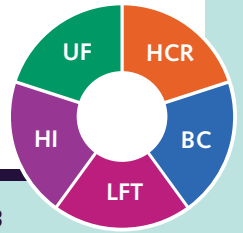
Tim Madelin,
Senior Public Health Strategist

"Our aim is to link Experian's classification tool, MOSAIC, which provides in-depth understanding of consumer behaviour, with the Segmentation Model."

DH: Healthy Foundations Pilot Site Ashton, Leigh & Wigan PCT

"The Healthy Foundations Segmentation Model is being used to better understand the characteristics and motivations of populations in relation to awareness and uptake of lifestyle services across the borough of Wigan in order to inform future commissioning strategies.

The pilot work in Wigan will initially focus on an analysis of Health Trainer service uptake by using the Segmentation Model within the service evaluation. Work is being undertaken in partnership with the University of Central Lancashire (UCLan) to attempt to retrospectively categorise service users against the population segments using the People & Places geo-demographic tool. The algorithm, which has been developed as part of the Healthy Foundations programme, will be used with new clients to identify the population segment they belong to.



On-going evaluation work involving the use of diaries, quantitative data collection and focus groups will then be used to assess the impacts and experience of users against the different population segments.

The evaluation will support developments specific to the Health Trainer service, but will also inform the way that the service interacts and is positioned alongside other behavioural change interventions such as Stop Smoking services, community weight management, specialist weight management and Find & Treat (local Cardio-Vascular Disease screening programme). The Segmentation Model will be used to influence local commissioning strategies for lifestyle and behavioural change interventions and to support more effective targeting of programmes and interventions in order to stimulate and support behaviour change."

Claire Roberts,
Public Health Development Manager

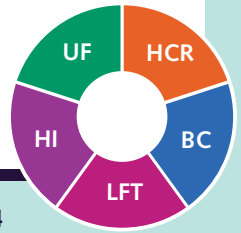
"The pilot work in Wigan will initially focus on an analysis of Health Trainer service uptake by using the Segmentation Model within the service evaluation."

"The Segmentation Model will be used to influence local commissioning strategies for lifestyle and behavioural change interventions."

Brilliant Futures and East Cambridgeshire Health and Wellbeing Partnership

"Brilliant Futures are providing coaching and consultancy services to the East Cambridgeshire Heath and Wellbeing Partnership. The Partnership wants to research the local population in order to shape behaviour change interventions aimed at reducing health inequalities. The project is targeting Littleport, the most deprived area in East Cambridgeshire.

We recommended that the Partnership made use of the Healthy Foundations Segmentation Model to provide insight into the motivations and environmental drivers of health behaviours amongst the population of Littleport. We also suggested that they use the Model to devise possible intervention approaches by segment.



The information generated by the Model will be used alongside insight from stakeholders and other geo-demographic profiling data held by the PCT.

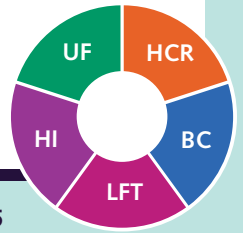
The Partnership has responded very favourably to our suggestions, and is keen to try the new approach. The project will begin with primary research using the Healthy Foundations profiling tool, with 250 face-to-face, door-to-door interviews with people over 16 in Littleport. The proposed interventions will then be tested with the target audience via existing community channels before development begins in earnest."

Richard Donaldson, Senior Associate

"We also suggested that they use the Model to devise possible intervention approaches by segment."

"The Partnership has responded very favourably to our suggestions, and is keen to try the new approach."

"We have had lots of discussions around joining up social marketing activity in Bolton."



NHS Bolton

"NHS Bolton is planning a joint piece of segmentation work with our local authority and the information and marketing company CACI. We have had lots of discussions around joining up social marketing activity in Bolton and we believe the Healthy Foundations Segmentation Project has the potential to add value to this work.

We are also undertaking a commissioning review of 'wellness services' in Bolton. The health needs assessment phase has been completed and a stakeholder visioning event is planned for June, 2010. An understanding of our local population segments, and what will work to change health behaviours, will be extremely useful to the review process – and this is where the Segmentation Model should prove invaluable."

Lesley Jones, Deputy Director Public Health

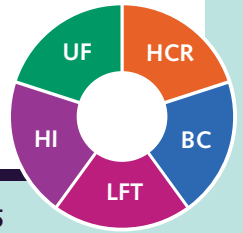
"An understanding of our local population segments, and what will work to change health behaviours, will be extremely useful to the review process."

NHS Dudley

"Here in Dudley we are using the Segmentation Model as a strategic tool to help bring about systemic change within the delivery of health services.

We have selected two segments from the Segmentation Model – Live for Todays and Unconfident Fatalists – to demonstrate the viability of segmentation to stakeholders and influence our local Joint Strategic Needs Assessment (JSNA) update.

We are currently reviewing existing programme services and interventions in order to decide which are best suited to the target segments. To help us do this we are using the Healthy Foundations profiling tool to match 'service bundles' with segment type. We are also using what we know about the type of interventions that may work within a given segment.



Our overall aim is to influence the commissioning process in the borough by showing evidence of increased efficacy and positive behaviour change. This process should also enable us to justify further funding for social marketing and segmented interventions in the future.

It is a long process, involving in-depth testing, research and evaluations, but if it pays off and we succeed in paving the way for improvements in health campaign delivery, then it will all have been worth it."

Claire Roberts,
Public Health Development Manager

"We have selected two segments from the Segmentation Model – Live or Todays and Unconfident Fatalists."

"Our overall aim is to influence the commissioning process in the borough by showing evidence of increased efficacy and positive behaviour change."

How DH is using the Segmentation Model

In this section we provide four examples of how the Segmentation Model is being used by the DH.

Change4Life

"In Summer 2009, the Change4Life team was given access to the Healthy Foundations database to help further our understanding of middle aged adults, the next target audience for the Change4Life campaign.

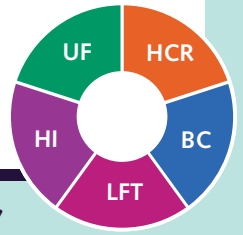
Data for adults aged 31 to 60 was cut by weight status (healthy weight, overweight, obese, very obese) and gave us some useful insight into their differences in terms of attitudes and behaviours. For example, key differentiators for people with healthy weight were that they were more likely to perceive a healthy lifestyle as enjoyable and have high self-confidence. For the obese, key differentiators were that they were more likely to say that a healthy lifestyle is not easy, have low self-confidence and have a high level of fatalism when older. These insights were used to inform our qualitative research, which in turn has been used to help develop our marketing strategy for our next target audience of 'middle-aged' adults."

Lucy Brady, Research Analyst, Planning and Insight Team, Department of Health

Mental Health

"Healthy Foundations data shows that there is a strong correlation between poor mental health (GHQ) scores and health risk behaviours such as smoking, alcohol, drug misuse, obesity, sexual health and insufficient physical exercise and fruit and vegetable intake. As the GHQ score increases, these health risk behaviours become more pronounced.

The only exception to this is alcohol which only shows a negative relationship with women. This pattern may reflect that alcohol consumption is high across society."



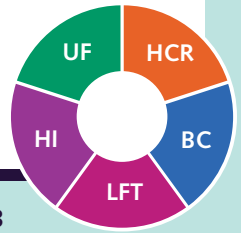
Dr Jo Nurse, National Lead for Public Mental Health and Well-being and responsibility for excess seasonal deaths, Department of Health

Cancer Services and End-of-Life Care

"The Cancer and End-of-Life Care branch, in conjunction with our strategic partners, Cancer Research UK (CRUK), have used the **profiling tool** to segment perceptions of cancer amongst the general public.

Our research is yet to be completed, but in the groups I viewed, it was clear that we were witnessing some kind of balancing behaviours (Balanced Compensators, Male, 50+). For example, one respondent consciously checked for lumps and anything out of the ordinary around his body. Unfortunately, he also smoked more than 20 cigarettes per day. As I understand the demographic, this behavioural pattern is consistent with the segmentation."

Justin Kerr-Stevens, Communications Manager, Cancer Services and End-of-Life Care, Department of Health



COPD

"We have used the health motivation profiles set out in the Healthy Foundations research and overlaid them on the segmentation work we have undertaken to support the prevention and early identification of chronic obstructive pulmonary disease (COPD). In doing this, we have used the Healthy Foundations segments to support the identification and design of targeted activity/ interventions which might motivate behaviour change. One key insight is that many within our main target group – routine and manual workers (R&Ms) – are Unconfident Fatalists. However, it is clear that changing the behaviour of this group could be the hardest to achieve, given they have the least positive environment and the lowest motivation to change.

A significant insight is to develop and deliver interventions positively – both in terms of environment and positioning.

An alternative and more realistic target segment to start with may be Live for Todays. This group is also heavily influenced by their environment but has a greater motivation to change and therefore could be easier to target. We also think that many younger R&Ms fall into the Hedonistic Immortals profile and that we therefore consider the motivations and potential interventions for this group differently."

Julia Crighton,
Service Engagement Manager,
NHS Medical Directorate,
Department of Health

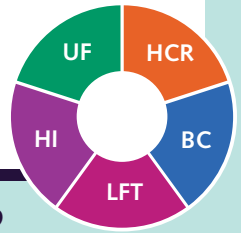
The local picture

The Healthy Foundations survey findings provide robust estimates of segment sizes for the general population of England. But for smaller areas the sample sizes are too small to be usable.

As the case studies on the previous pages show, there are various ways the Healthy Foundations Segmentation Model can be used including:

- Using the profiling tool (19 'golden questions') as a stand-alone survey
- Using a smaller number of the 'golden questions' and adding them into an existing health survey
- Conducting qualitative research i.e. focus groups using the questions as a basis, to gain further local insights into barriers and motivators of your target audience.

Evaluation



To assess whether the Segmentation Model has helped to target, tailor and deliver local health interventions, practitioners will need to evaluate their work.

A good evaluation with proper baseline and follow up measures will to enable practitioners to identify areas of strength and weakness, and establish key learning that will help to shape future interventions.

Here are some top tips for evaluation:

- Set measurable, achievable and time-realistic targets
- Establish links with networks of other health professionals; this will enable access to evaluation benchmarks, principles and frameworks
- Liaise with DH and share results
- Record methodology as well as outcomes.

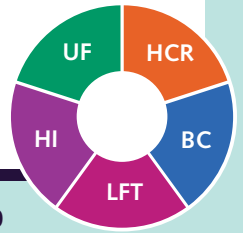
As Healthy Foundations gains momentum, DH is keen to hear how practitioners have used the tools, and what the results are. Please get in touch to discuss plans and achievements. Our **contact details** are at the end of this document.

Embedding the Segmentation Model

The Healthy Foundations Life-stage Segmentation Model is a mechanism for delivering tailored interventions based on a holistic understanding of people and their motivations for change. Using the Tool will enable you to tailor your interventions to local needs, helping you to work more easily and effectively across the healthy priority areas. The Strategic Segmentation Model provides audience insights, helping to fill information gaps and lending more depth and detail to current knowledge. It can help you to identify service needs and will assist in the commissioning and delivery process.

It is a vital tool for addressing health inequalities at local and national level. However, to ensure the long-term success and sustainability of the Model, it needs to be adopted and embraced cross-organisationally.

To embed it fully, the Model should be promoted and used at all levels, and championed from top to bottom of your organisation.



Key benefits

The Segmentation Model proposes a new approach to creating better health behaviour change interventions. Its solid evidence base means that it can be presented as part of a compelling case for the use of insight in health service delivery.

The key benefits that the Segmentation Model could potentially bring to an organisation include:

- **Deep and wide audience insight:** Builds a rich picture of your target audience to enable understanding beyond just health issues and uses quantitative and qualitative data sources, including attitudinal, demographic and behavioural data to help shape effective interventions
- **Support for the prevention agenda:** Helps early identification of those segments of the population who are more at risk of adopting unhealthy behaviours
- **People-centred approach:** Places citizens at the heart of approaches to achieving health equality
- **Saved time and resources:** No need to 're-invent the wheel', as the Segmentation Model is based on sound evidence and intelligence about what motivates people, how they behave, their perceived barriers to change and what interventions will help them change
- **Identification of local and national policy priorities:** Providing a cross issue analysis of people attitudes and behaviour will help Ministers, commissioners, senior managers and officials make more effective decisions about policy priorities and interventions.

So, if you have been inspired by what you have seen and heard about the Segmentation Model, don't keep it to yourself. Pass it on to others around you, and start to embed its thinking and vision into your everyday working life. This way we can achieve lasting positive change for better public health.

Frequently Asked Questions (FAQs)

Q How will HF help practitioners?

A The Healthy Foundations Life-stage Segmentation Project enables practitioners to:

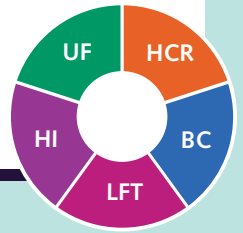
- Provide a consistent and holistic approach to segmentation across the different public service agreement (PSA) target areas
- Develop a better understanding of how a person's attitudes and motivations interact with their social circumstances to lead to negative or positive change
- To better understand the common motivational and environmental drivers of multiple poor health behaviours
- Assist the commissioning process in developing targeted services
- Better targeted efforts and resources at specific groups in most need e.g the 'Live for Todays'
- Provide a quality benchmark for future segmentation research e.g. robust, cross-issue quantitative and qualitative research.

Q What HF tools will be available to practitioners?

A The Healthy Foundations Segmentation tools either being developed, or developed already are as follows:

- Using Healthy Foundations data together with information from established market research tools e.g the Target Group Index (TGI)
- Online reporting tool – allowing cross tabulation of specific research variables, segments and regions **www.dh.gov.uk/socialmarketingportal**
- Profiling tool ('19 golden questions') – for use at regional or PCT level
- This toolkit.

Early examples from Healthy Foundations Policy Areas (Change 4 Life), Mental Health and SHAs/PHOs will be available as work in progress examples.



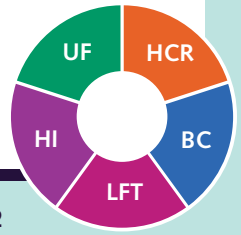
Q Who should I contact if I have a question or want to use the Healthy Foundations Segmentation Model?

A Your first point of contact should be the 'Superuser' in your region. To find out who this in your region visit **www.dh.gov.uk/socialmarketingportal** or refer to the Healthy Foundations presentations. Otherwise please contact the Healthy Foundations project team: **social.marketing@dh.gsi.gov.uk** or **020 7972 4638**.

Q How does the Healthy Foundations Segmentation Model differ from other segmentations models ?

A Whereas some other segmentations are specific to public health areas such as alcohol and obesity, the Healthy Foundations model has been developed to work across issues. Its holistic approach seeks to avoid the substitution of an alternative unhealthy behaviour for that targeted by the intervention – for instance, eating more when giving up smoking. If you are using other models, their segments may overlap with those of Healthy Foundations segments, so it is worth looking at both.

We are currently trying to ensure that the Healthy Foundations model is embedded into current policy.

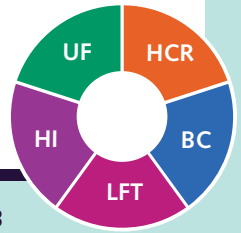


Q How much does it cost?

A Most of the Healthy Foundations segmentation tools and associated insight are free to access (via web portal for Government employees with a .gsi email account – registration required). If you do not have a .gsi email account but would like access to the web portal then contact the DH project team: **social.marketing@dh.gsi.gov.uk** or **020 7972 4638**.

Additional tools, and implementation of the segmentation, will have cost and resource implications for practitioners. However the aim of the Segmentation Model is to help practitioners and to make their work more targeted, more efficient.

Q How can a social marketing approach tackle health inequalities?



A A concern about interventions that aim to change behaviour is that they can contribute to a widening of health inequalities. Ineffectively targeted interventions can disproportionately affect those who are more able to act on the messages. Using insight and segmentation can limit this effect and ensure that interventions can better help those who need them.

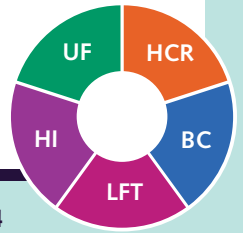
Intervention options by segment

(**Note:** A longer version of the interventions options grid, is available via the social marketing portal.)

Intervention Type	Health Conscious Realists	Balanced Compensators	Hedonistic Immortals	Live For Todays	Unconfident Fatalists
Context Health Motivations	In control of their health, this group feel they are healthy, with high levels of resilience and independence. They perceive no need to compensate for risks, as they do not take them often enough. Low intensity intervention needed.	Enhancing health and wellness is important to this group, who are aware of multiple health issues and responsive to messages highlighting risky behaviour they sometimes engage in. This group engages in 'compensatory' health behaviours. Medium/low intensity intervention needed.	Reducing negative risk behaviour must be associated with enjoyable aspects of healthy behaviour, through medium intensity intervention. Anything enjoyable is perceived as healthy regardless of the risk or outcome.	This group live in the present with a fatalistic, short-term outlook. Unhealthy behaviours are a response to stress, escapism or lack of planning. This group lack self reliance and do not recognise a need for change. Need a high intensity intervention.	This group recognise the need for change. Need to address low levels of self-esteem, fatalism, lack of control and motivation, and low mood through a high intensity intervention. This group do aspire to lead a healthy lifestyle.
Approach	Non-prescriptive approach. 'Maintain wellness' rather than prevent illness. Primary Care setting preferred.	Encouragement to maintain positive behaviour and awareness that the risky behaviour may not be compensated by compensatory behaviours.	Tailored information reflecting their priorities. 'Sell' positive links between health and their lifestyle.	Ongoing monitoring, mentoring, evaluation Hands-on or practical approaches are best.	Present change as worthwhile. Support/hand-hold, take small steps and tackle mental health issues.
Personal Interventions	Wellness health check (outside of medical/ill health context). Personal and clear advice. Supported self management materials.	Health check available across gyms, primary or secondary care. Mentoring rejected by this group, however welcome advisory roles for behaviour change with their own friends. Supported self Management materials.	External trigger/wake up call. Personal and clear advice related to specific need. Incentives e.g free gym pass for completion of health diary.	Health Check – explicit personalised 'real status' away from a health setting to increase personal knowledge. Peer led interventions such as Health Trainers.	Behaviour change support in a private 1-1 environment. Packaged support sensitive to needs: psychological interventions e.g. IAPT Programme, then introduced to lifestyle. Structured single issue programmes. Free health checks.
Engagement	Already engaged with health/ services, so prefer facilitation based approaches.	Already engaged with health, so prefer facilitation through a range of sources. In control of own health, prefer to search for own information via internet, friends and family. Family viewed as the most positive influencers of health.	Prefer to be engaged through multiple channels/ influencers.	Won't 'shop around' for information/advice, so need to go to them. Friends are viewed as positive influencers.	Face to face engagement through known/trusted channels.
Service Utilisation and Satisfaction	Already engaged with health/ services, so prefer facilitation based approaches.	Very low levels of service use (but they are the healthiest). Average levels of satisfaction.	Average levels of service use and satisfaction.	Low level of service use (despite some health issues), including screening attendance. Average levels of satisfaction.	Low level of service use (despite some health issues), including screening attendance. Average levels of satisfaction.

Life-stage categories

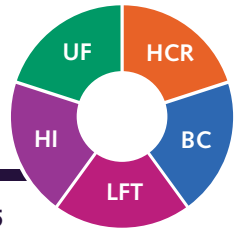
Life-stages were constructed based on those suggested by the initial hypothesis. A validated life-stage model was constructed following the Healthy Foundations survey. The life-stages are based on a number of different elements:



- Age
- Presence of children
- Presence of partner
- Whether they have significant caring responsibilities
- Working status (whether retired or not)

The following tables describes the variables which contribute to the life-stage categories.

Life-stage definitions



Category	Where this is derived from
Discovery teens	• Any respondent aged 12-15
Freedom years under 25	• Age 16-24 • Have no partner in household and have never had a partner • Have no children in the household and no children outside of the household • Have no caring responsibilities • Not retired
Freedom years 25 and over	• Age 25+ • Have no partner in household and have never had a partner • Have no children in the household and no children outside of the household • Have no caring responsibilities • Not retired
Young settlers	• Age 16-44 • With partner • Have no children in the household • Have no caring responsibilities • Not retired
Older settlers	• Age 45-64 • With partner • Have no children in the household • Have no caring responsibilities • Not retired

Category	Where this is derived from
Young jugglers	• Age 16-44 • Have children in household or have caring responsibilities • Not retired
Older jugglers	• Age 45-64 • Have children in household or have caring responsibilities • Not retired
Alone again	• Age 18+ (The majority are over 30) • Have no partner in household • Have no children in household • Have no caring responsibilities • Not retired • Have had a partner in the past or have children outside of the household
Retirement with partner	• Retired • With partner
Retirement without partner	• Retired • Have no partner in household

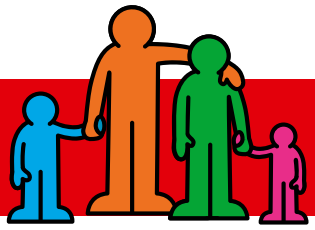
FOREWORD

In 2009, Change4Life came to life.

Responding to an urgent need to tackle the alarming rise in obesity, we launched not just a campaign but a societal movement, Change4Life, with a mission to encourage people to eat well, move more and live longer.

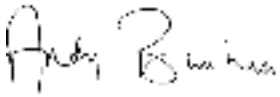
Change4Life set out to move beyond traditional communication, with an ambitious social marketing strategy to match the scale of the challenge: if we took no action, forecasts suggested that by 2050 only one in ten of the adult population could be a healthy weight.

Over the last year, I have seen the Change4Life movement extend across England, with a coalition of grassroots supporters, NHS and local government staff, commercial sector partnerships and non-government organisations joining forces with the Government to bring Change4Life to life.



We have mobilised a network of trusted sources to help us communicate messages about how families can eat well and move more. You can now find Change4Life activity in schools, GP surgeries, community centres, even your local supermarket, ranging from reminders to eat 5 A Day, to a new rap composed by kids to promote healthier eating.

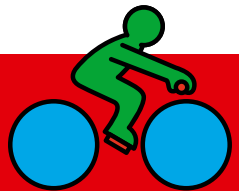
As the campaign developed, we launched a range of Change4Life sub-brands, such as Let's Dance with Change4Life, Bike4Life and Walk4Life, that have encouraged and supported people to get up and about and have fun. We have also extended the campaign to pregnant mums and families with babies aged 0–2 with Start4Life, and worked to promote Change4Life within ethnic minority communities.



This report shows the fantastic progress we have made towards achieving our shared aim – to create a lifestyle revolution in which we all play a part in changing the behaviours that can lead to people becoming overweight and obese. As we enter Change4Life's second year, we have surpassed all our targets for year one and we are beginning to see the impact on families as they start to adopt new, healthier behaviours.

These might be simple swaps, like switching from full-fat to skimmed milk or walking instead of travelling by car or bus. But they all contribute to our goal of reducing obesity.

While we have made significant progress, this is no time to take our foot off the pedal, so this month we launch Change4Life to a new adult audience and we will be going even further in our mission to help everyone achieve a healthy weight.



Unless we sustain the achievements of year one, we will still face an obesity crisis in years to come. With the Change4Life brand and the continued commitment and energy of the Change4Life movement, I believe we can support people to make the simple changes that will lead to us living healthier, longer lives.

Secretary of State for Health
Andy Burnham

1. EXECUTIVE SUMMARY

1.1 Background

Change4Life is the social marketing part of the Healthy Weight, Healthy Lives cross-governmental strategy for England.

In its first year, Change4Life focused on those families with children aged 5–11, who were at greatest risk of becoming overweight or obese.

1.2 The Change4Life movement

Change4Life's aim has been to inspire a societal movement through which government, the NHS, local authorities, businesses, charities, schools, families and community leaders can all play a part in improving children's diets and activity levels.

Change4Life has been promoting eight behaviours that help children achieve and maintain a healthy weight.

When families joined Change4Life, they received a questionnaire that asked about a typical day in the life of each of their children. This enabled us to send everyone who completed a questionnaire a tailored action plan with advice for each child. Beyond this, we sent 200,000 of the most at-risk families further support packs, which, through frequent reminders, tips and ideas, aimed to help people keep up good behaviours.

1.3 Achievements so far

We were set challenging targets for the first year of activity. All of the targets were exceeded.

	Year one Target	Year one Achievement
Reach (% of all mothers of children under 11 who had an opportunity to see the advertising campaign)	99%	99%
Awareness (% of all mothers with children under 11 who recalled seeing the Change4Life advertising)	82%	87%
Logo recognition (% of all mothers with children under 11 who recognised the Change4Life logo)	44%	88%
Response to *How are the Kids?* (total number of questionnaires returned electronically, by post or from face-to-face marketing)	100,000	346,609
Total responses (including website visits, telephone calls, returned questionnaires)	1,500,000	1,992,456
Sign-up (total number of families who joined Change4Life)	200,000	413,466
Sustained interest (total number of families who were proven to still be interacting with Change4Life six months after joining)	33,333	44,833

1.4 Are families doing anything differently?

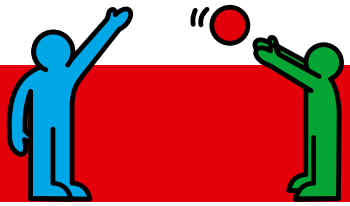
According to our tracking study,[1] over 1 million mums are already claiming to have made changes to their children's diet or activity levels as a result of Change4Life.

When we compare our latest data with a year ago, about 180,000 more mums now claim that their families have adopted *all eight* of the Change4Life behaviours.[2]

Analysis of actual sales data provided by commercial partners suggests that Change4Life may already be having a positive impact on the types of food that families are purchasing.

We are working with other government departments, with industry and with a leading academic to underpin these early positive indications with more robust evidence of behaviour change.

1.5 Local and national partnerships



We believe that the success in the first year is a testament to the way in which communities supported Change4Life. For example:

- 44% of primary schools, hospitals, general practices, town and village halls, children's centres, pharmacies, nurseries, libraries and leisure centres displayed Change4Life materials.
- Over 25,000 local supporters used Change4Life materials to help them start conversations regarding lifestyles with over 1 million people.
- NHS staff ordered over 6 million items of Change4Life material to distribute to the public.
- Primary schools generated over 50,000 sign-ups to Change4Life.
- Local authorities and primary care trusts joined up their own activities and created new ones, such as street parties and roadshows.

In addition:

- We have worked with other government departments to launch Change4Life sub-brands, such as Swim4Life, Play4Life and MuckIn4Life.
- Three of the main health charities (Cancer Research UK, Diabetes UK and the British Heart Foundation) ran their own campaign in support of Change4Life, and other non-governmental organisations, such as Natural England and Sustrans, also supported the campaign.

1 See Annex 4 for details of the tracking and all extrapolations made from it
2 British Market Research Bureau (BMRB)

- Businesses supported the movement, for example by providing free gym access, money off fruit and vegetables, and low cost bikes.

1.6 Looking forward

The latest data show that obesity prevalence in children may be beginning to flatten out. This is good news. Change4Life can play a role in accelerating the pace of change towards the government's target of returning obesity levels to 2000 levels by 2020.

We will be using what we have learned about the power of partnerships and community engagement as we evolve the families' campaign for 2010 and 2011.

In the next 12 months, we will do more of the things that families have told us help them to change their behaviours and will test more ways to inspire them to do so. This will involve, for example, providing materials for schools to encourage children to make pledges to change their diet and/or activity levels, and developing a clearer role for the Change4Life sub-brands and Change4Life ambassadors.

We are also producing messages for pregnant women and parents of children under the age of two (under the Start4Life sister brand), for ethnic minority communities and for middle-aged adults.

2. INTRODUCTION

Change4Life is the social marketing component of the Government's much broader response to the rise in obesity, as set out in *Healthy Weight, Healthy Lives: A Cross-Government Strategy for England* (HM Government, 2008) and in *Healthy Weight, Healthy Lives: One Year On* (HM Government, 2009).

Change4Life was launched to the public in January 2009. In the spring of that year, the Government published the Change4Life marketing strategy (available at www.dh.gov.uk) setting out the rationale for the programme, how it was intended to work, and what targets had been set for the first 12 months of activity.

A commitment was made to report on Change4Life's performance against those targets, together with what had been learned about using marketing to influence behaviour, one year later. This report fulfils that commitment.

This document contains the work of a diverse team of people working within the communications directorate of the Department of Health, as well as their policy colleagues across government departments, regional and local counterparts and national and local partners. Ten specialist marketing and communications agencies contributed to the programme and to the thinking that led to it. Nine independent research agencies provided analyses used in this document. In addition, the Healthy Weight Healthy Lives Expert Advisory Group provided technical advice throughout the development and delivery of the campaign.

2.1 Context

The rise in obesity is one of the greatest health challenges facing our society. Already 30% of children and 61% of adults are overweight or obese.[3] If the trend is allowed to continue, by 2050 nine out of ten adults could be overweight or obese.[4]

Obesity is not a cosmetic issue. Becoming overweight or obese increases an individual's likelihood of developing (among other conditions) cancer, type 2 diabetes and heart disease, leading to reduced quality of life and, in some cases, a life cut short. The annual cost to society of obesity-related illness could reach £50 billion by 2050 at today's prices.[5]

Childhood obesity is particularly worrying, since there is a recognised 'conveyor-belt effect' whereby weight gained in childhood continues into adulthood.

Foresight called for a society-wide response to the rise in obesity, creating an environment that better supports people in developing and sustaining healthy eating and activity habits.

3 Health Survey for England 2008
4 Government Office for Science's Foresight Report (*Tackling Obesities: Future Choices,* 2008)
5 Government Office for Science's Foresight Report (*Tackling Obesities: Future Choices,* 2008)

The Government set out its response to the Foresight report in *Healthy Weight, Healthy Lives: A Cross-Government Strategy for England*. The strategy focused activity across government in five areas:

- Children: healthy growth and healthy weight – early prevention of weight problems to avoid the 'conveyor-belt' effect into adulthood.
- Promoting healthier food choices – reducing the consumption of foods that are high in fat, sugar and salt and increasing the consumption of fruit and vegetables.
- Building physical activity into our lives – getting people moving as a normal part of their day.
- Creating incentives for better health – increasing the understanding and value people place on the long-term impact of decisions.
- Personalised advice and support – complementing preventative care with treatment for those who already have weight problems.

Healthy Weight, Healthy Lives: One Year On and *Healthy Weight, Healthy Lives: Two Years On* (both available at www.dh.gov.uk) reported on progress against these five areas.

The Healthy Weight, Healthy Lives strategy is already delivering important changes to the environment and to the society families inhabit. All children are now entitled to five hours of physical activity in and out of school. Free school meals are more widely available and uptake of healthy meals has increased in both primary and secondary schools. A pilot programme has increased the quality of fruit and vegetables in convenience stores in deprived areas. Schemes such as Walk-Once-A-Week and the designation of 19 'Cycling Towns' and Cities have made it easier for families to walk and cycle. Nine 'Healthy Towns' are up and running, with schemes such as mass bike rides, healthy meal events, green gyms and cookery classes. Weight management services for both children and adults have been improved and healthcare professionals have new resources, such as the 'Let's Get Moving!' physical activity care pathway.

From the outset, it was envisaged that social marketing would play an integral part in the delivery of the Healthy Weight, Healthy Lives strategy, by engaging with individuals, families and communities to encourage them to take advantage of these environmental and societal changes and give them the skills, tools and knowledge to change their behaviours. This was recognised to be a long-term and substantial endeavour. A sum of £75 million was set aside for a three-year programme of activity.

2.2 Summary of the one-year marketing strategy

Change4Life is the first national social marketing campaign designed to prevent obesity in England.

It is based on a substantial body of research and insight, combining the academic evidence base with consumer market research. A summary of the research and insight can be found in *Healthy Living Social Marketing Initiative: A Review of the Evidence* (Medical Research Council, 2008) and in *Healthy Weight, Healthy Lives: Consumer Insight Summary* (HM Government, 2008).

Change4Life's initial focus is on families with children aged 5–11, particularly on those whose current behaviours and attitudes indicate that their children are at increased risk of excess weight gain. These families, grouped into distinct 'clusters' using a method that combined qualitative and quantitative techniques, account for approximately 64% of all families and are biased towards low income groups. Initially only clusters 1, 2 and 3 were defined as at-risk; subsequently, cluster 5 was also classified as high-risk.[6]

Change4Life's remit is preventative not remedial: the programme was not set up to recruit overweight or obese children into weight loss programmes but to change the way all of us raise and nourish our children, with the aim of creating a cohort of 5–11-year-olds who have a healthy relationship with food and activity.

Change4Life promotes eight different behaviours that parents should encourage their children to adopt if they are to achieve and maintain a healthy weight (see section 4.4). These behaviours were developed in consultation with the Healthy Weight, Healthy Lives Expert Advisory Group, the Chief Medical Officer and key stakeholders such as the Food Standards Agency.

Since there was no established model for changing these behaviours through a large scale campaign, we took advice from leading academics in the fields of child psychology, nutrition, physical activity and behaviour change, as well as adapting learning and combining best practice from other successful behaviour change programmes. A theoretical model of how families' behaviours might change was developed, with all assumptions being documented in the Change4Life marketing strategy.

The programme developed to support this model differed from traditional government marketing and communications campaigns. Rather than taking a top-down approach, the campaign set out to use marketing as a catalyst for a broader societal movement in which everyone who had an interest in preventing obesity (be they teachers, healthcare professionals, community groups, businesses, charities or individual members of the public) could play a part. This involved working across

6 See Annex 2 for more detail

government departments, recruiting local supporters and forming partnerships with non-governmental organisations and the commercial sector.

Resources were targeted at the families that had been identified as being at greatest risk of weight gain. All materials were researched with families from at-risk audiences in advance, to ensure that the messaging and tonality was both engaging and appropriate.

We consciously decided to avoid government branding, since our research told us that people were keener to be a part of a movement that was owned by all, rather than prescribed by the Government. Accordingly, one of our agency partners, M&C Saatchi, created the Change4Life brand, along with a suite of sub-brands (Walk4Life, Play4Life, Cook4Life, etc) and toolkits which were made available to partners.

It was also a deliberate decision not to use the word 'obesity' in the brand name, since evidence suggests that focusing on positive messages about healthy lifestyles, rather than directly on weight or obesity, is more likely to create effective behaviour change. Indeed, the campaign seldom refers to obese or overweight (and never to fat) children, since this can increase stigmatisation. Instead the campaign refers to 'dangerous amounts of fat in the body'.

The campaign involved:

- paid-for advertising (including television commercials, newspaper advertising and posters);
- sponsorship of Channel 4's *The Simpsons*;
- direct and relationship marketing (including a customer relationship programme, delivered both online and offline);
- digital communications (including a website, email marketing and online display advertising);
- public relations;
- partnership marketing (the creation and dissemination of messages and offers by Change4Life partners); and
- communications aimed at stakeholders (such as the health and teaching workforces).

The campaign also communicated with the public by means of materials distributed to healthcare professionals, via benefits mailings and through schools.

At-risk families were invited to join Change4Life and were sent a questionnaire (referred to throughout this document as *'How are the Kids?')* to assess their current behaviours. Of those who opted in to future contact, 200,000 received ongoing

Change4Life support, advice and information via a customer relationship management (CRM) programme.

To enable local use and implementation, the brand and its assets were made available to local authorities, the regional and local NHS and to local partners. We tried to provide a high degree of flexibility, enabling communities to decide what they needed and create their own marketing materials as well as more lateral solutions (for example, a Change4Life advice centre was opened in Luton, a Change4Life van toured East Lancashire).

Details of how these individual elements of the campaign performed are to be found in Section 4.

3. CHANGE4LIFE'S PERFORMANCE IN YEAR ONE

The targets for the first year of the campaign were:

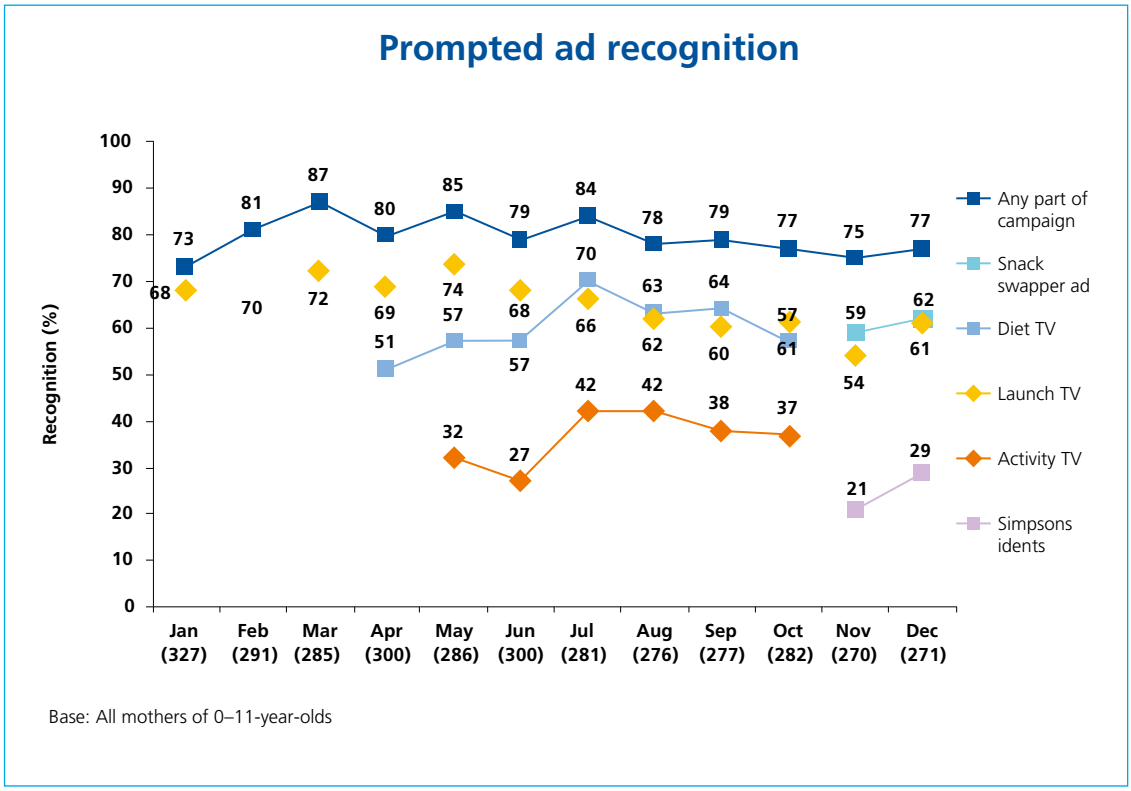
- to reach 99% of families living in England (defined as an opportunity to see the campaign);
- for 82% of all mothers with children under 11 to recall the advertising campaign (as measured by the tracking study);
- for 44% all mothers with children under 11 to recognise the Change4Life logo (as measured by the tracking study);
- for 100,000 families to complete *How are the Kids?* questionnaires;
- for 200,000 families to join Change4Life (defined as registering their details with us);
- for 33,333 families to still be involved with Change4Life after six months; and
- to generate 1.5 million responses (calls, web visits or paper responses).

These targets were developed in conjunction with our communications partners and with COI, by examining what had been achieved by previous campaigns of a comparable size and by using COI's Artemis evaluation software.[7] Artemis forecasts the levels of response and 'conversion' (the percentage of responders who will then take the desired action), based on media spend and mix.

The campaign met or exceeded all of its targets, many of them in the first few months of the campaign.

3.1 Targets for reach and awareness

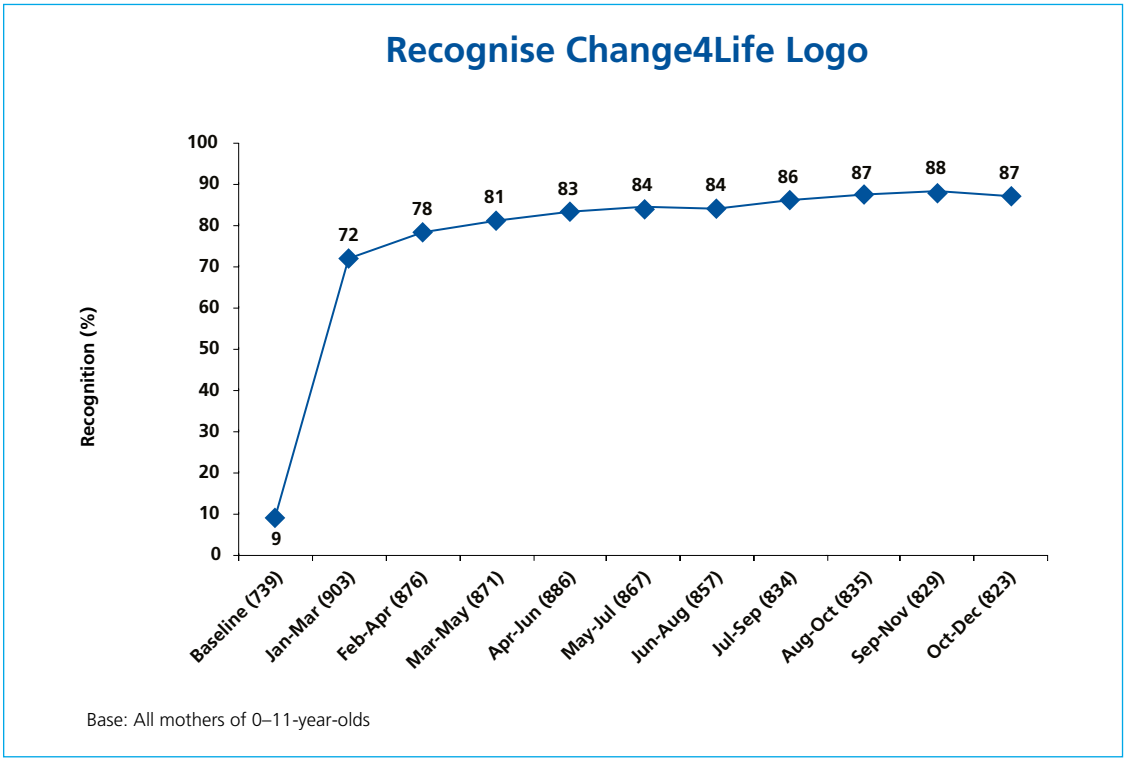
The campaign reached 99% of families by the end of January 2009.[8]



Awareness of the advertising campaign peaked at 87% in March[9] and remained high throughout the year.[10]

7 COI Artemis was specifically developed to better evaluate government and public sector campaigns whose principal objectives are to bring about changes in behaviour and attitudes rather than drive purchasing

8 Source: IPA Touchpoints

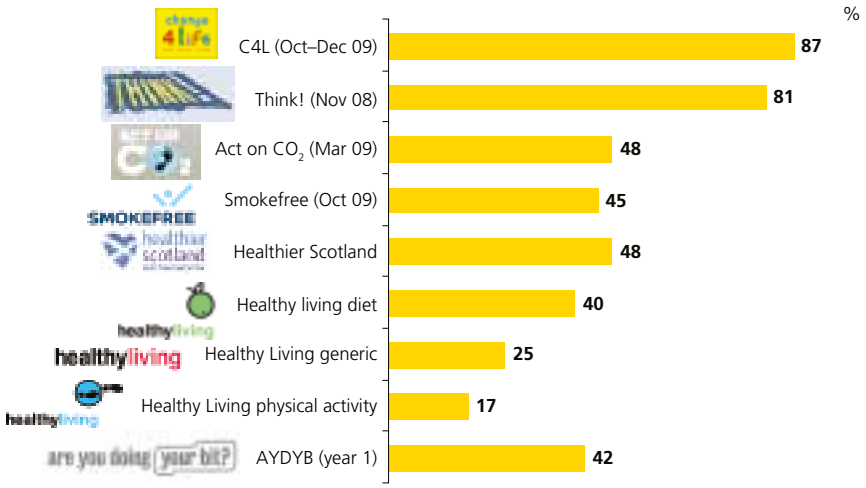


9 BMRB tracking study

10 Note: advertising awareness is reported using 4-weekly data, since it fluctuates considerably depending on television advertising. Since several different commercials ran during the year, the figure for 'any part of campaign' is the most reliable guide for total advertising awareness

Base: All mothers of 0–11-year-olds

Logo recognition exceeded its target, reaching 88% in September-November and closing the year at 87%.

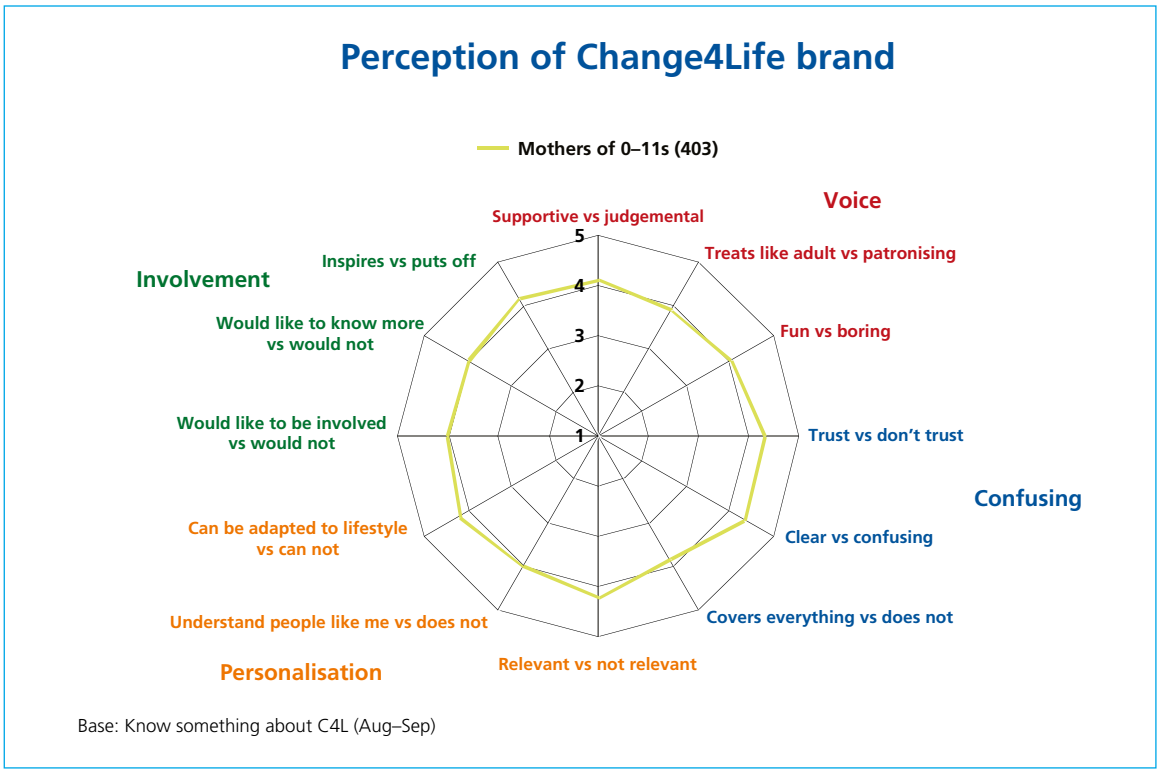


Base: All mothers of 0–11-year-olds

It surprised us that brand awareness was higher than advertising awareness, and on reflection, the target for logo recognition seems low. However, it was based on analysis by COI of other government logos, which typically plateau at between 40% and 50% recognition, some after years of campaigning. There are a few exceptions within Government, the most successful being the Department for Transport's *Think!* identity.

Unlike advertising awareness, which fluctuated in response to bursts of television advertising, logo recognition built steadily throughout the year. This suggests that awareness of the brand is driven not only by the advertising but by other factors, such as activity by commercial partners and NGOs, public relations and direct and relationship marketing, and also not-paid-for activity within communities (see Section 4 for more detail on this).

Logo awareness – vs other logos



Such a high figure for logo awareness suggests that Change4Life is operating in a different way to other government brands: rather than simply 'kitemarking' information, it is acting like a commercial brand, with values that people can buy into and with which they can identify.

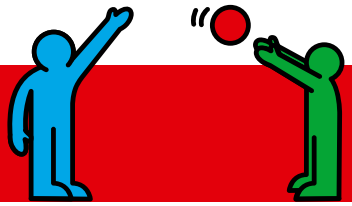
This is underlined by the scores on 'brand metrics' (questions that show how people feel about a brand), which show a high level of affinity between the public and Change4Life.

The chart opposite shows data on a five point scale, where a score of 5 would be the most positive score possible (i.e. if all 403 people chose the positive attribute for that measure) and 1 would be the most negative.[11]

11 Source: BMRB tracking study

The brand is extremely strong on all dimensions, most especially being clear, trusted, relevant, adaptable to lifestyle and supportive not judgemental.

3.2 Targets for engagement



In the first 12 months 413,466[12] families joined Change4Life – that is they registered their details by telephone, post or on the website.

In England, 346,609[13] families sent in *How are the Kids?* questionnaires, of whom 288,487 (85%) provided enough information for us to provide them with a personalised response. Even though *How are the Kids?* is no longer 'live' or being promoted, responses continue to come in at average of over 200 per day.

Some 200,000 at-risk families were included in the postal (and more expensive) version of the customer relationship management (CRM) programme, which comprised four separate packs of additional information and resources (see Section 4). A further 90,000 people received a lower-cost electronic version of the CRM programme.

We had set a target of 33,333 families entering the CRM programme to still be interacting with Change4Life after at least six months. In order to measure continued interaction, we put coupons into the CRM packs to incentivise a response (e.g. 'send this back to receive a free ringbinder'). While response does not in any way signal

12 Source: Data Lateral
13 Source: Data Lateral

behaviour change, it does prove that the packs were opened, read and that the recipients were sufficiently interested to interact further with Change4Life.The second CRM pack (sent out at least six months after people joined Change4Life) received over 44,833 responses.

Counting all postal, online, face-to-face and telephone responses, Change4LIfe generated 1,992,456 responses, exceeding the target of 1.5 million.

These figures are impressive. Independent audits by COI concluded that Change4Life:

- had the fastest awareness build of any government campaign that they had ever monitored; and
- had (in *How are the Kids?)* the most efficient engagement tool in the COI Artemis database.[14]

3.3 Achievement against targets: summary table

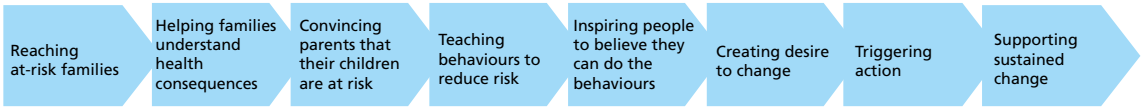
	Year one Target	Year one Achievement
Reach (% of all mothers with children under 11 who had an opportunity to see the advertising campaign)	99%	99%
Awareness (% of all mothers with children under 11 who recalled seeing the Change4Life advertising)	82%	87%*
Logo recognition (% of all mothers with children under 11 who recognised the Change4Life logo)	44%	88%*
Response to *How are the Kids?* (total number of questionnaires returned electronically, by post or from face-to-face marketing)	100,000	346,609
Total responses (including website visits, telephone calls, returned questionnaires)	1,500,000	1,992,456
Sign-up (total number of families who joined Change4Life)	200,000	413,466
Sustained interest (total number of families who were proven to still be interacting with Change4Life six months after joining)	33,333	44,833

* Where the figure fluctuates month by month, the highest figure achieved is given; final figures for December were 77% for advertising awareness and 87% for logo recognition.

14 COI Artemis currently contains data for 54 campaigns across a variety of government departments, enabling comparisons to be made in terms of efficiency and effectiveness

4. PERFORMANCE OF INDIVIDUAL STAGES OF THE CAMPAIGN

The staging and shape of the year one activity was based on a hypothetical model of behaviour change. In developing this model, we drew heavily on the academic literature around behaviour change, on previous behaviour change programmes (particularly tobacco control) and on other interventions (often smaller scale, face-to-face programmes) that had successfully changed behaviours.



This model assumed that, for behaviour change to happen on any significant scale, people would first need to:

- be concerned that weight gain could have health consequences;
- recognise that their families were at risk and take responsibility for reducing that risk;
- know what they needed to do to change; and
- believe that change was possible.

Then people would need to:

- try new behaviours; and
- embed these behaviours into their daily routines so that they became habits.

This led to a working hypothesis for how behaviour change might be created, which looked like this:

It was always recognised that this model is overly rational and simplistic. We did not expect individual families to travel neatly and sequentially through each stage. Rather we assumed that individual families would move at their own pace, sometimes fast, sometimes slow, sometimes stalling, lapsing or even going backwards for a time. However, it was considered to be a reasonable overview of what might be expected to happen at a population level.

The model also provided a framework for deploying communications activity.

This was aligned into six phases:

- Mobilising the network.
- Reframing the issue.
- Personalising the issue.
- Rooting the behaviours.
- Changing social norms and inspiring trial of new behaviours – 'we're in'.
- Supporting change.

The next section of this report considers each of these phases and explores how well they met their individual objectives.

4.1 Mobilising the network

'Mobilising the network' started in 2008, before any direct communication to the public. The aim of this phase was to ensure that, when the public did attempt to change behaviours, it met an informed and supportive local environment.

An enormous amount of work was done in this stage by local authorities, primary care trusts, strategic health authorities, the government offices in the regions and commercial and NGO partners to prepare for the public launch.

The scope and scale of partnership working that has been achieved is unprecedented, and we worked with representatives from across the network to develop a governance framework and campaign guidance to ensure best practice (full details in Annex 3).

This phase of activity has not been time-limited. Harnessing the strength and creativity of everyone from national partners to local people is part of the creation of a broader movement, and is continuing.

4.1.1 Local supporters

In the context of Change4Life, a 'local supporter' may be someone from the community whose job it is to promote healthy lifestyles or an individual who has influence with our target audience (such as a member of a community-minded voluntary group, club or registered charity). What distinguishes them is that they are willing to do more than help their own families; they are willing to help others.

At launch, there were about 8,000 individuals signed up as local Change4Life supporters. By the end of 2009, there were over 25,000.

Our initial expectation was that local supporters would come primarily from the voluntary sector and from community-minded individuals, many of them parents themselves. Analysis of the local supporter database taught us that (among those who have given us their occupation) 70% are public sector workers, the largest single group (nearly 4,000 people) working in local authorities. While this is not altogether surprising (there is evidence that public sector workers are more community-minded than the general population[15]) it is a reminder that Change4Life is a movement not just of parents but of the people those parents look to and trust, many of whom have a pre-existing professional interest in obesity prevention.

15 See, for example: 'The Economics of Public Sector Motivation', Karlsson, Martin, Oxford Policy Institute, March 2008

Quantitative research[16] (*n*=500) with local supporters showed that the most common way in which they had promoted Change4Life was by facilitating conversations with people about healthy weight, eating well and moving more (75% of respondents said that they had done this), the next closest being displaying or giving out Change4Life leaflets (68%) and putting up Change4Life posters (67%). As many as 23% of local supporters reported that they had already spoken to more than a hundred people about Change4Life. By multiplying the mean number of people that those local supporters who were surveyed said they had spoken to by the total number of local supporters, Continental Research calculated that the 25,000 local supporters have already spoken to over 1 million people about Change4Life.

Asked whether they intended to sustain their involvement with Change4Life in the next year, only 5% of local supporters said that their involvement would decrease; 44% said they expected their involvement to increase and 51% said it would stay the same.

Local supporter case study: Wayne Carter at Bolsover District Council

Wayne Carter works for Bolsover District Council in Derbyshire and runs the Five 60 scheme, which aims to increase consumption of fruit and vegetables and the proportion of children doing sixty minutes of activity per day.

In the scheme, children and their families record their activity levels and consumption of fruit and vegetables over a 12 week period. For every three weeks completed, the family receive an 'exercise cheque', allowing the whole family to take part in a free exercise session at the district council's leisure facilities.

When Change4Life launched, Wayne registered as a local supporter as he felt that linking to the campaign and using the logo was a way to enhance his activity. He used the logo to reinforce the Five 60 promotional materials and ordered Change4Life materials to give to pupils.

Wayne said 'Change4Life helped to raise awareness of the need to tackle obesity. You saw the campaign everywhere: on the telly, in supermarkets, in the community, and I wanted to make the most of linking to it.'

4.1.2 Workforces

We targeted the health and schools workforces as routes in to our families, and designed resources for use both by healthcare professionals and by schools.

To tell workforces that Change4Life was coming, the Chief Medical Officer wrote to every general practice, the Chief Nursing Officer wrote to every nurse and the

16 Continental Research, December 2009

Secretary of State for Children, School and Families wrote to every head teacher, urging them to lend their support to the movement.

Materials sent to healthcare professionals

Note: Messaging to NHS workforces does use the word 'obesity' and features the NHS logo (in contrast to public-facing communication, which does not).

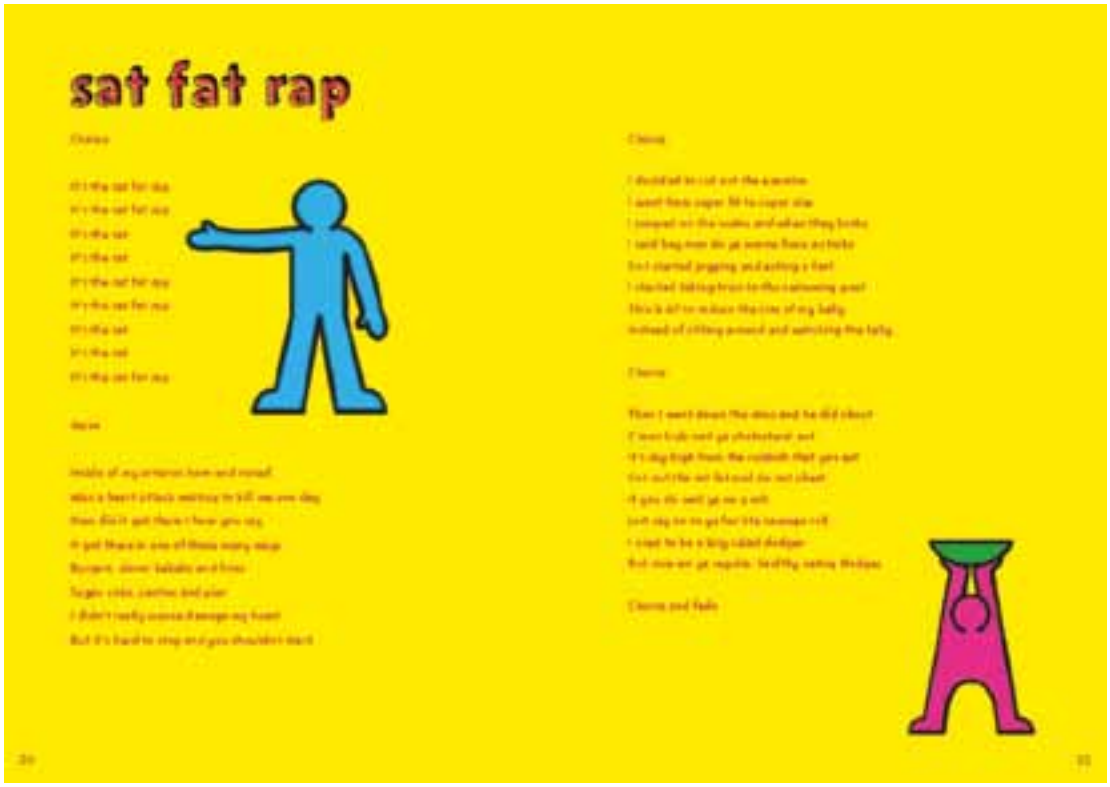
Healthcare professionals ordered over 6 million Change4Life materials.

A quantitative survey (*n*=251) of general practitioners, practice nurses and practice managers, conducted in June and July 2009, showed that the majority were aware of Change4Life and approved of its aims:

- 72% were aware of Change4Life.
- 87% said that they supported the idea of using government money on a campaign to prevent childhood obesity.
- 84% agreed with the statement 'the prevention of people becoming overweight or obese is part of my role'.[17]

Qualitative research with healthcare professionals who were using the materials showed that they found them useful as a 'conversation-starter'. The scale and mass

17 GFK Quantitative Research with healthcare professionals, 2009



appeal of the campaign makes it easier to bring up the subject of diet and physical activity, as this quote illustrates:

'The materials are easy to use for our client group, because literacy rates are quite low. It's a very good tool to have a conversation.' (Practice nurse)[18]

How are the Kids? questionnaires were delivered to schools with their free fruit and vegetables. This delivery mechanism was the single largest driver of response to *How are the Kids?* delivering a total of 53,091 returned surveys to Change4Life.[19,20]

In addition, Change4Life branding appeared on healthy school food menus. Change4Life lessons and assemblies took place. We also heard about schools harnessing the creativity of children themselves, writing plays, music and lyrics in support of Change4Life.

The Sat Fat Rap, composed by the pupils at Shotton Hall School, Peterlee

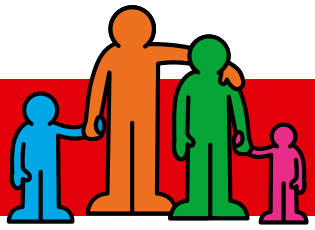
Ways in which we will be working more closely with healthcare professionals and schools will be explored in Section 7.

18 GFK Qualitative Research with healthcare professionals, 2009
19 Source: COI Artemis/Data Lateral
20 Approximately 2 million questionnaires were sent to schools, although since they were unsolicited, we do not know how many were given to children. Even if all were distributed, this represents a response rate of 2.5%, which is extremely high for direct marketing

4.1.3 Non-governmental organisations

At the launch of Change4Life, it was important that there was a consistent message about the health consequences of obesity and that this message was delivered not only by Change4Life but also by other trusted voices.

For this reason we asked three of the main health charities – Cancer Research UK, the British Heart Foundation and Diabetes UK – to run their own campaign in support of Change4Life, using the same language and making the same key arguments ('nine out of ten of our children could grow up to have dangerous amounts of fat build up in their bodies' and 'children would be more likely to get type 2 diabetes, heart disease and cancer and could even have their lives cut short') as were made in the government campaign.



The charities produced this campaign in women's magazines:

This was the first time these three charities had come together to campaign on a single issue and we believe it contributed to the success of the 'Reframing the issue' phase of the campaign. The tracking study indicates that 23% of mothers recalled seeing the the campaign in March.

In addition, we also work closely with other non-governmental organisations (NGOs) such as Living Streets, Sustrans and Natural England, who also have an interest in promoting physical activity.

4.1.4 Commercial partners

We chose to work with commercial partners to deliver the Change4Life messages, not for their financial might but because of the close relationships that they have with the public and their proximity to the point of purchase and consumption, particularly of food products.

All national partners (including commercial partners) must agree to abide by the Change4Life terms of engagement and all applications for partner activity must be approved by the Department of Health. We estimate the value of the media already delivered (or committed to be spent by April 2010) by commercial partners as £7.5 million.

At the stakeholder launch, there were seven commercial organisations that had signed the Change4Life terms of engagement and made pledges to support the campaign. These seven were:

- Tesco
- Asda
- Association of Convenience Stores
- Pepsico
- Kellogg's
- Fitness Industry Association
- ITV.

In addition, the Advertising Association had pledged to put together a consortium that would deliver £200 million of media value (over four years) to the campaign.

At the time of writing, there are 183 national organisations, most of them commercial sector, signed up to Change4Life, 50 of whom are already delivering against their pledges.

We estimate the value of the media already delivered (or committed to be spent by February 2010) by partners to be £9 million,[21] with much more already pledged for future delivery.

Activity included providing lower-cost fruit and vegetables (by, among others, Tesco), promoting Change4Life in-store (for example the Co-operative produced till screen advertising), selling 70,000 family bikes at cost (Asda), sponsoring the London Marathon as the Flora Change4Life London Marathon (Unilever), funding breakfast

21 Advertising Equivalent Value to April 2010 forecast by Manning Gotlieb OMD. At time of writing this is being independently audited

clubs (Kellogg's, working with the charity ContinYou), funding free swimming for all customers (British Gas), producing and airing prime time television programming that showed how people could make changes to their lives (ITV's *The Feelgood Factor*), advertising active games (Nintendo Wii) and promoting the Change4Life sub-brands (for example PepsiCo's support for Play4Life).

Full details of all commercial partner activity can be found at www.nhs/change4life/pages/partners.

The public are already noticing the impact of the partnerships. In the latest period of the tracking study, 29% of mothers could spontaneously name at least one Change4Life national partner.

Case study: Fitness Industry Association and MoreActive4Life

The Fitness Industry Association represents both private sector and local authority fitness venues.

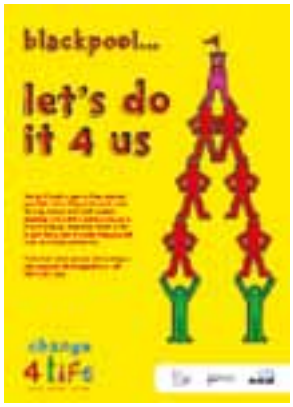
It was one of the original Change4Life partners and has committed to a three year plan of support under the MoreActive4Life sub-brand.

The first phase of activity, during the summer of 2009, saw over 200,000 people take part in 'taster sessions' (opportunities to try new activities for free) at 1,100 participating venues.

Participants filled out questionnaires to assess their FIA 'Healthy Living Index', which combines self-reported data on activity, diet, general lifestyle and emotional well-being.

Data collected by the FIA indicate that 80% of those taking part had a starting Healthy Living Index of average or below average and that participants improved their HLI by 20% over six weeks.

The FIA will launch the second stage of its MoreActive4Life campaign in 2010. The FIA has worked in partnership with MEND[21] to develop a brief behavioural intervention specifically designed to enable the health and fitness sector to proactively target sedentary people. This combines evidence-based behaviour change techniques with nutrition education and varied forms of graded physical activity.



22 MEND is a social enterprise dedicated to reducing global overweight and obesity levels. MEND stands for Mind Exercise Nutrition… Do it!

4.1.5 Local and regional partners

Change4Life created assets that could be taken and adapted by the local and regional NHS and by local partners.

Uptake of these assets has been high. The flexibility of the assets has enabled local areas to create new products that address local issues and make the best use of local knowledge.

Change4Life in Blackpool

Change4Life in East Lancashire

In addition to the activity that regions paid for themselves, a fund of £1 million was set aside from the central money and regions were invited to submit bids for this via their strategic health authority (SHA). All submissions needed to propose a marketing or communications initiative within Change4Life that was specific to a local need or circumstance. Bids were co-signed by the SHA communications director and the regional director of public health.

Eight awards were made from this fund and the table below gives examples of the activities that were organised as a result of this financial support.

North East	A Change4Life play (developed in partnership with Shotton Hall School community arts team in Peterlee); a Change4Life comic (distributed to primary schools, doctor's waiting rooms and children's hospital wards in the region); sponsorship of regional events (including regional Cancer Research Race for Life events and TESCO Great School Run); a Change4Life art project (working with The Baltic in Gateshead to develop a school arts project focusing on 'what Change4Life means to me')
North West	Change4Life 'Down Your Street' events (a radio partnership between Greater Manchester Public Health Network and Manchester Key 103 and a Change4Life radio awareness campaign plus a radio partnership with CFM Radio in Cumbria
Yorkshire and the Humber	Change4Life was the headline sponsor at the Countryside Live event; in addition, dance was promoted via youth dance hubs
East of England	A regional communications campaign and a cookery theatre at the Royal Norfolk Show
London	A Change4Life branded marquee at major community festivals over the summer
South East Coast	A Change4Life/Bike4Life event stand at the South of England Show. The NHS South East Coast Best of Health Awards conference (promoting Change4Life to NHS Colleagues); the launch of an Eat Out Eat Well Award, and a dance promotion campaign across Kent in association with ActivKent and Kent County Council
South Central	A catalogue of Change4Life branded items (such as lunchboxes, aprons, cycling bands and pedometers), a Change4Life image library (to provide a free resource for all local supporters)
South West	A series of highly targeted events focusing on signing up priority cluster families to Change4Life and to sign-post them to Change4Life activities/partners in their area; a communications campaign focusing on healthy fruit and vegetable displays in the independent retail and community food sectors

During October 2009, we asked the British Market Research Bureau (BMRB) to conduct a local audit to assess how much Change4Life material (excluding the mass media campaign) was visible at a local level. Staff visited 400 venues (general practices, pharmacies, hospitals, primary schools, children's centres, nurseries, children's play centres, leisure centres, libraries and town/village halls) chosen for their proximity to 50 randomly generated postcodes throughout England. Staff recorded

any non-paid-for materials visible within the community. The auditors were able to see Change4Life materials on display in 27% of all venues. Change4Life was most visible in general practices (40%), children's centres and leisure centres (36% each), children's play centres (33%) and primary schools (32%). The researchers also interviewed staff and asked whether there were any materials on display in areas of the venue that they were not able to visit (such as changing rooms) and whether materials had previously been on display but had since been taken down. Taking into account these responses, 44% of venues have displayed Change4Life materials at some point.

There was some regional variance in the amount of material on display. Since the tracking study was conducted in the same randomly generated postcodes, BMRB were able to map the observed data back to the tracking study to assess whether a high level of community-sponsored material correlated to increased levels of awareness and knowledge of Change4Life. The analysis showed no statistical difference in the levels of awareness of Change4Life between areas that had high or low levels of community-sponsored materials (which is unsurprising since these measures are close to saturation levels and are driven by mass media). However, there were significant differences in responses to two questions. People who lived in areas that had high levels of community-sponsored communications were significantly more likely to say that they *knew a lot about Change4Life* (17% vs 3%)[23] and to say that they *had passed Change4Life information on to families and friends* (21% vs 8%).

4.2 Reframing the issue

The first stage of the public campaign set out to reframe obesity from a cosmetic to a health issue.

The campaign launched with television advertising supported by a website and a customer information line.

While the paid-for advertising was substantial, the launch also generated significant free publicity. An independent audit[24] showed that, by the end of February, 1,317 separate articles had been written about Change4Life, 95% of which were positive. The auditors placed a value on this coverage of £12,457,572.

23 TNS BMRB October 2009
24 Metrica, 2009

The advertising reached 99% of the target audience during the launch phase and was recalled by 87% of mothers.

It also succeeded in helping parents make the link between the behaviours that cause excess weight gain and poor health outcomes, for example:

- 85% of mothers agreed that the Change4Life advertising 'made me think about my children's health in the long term';
- 81% agreed it 'made me think about the link between eating healthily and disease'; and
- 83% agreed that it 'made me think about the link between physical activity and disease'.

Awareness of the link between behaviour and poor health outcomes also increased.[25]

25 Source: BMRB tracking study. Q1 (Jan-March) data are compared with the baselines as March marked the close of the 'Reframing the issue' phase

	Food that children eat now could affect their chances of developing...		Physical activity that children do now could affect their chances of developing...	
	Pre stage %	Q1 %	Pre stage %	Q1 %
Diabetes	48	**55**	29	**39**
Cancer	24	**29**	19	**25**
Heart disease	52	57	42	**48**

(Note: bold type indicates that the change is statistically significant.)

4.3 Personalising the issue

The 'Personalising the issue' phase was designed to help people recognise that their own families may need to change their current behaviours.

The main marketing mechanic for this phase was the *How are the Kids?* questionnaire on children's diet and activity. *How are the Kids?* was positioned as an opportunity to see how modern life was affecting the individual's family and to start a dialogue with Change4Life. It was not designed to be a scientific study but to generate engagement with our target audience.

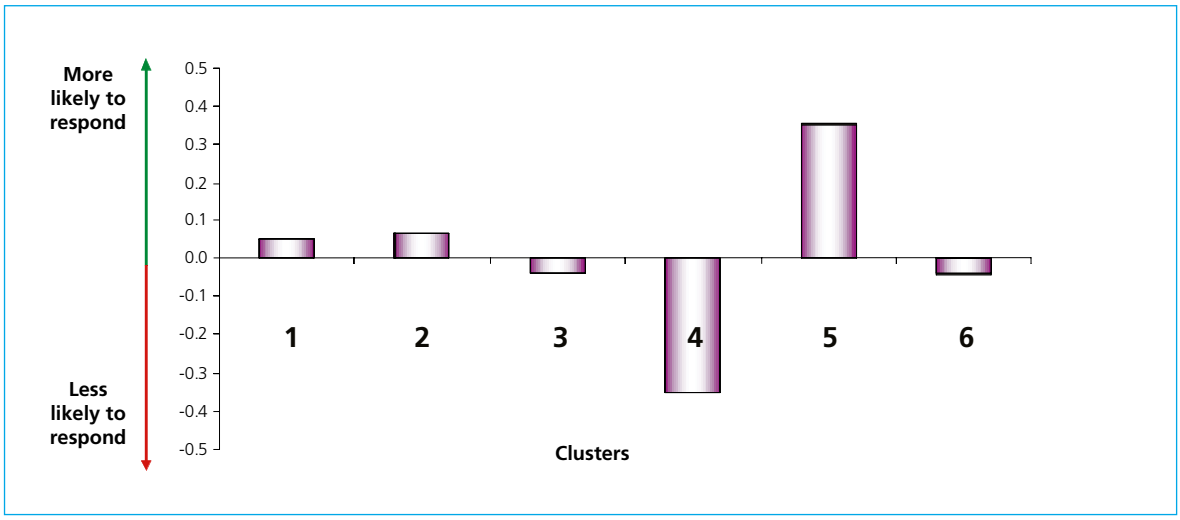
The *How are the Kids?* questions were constructed around the eight desired behaviours and were designed to encourage the reader to re-evaluate their children's performance against these behaviours – to make the issue personal.[26]

***How are the Kids?* schools pack**

26 *How are the Kids?* was a means of encouraging participation and not a risk-profiling tool. While the programme generated a vast amount of data, we recognise that it is not an accurate picture of what people are really doing

The survey was available both online and on paper, and was 'door-dropped' directly to high-risk cluster areas, delivered face to face via field marketing, supported with direct response television, made available in doctors' surgeries, pharmacies and post offices, distributed as loose inserts in women's magazines and posted as an online version on the website.

Those who responded received a review of how they scored against the relevant questions, with tailored recommendations for each child.



How are the Kids? action plan

We had been set a target for 100,000 responses to *How are the Kids?*

In the event, 346,609[27] families in England sent in *How are the Kids?* questionnaires, of whom 288,487 (85%) provided enough information for us to provide them with a personalised response. Even though *How are the Kids?* is no longer 'live' or being promoted, responses continue to come in at an average of 200 per day.

The success of the *How are the Kids?* initiative was recognised at the Direct Marketing Awards, where the campaign was awarded the gold for the best customer acquisition campaign, the gold for best launch campaign, the silver for best direct response print advertising, and three bronze awards (best use of door drops, best use of field marketing and best use of email marketing).[28]

Response to *How are the Kids?* was higher among at-risk segments, particularly the lower income segments (1, 2 and 5), confirming that Change4Life is engaging the right target audiences and not just reaching already healthy, affluent households (segments 4 and 6).[29]

27 Source: Data Lateral
28 Entries available to read at www.dmaawards.org.uk
29 Source: COI Artemis

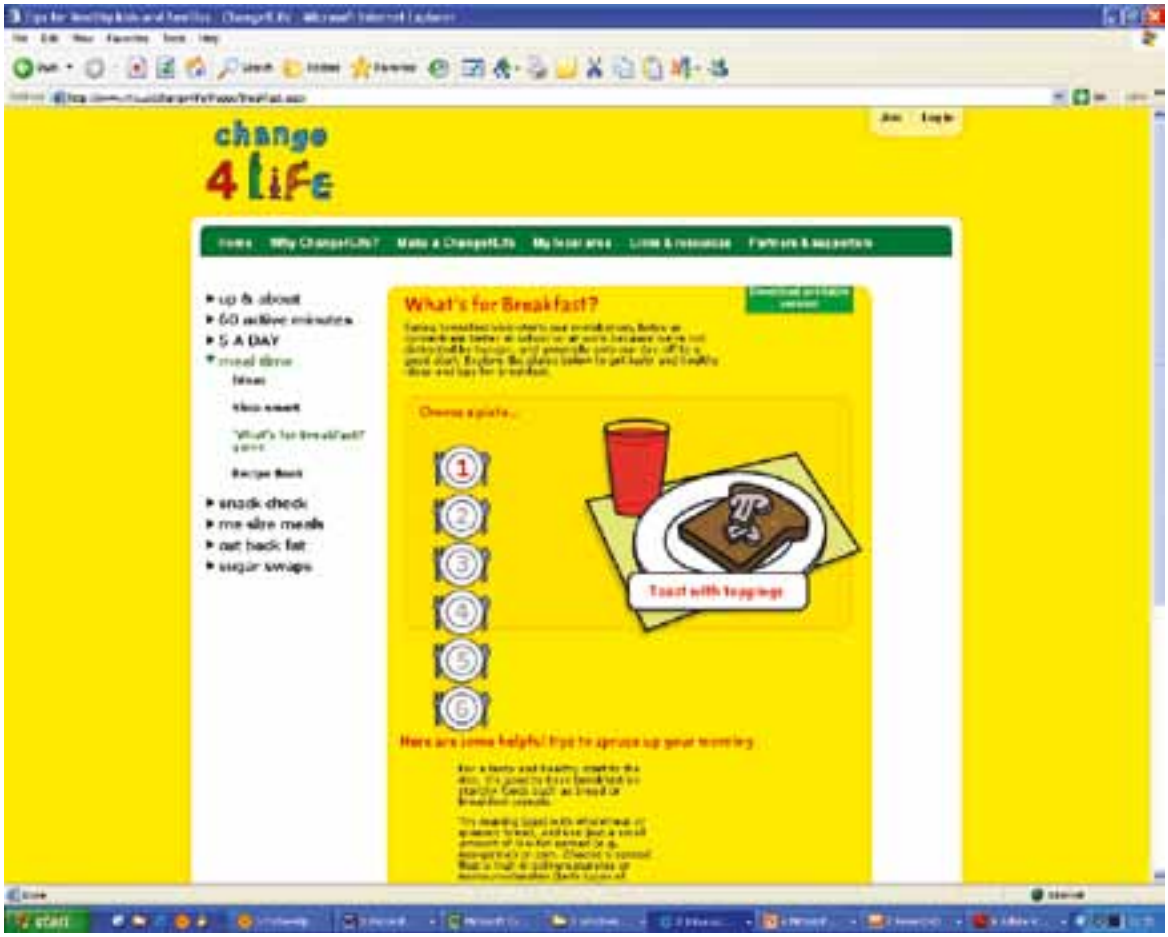
4.4 Rooting the behaviours

Achieving and maintaining a healthy weight requires that parents help their children to:

- reduce their intake of fat, particularly saturated fat;
- reduce their intake of added sugar;
- control portion size;
- eat at least five portions of fruit and vegetables per day;
- establish three regular mealtimes each day;
- reduce the number of snacks they eat;
- do at least 60 minutes of moderate-intensity activity per day; and
- reduce time spent in sedentary activity.

Prior to the launch of Change4Life, only one of these (eat at least five portions of fruit and vegetables per day) had any real traction with the public (via the 5 A Day initiative). DH set its agencies the challenge of developing seven new vivid descriptors for the remaining behaviours. The descriptors they generated were:

- Cut Back Fat
- Sugar Swaps
- Me Size Meals
- Meal Time
- Snack Check
- 60 Active Minutes
- Up And About.



Each individual behaviour was brought to life via a 'sourcebook' of advice and information, which could be used by anyone developing marketing materials

Members of the Healthy Weight, Healthy Lives Expert Advisory Group were instrumental in developing these behaviours and in building confidence across the Department of Health, other government departments, the NHS and the academic community.

The eight behaviours were initially promoted to the public via a wall chart and by interactive tools on the Change4Life website.

Online 'What's for Breakfast?' tool, supporting the Meal Time behaviour:

In addition, three television commercials were made. The first supported Me Size Meals; the second 60 Active Minutes and the third supported Snack Check and Sugar Swaps. For the third, a 'Snack Swapper' tool was developed and distributed via schools, media partners and through the helpline.

There have been encouraging increases in awareness of the eight behaviours:

Behaviour	January 2009 (327) %	October–December 2009 (823) %
5 A Day	80	73
Sugar Swaps	6	26
Me Size Meals	4	36
Snack Check	5	15
Cut Back Fat	14	21
Meal Time	5	14
60 Active Minutes	8	26
Up And About	9	13

Source: BMRB Tracking Study

The significant increases are in those behaviours – Me Size Meals and 60 Active Minutes, Sugar Swap and Snack Check – that have featured in the television advertising, although the trend is positive in most cases.

There is a decline in awareness of the 5 A Day behaviour. We will continue to monitor awareness of this behaviour, to assess whether it needs more support.

Further analysis of the Me Size Meals behaviour is included in Section 6.

4.5 Changing social norms and inspiring trial of new behaviours – 'we're in'

It can be difficult for people to try something new. We know that for people to move from the intention to change to actually changing their behaviour, they need to believe that change is both possible (i.e. believe in their own ability to change) and normal (i.e. believe that people like them are already making changes).

The 'We're in' phase of the campaign seeks to normalise the desired behaviours by providing proof that other people are already changing. It also aims to inspire people to try new behaviours by providing incentives and trial opportuntities.

4.5.1 Regional press partnership

The objective for regional press was to target at-risk areas and showcase stories of Change4Life making an impact at a community level. Regional press was used to generate stories and images of families as they were making their own changes, with an aim of creating a virtuous circle of normalisation.

Amra, which represents over 190 regional newspapers, was chosen for this activity.

Amra used locally sourced case study material to showcase local activity and reported on upcoming and relevant events which fitted the Change4Life movement.

Example of the Amra sponsorship: the *Crewe Chronicle*

Make the leap to a healthier family life

change 4 life

Swimming lessons are a splash hit

swim 4 life

Club members get on their bikes to boost fitness

bike 4 life

Find out how you could be more healthy – visit www.crewechronicle.co.uk/change4life

The activity ran from w/c 29 June to w/c 21 September. We are currently working with Amra to evaluate this activity.

4.5.2 Other local activity

Local activity also contributed to the 'We're in' phase.

Case study: Greater Manchester takes Change4Life 'Down Your Street'

The Diary

Come dancing, Middleton

In the summer of 2009, the Greater Manchester Public Health Network partnered with Key 103 (Manchester's music radio station), Greater Manchester Fire and Rescue and Greater Manchester DriveSafe to deliver a series of community-based street parties. Key 103 asked listeners to send in their stories about why they thought Key 103 should come down their street. Streets were chosen in areas with high levels of deprivation and high numbers of children under 11 years old.

During the lead up to the parties, the Key 103 media van visited all 10 Greater Manchester boroughs, with local healthcare professionals and local authority staff on hand. On board the van were a range of Change4Life activities for the community to engage with. Over 1,500 people visited the bus and podcasts were created at each site to allow a wider public to be engaged.

Four street parties were held in: Harpurhey (Manchester), Curzon Green (Stockport), Stalybridge (Tameside) and Carmine Fold (Middleton). Celebrities (Peter Andre, Alesha Dixon, Daniel Merriweather, the Noisettes and JLS) attended the parties.

During the street parties 328 people (divided into two samples of adults and children aged 5–12) were interviewed. Of the adults surveyed, 58% said that they had been inspired to make changes within their family as a result of Change4Life. Among children, 65% said that they had been inspired by the campaign.

The campaign website attracted 14,936 unique users with 645 click-throughs to the main Change4Life site.

Across the nine weeks of the campaign, Change4Life was mentioned at least once per hour every day on Key 103 by a presenter or in a promotional trail. Change4Life messages were heard on air by 853,017 adults (36% of the Greater Manchester population) an average of 31 times.

Many NHS, local authority and non-governmental organisation (NGO) partners also organised their own activity; for example Active Luton opened a Change4Life advice centre in the Arndale Centre, which provided advice about diet and activity as well as information about local facilities, such as free women-only swimming classes, to the local community.

4.5.3 Impact of the sub-brand activity

Commercial partners supported sub-brands, which have provided inspiration and opportunities for people to try new behaviours. For example:

- Bike4Life is supported by Halfords, Sky and Asda (who sold 70,000 bikes at cost as part of its support).
- Breakfast4Life is supported by Kellogg's.
- Play4Life is supported by JJB Sports, Pepsico and Unilever (Flora).

- Swim4Life is supported by Kellogg's and British Gas (which offered a free swim to all its customers).

Across government, the Department for Children, Schools and Families campaigned around Play4Life; the Department for Culture, Media and Sport (DCMS) promoted the cross-government free swimming offer as Swim4Life; the Department for Transport took up both Bike4Life and Walk4Life as part of its sustainable transport policy; Defra promoted intergenerational conservation volunteering as MuckIn4Life; and the Food Standards Agency aligned its Eat Well programme as EatWell4Life. By April 2009, £1.5 million had been spent on the campaign by other government departments.[30] This was early in the campaign and we hope to repeat this analysis so that we continue to monitor cross-government support as it builds.

30 Advertising equivalent value calculated by Manning Gottlibe OMD

Case study: Defra and MuckIn4Life

The MuckIn4Life brand was developed with Defra to support its conservation volunteering agenda.

MuckIn4Life aims to help people have fun and be healthy whilst taking part in free environmental activities for all the family.

The Muckin4Life website

Independent research conducted for Defra[29] at the events found that:

- 94% of those who visited the MuckIn4Life stand said that they would be more likely to spend more time outside in green spaces in future;
- 86% agreed with the statement 'I now have more ideas of how to get the children involved in environmental activity'; and
- 32% said they were likely (11% said very likely) to volunteer for a conservation/environmental project.

31 HPI Research, 2009

Beyond central government departments, there was also enthusiasm for the sub-brands. Forty-five applications were made to create sub-brands, with 16 (including ideas as diverse as Hula4Life and Skip4Life) created to date.

Case study: Manchester and Points4Life

In November 2008, Manchester was successful in its bid for funding from the Healthy Community Challenge Fund to become a Healthy Town.

Points4Life will launch in Manchester in the summer of 2010. It is an innovative approach that seeks to make activity and healthier food choices easier for the local community.

Developed by NHS Manchester and Manchester City Council, Points4Life is the world's first citywide wellness incentive programme, rewarding people for making healthy and active choices.

Members earn Points4Life when they buy healthy food through partner retailers and by participating in physical activity with a range of partner organisations.

The rewards depend on the number of Points4Life earned, with a range of rewards such as leisure and entertainment experiences, gadgets and money-off vouchers, as well as chances to win money-can't-buy prizes.

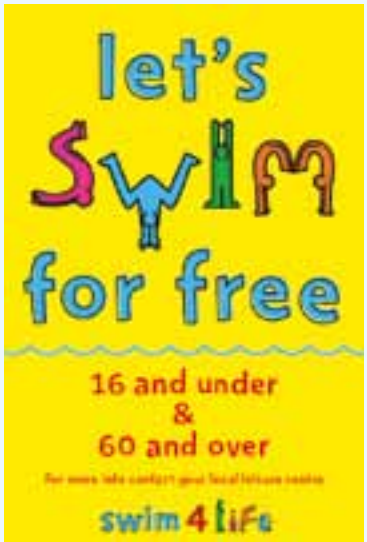
Members who reach their Points4Life goals – representing achievable steps towards a healthier lifestyle – qualify for bigger rewards.

To facilitate uptake of the sub-brands, a number of toolkits were provided to enable local service providers to promote sub-brands and, where appropriate, run associated events. Independent research with local supporters found that the most-used toolkits so far are Walk4Life (with 25% of local supporters claiming to have used it) and Breakfast4Life (20%).[32]

32 Contintental Research, December 2009

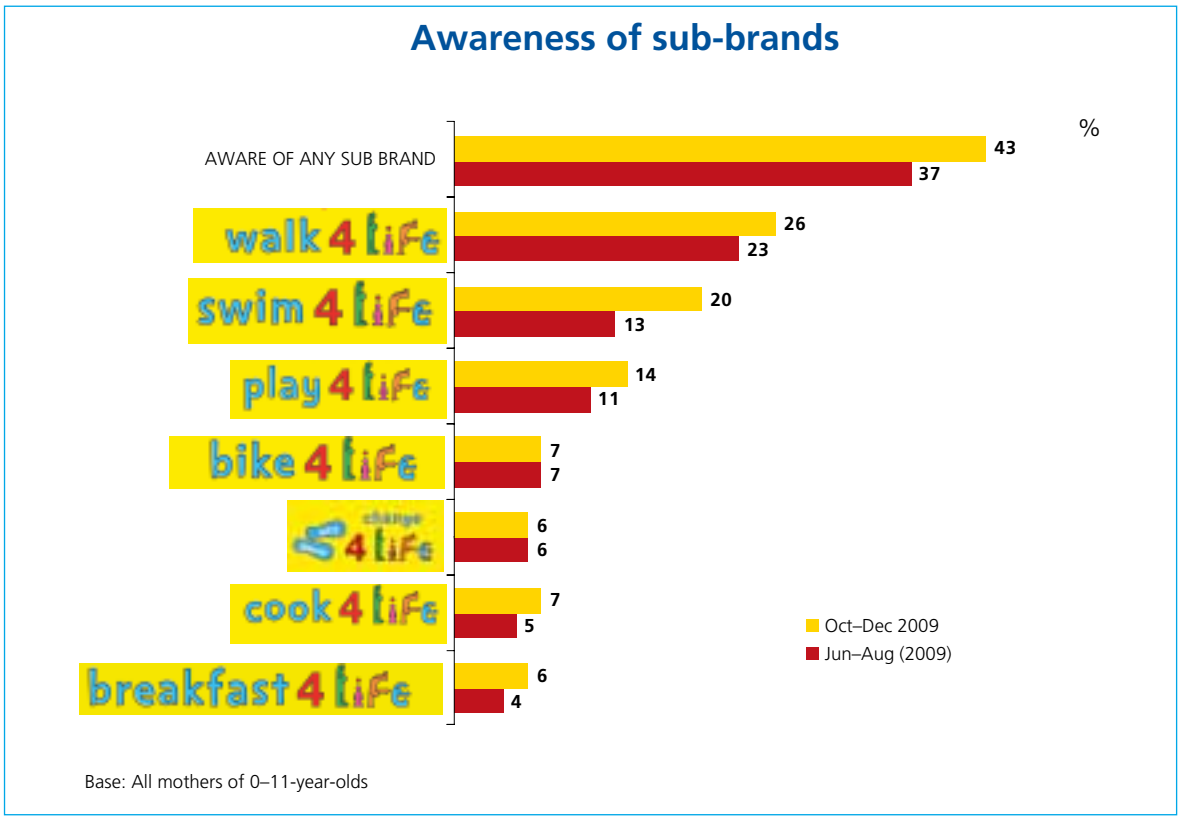
Case study: Swim4Life

In qualitative research[31] with our target audiences, mothers reported that their children often wanted to go swimming and that they valued swimming as an important life skill that was also fun to do. However, cost was a significant barrier to participation.



The free swimming programme, launched in April 2009, is a £140 million programme designed to increase participation in swimming in England and lead to subsequent health and economic benefits.

The initiative is based around local authorities providing free swimming for children aged 16 or under and for adults aged 60 or over. Free swimming along with a variety of other initiatives, will contribute to the target set out in the London 2012 Olympic Legacy Action Plan to get 2 million more adults more active by the London 2012 Olympics.



The programme is funded by five government departments: DCMS, DH, DCSF, the Department for Work and Pensions, and Communities and Local Government.

Free swimming is publicised under the Swim4Life sub-brand with a centrally funded poster campaign in participating areas, as well as assets that could be used by local partners. Additional public relations activity has included a competition for children to design a new swimming stroke.

Between April and September, there were over 6.8 million free swims for children under 16 and over 3.5 million free swims for the over-60s.

Public awareness of the sub-brands grew in consequence of the sub-brand activity.

Recommendations for how the sub-brands will be deployed in future are included in Section 7.

4.6 Supporting change

Change4Life messages and information can be accessed through many different channels. However, we also provided an intensive programme for families who were likely to need most support.

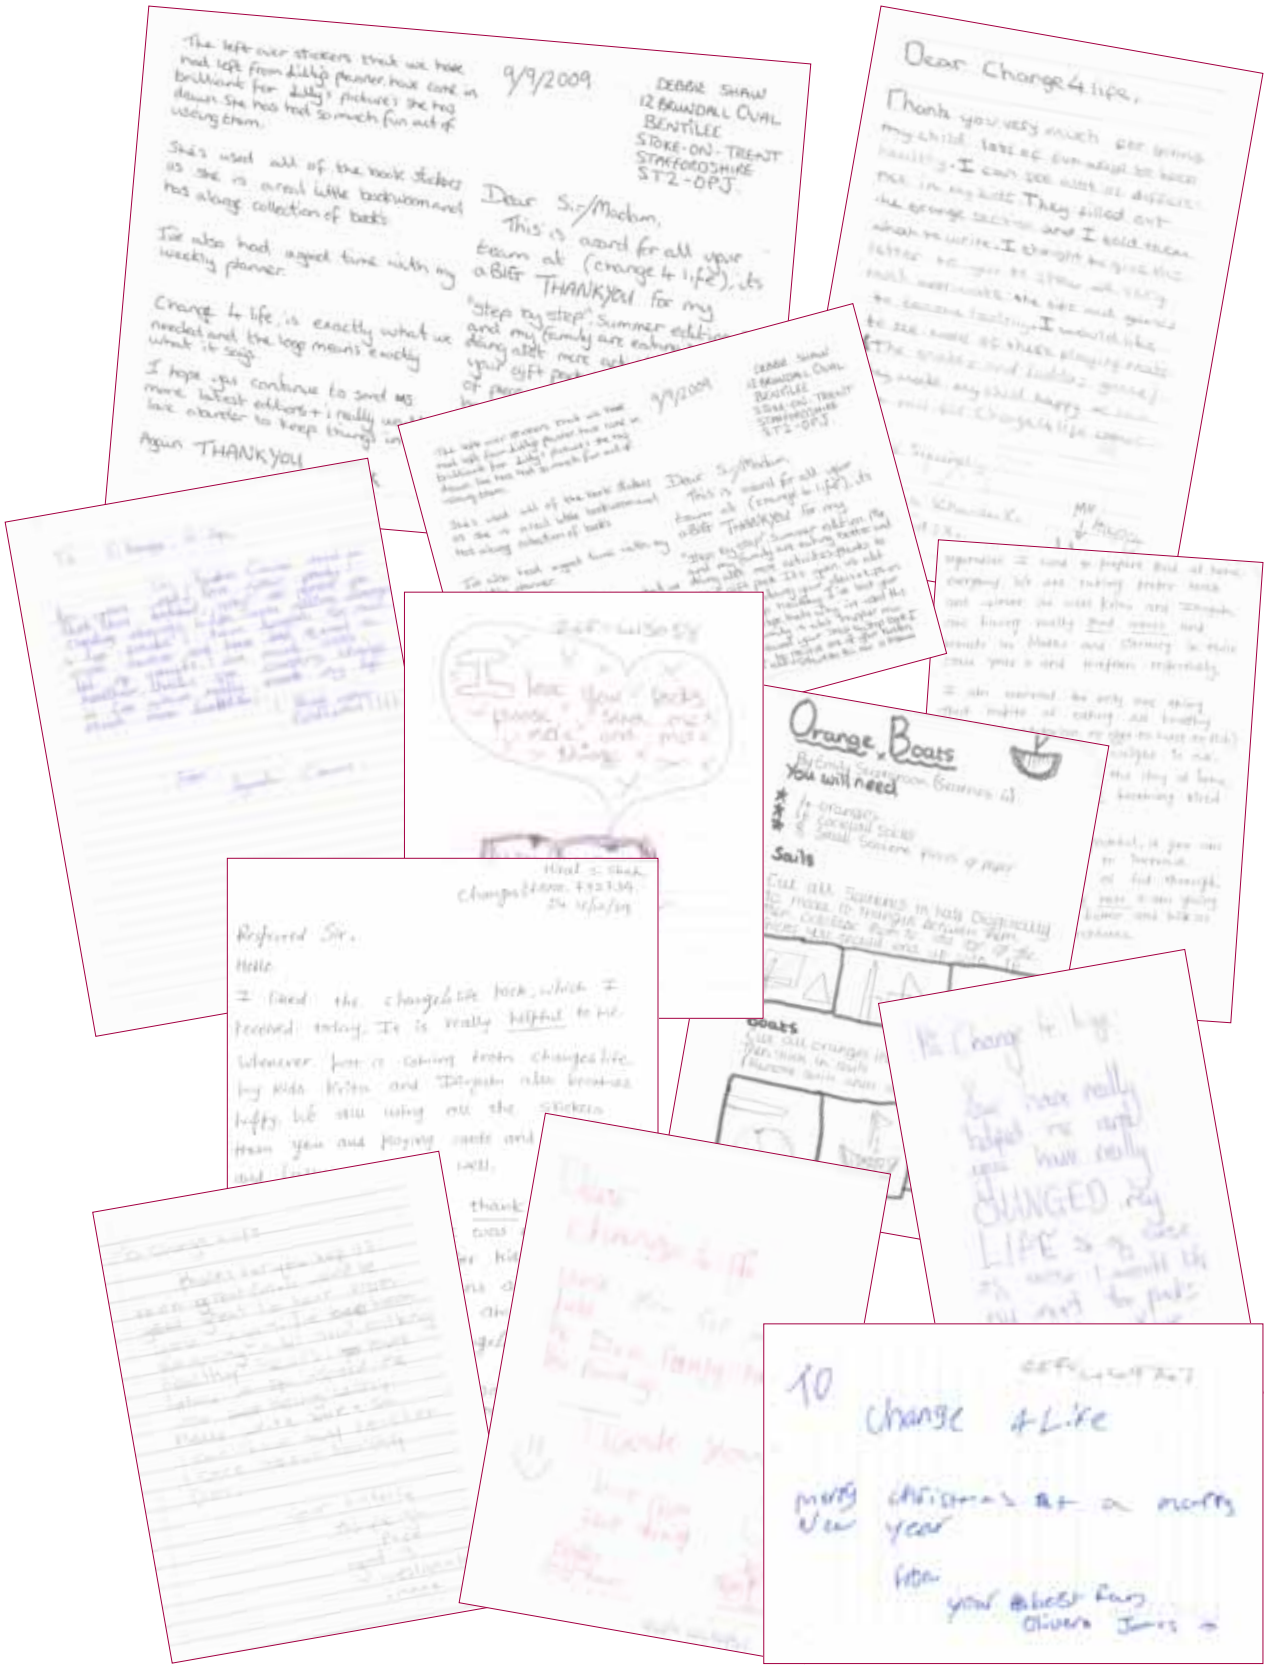
Of the 413,466 families who joined Change4Life, 387,906 (85%) provided contact details and gave us permission to continue sending them further communications.

From among these, we prioritised 200,000 families (using postcodes to determine those households that were most likely to be at risk) to enter a customer relationship management programme, which comprised four separate packs of information and resources, designed around the calendar of family life and delivered to their homes.

In addition, over 90,000 others who had opted in to further communication received an electronic customer relationship management (CRM) programme.

CRM pack 1 ('Your Summer Survival Kit') contained an activity book, the offer of a free ringbinder and either a snakes and ladders game (with dice) or a pedometer (for families with older children).

CRM pack 2 contained three booklets (Me Size Meals, 5 a day and Swaps).



As discussed, we know that at least 44,833 people were opening the packs and reading at least the letter (since they returned a coupon to us).

In addition, we asked the people who received CRM2 to tell us whether or not the pack had been useful to them. Analysis of responses from the first 8,000 coupons received shows a high degree of customer satisfaction with the pack.

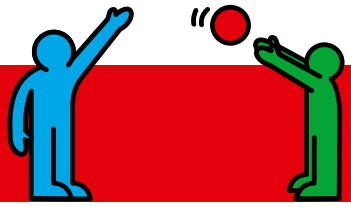
What do you think of this pack? Base: those answering this question	**4537 (%)**
Brilliant	76
Good	22
OK	2
Not very useful	*

We also asked people for their comments on the Change4Life programme as well as their suggestions for what could be improved. Over 23,000 people hand wrote responses to this question. A selection of their responses is included opposite.

From the 23,000 handwritten responses to the CRM pack

Outside the CRM programme, we realised that there was considerable appetite among the public for interactive products and tools that would provide stimulus to change their behaviours and would help them track the changes that they were making. For example, we included a response mechanism on the Change4Life 8 Behaviours wall chart that invited people to phone Change4Life if they would like to receive another wall chart. 17,738 people took up this opportunity.

For this reason, we set our agencies the task of creating an integrated communications package around the Snack Check (reducing consumption of unhealthy snacks) and Sugar Swaps (reducing consumption of added sugars) behaviours. This package involved the creation of a product (the 'Snack Swapper'), advertising (a television commercial), public relations (including distribution of the Sugar Swapper in women's magazines), partnership activity (including free distribution through schools and the NHS) and an online version.



Over 2.5 million Snack Swappers were distributed to the public, supplies were exhausted and Snack Swappers gained their own online following through blogs, Facebook and Twitter posts.

Did anyone see the snack swapper advert?
ELE
Member
I saw an advert the other day which had details how to get a snack swapper for your kids. Did anyone see it as i cant find any information to get one??
Thanks

5. WHAT HAVE WE LEARNED FROM THE FIRST YEAR?

We are aware that others may wish to replicate some or all of the Change4Life programme and, to this end, we thought it worthwhile documenting what we believe to be the important factors in its performance to date (as well as outlining some things which, had we our time over again, we might have done differently).

5.1 Critical success factors

We believe the following have been critical to the success to date:

- **Embedding Change4Life within the broader policy context.** The campaign is not an add-on, it is an integral part of Healthy Weight, Healthy Lives. It has helped to bind the policy together and explained it to the public.
- **Basing the campaign on the latest evidence,** including evidence generated through ongoing campaign research and monitoring, sharing that evidence base widely and seeking expert opinion to guide decisions where the evidence base is limited.
- **Engaging specialist suppliers**, all of whom, while outstanding in their own field, are also capable of working together in a spirit of cooperation.
- **'Open source' marketing**: the creation of sub-brands and allowing partners to create their own sub-brands, content and programmes, encouraging them to feel that they are part of a bigger initiative.
- **Building a coalition of partners**, including commercial sector, non-governmental organisations and other government departments.
- **Working to engage the local NHS and the schools**. Pre-existing networks, such as regional obesity leads, regional physical activity leads and healthy schools coordinators have all worked hard to promote the movement in their areas.
- **The Change4Life brand identity**, created by M&C Saatchi (and the claymation television advertising developed by Aardman Animation) captured the imagination of the public and made it possible to land some hard-hitting messages in an engaging and charming way. It has also provided a rallying call for those already working in the area.
- **The *How are the Kids?* mechanism**, created by EHS Brann. *How are the Kids?* was the entry point into Change4Life for 63% of those who joined. Without it, we would have ended the year with a database of only 149,458 families, about 50,000 short of our target. In addition, we know that families who joined Change4Life through *How are the Kids?* engage more frequently with other aspects of the programme.

5.2 If we had our time over again, what would we do differently?

The campaign was developed (and is being delivered) at great speed. Our advice to others contemplating such a programme would be:

- **Spend more time on the 'Mobilising the network' phase**: on reflection, we underestimated the amount of time it would take to engage properly.
- **Start the CRM programme sooner:** many families waited months for their first CRM pack; we should have had the CRM programme ready to go out to families as soon as they joined Change4Life.
- **Develop more products for professionals** such as teachers and doctors who have a professional interest in combating obesity.

5.3 Did the programme represent good value for money?

When we spend public money on an intervention, we need to consider whether it represents good value.

This section provides answers to the following questions:

- Was the investment in Change4Life deployed efficiently?
- Did the government investment attract other marketing spend relating to obesity that would not otherwise have happened?

5.3.1 Was the investment in Change4Life deployed efficiently?

5.3.1.1 Buying review

An independent review of the media buying for the Change4Life campaign[34] highlighted considerable savings across all media channels:

- Securing sponsorship of *The Simpsons* for less than 50% of the market price.
- Over-delivering launch TV by 20% (achieving 20% higher ratings than paid for).
- Added value of over £700,000 across press partnerships and display advertising.

In all, over £6 million worth of media savings were made across the year, the equivalent of 40% of the actual spend.

5.3.1.2 COI Artemis

COI's Artemis tool holds data for 54 government campaigns and enables government departments to assess the cost effectiveness of their activity.

COI Artemis measures:

- cost per response (includes all calls, texts, web visits and survey returns);
- cost per active response (the cost for a response where the individual went on to do something active, such as order fulfilment materials); and
- cost per intermediate conversion (the cost for a response where the individual registered their details, gave us more information about themselves or opted in to an ongoing relationship with Change4Life).

The original COI Artemis forecast (based on the media plan) was for 100,000 returns at an average cost per response of £5, cost per active response of £22 and cost per intermediate conversion of £27. These forecasts were themselves bullish: the average cost per response across government campaigns is £13, the average cost per active response is £115 and the average cost per intermediate conversion is £303.

How are the Kids? delivered a cost per active response of £10 and cost per intermediate conversion of £15, making it the most cost-effective response mechanism in government.

		How are the Kids?	
	COI Artemis average	**COI Artemis forecast**	**Actual**
Cost per response	£13	£5	£5
Cost per active response	£115	£22	£10
Cost per intermediate conversion	£303	£27	£15

5.3.2 Did the government investment attract other marketing spend?

The original investment in the DH campaign attracted:

- £1.5 million in spend from other government departments.[35]
- A further £7.5 million of national partner activity.[36]
- £12,457,572 in free media space for the launch.
- £532,393 in free media around the sponsorship of Channel 4's *The Simpsons*.
- £200 million in commitments by the Advertising Association consortium.
- Considerable as-yet-unquantified activity by local supporters, regional and local NHS, local authorities, schools and healthcare professionals.

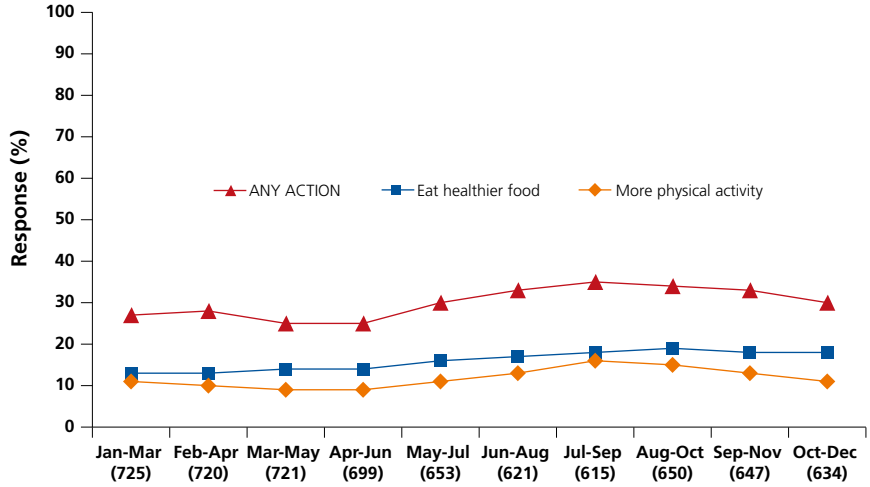
6. IS THERE ANY EVIDENCE THAT FAMILIES' BEHAVIOURS ARE CHANGING?

In the original marketing plan, we stated that we would not expect to see significant behaviour change in the early stages of the campaign. However, even at this stage, there are promising signs that people may be changing their behaviours. This evidence is drawn from two sources:

- the tracking study; and
- basket analysis.

6.1 What does the tracking study tell us?

As part of the monitoring of Change4Life, we commissioned a tracking study, fielded for us by the market research company, BMRB. The tracker is continuously in operation, and interviews 300 mothers with children aged 0–11 every month.



The tracker asks mothers about their own behaviours, the behaviours of their children, and their beliefs about what constitutes a healthy diet, as well as checking for awareness of the campaign, specific adverts, sub-brands and behaviour descriptors.

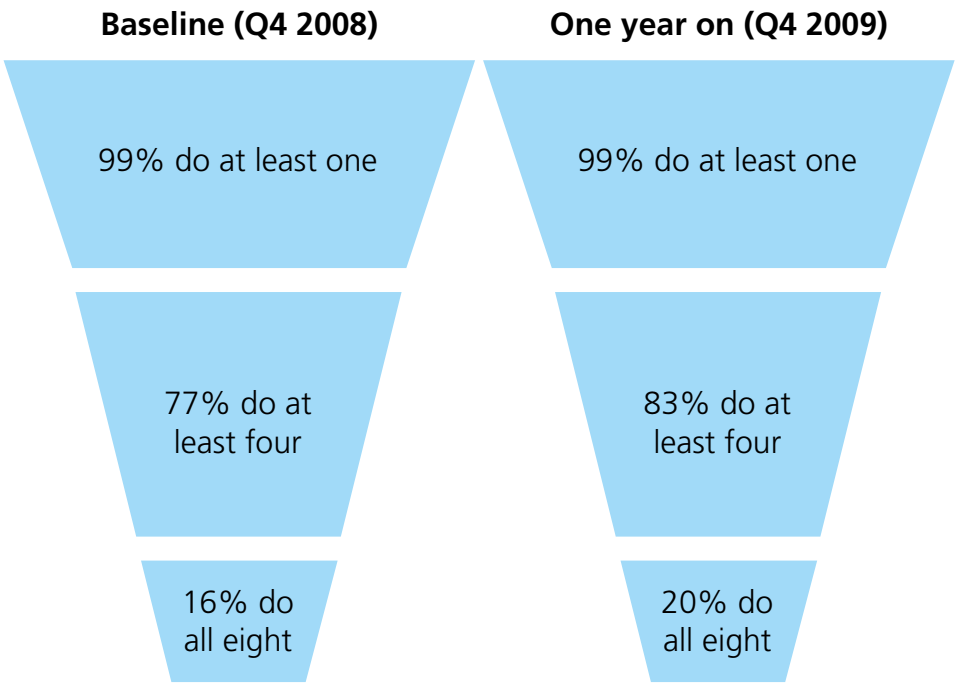
Data is collected face-to-face in the respondents' homes. Fieldwork began in December 2008, before the launch of Change4life in order to provide a 'baseline'.

The tracker is a rich resource, allowing us to see how attitudes and claimed behaviours change throughout the year and giving us, in the final quarter, the opportunity to make year-on-year comparisons. However, we exercise caution when interpreting the data in the tracking study, since we know that there is a risk that the campaign could increase the social desirability of certain responses.

The tracker shows a high degree of claimed change, with three in ten of those mothers who were aware of Change4Life claiming to have made a change to their children's behaviours *as a direct result of the campaign.* This equates to over 1 million mothers claiming to have made changes in response to the campaign.

Action taken as a result of seeing the ads (prompted)

Base: All mothers of 0–11-year-olds who have seen any ads
*denotes that these are statistically significant



It is interesting that some people claimed to be changing their behaviours as soon as they saw the advertising, although there is a steady increase from the beginning of the 'Rooting the behaviours' phase, which peaks in the summer and then declines slightly at the end of the year. It seems likely that there is some seasonality to family behaviours, with physical activity being more popular in warm weather and comfort-eating more tempting in the cold. Clearly we will need to look at more than one year's data to see whether year-on-year trends are changing.

It is perhaps more useful to look at what people are claiming to do and to do, and actually do, without the halo of the Change4Life brand. The tracking study asks people about the eight behaviours right at the beginning of the questionnaire, before the Change4Life branding has been revealed (and without using the Change4Life versions of the behaviours). We asked about these behaviours before the campaign launched and throughout the activity, so it is possible to make year-on-year comparisons.

Almost all mothers (99%) claimed that their children did at least one of the Change4Life behaviours at the pre-stage and this remained constant throughout the year.

Encouragingly, however, the number of mothers claiming that their children do all eight behaviours increased from 16% at the baseline to 20% by quarter four. This also showed seasonality, climbing steadily throughout the year (18% in the spring, 20% in the summer and 24% in the autumn, dropping slightly in the winter).

Trend in mothers claiming their children have adopted the Change4Life behaviours

The proportion of families having adopted at least four of the behaviours has also increased (in other words, the campaign has not only encouraged families who already had relatively healthy lifestyles to become even more healthy; it has also persuaded people with much less healthy lifestyles to make an effort to improve their health).

If the claimed data equate to actual change, an extra 4% of families (about 180,000) are now practising all eight behaviours.[37]

37 See Annex 4

Case study: What is happening with portion size?

Portion size is one of the behaviours we have promoted most. The tracker provides us with a rich source of data around portion size. It measures mothers' beliefs about what constitutes a healthy portion size, their awareness of the 'Me Size Meals' behaviour, and their claimed adherence to this behaviour.

In all cases, we see a positive trend following the Me Size Meals advertising:

	Baseline (Dec 08) (656) %	Final quarter Oct–Dec 09 (727) %
Proportion strongly agreeing:		
It's better to give children smaller portions and then they can have seconds if they want	31	42
Proportion strongly disagreeing:		
As long as my children aren't overweight, I don't worry about what they eat	38	40
The most important thing is to fill up my kids, so I encourage them to clear their plates	17	34
Proportion aware of Me Size Meals behaviour	4	36
Proportion claiming to serve child-sized portions	60	69

In addition, the proportion of mothers claiming that they now limit the amount of food on their own plates has also increased significantly from 35% at the baseline to 42% one year later, suggesting that changes made for children may also have, in the case of this behaviour, a positive effect on parental behaviour.

6.2 What can basket analysis tell us?

'Basket analysis' uses data provided by retailers to track actual shopping behaviour. It employs a variety of methods, including geo-demographic profiling of store loyalty card data (to see what sort of people bought what sort of products) and the use of in-home scanners (so that panellists, who have already provided demographic information, can automatically upload data on all of their purchases). Individuals give their consent for their information to be used in this way, and the data is presented anonymised and aggregated.

To understand whether Change4Life might be beginning to have a measurable impact upon the food that our at-risk audiences were buying, we commissioned dunnhumby to analyse data from the Tesco Clubcard database.

6.2.1 Exploring the relationship between joining Change4Life and food purchasing

In a pilot study using objective measures of actual purchasing behaviour, dunnhumby analysed purchases (using the Tesco Clubcard database) of 10,000 of the families who were most engaged with Change4Life.[38]

The analysis compared purchases made at Tesco during September, October and November 2009 (the intervention period) with the same three months of 2008 (i.e. pre-Change4Life). To factor out the impact of pricing and sales promotion, dunnhumby created a control group of 10,000 non Change4Life families who were demographically comparable and whose purchasing in 2008 matched the intervention group.

Profiling by dunnhumby confirmed that the Change4Life households did indeed contain a large proportion of lower income families (confirming that the people who are engaging with Change4Life are from the right target audience segments.)

The analysis found differences in the purchasing behaviour of the intervention group relative to the control. In particular, there were changes in the purchases of beverages among Change4Life families, favouring low-fat milks and low-sugar drinks. More in-depth analysis will be undertaken to confirm this.

6.2.2 Next steps

This is the first time we have employed this kind of analysis. These initial results are encouraging and suggest this will be a useful method to track changes in behaviour.

In the coming months, we will be refining the methodology to get a clearer understanding of the overall diet of Change4Life families.

6.3 Building a Change4Life funnel

In all behaviour change programmes there is a degree of attrition between those who want or intend to change their behaviours and those who make a change, and also between those who make a change or try a new behaviour and those who keep it up or succeed in embedding that change into a habit. In the original marketing strategy we considered two examples from other campaigns: tobacco control and 5 A Day. In the case of tobacco control, we saw that, while 75% of smokers report that they

38 'Most engaged' was defined as families who had joined Change4Life and had responded to at least one of the CRM packs

want to quit, only 45% will make a quit attempt in a given year. Of these, only one in fifteen (3% of smokers) will succeed in becoming smokefree. In the case of 5 A Day, the attrition rate is less acute: 52% of the population report that they want to eat five portions of fruit and vegetables per day, 40% try and about 14% (about one in three) succeed in doing so regularly.

In the marketing strategy, we hypothesised that the success rate for Change4Life would fall somewhere between these two: the Change4Life behaviours being harder to implement than 5 A Day (there being eight of them) but not so hard as smoking (which requires the conquering of an addiction). As a working hypothesis, we suggested a conversion rate of one in six for people participating in the Change4Life CRM programme; that is, for every family who succeed in embedding all eight behaviours, we would need to recruit at least six into the programme. Outside of the programme, we proposed a much weaker conversion rate (since people would not have the support and frequent reminders available to those in the CRM programme) of one in twelve.

The tracking study data would suggest that the conversion rates proposed in the original marketing strategy were overly cautious: as we have seen, 1 million mothers reported that they attempted to change their children's behaviours as a result of Change4Life; and an extra 180,000 mothers now claim that their children now do all eight behaviours. This equates to a conversion rate of 1 in 5.5.

Within the CRM programme, the conversion rate also seems to be better than expected. We sent the CRM materials to 200,000 families. We know for certain that 44,833 were still interacting with the programme after six months. This equates to a conversion rate of about 1 in 4.5.

We should, however, remember that we are not comparing like with like. In the case of smoking and 5 A Day, people are telling us about their own behaviour; in the case of Change4Life, parents are telling us about their children's behaviours and this alone could account for the apparently high conversion rate. We will need to look at the forthcoming academic research (see annexes for description) to see whether people's claimed behaviours are an accurate reflection of the changes they are actually making.

6.4 What did we learn about the behaviour change model and how will we refine our thinking as a result?

As we look back over the year, it would appear that our hypothetical model of how we might influence behaviours served us well. The issue does indeed appear to have been reframed (more people believing that excess weight gain in childhood leads to poor health outcomes) and personalised (more people believing that their families are at risk). Taking time to carry out these stages seems to have paid dividends, since response rates and conversions have been high.

Two things stand out as areas for refinement:

- Whether or not people are actually changing their behaviours, they seem to *want to* change their behaviours from the moment they engage with the campaign. As we move forwards into 2010/11 we will seek to ensure that every interaction with the campaign provides an immediate stimulus or prompt to do something differently.
- The local media partnership is still to be evaluated. However, our sense is that this activity was less convincing in providing social proof (increasing the belief that others like you are already changing their behaviours) than the activities of local supporters (who held over 1 million face-to-face conversations with the target) and the regional and local NHS and local authorities. Next year, we will explore ways we can better use the assets that the central marketing team holds (such as the *How are the Kids?* dataset) to provide social proof as well as looking to provide more mechanisms to stimulate local activity.

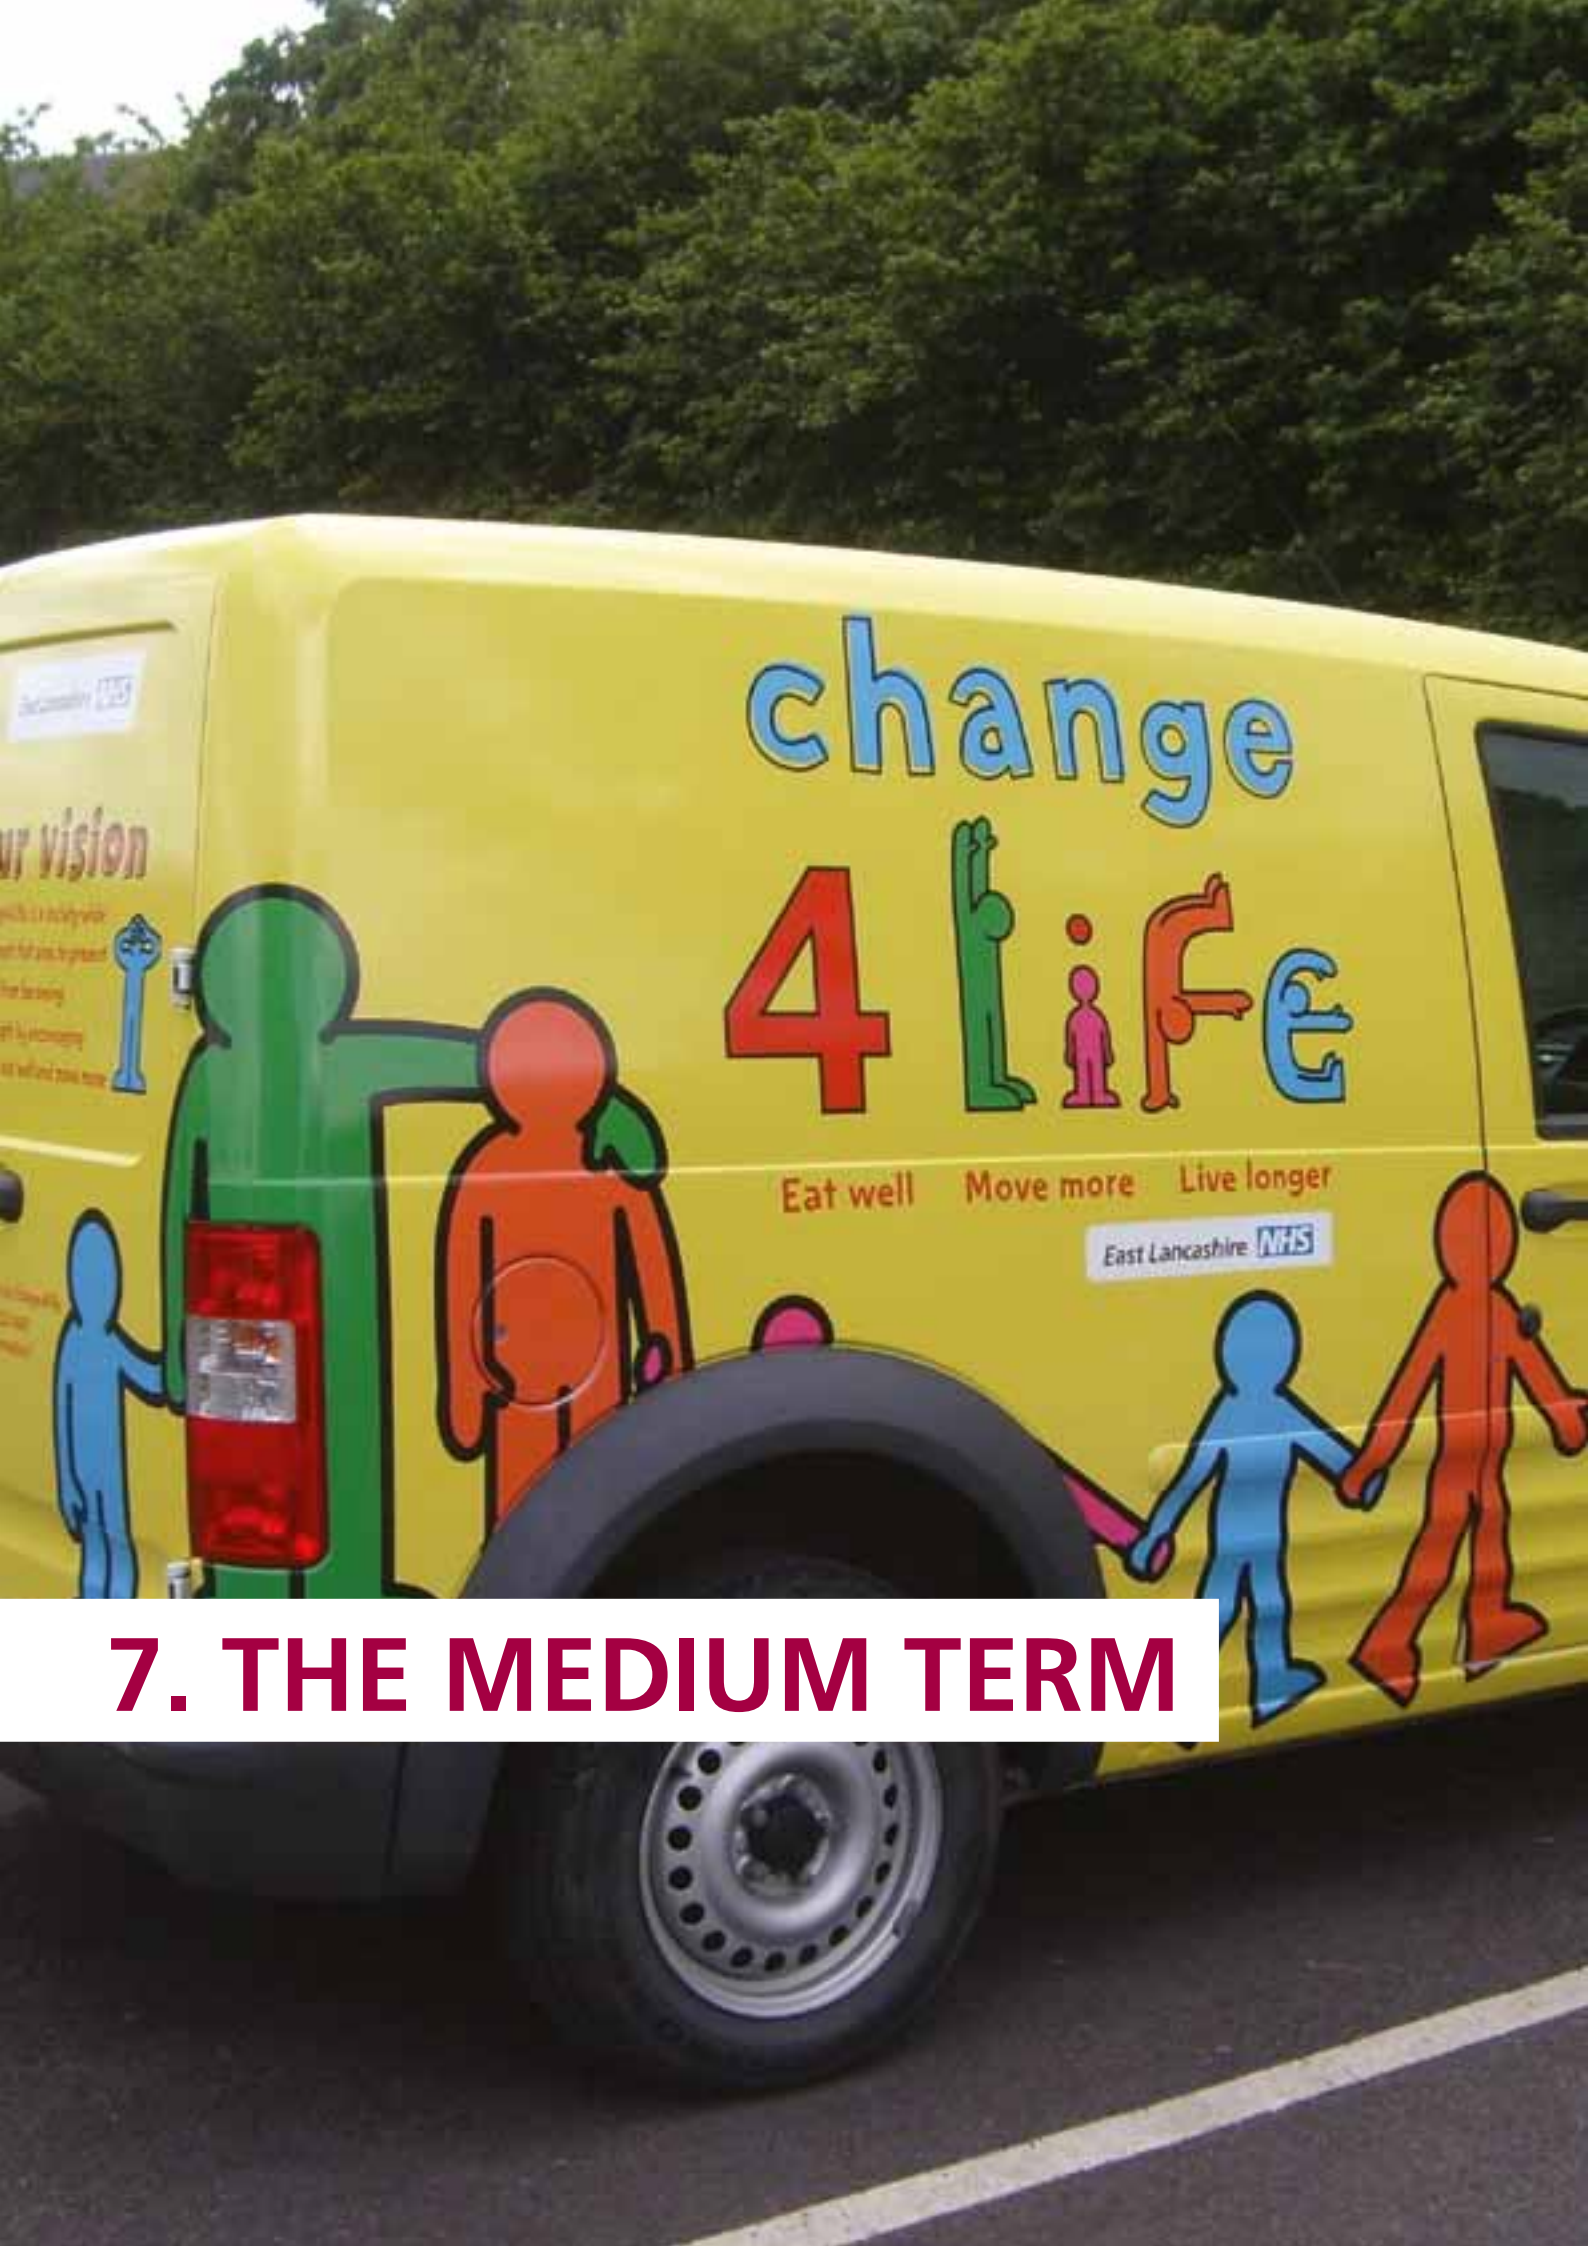
6.5 Are trends in obesity changing?

In November 2009, the National Heart Forum published *Obesity trends for children aged 2–11 years and 12–19 years*. This compared previous forecasts of obesity prevalence based on Health Survey for England (HSE) obesity data to new updated forecasts based on data between 2000 and 2007. This suggested that obesity might be levelling off in children.

One month later, data from the National Child Measurement Programme (NCMP) for the 2008/09 school year and from the HSE for the 2008 calendar year both showed that the trend in childhood obesity was flat when compared with the previous year.

While the new data are encouraging, they show a levelling off, not a decline. Rates of obesity are still unacceptably high and it would be dangerous to become complacent at this stage.

Many of the children who were measured by the NCMP and HSE were measured before Change4Life launched and their weight will depend on their experiences some time before that, so no credit can be ascribed to the campaign. However, Change4Life did not mark the start of government (or NGO) activity in obesity. If the trend is levelling off, we should look to other causes such as initiatives that had already started in schools plus the many local initiatives and the actions of individuals and families.



There is, however, an opportunity to accelerate the pace of change towards the government's target of reducing the proportion of people who are obese or overweight to 2000 levels by 2020.

We believe that Change4Life can continue to play a critical part in this by bringing together national work, grass roots programmes and individual efforts into a bigger societal movement.

6.6 Risks

The Change4Life programme is still only 12 months old, but, in the changing economic climate, there are considerable risks to the programme:

- The targets for the first year of Change4Life are only interim steps towards a much bigger objective – that of reducing the level of childhood obesity. Evidence suggests that lasting effects can only be brought about with sustained intervention.
- Change4Life has evolved as the evidence comes in and as new opportunities arise. There is, however, always an anxiety that the brand will be asked to stretch too far or do too much too early in its development.
- We have succeeded in creating a programme that partners want to support. There may now be the temptation to withdraw central funding and 'let the partners deliver it for us', but we doubt that partners would continue their support if there was no central activity. Local partners in particular may not continue their efforts if they do not see evidence of continued commitment from the centre.

7. THE MEDIUM TERM

In the next 12 months, we will do more of the things that families have told us help them to change their behaviours and will test more ways to inspire them to do so. This will involve, for example, providing materials for schools to encourage children to make pledges to change their diet and/or activity levels, developing clearer roles for the Change4Life sub-brands and Change4Life ambassadors.

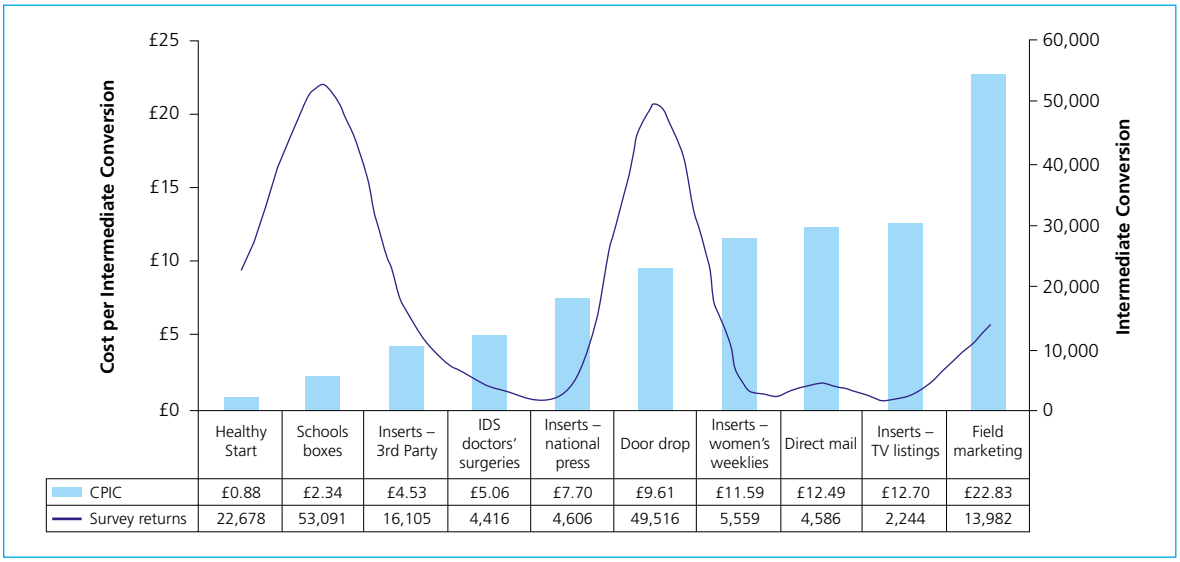
We are also producing messages for pregnant women and parents of children under two (under the Start4Life sister brand), for ethnic minority communities and for middle-aged adults.

7.1 How the families campaign will evolve

As we look to the next year, our task is to maximise opportunities for behaviour change, in particular our focus will be on activities that encourage people to try unfamiliar or hard-to-adopt behaviours.

7.1.1 Evolution of the advertising campaign

We will continue to run the 'Rooting the behaviours' advertising, and will use the 'Snack Swapper' model (where the advertising features a tool that is also distributed to the public to help them change their behaviours).



We will also set up a media test in which we will deploy different levels of advertising, and different combinations of adverts in different regions, in order to assess the relationship between the families campaign and the forthcoming adults campaign. In this way, we aim to maximise the benefits of both strands of the campaign in the most cost-effective manner.

7.1.2 Using government channels even more

The COI Artemis results indicate that government-funded channels (such as distribution through schools and doctors' surgeries and including the questionnaire in the Healthy Start mailing) outperformed paid-for commercial channels (e.g. magazines), both in terms of the overall levels of response and the cost per response.

The following chart shows both the total number of families who completed a *How are the Kids*? survey with enough data to generate a personalised response (shown by the solid line and the right hand scale) and the cost per intermediate conversion (shown by the solid blocks and the left hand scale).

Total response and cost per intermediate response by channel

	Healthy Start	Schools boxes	Inserts – 3rd Party	IDS doctors' surgeries	Inserts – national press	Door drop	Inserts – women's weeklies	Direct mail	Inserts – TV listings	Field marketing
CPIC	£0.88	£2.34	£4.53	£5.06	£7.70	£9.61	£11.59	£12.49	£12.70	£22.83
Survey returns	22,678	53,091	16,105	4,416	4,606	49,516	5,559	4,586	2,244	13,982

The most cost-effective response mechanism was the Healthy Start mailing, generating intermediate conversions for an astonishing 88 pence (against a government average of £303), although the total number of returns at 22,678 was limited by the absolute size of that mailing. The schools boxes was the most successful mechanism in terms of absolute numbers, generating over 53,000 conversions at a cost of £2.34.

These compare with more expensive channels, such as inserts in TV listings magazines, which generated 2,244 conversions at a cost of £12.70 each.

Field marketing is the *most* expensive means of generating responses. However, field marketing took place in areas of high deprivation and was intended to give families with low literacy skills help with questionnaire completion. So while the cost is high, it secured nearly 14,000 responses from families who otherwise might not have been able to join Change4Life.

In future, therefore, we plan to focus more on Government channels, and de-prioritise paid-for distribution channels, making the campaign more cost-effective.

In addition to using government channels to spread our messages, we will also invest in tailored materials that meet the needs of our partners and support them as they attempt to change people's behaviours. One example of this will be the launch of a bespoke programme for schools called SmallSteps4Life, developed by the Food Standards Agency.

SmallSteps4Life

SmallSteps4Life is the food spearhead programme developed by the Food Standards Agency to support Change4Life and the healthy active lifestyle strand of the London 2012 domestic education programme.

The SmallSteps4Life programme aims to encourage primary and secondary pupils to set themselves small, achievable lifestyle challenges, either as individuals or as groups, around the three themes of healthy eating, getting active and feeling good.

Programme elements include the SmallSteps4Life website, which, through challenge tips, games, and classroom resources, will enable schools to promote their activities and share their experiences so as to inspire other schools across the UK. The website will also help to maximise accessibility and offer an engaging and interactive rich experience for schools and young people. There will be a local engagement programme as well as hard copy resources for schools.

SmallSteps4Life launched to teachers in October 2009 and will launch UK-wide in February 2010.

7.1.3 Developing *How are the Kids?*

We recognise that we have, in *How are the Kids?* a property that can be further developed. During the campaign's second year, we will do two things:

- Send a second questionnaire to everyone who completed the first one; remind people of their positive intentions, help people reflect on their behaviours, celebrate successes and congratulate them on their progress.
- Pilot a localised *How are the Kids?* which will enable primary care trusts and/or local authorities to collect data and engage directly with their populations.

7.1.4 Increasing sub-brand activity

The sub-brands promote single issues with either a food or an activity focus (for example cooking is promoted via Cook4Life and swimming is promoted via Swim4Life).

Sub-brands are uniquely positioned to give people realistic ways of trying out for the first time something that is unfamiliar (e.g. access to free/reduced-price equipment; guided walks or cookery classes).

To date, DH has developed seven sub-brands: Walk4Life, Swim4Life, Bike4Life, Play4Life, Let's Dance, Cook4Life and Breakfast4Life.

Beyond the seven DH-created sub-brands, 45 partners have applied to create new sub-brands. The 16 approved to date include MuckIn4Life (Defra), MoreActive4Life (the Fitness Industry Association) and Skip4Life (Birmingham PCT). In theory, there is no limit to the number that could be developed, although we have recently changed our guidelines to encourage partners to look first at the existing suite of sub-brands before submitting an application to create another.

The speed at which the Change4Life sub-brands have been created and launched is unprecedented. Most commercial brands establish themselves for *years* before they launch a single sub-brand. Very few brands ever develop seven or more. We cannot think of a prior example of any brand that has launched so many sub-brands in so short a time as Change4Life has done. The willingness of the market to accept so many sub-brands suggests that they are meeting a real need both for partners and for the public.

Originally, it was envisaged that partners would join forces and campaign collectively behind sub-brands. However, this has not happened and has resulted in a proliferation of sub-brand names, with partner activity fragmented. While this helps to create a sense of buzz and movement around Change4Life, it is organic and unscripted and probably duplicates a lot of resource. We believe that there is now an opportunity to create a structured programme of activity that uses the sub-brands more effectively, particularly as a means of galvanising partner support at a local level.

From existing 7 sub-brands (which we will continue to support) we will prioritise the following:

- Let's Dance
- Bike4Life
- Walk4Life

In addition we plan to introduce a new sub brand:

- Football4Life

We chose these sub-brands to focus on because:

- they focus on areas which require equipment, coaching or specialist skills; and
- they all have broad popular appeal.

7.1.5 Harnessing the talent of Change4Life 'Ambassadors'

A wide variety of engaged organisations and individuals could already be considered as Change4Life Ambassadors, including national partners, local supporters, CEOs of charities, the Chief Nursing Officer, community leaders and journalists. They help to act as advocates and endorsers or add credibility to our message.

However, our focus in 2010 will be to build on the level of 'ambassadorial' support that we can harness from both mums (peer-to-peer awareness raising, endorsement, feedback mechanism and test bed, recruitment of new mums, etc) and celebrities (helping to secure media coverage, broaden the message to specific audience groups or clusters, add credibility, etc).

7.2 New audiences for years two and three

7.2.1 Start4Life marketing strategy

While Change4Life sets out to change common behaviours that lead to weight gain in children aged between 5 and 11 years old, there is an opportunity to ensure that those children who are being born now grow up with a healthy relationship with food and activity from birth. This opportunity is not about *changing* but about *starting well*. To meet this opportunity, Change4Life's first sister brand was created: Start4Life.

Start4Life promotes breastfeeding, healthy weaning and active play. Programme objectives are to increase breastfeeding continuation rates at 6 weeks and increase average weaning age from 19 weeks to 26 weeks. As with the Change4Life

campaign, consumer-friendly versions of the behaviours were designed, with creative, academic and health professional involvement.

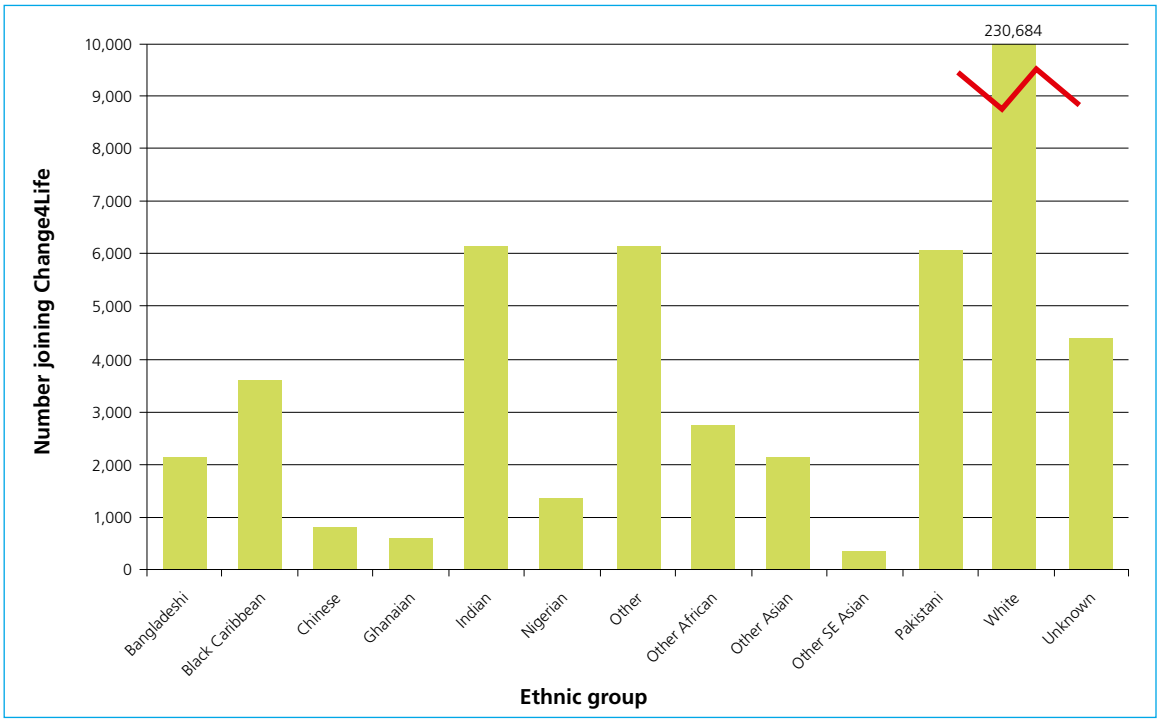
Since the early years are so important to a child's future health outcomes (including but not limited to obesity), Start4Life will also provide links to (and will indirectly support) other programmes, such as the Healthy Child programme, that aim to promote child health and well-being.

Start4Life will target healthcare professionals, pregnant women, families with babies under 2 years old and those who influence them.

Start4Life launched to the public in January 2010.

It will be evaluated via:

- surveys with healthcare professionals (to establish awareness and attitudes to the campaign);
- monitoring of orders for campaign materials (to establish whether healthcare professionals are using the campaign);
- a quarterly tracking study of pregnant women and parents of babies; and
- monitoring of website visits.



We will not at this time be engaging in any commercial partnerships for Start4Life.

7.2.2 Marketing strategy for ethnic minority communities

Analysis of data from that National Child Measurement Programme indicates that children from the Pakistani, Bangladeshi and black African communities are more likely to become overweight or obese than their white British counterparts:

	Overweight/obese in Reception class **%**	**Overweight/obese in Year 6** **%**
White	22.6	31.5
Asian or Asian British	19.1	35.6
Black or Black British	28.7	41.9
All children	22.6	32.6

Encouragingly, a significant number of ethnic minority families joined Change4Life in its early stages. However, it is more likely that these responders were born in Britain and more likely to access mainstream media.

The original *How are the Kids?* survey and the materials that were sent in response were only available in English. We have always recognised that tailored materials, using other languages and culturally specific advice would allow Change4Life to engage with other communities in a more meaningful way. In consequence, we appointed a specialist ethnic marketing agency and worked closely with primary care trusts and local authorities in three areas – Luton, Bradford and Lambeth & Southwark – to design bespoke programmes.

The ethnic minority campaign was launched in late 2009, in Luton, and includes:

- gatekeeper events, engaging with healthcare professionals and others working with the communities;
- community events, engaging authority figures (such as faith leaders) from within the communities themselves;
- working with respected celebrities from the communities;
- bespoke advertising, stressing the importance of obesity as an issue for these communities and making the link between current practices and weight gain;
- a culturally sensitive version of *How are the Kids?*, with tailored fulfilment materials, available in different languages;
- face-to-face marketing at community events and melas; and
- partnership marketing, including with commercial brands that target these audiences.

NEWS

Lambeth and Southwark West African community make a Change4Life

Local West African community leaders came together on Friday 27th November 2009 to back the Government's Change4Life movement, which gets families eating well, moving more and living longer.

Attendees at the first three gatekeeper events were invited to comment on how useful they found the initiative. Overall, we received a very positive response from stakeholders, with most of them confirming that they felt better informed about the communities and found the conferences useful.

The cookery demonstrations were a particular highlight and a number of community representatives were keen for us to replicate them in their local churches and centres.

Following the conferences we have so far received orders for 7,115 information leaflets (Urdu and Bengali bi-lingual versions and English only versions for our West African communities) and 1,120 posters, from a total of 415 organisations.

We are currently developing plans for a consumer campaign and will be co-branding the British Asian Sports Awards.

7.2.3 Marketing strategy for adults

Obesity peaks in the 45–65 age range: 30% of adults aged 45–54 are obese (and 69% are overweight or obese).[39]

For this reason, from February 2010, Change4Life will launch a campaign for adults.

The objectives behind the Change4Life adults campaign are to:

- encourage adults who are overweight, or on a trajectory to obesity, to lose some weight; and
- prevent the onset of lifestyle diseases such as type 2 diabetes, coronary heart disease and some cancers.

We have developed a set of behavioural goals in consultation with experts and stakeholders including the Food Standards Agency and the Healthy Weight, Healthy Lives Expert Advisory Group, which, if adopted, should help adults maintain a healthy weight and which can be adapted, where appropriate, to help people lose weight. Many of the behaviours are similar to the Change4Life family target behaviours; however, there are additional adult behaviours related to liquid calories and fibre.

These behaviours and early creative work were researched with the target audience. Our target adults found the behaviours easier to access when packaged under a core 'umbrella' proposition.

The most compelling umbrella proposition was 'Swap it, don't stop it', since this packaged diet and activity together and offered a positive exchange which not only motivated people to take up the behaviour change but also equipped them with strategies to carry this out.

The adults campaign launches to the public in February 2010. This will involve:

- a public relations campaign, using free editorial to highlight the changes that modern life has made to the lifestyles of people in the target audience;
- advertising launching Change4Life to the adult audience and promoting a 'swapper' tool to facilitate behaviour change;
- web-based tools and content contained within a dedicated part of the Change4Life site; and
- a partnership element, including an employee health and well-being programme.

39 Health Survey for England, 2007

7.3 Future audiences

Our intention has always been to extend the Change4Life campaign beyond families to other at-risk audiences. In the original marketing strategy we raised the possibility of a campaign for teenagers in the near future. We have, however, decided not to develop bespoke work for teenagers at this point:

- Our academic advisors told us that, while diet and physical activity behaviours do often deteriorate in the teenage years, they tend to improve again in adulthood (providing good habits were established in childhood).
- When seeking to influence teenagers, we have to recognise that we are in a competitive landscape with other health behaviours – alcohol, drugs, sexual health – which teenagers may find inherently more interesting and whose negative consequences may be more immediate.
- We have been advised by stakeholder groups (particularly the eating disorders charity, Beat) that we should guard against unintended consequences, particularly an over-focus on dieting and excessive exercising in teenage girls.

While we are not, therefore, designing a specific campaign for teenagers at this time, we are encouraged that the mainstream families campaign is landing far more squarely with teenagers than might have been expected:

- The tracking study indicates that 88% of 12 to 19-year-olds have seen a C4L advertisement.
- The *How are the Kids?* questionnaire included a surprising number of responses from families with children aged 11 to 16 – over 125,000 – for whom we designed a bespoke fulfilment pack.
- The programme contains offers, such as free swimming, that may be motivating to teenagers, and we anticipate that the forthcoming Let's Dance and Football4Life sub-brands will also appeal to this audience.
- Finally, we are working with the Ideas Foundation (a charity whose mission is to involve young people from lower-income backgrounds in the creative industries) with the aim of harnessing the creativity of young people to put forward ideas for how Change4Life might motivate 11–16s in future.

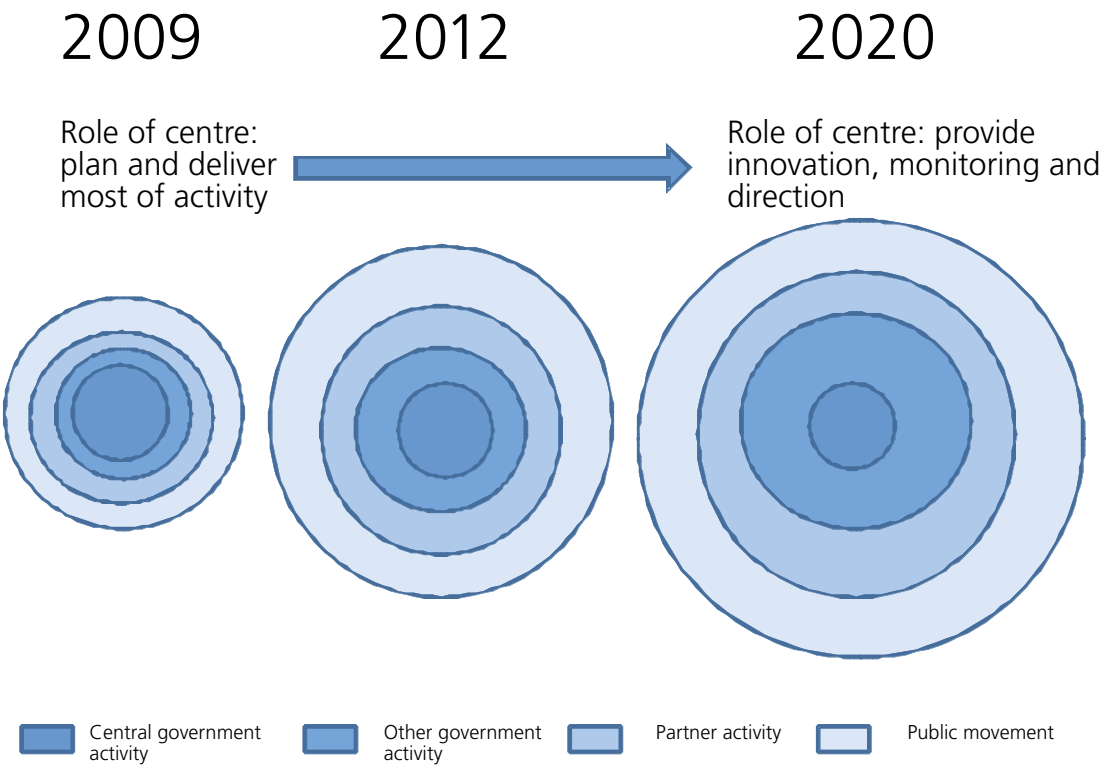
7.4 Beyond England

Change4Life was developed for England. However, we have held meetings with the devolved administrations, and, in February 2010, Wales will launch its version of Change4Life, including a Welsh-language version of *How are the Kids?*

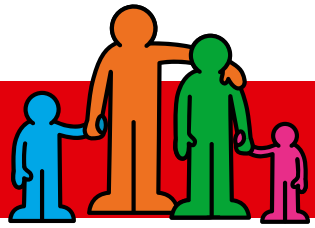
During 2009, meetings were held with the American Health Secretary, and with Michelle Obama, to explore the possibility of adapting the Change4Life model for the USA.

8. THE LONGER TERM

All the evidence suggests that, for a lifestyle intervention to be successful, we will need sustained activity for a number of years. The progress to date on Change4Life is encouraging and we hope that central funding will continue for years to come. However, we recognise that we operate in a changing environment (and also that, as with any publicly funded campaign) we should respond to the emerging evidence and always seek to implement the most efficient funding model.



The purpose of this central funding was to provide a catalyst for a much broader societal movement, which happens at a grass roots and local level and is, to some extent, independent of Government control.



Once the local movement is under way, we anticipate that the role of the centre will change (although some central funding will always be needed to ensure that partners have something to join up with).

8.1 Increasing localisation

It is our ambition that, with time, the proportion of the total spend that comes from central funding could decline (as could the need for central control) as local funding and local solutions increase.

Role of the centre in future

There are some things which can be done more efficiently from the centre (and there are benefits in doing some things once, rather than asking each region to do the work themselves). Over time, however, the role of the centre shifts from the creation and delivery of most activity to a role that is about innovation (horizon-scanning and generating new ideas and products), monitoring (providing common evaluation tools and benchmarking regions against one another) and direction (sharing best practice and encouraging the roll out of success models).

8.2 Brand stretch

Change4Life was created to help prevent childhood obesity, by prompting changes to behaviours relating to food and activity.

However, the physical incarnation of the brand does not mention children, obesity, diet or exercise. While this was originally done for sound consumer-insight-driven reasons (the words 'obesity', 'diet', 'food' and 'exercise' were all unappealing to our target consumers; an excessive focus on childhood obesity made parents feel that they were being singled out and blamed by society for their children's weight), we have created a brand which might potentially have broader application. In the current challenging economic climate, it behoves us to explore whether the brand might be able to carry messaging beyond diet and activity and whether doing so would create economies of scale within the overall departmental communications budget.

It is interesting that, while we know that Change4Life is a prevention campaign in childhood obesity, to the public it already seems to have a broader meaning as a 'health and well-being movement'.

Indeed the brand has already moved beyond its original definition:

- Healthcare professionals are using Change4Life materials not just for prevention but to initiate conversations about weight loss.
- Local authorities and primary care trusts have also branded weight loss services (for adults and children) under the Change4Life umbrella.
- At the beginning of 2010, the brand began to target both Early Years and the non-family adult audience.
- Within the Change4Life adults campaign there will be messaging about the calorific content of alcoholic drinks.

However, it may be possible to go further. For this reason, we have initiated an exploratory project to assess how far the brand might stretch into other public health areas. This project will conclude later in 2010.

9. CONTRIBUTORS

Principal authors

- Sian Jarvis, Director General of Communications, Department of Health
- Sheila Mitchell, Deputy Director, Marketing, Communications Directorate, Department of Health
- Paul Gilham, Change4Life team
- Jane Asscher, Change4Life team
- Alison Hardy, Change4Life team.

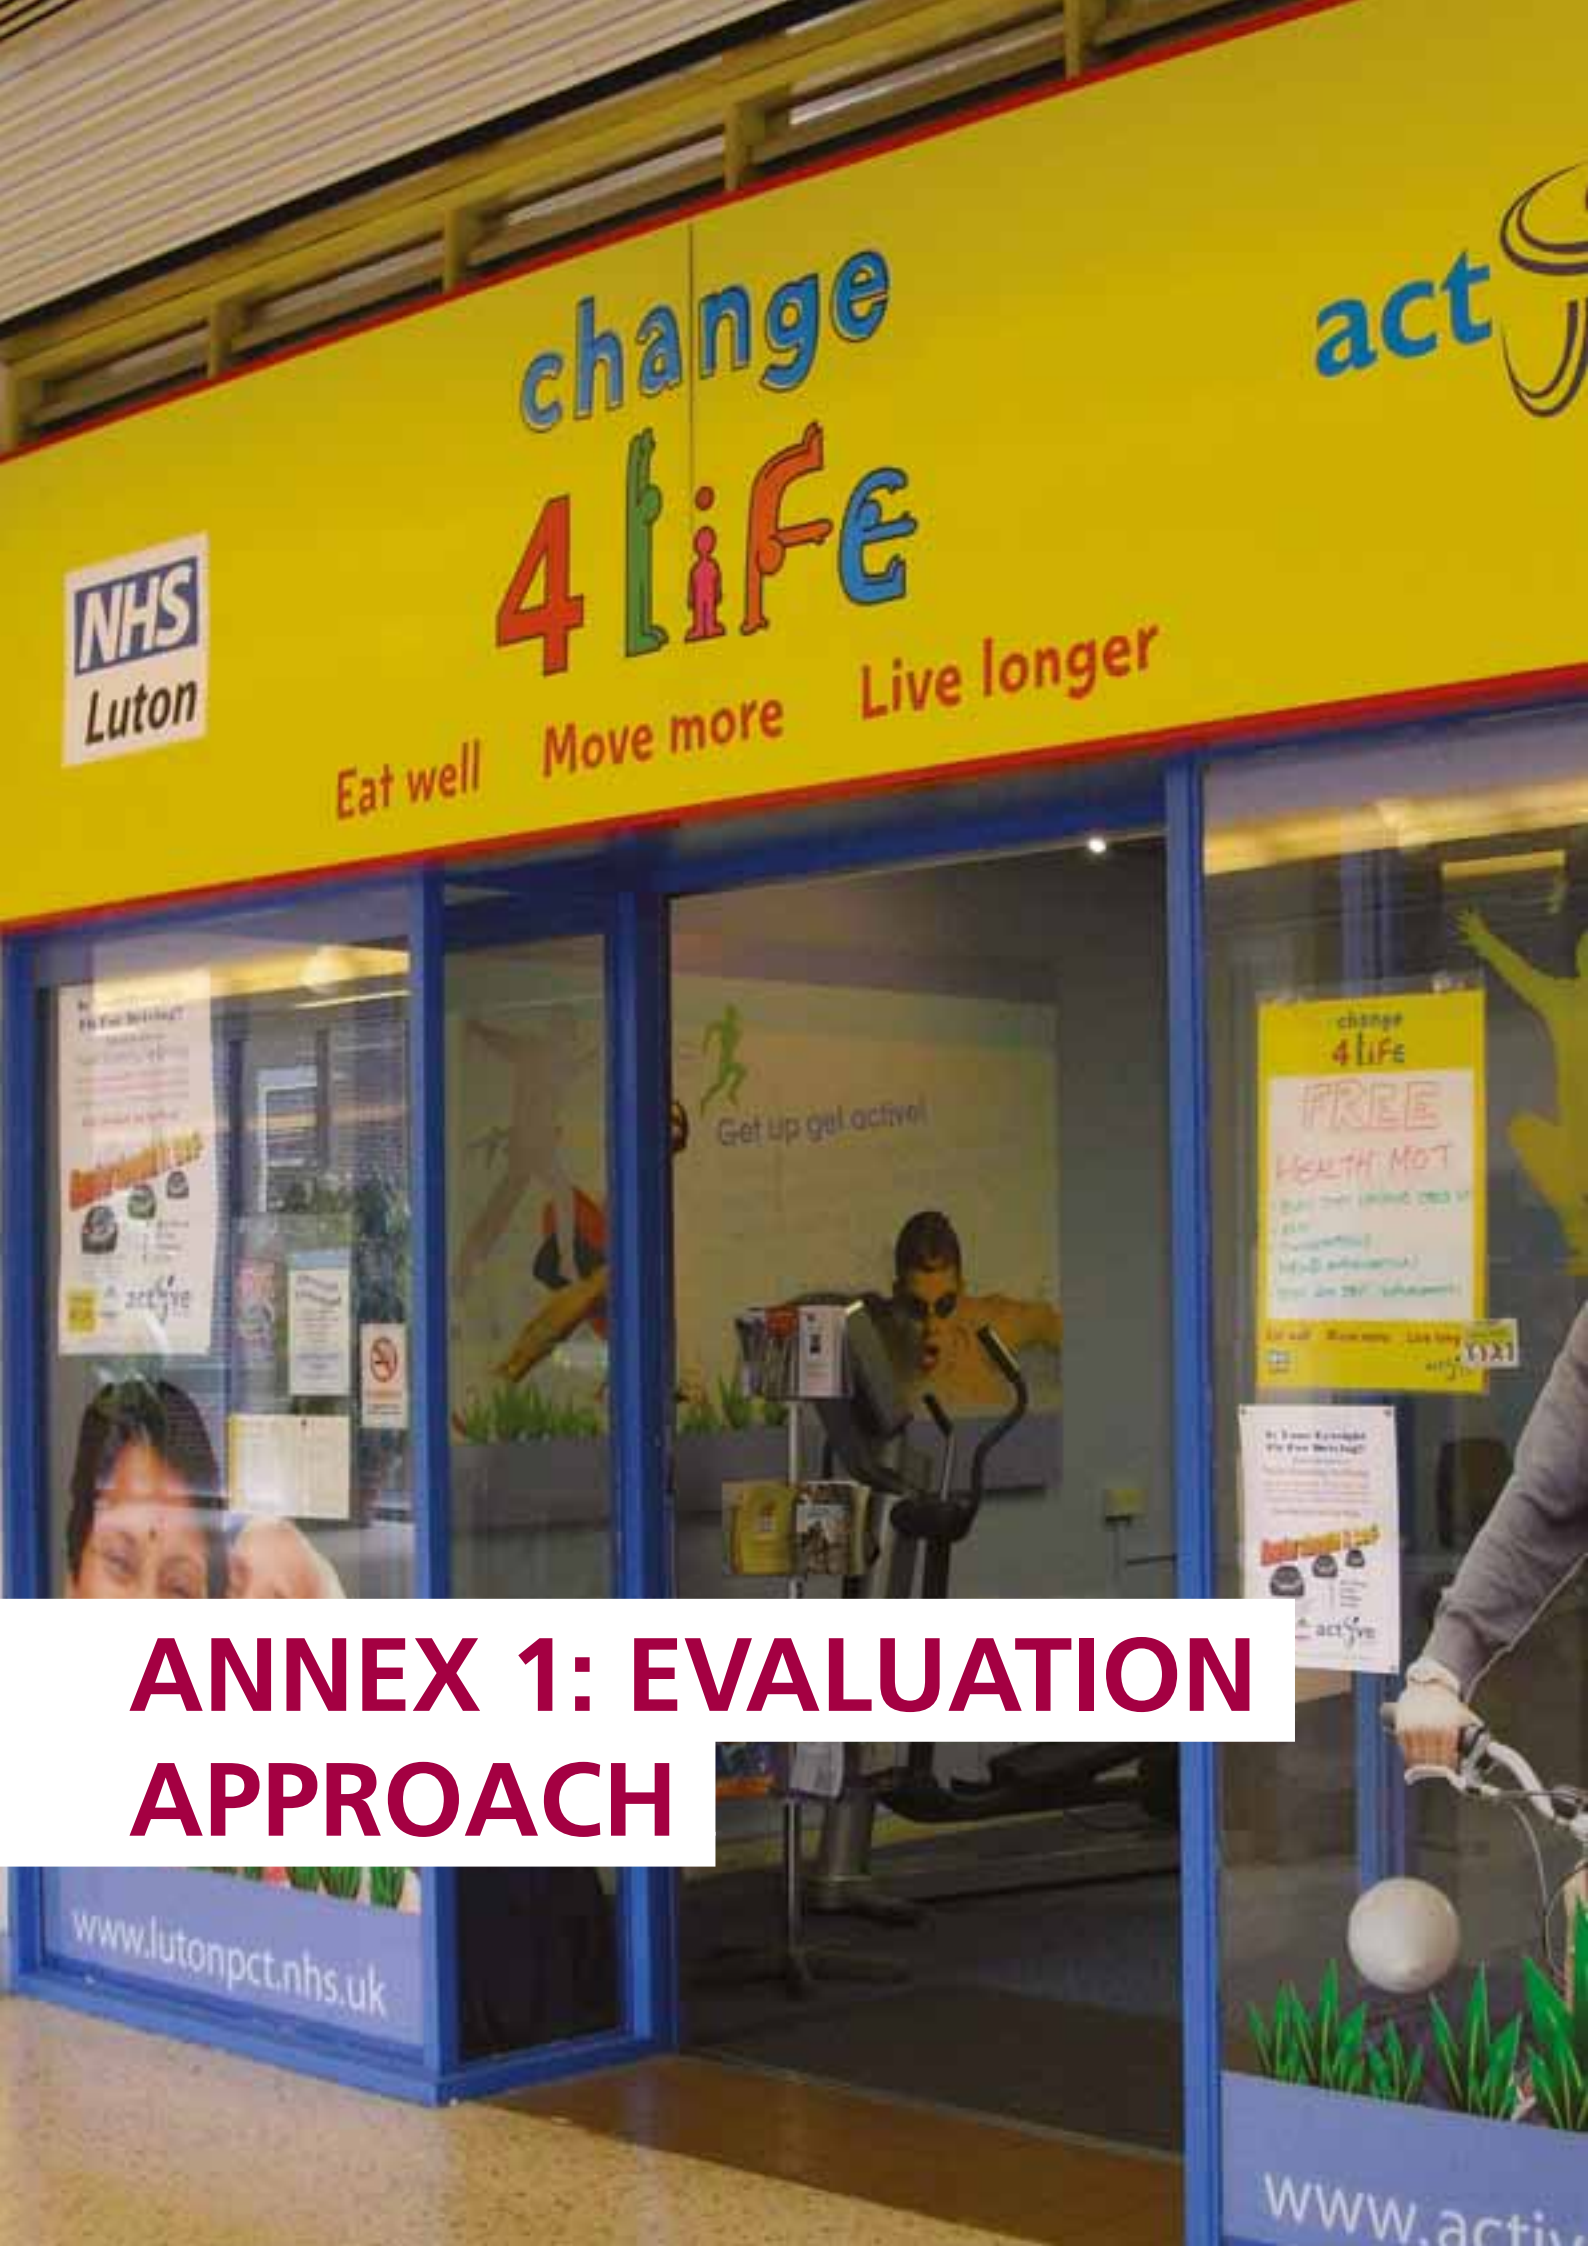
Peer reviewing

The authors would like to thank the peer review group, who provided valuable input and expertise:

- Ms Sue Garrard, Director of Communications, Department for Work and Pensions
- Dr George Gordon, Communications Director, UK and Ireland, Unilever UK Limited
- Professor Gerard Hastings, Director of the Institute for Social Marketing and the Centre for Tobacco Control Research, University of Stirling
- Dr Susan Jebb, Head of Nutrition and Health Research, Medical Research Council, Human Nutrition Research
- Ms Sarah Lyness, Director, Policy and Communications, Cancer Research UK
- Professor Gregory Maio, School of Psychology, University of Cardiff
- Ms Jane Riley, Yorkshire and the Humber Regional Public Health and Social Care Group
- Ms Fiona Wood, Director of Research, Central Office of Information.

Communications agencies

- 23 Red (partnership marketing)
- Biss Lancaster (public relations, early years)
- COI (procurement, research, evaluation and strategic advice)
- Data Lateral (data management)
- EHS Brann (direct marketing and customer relationship management)
- Freud Communications (public relations)



- M&C Saatchi (brand creation and advertising)
- Manning Gottlieb OMD (media planning)
- Media Moguls (marketing for ethnic minority communities)
- Profero (digital communications).

- Dr Susan Jebb, Head of Nutrition and Health Research, Medical Research Council (Chair)
- Professor Tom Baldwin, Department of Philosophy, University of York
- Professor Ken Fox, Professor of Exercise and Health Sciences, Bristol University
- Professor Peter Kopelman, Principal, St. George's, University of London
- Professor Timothy Lang, Professor of Food Policy, City University, London
- Mr Paul Lincoln, Chief Executive, National Heart Forum
- Professor Klim McPherson, Visiting Professor of Public Health Epidemiology and Fellow of New College, Oxford University
- Dr Geoff Rayner, Visiting Research Fellow, City University, London
- Professor Mary Rudolf, Consultant Paediatrician and Professor of Child Health, NHS Leeds and University of Leeds
- Dr Harry Rutter, Director, National Obesity Observatory for England
- Professor Jane Wardle, Director, Cancer Research UK, Health Behaviour Unit, Department of Epidemiology and Public Health, University College London.

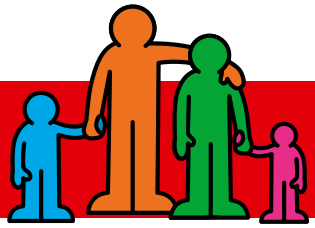
ANNEX 1: EVALUATION APPROACH

The relatively few campaigns on obesity prevention to date have tended to be short lived and most have not been evaluated on the scale that would be desirable. In consequence, the project team finds itself pioneering a new approach to evaluation as well as government communication. In order to create a robust evidence base, 7% of the total marketing budget is being spent on research, monitoring and evaluation of campaign activity, and national partners are required to demonstrate how they will evaluate their own activity and to share any results with Change4Life.

There are three high-level themes to the evaluation programme:

- Monitoring campaign exposure and visibility to target audience.
- Investigating the impact on families.
- Tracking the development of a social movement.

Such a complex intervention necessitates a mixed-method approach to evaluation to ensure that we have a rounded view of the campaign. This approach makes use of best practice from market research (e.g. DH Marketing Evaluation Handbook), academia (e.g. MRC updated guidance on 'developing and evaluating complex interventions', 2006) and the commercial world. Some of the methods we are using to evaluate the campaign are still being finalised; however, we have already set up a number of strands.



Monitoring campaign visibility

Several projects contribute to the measurement of the target audience's exposure to the campaign. The core source of information is a continuously fielded, nationally representative monitoring study conducted by the British Market Research Bureau (BMRB). This includes a series of standard measures (brand and advertising awareness, understanding of key messages, engagement with the campaign, awareness of the sub-brands, etc). Additional questions have been added to reflect the evolving nature of the campaign.

Measuring the impact on families

The fundamental question for the evaluation of Change4Life is 'what impact is it having on families' attitudes and behaviours?' A number of projects will support us in addressing this:

- The nationally representative monitoring study conducted by BMRB. As well as the measures of campaign awareness mentioned above, this survey also monitors intent to change and self-reported behaviour. The sample is representative of the English adult population with boosts in target audiences of mothers with children aged 0–11 and pregnant women. The survey is soon to include a boost of the future adult audience (aged 45–65).

- An academic study using a randomised design and control group to gauge the impact of Change4Life marketing materials upon family behaviour. The study is led by Professor Jane Wardle and Dr Helen Croker of UCL and contains a combination of quantitative and qualitative approaches.
- COI's Artemis database which holds response data for all government campaigns and enables us to assess the cost-effectiveness of marketing activity in terms of the volume and nature of responses generated.
- Longer term use of proxy data at a population and sub-population level. Over time, routine survey data will support tracking of behaviour change, body mass index (BMI) change and other longer term health outcomes (e.g. Health Survey for England, National Travel Survey and the National Diet and Nutrition Survey).

In addition we have commissioned two pieces of basket analysis (see Section 6 for explanation) using data provided by retailers. These will track purchases of healthy and unhealthy foods throughout the life of the campaign.

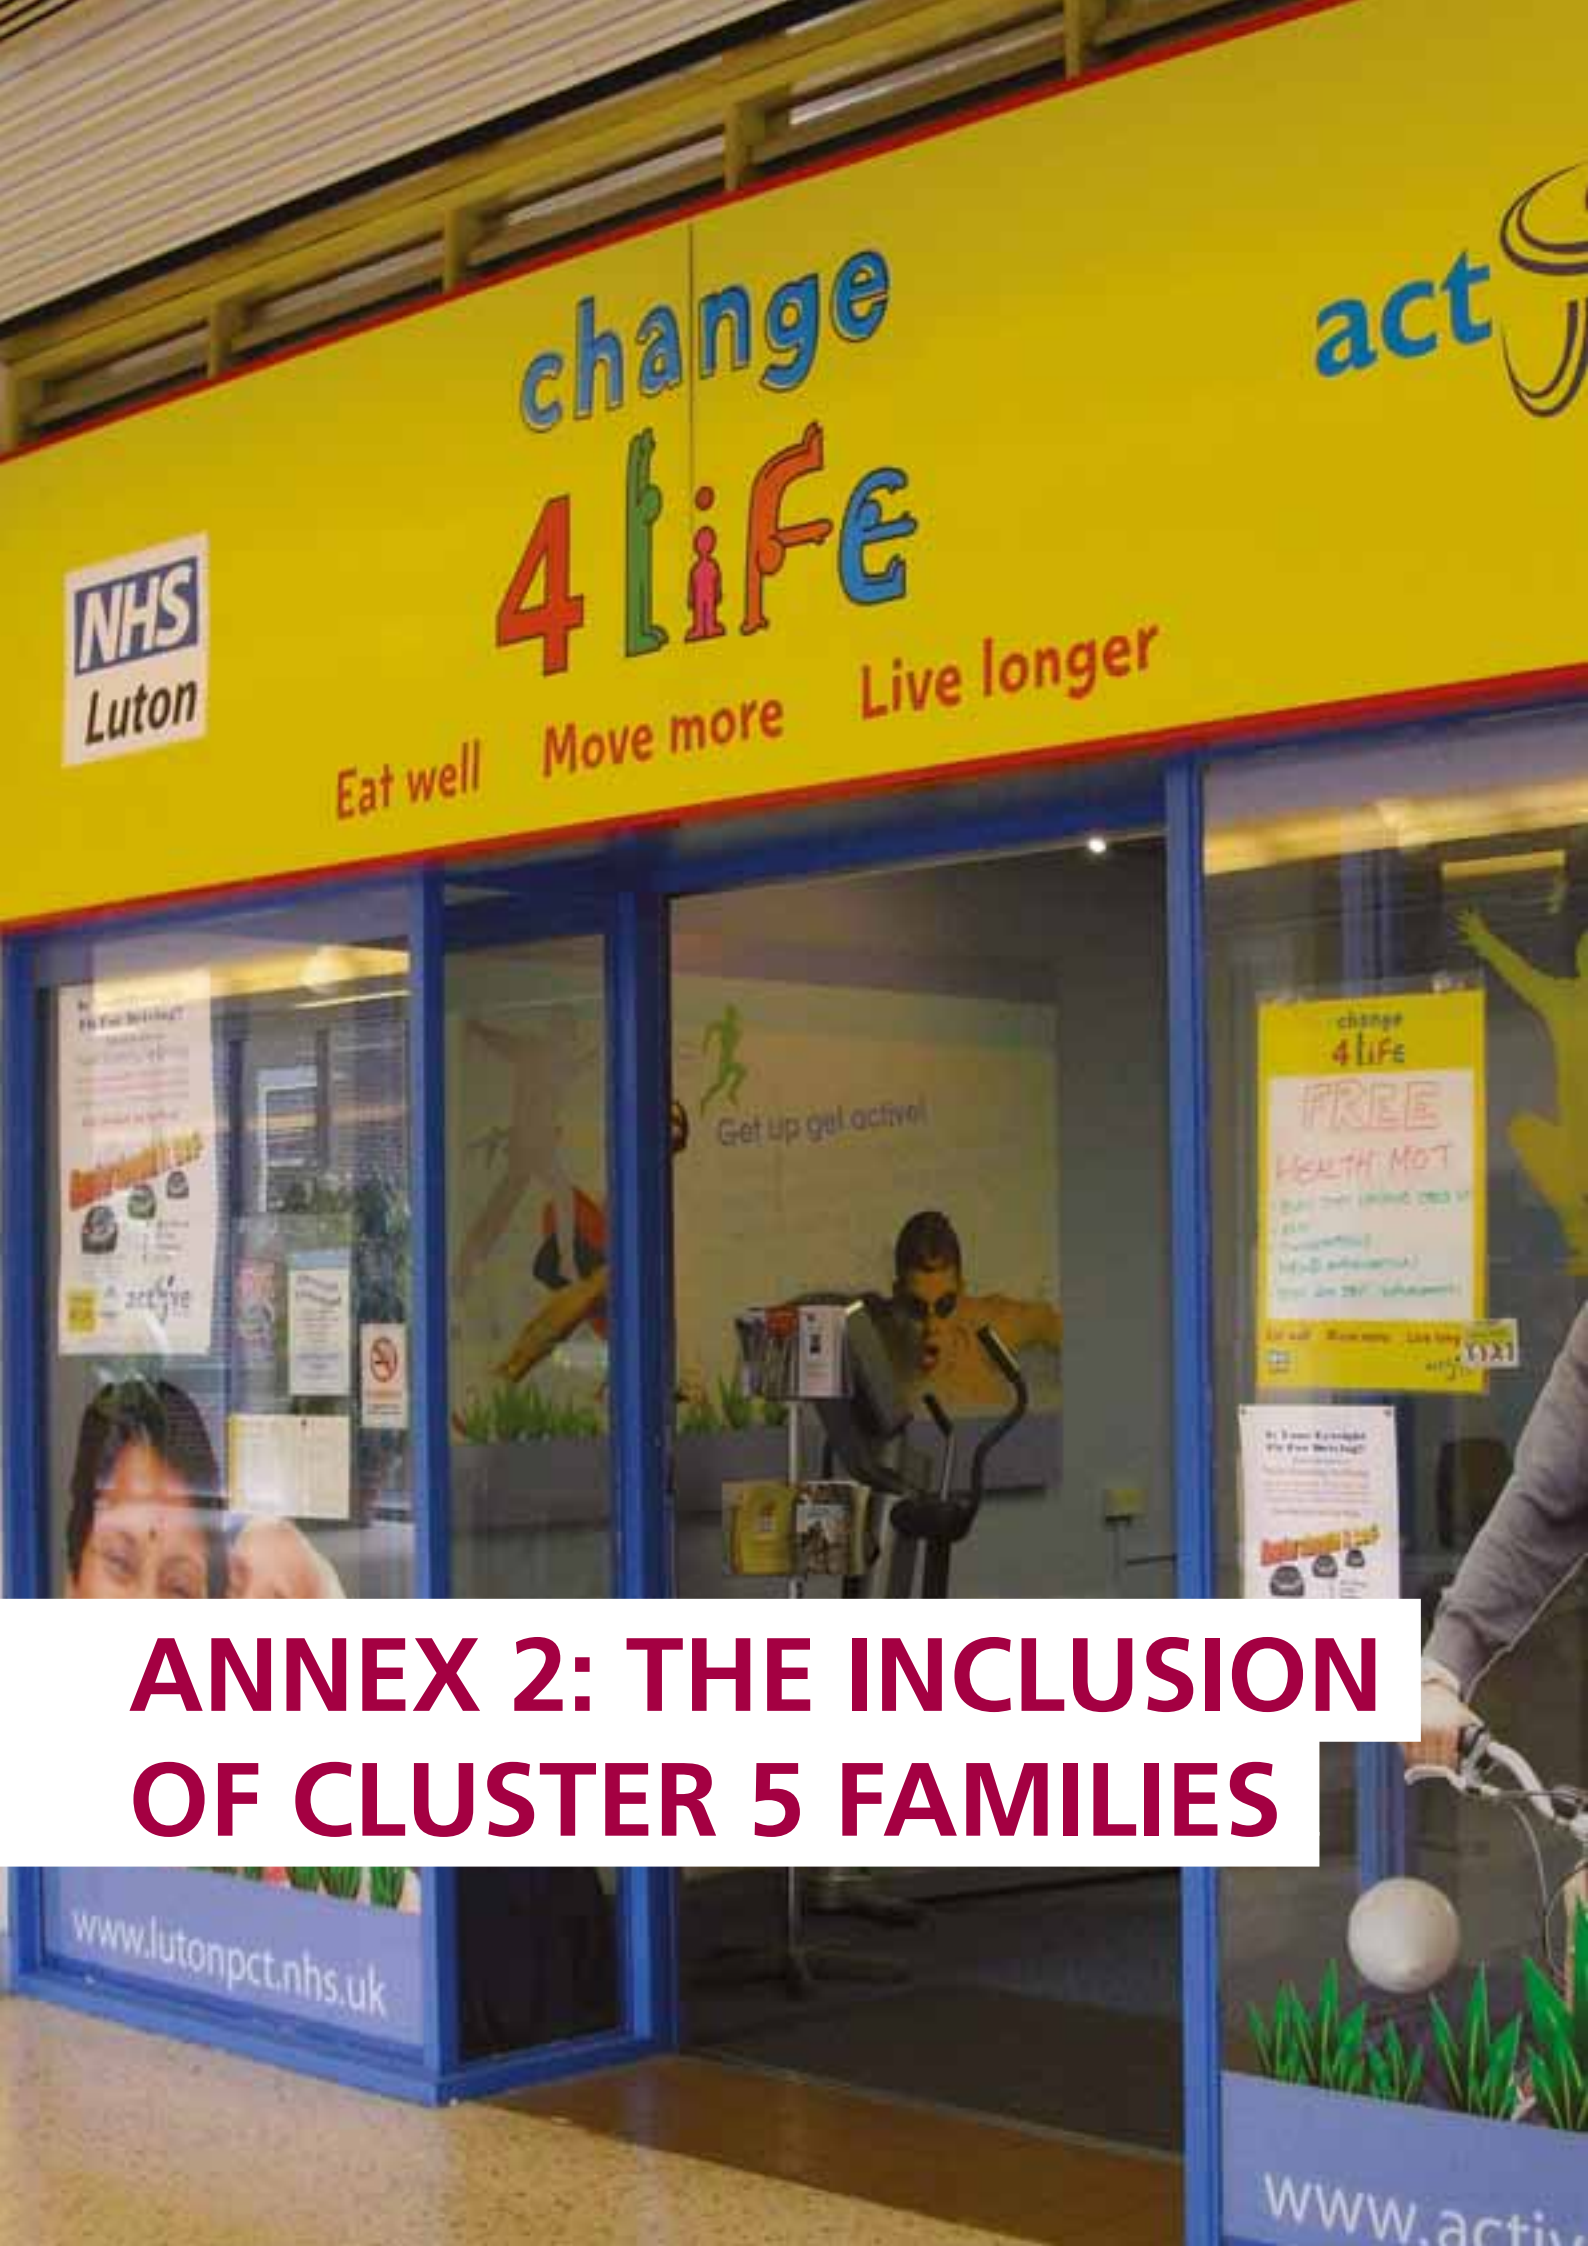
Tracking the development of a social movement

There is no standard approach to measurement and evaluation of a 'social movement', particularly at such an early stage in its genesis; therefore, the campaign is seeking to monitor progress at a number of levels:

- **Selected questions within the monitoring study.** These will provide an indication of target audience impression of the pervasive nature of Change4Life and whether they recognise, from having seen the Change4Life logo or messages, which commercial organisations are involved in the campaign.
- **A quantitative survey of delivery chain professionals.** An initial survey of general practitioners, practice nurses and practice managers was conducted in May–July 2009. The survey measured awareness, attitudes and response to Change4Life. The current intention is to repeat this with a wider set of professionals in 2010.
- **National partnership monitoring.** This includes measures such as partner pledges and activity, number of local supporter registrations and orders for campaign materials. Work is also being carried out to measure the financial contribution of commercial partnerships using a model for Advertising Equivalent Value.
- **A local audit.** This will independently assess the extent of local and national partnership activity in a number of communities. With extensive local variation in activity it will not be possible to assess all activity or generalise to a great extent from this work; however, the audit will be linked to the monitoring study, thereby providing local context to this data set. The first survey will be carried

out in November 2009 and will involve a day's audit of 50 locations, to include GP surgeries, schools, leisure centres, supermarkets, community centres, etc. This is a new methodology, which will be rerun if the results prove useful.

- **Buzz monitoring.** A project looking at keyword tracking online to see to what extent people are talking about Change4Life through this medium.



Links to policy and delivery programmes

A number of other evaluation projects have been commissioned by the policy team to explore the impact of other Healthy Weight, Healthy Lives policy activities, where Change4Life plays a role, either through use of branding or specific campaign materials. There will be opportunities to draw insights from these projects for the overall campaign evaluation. This could include examples of local adaptation, impact of Change4Life in specific settings and investigation of the combined effect of marketing and environmental change.

Particular examples include the evaluation of the convenience stores project and local and national evaluation of the nine 'Healthy Towns'. To some extent these are focused interventions and lessons may not be transferable to the campaign as a whole; however, they could give interesting case studies of the varied and innovative use of Change4Life for specific outcomes.

Longer term evaluation

Ultimately the team aims to establish whether there is a link between changes in behaviours and changes in weight, and between changes in weight and improved health in the longer term, thus allowing us to calculate the return on marketing investment in terms of savings to the state and quality adjusted life years (QALYs) to the individual.

ANNEX 2: THE INCLUSION OF CLUSTER 5 FAMILIES

Since writing the original marketing plan, a decision was taken to include Cluster 5 families within the definition of 'at risk'. The reasons for this decision are set out below.

In order that resources can be targeted to those families who have greatest need of them, a segmentation was developed,[40] which identified six different 'clusters', or groups of families, who held similar attitudes, behaved in similar ways and shared certain demographic characteristics.

The cluster segmentation was first developed using the TNS Family Food Panel[41] and bespoke surveys. The clusters were each given a risk category based on their self-reported weight status and self-reported behaviours and attitudes. Cluster 5 was classified as medium risk because, although parents may have been overweight, their children had lower levels of obesity and were less likely to be overweight, and these families also seemed to have lower levels of risky behaviour and stronger parenting skills than Clusters 1, 2 and 3. In practice, however, 'medium risk' meant that Cluster 5 were initially excluded from much of the activity and were scheduled to receive no more support than the low-risk clusters 4 and 6.

In order to develop the segmentation further, we recreated our clusters on the TGI[42] database to get a richer picture of the people – the media they are regularly exposed to and the brands they buy – to help us with our media targeting and campaign development. The TGI sample was larger and the data had been collected more recently than that in the original TNS sample; however, when carrying out the recreation, we found some nuances and differences that gave us new information on Cluster 5, in particular:

- Cluster 5 were exhibiting lower levels of the desired dietary and activity behaviours than previously thought. While Cluster 5 may have strong parenting skills, it appears that they are not necessarily using them to ensure their children have healthy diets.
- Cluster 5 contained more people from the lower (DE) socio-economic groups than originally thought. Families in lower socio-economic groups are a key audience for the Change4Life campaign, as they are at a higher risk of obesity than more affluent groups, and because of the wider health inequalities agenda.

40 See Healthy Weight Healthy Lives Consumer Insight Summary at www.dh.gov.uk

41 Taylor Nelson Sofres (TNS) Family Food Panel includes 11,000 individuals within 4,200 households who record their food and drink consumption in diaries. It is the UK's largest database tracking food and drink consumption

42 TGI = Target Group Index, is a continuous survey of consumer usage habits, lifestyles, media exposure and attitudes. It is widely used in planning marketing strategies and advertising campaigns

A recommendation was made that Cluster 5 be reclassified as high risk. This reclassification means that Change4Life is now targeting an even greater proportion (approximately 64%) of families with children aged 2 to 11. It also means that Cluster 5 families will receive information and support from Change4Life; for example, those who signed up for the CRM programme will have received a summer survival kit in July.

	Cluster 1	Cluster 2	Cluster 3	Cluster 4	Cluster 5	Cluster 6
Description	Struggling parents who lack confidence, knowledge, time and money.	Young parents who lack the knowledge and parenting skills to implement a healthy lifestyle.	Affluent families, who enjoy indulging in food.	Already living a healthy lifestyle.	Strong family values and parenting skills but need to make changes to their diet and activity levels.	Plenty of exercise but potentially too many bad foods.
Family diet	Seek convenience, eat for comfort, struggle to cook healthily from scratch.	Children fussy eaters, rely on convenience foods.	Enjoy food, heavy snackers, parents watching weight.	Strong interest in healthy diet.	Strong parental control but diet rich in energy-dense foods and portion size an issue.	Eating motivated by taste, diet includes both healthy and unhealthy foods.
Physical activity	Seen as costly, time-consuming and not enjoyable. High levels of sedentary behaviour.	No interest in increasing activity levels because parents perceive children to be active.	Believe family is active, no barriers to child's activity except confidence.	Family active although believe children not confident doing exercise.	Know they need to do more: time, money, self-confidence seen as barriers.	Activity levels are high, particularly among mothers.
Weight status	Mothers obese and overweight.	Families obese and overweight. Fail to recognise children's weight status.	Families obese and overweight. Low recognition of children's weight status.	Below average levels of obesity and overweight.	Parental obesity levels above average, children below.	Low family obesity levels but child overweight levels are a concern.
Demographic	Low income, likely to be single parents.	Young, single parents, low income.	Affluent parents of all ages, households vary in size.	Affluent older parents, larger families.	Range of parental ages, single parent families.	Average incomes, younger mothers, households vary in size.
Intent to change	High, but fear of being judged and lack of confidence are powerful barriers.	Currently low due to lack of knowledge, but willing to accept help once alerted to risks.	Low intent to change and likely to deny that problems exist.	Low intent to change but already leading a healthy lifestyle.	Low intent on diet but significant intent to change on physical activity.	Highest among the clusters for both diet and physical activity, so influencing them is not a priority.
Potential task	Build confidence, increase knowledge and provide cheap convenient diet solutions.	Increase understanding of risks of current lifestyle and develop parenting skills.	Encourage recognition of problem and awareness of true exercise and snacking levels.	Learn from successful techniques used by cluster.	Focus on increasing activity levels and educate on portion size.	Focus on providing cheap, convenient, healthy high-energy foods to fuel active lifestyle.

ANNEX 3: GOVERNANCE AND CAMPAIGN GUIDANCE

The scope and scale of partnership working on Change4Life is unprecedented and it is not without its risks. We have worked collaboratively with representatives from industry, and with NGO and other government department partners, as well as with the NHS to develop a governance framework and campaign guidance and resources to ensure best practice in partnership working.

Governance framework

Whilst final accountability and decision making responsibility must lie with ministers and the Department, we are committed to clear governance with strong senior representation from across a selection of partners to help guide the campaign, and have created a Change4Life Board.

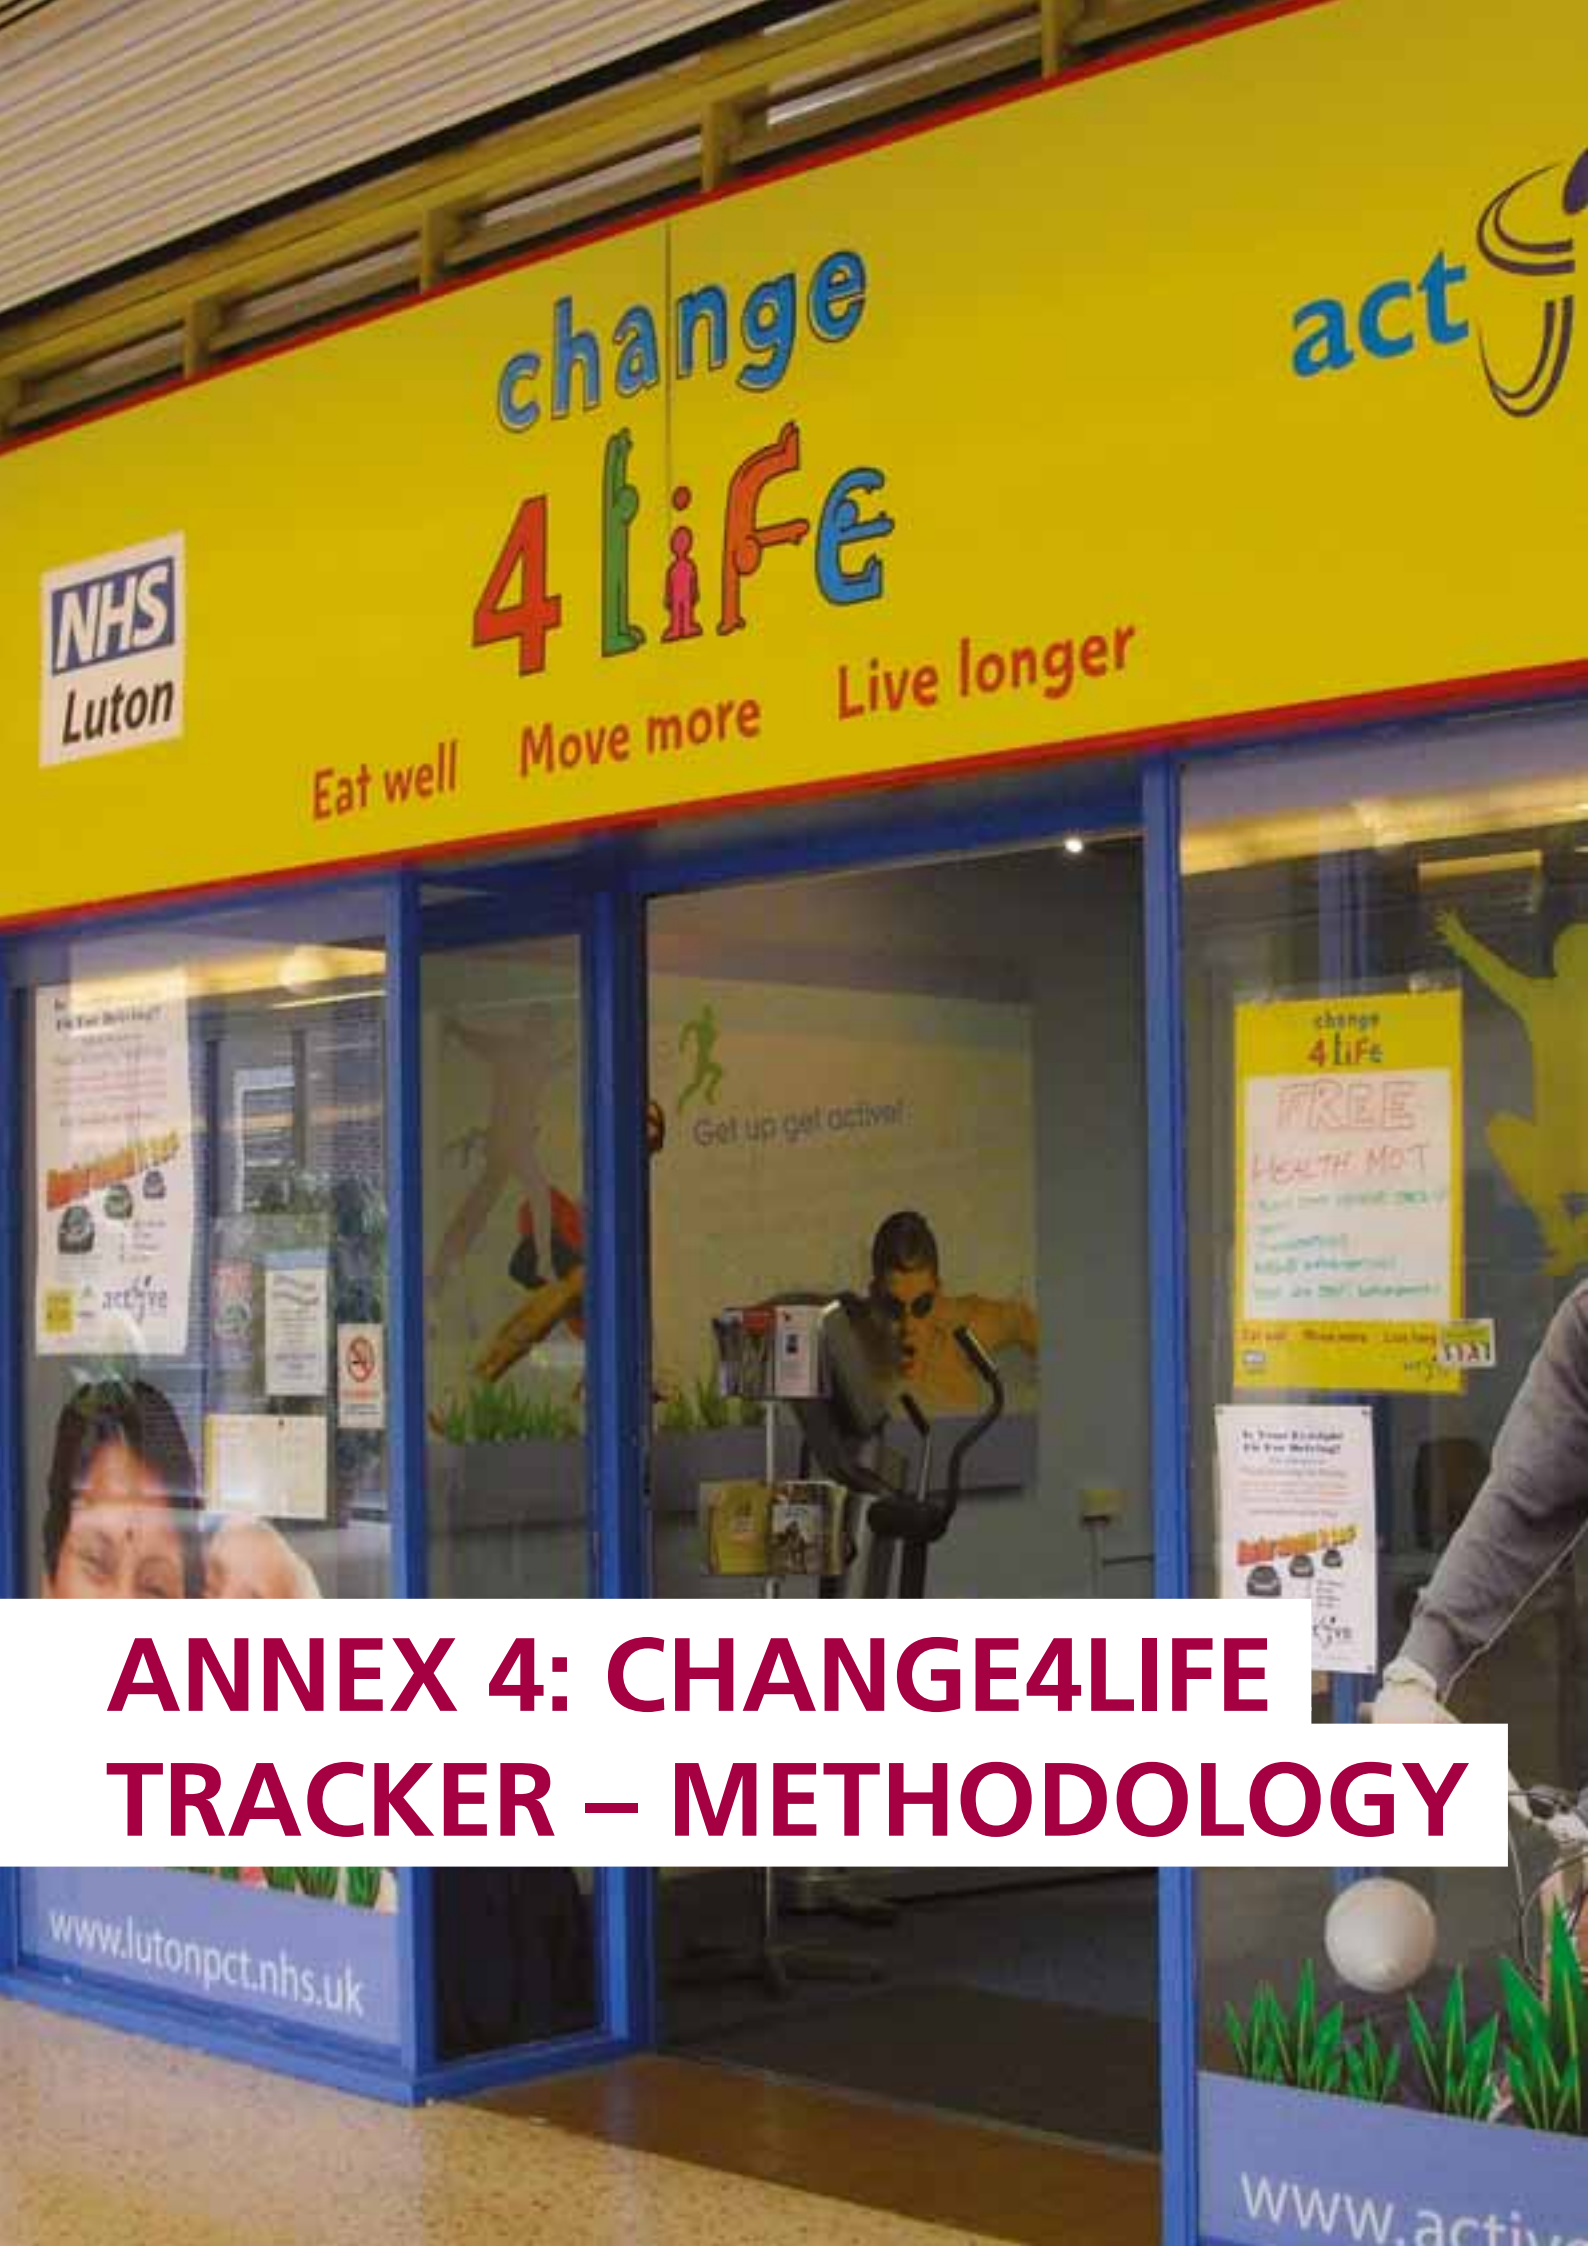
The Change4Life Board is jointly chaired by the DH Director General of Communications and the Director of Health and Wellbeing.

The membership comprises:

- Mike Farrar CBE, CEO, NHS North West
- Claire Hughes, Company Nutritionist, Marks and Spencer PLC
- Dr Susan Jebb, Head of Nutrition and Health Research, Medical Research Council, Human Nutrition Research
- Tim Lefroy, CEO, The Advertising Association
- Sarah Lyness, Director, Policy and Communications, Cancer Research UK.

The role of the board is to review progress against the campaign objectives, advise on future direction and adjudicate on any disputes arising under the partnership terms of engagement (see below).

Before any national partner (commercial or NGO) can work with us they must sign the campaign Terms of Engagement. Amongst other things, the Terms require the organisation to support healthy diet and activity behaviours and the goals of the campaign. Local supporters are required to accept the campaign terms and conditions.



All national partners are also required to complete and submit activity application forms for approval by the Department of Health.

Campaign guidance and resources

Change4Life invites all partners to work with the campaign to achieve behaviour change objectives. Whilst we therefore promote 'open sourcing', we also provide guidance and tools to inspire partners and ensure that they use the brand consistently and in the right context. The campaign guidance and resources include:

- brand guidelines for national partners and the NHS;
- retail guidance, which sets out how Change4Life can be used in the retail environment;
- resources and reference materials; and
- toolkits.

All the documents referred to under the governance and campaign guidance and resources can be downloaded at www.nhs.uk/change4life/pages/partners.aspx.

ANNEX 4: CHANGE4LIFE TRACKER – METHODOLOGY

As part of the evaluation plan for the Change4Life campaign, a large-scale tracking study is being run to evaluate awareness of, and response to, the campaign and its impact on attitudes and behaviours. The tracking study is carried out by the British Market Research Bureau (BMRB). The survey commenced in November 2008, when a baseline of key measures was established, and the full study has been running since January 2009. The questionnaire is updated on a monthly basis in order to ensure that the latest campaign activity is monitored; however, the majority of core questions have remained consistent throughout in order to provide trend data.

All interviews are carried out face-to-face in homes using computer-aided personal interviewing (CAPI), which enables interviewers to show adverts, pictures, etc to respondents. The sample is drawn using random location sampling in England. The data is collected by continuous, dedicated ad hoc surveys with fieldwork taking place all the time, and for the minority group of pregnant women, through BMRB's Omnibus survey. By interviewing continuously, it is possible to track the impact of the campaign in its broadest sense, picking up the effect of campaign bursts and any other activity between the bursts, which is important as the movement grows. It also covers background 'noise' in terms of partner activity, other related activity and other influences such as seasonal effects, and economic factors such as the credit crunch. The tracker is reported on quarterly, although weekly summaries and monthly tables are provided.

A number of different groups are interviewed to elicit the views of those who are the campaign focus now and those who could become the focus in the future:

- At the broadest level there is a sample of all people aged 15+ in England, which provides the wider context to compare subgroups against and to see the wider impact of the campaign on those not specifically targeted. Approximately 300 people are interviewed per month (NB the number of interviews has decreased since Q1 and Q2 2009 – when approximately 500 per month were interviewed – now that there is a clearer idea of the audiences of most interest).
- Alongside the general public there is a 'booster' sample of mothers of 0–11s, approximately 300 per month. Within this group, target mothers (in clusters 1, 2, 3 and 5) are looked at specifically as the primary target of the families campaign.
- Since December 2009, a 'booster' sample of 100 45 to 64-year-olds per month has been interviewed. When this booster is added to the general sample it results in approximately 200 interviews with the target middle-aged adult audience per month.
- Approximately 100 pregnant women a month are interviewed using the BMRB Omnibus. From January 2010 pregnant women are interviewed on a 'three

months on, three months off' basis (resulting in a sample size of approximately 300 every six months).

- Finally, there is a sample of approximately 50 young people aged 12–19 per month made up of those aged 15–19 from the all-adult sample, supplemented with interviews with 12–14-year-olds identified in households interviewed in the general public survey.

Extrapolations made from the tracking study data

Over 1 million mothers are now claiming to have changed something in their children's lifestyles as a result of Change4Life. This was calculated as follows:

- Total number of mothers with children aged 0–11 in England: 4.59 million.[43]
- Percentage of mothers aware of Change4Life advertising in final quarter of 2009: 77% = 3.53 million mothers.[44]
- Percentage of those who claim to have changed something as a result of Change4Life: 30% = 1.06 million mothers.

About 180,000 more mothers are now claiming to have adopted all eight of the Change4Life behaviours. This was calculated as follows:

- Total number of mothers with children aged 0–11 in England: 4.59 million.
- Percentage of mothers claiming their children did all eight behaviours at baseline: 16% = 734,400.
- Percentage of mothers claiming their children did all eight behaviours one year later: 20% = 918,000.
- Additional mothers now claiming their children have adopted all eight behaviours = 183,600.

All calculations compare the end of 2009 data to the baseline (end of 2008) to factor out seasonality.

Foreword

In the 2008 book *How public service advertising works*[1], Rebecca Morgan and John Poorta of Lowe Worldwide and Leo Burnett, say: “Although profit per se is not relevant to government campaigns, the most successful cases do think in terms of the financial value of the effect”.

It has always been the case that the stewardship of public expenditure should be achieved in the context of value for money and we believe that government communication, including the work of the COI, has demonstrated adherence to this principle through cost-effective campaigns, programmes and activities in support of the delivery of government information, policy and services.

At a time of great pressure on public finances, it is right to be looking closely at how communicators measure the benefits of what they achieve for what cost. We should be prepared with the facts and data that will enable us to learn from both the successful and the less successful and we should be able to explain worth, not just worthiness. There are some tried and tested ways of measuring the effectiveness and efficiency of communication campaigns and COI is working with the Government Communication Network (GCN) and with colleagues across government on improving and adding to these.

Important and urgent work on evaluation is happening across the spectrum of communication and we expect this paper’s contribution to be followed by a number of others in the coming months – although the secrets of evaluating some aspects of what we all do may take longer to crack. Work is underway, for example, on how behaviour change theory, social psychology and behavioural economics can help define the precise role for communication in delivering policy objectives. Reference to this precise role would be the starting point of evaluating communication interventions.

While this paper may appear ‘campaign’ orientated at present, and the examples given are mainly taken from larger campaigns involving advertising, the principles apply to all forms of communication activity.

But, beyond our knowing how well and why a message was communicated, was received and why it stimulated action, we feel it appropriate for public sector communication to consider how it can look more often at the extent to which society has benefitted, financially, from its investment in our actions.

Certainly, Government does not seek to ‘profit’ in the commercial sense from its policies and services but it does want to add value to the lives of the public, to the user of services, to the beneficiary of policies. To some, but not all, of these benefits to society can be ascribed financial value: the reduced cost to the NHS and Police of lowering drink driving; the reduced cost to administering the tax system from on-line

[1] How public service advertising works. Judie Lannon (Ed). COI, IPA, WARC: 2008.

self assessment; the financial benefit of recruiting the right number of appropriate quality teachers, service personnel and hospital staff.

Capturing what these financial benefits are – and calculating the extent to which a pound spent on marketing communication pays for itself – is the job of Payback and Return on Marketing Investment (ROMI); and the subject of this paper. Taken together, and with Payback as the more important to us, they make up but one of the evaluative tools in what should be a sophisticated evaluation toolkit available to, and used by, policy officials, communicators and marketers in Government.

This paper makes the point that not all government initiatives supported by communication are intended to provide benefits in terms of social or public value that can, or should be monetised. Further, there are some that will not be suitable for this level of analysis – some of the calculations suggested require the services of specialists, such as econometricians, or could only be achieved at disproportionate cost. That said, the default should be to go to the highest level of evaluation feasible and realistic, especially when substantial amounts of public money are being expended.

With the help of two leading practitioners, Les Binet and Sarah Carter of DDB, COI has prepared this paper with the intent of stimulating discussion, and further work across the GCN towards the development of a cross-government approach to calculating and using ‘Payback’ and ROMI, wherever feasible, to help design, monitor and account for Government communication campaigns.

It is deliberately comprehensive but we do not claim it to be definitive. We hope that this will be but one contribution to a lively debate, to the improvement of professional expertise and, perhaps, to mutual agreement on the use of these tools in the public sector.

We look forward to discussing it with you and colleagues from across Government, the communication and marketing industry, evaluators, academia and observers.

Mark Lund
Chief Executive

Editors' Note

The last 30 years have seen a major revolution in the way that advertising and other marketing communication is evaluated. Back in the 1970s, the consensus was that the effects of advertising were too subtle, intangible and long-term to be subjected to anything as crude as a cost-benefit analysis. Advertising clearly changed attitudes and beliefs, but the effect on behaviour and contribution to the bottom line were something of a leap of faith.

That all began to change in 1980, when the UK's Institute of Practitioners in Advertising (IPA) launched a new competition, the IPA Advertising Effectiveness Awards. The aim of the competition was simple: to prove and measure, beyond reasonable doubt, the effect of advertising in hard financial terms.

The IPA Effectiveness Awards (as they are now known) demonstrated that proper financial evaluation of advertising was indeed possible, and spurred the advertising industry on to raise their game. With over 1,000 detailed case studies now in the public domain, we have learned a lot about how to evaluate advertising properly, and that learning is now being extended to other channels like PR, sponsorship, and digital media.

As a result, it is probably fair to say that the UK now leads the world when it comes to the financial evaluation of advertising. Most campaigns are still evaluated using softer attitudinal data, of course, but most marketers in the private sector are at least familiar with concepts such as econometric modelling and ROMI these days. Companies are subjecting their marketing departments to increasing financial scrutiny in an effort to drive down costs, and the current economic climate will only accelerate that trend. We have entered a new "era of accountability" in business.

A range of resources exist to help commercial businesses measure the Payback from their marketing, some of which are listed at the end of this publication. Professional organisations, such as the IPA and the Incorporated Society of British Advertisers (ISBA) publish guides, run courses, and provide information online. Agencies and research companies provide consultancy services such as econometric modelling. But until now, the debate has focussed on private sector marketing. Financial evaluation of public sector communication has been much less common.

But public sector spending also needs to be accountable, and never more so than now, when the public finances are coming under pressure. It is time to start subjecting government communication to the same financial scrutiny as commercial advertising. And this guide is an important step towards that goal.

Government communication presents special challenges when it comes to evaluation. Whereas commercial firms tend to be clearly focussed on creating shareholder value, government campaigns can have quite complex objectives. Whereas businesses tend to demand payback over modest timescales – say one to two years – governments often have to take a very long term perspective. Whereas

marketers are trying to elicit fairly simple behaviour – usually to buy something – governments try to influence their citizens in quite complex ways. And whereas financial payback is the ultimate measure of commercial success, it is only one metric among many for governments.

Nevertheless, financial metrics should play an important role in any evaluation of public sector communication activity. Financial evaluation of this kind is not straightforward, but it is possible, and there are some general principles of best practice. This guide is an attempt to lay out some of those principles and to stimulate further research and debate on the subject.

As editors, our principle contribution has been to provide a commercial perspective. While many of the challenges faced by those trying to evaluate public sector communications are unique, there is still much to learn from commercial evaluation. Having helped to prepare more IPA cases than we care to remember over the last 20 years or so, we are familiar with most of the commonly used evaluation techniques.

But the learning should go both ways. We have been impressed and excited by the analytical rigour and professionalism of this project, and we feel that commercial organisations could learn a lot from the principles outlined in this report. Hopefully, this marks the beginning of a fruitful dialogue between our two worlds.

Les Binet Sarah Carter

Executive Summary

About this paper

Evaluation of the return delivered on investment by public sector marketing communication is carried out widely across government – and in some cases very well. But it is currently carried out inconsistently in terms of approach and methodology, and it is this inconsistency we wish to address. While not all communication interventions are suitable for a monetised approach to evaluation, the public sector recognises that it should be at least common practice and, at best, universal.

Having researched the field we have formulated **a set of definitions** that we recommend can be used in future as common terminology. We offer a pathway: **10 steps to Payback and ROMI**, to be followed in any analysis. We provide **six key principles** that should be borne in mind.

This paper also places Payback and ROMI in context as they are just two measures of financial effectiveness and value for money that sit alongside others, such as 'cost per response' or 'discounts on media space'. But, whatever other measures are used, we found that the process of calculating Payback and ROMI will usually be valuable, as it sheds light on exactly how marketing communication delivers value in monetary terms.

In researching past programmes, we did find that public sector marketing is capable of delivering very high returns (Payback) and can pay for itself many times over (ROMI). For example, it can be shown that the Teacher Recruitment campaign from 1998-2005 not only paid for itself; but also should provide returns of another £85 for every £1 spent.

It has long been accepted that all government marketing communication should be evaluated and our conclusion is that analysis of Payback and ROMI should be considered an integral part of that evaluation process. We recognise that there are occasions when they cannot be calculated. But where they *can* be calculated, Payback and ROMI can be used, alongside other 'hard' and 'soft' measures, to make strategic and tactical investment decisions and to demonstrate accountability and value for money in the spending of public funds.

We recommend the approach in this document is considered as a starting point by all government departments, bodies, and the agencies they work with when analysing financial return on investment in marketing communication.

That is not to say that we claim that this paper is the last word on what is a complex and evolving discipline. Rather, we see it as a beta version - something to set standards in best practice where there have been none - and a catalyst to a healthy debate among experts within and beyond the field of public communication.

What is in each section

The **Introduction** section explains the background to Payback and ROMI. It looks into government marketing communication, how it fits with other policy levers; such as legislation; and how it can deliver financial payback. Importantly, it defines three terms:

- **Payback** – the financial benefit that can be shown to result from marketing communication activity, at present values;
- **Net Payback** – the Payback, less the cost of the activity; and
- **ROMI (Return on Marketing Investment)** – the ratio of the Net Payback to the cost; or, the number of pounds returned for every pound spent, once the activity has paid for itself.

We recommend that these terms be adopted and that the term 'ROI' should not be used in the context of marketing communication as it may lead to confusion with other calculations. Further terms are defined in the introduction and there is an extensive glossary of terms at the end of the document.

The **Context** section looks at evaluation of government spending in general; current best practice for the evaluation of marketing in the public sector; and the state of play for marketing evaluation in the private sector. It addresses the role of Payback and ROMI as metrics - where we recommend that both Payback and ROMI should be included in a 'balanced scorecard' approach to the evaluation of marketing communication.

The **Guide to calculating Payback and ROMI** section details a 10 step process of analysis to reach robust estimates of Payback and ROMI. We recommend that anyone seeking to calculate these metrics should follow these steps as closely as possible.

1. Map objectives to outcomes and check expected contribution
2. Identify stakeholders and set the scope of analysis
3. Plan to measure campaign outcomes
4. Measure the impact of the campaign
5. Put a value on the impact of the campaign
6. Calculate Payback at present values
7. Calculate costs at present values
8. Calculate Net Payback and ROMI
9. Understand Payback and ROMI
10. (Optional) Advanced Payback and ROMI

The **Guide** is somewhat technical, so it will be of most use to those who have prior or current experience of measuring the effectiveness of marketing campaigns – and the more advanced concepts will be most easily utilised by those with a background in mathematics, statistics, or economics. However, we hope it is written in a way that

should make it accessible and of practical use to all public sector marketing communication professionals.

Case study examples are used to bring the **Guide** to life and there is a also a fully worked case study later in the document. It will be useful to refer to this as you read the **Guide**.

Step 4: Measure the impact of the campaign and *Step 5: Put a value on the impact of the campaign* are the two most challenging steps. This is because isolating the effects of communication from the effects of other factors – and assigning financial values to benefits – can be difficult in public sector marketing communication. When carrying out these steps, and the optional advanced steps, you may need to consult an econometrician, economist, mathematician, statistician or accountant.

Throughout the process, we recommend following six key principles:

1. Start with an understanding of what your campaign is trying to do and how it will work
2. Isolate the impact of your campaign from the effects of other factors
3. Make conservative but realistic estimates of the value of the impact
4. Be transparent: show all your working and list all your assumptions
5. Net Payback is usually more important than ROMI
6. Do not use Payback and ROMI to make decisions in isolation from other measures

The **Case Study – Teacher Recruitment** section revisits an IPA Effectiveness award-winning campaign which demonstrated outstanding Payback and ROMI. We have refined the calculations by following the steps laid out in our own guide. You may find it useful, when reading the case study, to turn back to the steps and see how they have been applied to the case.

Finally, the **Useful Resources** section provides help and further information to support you in carrying out analysis of Payback and ROMI.

1 Introduction

> *"The same prudence which in private life would forbid our paying our own money for unexplained projects, forbids it in the dispensation of the public moneys".*
>
> Thomas Jefferson, 1808[2]

In the current economic climate, there is more scrutiny than ever on government investment. Accountability – demonstrating benefit achieved and value for money – is high on the Whitehall agenda. That said, neither the need to improve the theory, techniques and practices used to evaluate public sector communication, nor the need to do this consistently across government, are new.

Initiatives to address these needs, such as the strengthening of the Government Communication Network; their *Engage* programme; and moves to share research and insight between departments, and between them and the COI, are making progress. But in a communication landscape that has transformed almost beyond recognition in recent years, evaluating the impact of marketing remains a significant challenge.

Communicators and social marketers want to know if their campaign is efficient and effective; policy officials want to know if their objectives are being served with value for money; ministers want to know that their policies are being given the best chance with the resources available; Parliament and the public want to know (and have the right to be informed) that public money is being well spent and achieving the promised returns.

The stakes are often high and the figures can be substantial: if obesity in England, for example, costs us £4.2 billion a year, £75 million spent on achieving some behavioural change through communication would only need to reduce obesity by 2% to pay for itself.

There is some hard, and a great deal of circumstantial, evidence that government marketing communication delivers significant return on the money spent on it by the taxpayer, but only a fraction of campaigns put figures on this return and use them to demonstrate success and inform future investment. Accurate measurement of financial Payback is also rare in the private sector: in the 2007 IPA Paper, *Marketing in the Era of Accountability*[3], analysis of 880 advertising industry case studies showed that only 39 could demonstrate valid Return on Marketing Investment (ROMI) calculations.

This document, Payback & Return on Marketing Investment (ROMI) in the Public Sector, is intended to address the need for a consistent, best practice approach. It is

[2] http://etext.virginia.edu/jefferson/quotations/jeff1310.htm
[3] Marketing in the Era of Accountability, Binet and Field, IPA, 2007

the first iteration of a guide illustrating how to evaluate the financial effectiveness and efficiency of government marketing communication in delivering its objectives.

It is important to stress at the outset that we believe that Payback is more important (because it measures benefit delivered) than ROMI (which measures efficiency). But the two are complementary and are treated together in this paper – both should be included in a balanced scorecard of a campaign.

It has been written by a team from COI Strategic Consultancy and edited by Les Binet, European Director DDB Matrix, and Sarah Carter, Strategy Director DDB London. Les is an industry expert on marketing evaluation and has written best practice guides on the subject, including the IPA paper referenced above. Sarah has co-edited, with Les, more than 40 award-winning IPA Effectiveness papers.

The guide draws on many successful campaigns delivered by a wide range of government departments and public bodies, many of which have been demonstrated to deliver financial benefits well beyond their costs. Referencing standard government practice in the financial measurement of benefits, academic research and private sector literature, it aims to provide a framework and supporting resources for use throughout government.

We will use the following terms throughout this document:

- **Marketing communication** – Communication by the government or public bodies, generally aimed at the public (or sections of it), with the purpose of raising awareness or changing behaviour
- **Campaign** – A co-ordinated, discrete programme of marketing communication
- **Effectiveness** – the degree to which a campaign meets its ultimate objectives
- **Efficiency** – the amount of effort required to run a campaign compared with the degree to which it meets its objectives
- **Impact** – the effect of the campaign, isolated from the effects of other factors
- **Payback** – the financial benefit that can be shown to result from a campaign, at present values
- **Net Payback** – the Payback, less the cost of the activity
- **ROMI** – the ratio of the Net Payback to the cost of the campaign

We recommend that these terms be adopted and that the term ‘ROI’ should not be used in the context of marketing communication as it may lead to confusion with other calculations. ‘Return on Investment’ is a wide term and we instead define ‘Payback’ and ‘ROMI’, which are more specific and appropriate for the purposes of this guide.

Further terms are defined in an extensive glossary at the end of the document.

1.1 Objectives of government marketing communication campaigns

> *"The need for government to communicate with the public is greater than ever as society faces challenges such as obesity, climate change and the recession. Government campaigns can help save lives and save money. Changing behaviour is difficult, but the benefits to the taxpayer and society can repay the investment many times over"*
>
> Mark Lund, Chief Executive, COI, July 2009[4]

Government marketing communication is managed by members of GCN and delivered by their departments and public bodies, either directly, or in partnership with COI. Along with policy, economic and legislative intervention, marketing communication campaigns are among the main levers available to Government in bringing about change. They can have a variety of objectives, which can be divided into six broad groups.

- They can aim to persuade individuals to **start** doing something they are not doing now - for example, wearing seatbelts whilst sitting in the back seats of cars, thereby reducing injuries and fatalities.

- They can aim to encourage individuals to **stop** doing something they do now. Lifestyle behaviours such as smoking, excessive alcohol consumption and reliance on fast food cause long-term damage to health. Stopping or reducing these behaviours can improve the health of individuals and lower the impact on the National Health Service.

- Their purpose may be to **prevent** individuals from doing something that they may do in future. An example of this are the ongoing efforts to inform young people about the risks associated with drug use.

- Government may want individuals to **continue** what they are doing now. Sustaining levels of blood donation, for example, is essential to allow the NHS to provide effective treatment.

- The public sector often needs to **recruit** individuals to work in vital services. The Armed Forces, the National Health Service and the Education system are just three areas of public service that depend heavily on the quality and quantity of new recruits.

- Finally, some campaigns may simply meet the duty of government to **inform** its citizens of its work, their rights and changes in legislation, without requiring action on the part of the individual. For example, communication of national statistics is an important service provided by government.

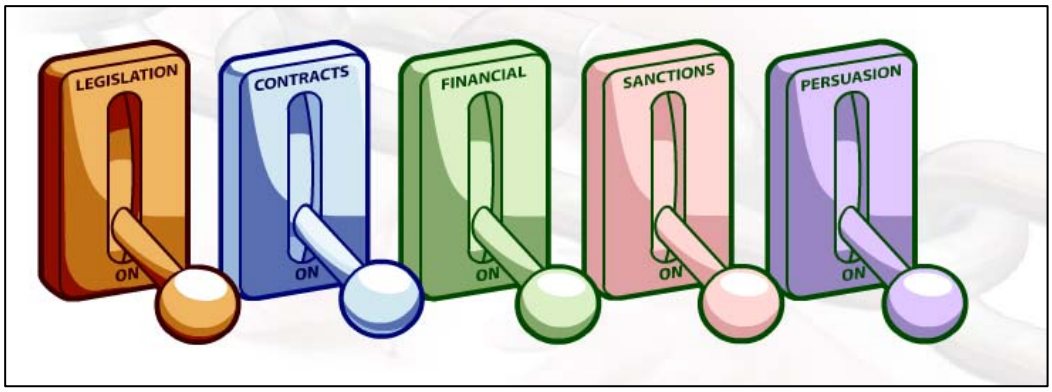
1.2 The place of marketing communication in delivering change



> *"Policy development cannot take place in a vacuum – it depends upon a dialogue with all the interested and affected parties. The delivery of public services relies upon effective communication between those delivering and those receiving services. More effective communication will lead to more effective government"*
>
> The Phillis Review of Government Communications, 2004[5]

Government aims to deliver change through *Delivery Chains*. A *Delivery Chain* refers to the complex networks of organisations, including central and local government, agencies, and bodies from the private and third sectors, which need to work together to achieve or deliver an improved public sector outcome defined through a central government Public Service Agreement (PSA) target[6].

Policy Levers can help to deliver change by giving government a control mechanism over the many different types of links between parts of the delivery chain[7].

There are a range of Policy Levers, from legislation to codes of practice, from contractual arrangements to financial incentives and from sanctions to communication campaigns.

Figure 1: Policy Levers

Of course, this is a simplification. Government can't just pull one of the levers and see what happens. But it can aim to intervene in a number of ways and see how different combinations of intervention work, in trying to reach the desired outcome.

Figure 2: Smoking – Delivery Chain & Policy Levers

The 1998 white paper 'Smoking Kills' defined that the key objective of the programme was to help existing smokers quit. A target was set to reduce adult smoking from 28% to 25% by 2010.

The *Delivery Chain* for smoking cessation was complex and involved the Department of Health, the NHS (Strategic Health Authorities & Primary Care Trusts), charities such as Cancer Research, and required co-operation from tobacco manufacturers and employers.

The *Policy Levers* included legislation (increase in workplace bans, advertising ban on secondary media), contracts (increased size of warnings on cigarette packets), financial (increasing the cost of smoking), sanctions (fines for employers who did not comply), the availability of new services (Nicotine Replacement Therapy made available from the NHS) and persuasion (marketing campaigns).

Source: IPA Effectiveness Awards 2004 "Tobacco Control. How the Integration of Advertisers made Advertising more Powerful than Word of Mouth"

COI is currently developing guidance on the role of communication in behaviour-influencing interventions by government, to be published separately to this document. This guidance draws on key sources from the disciplines of social psychology, economics and behavioural economics (where the two overlap). It seeks to distil this information into some key factors that are important to consider for anyone developing communications that aim to influence behaviour, and seeks to develop a framework for applying these factors to the development of a communications strategy.

The guidance should help communication to be provided with realistic role(s) in the wider suite of interventions which are often required to facilitate behaviour change, and defining this role should make for more effective communication strategies, planning, resourcing, implementation and evaluation.

Ideally, robust and thorough analysis should be carried out, in the initial stages of policy development, to predict the total impact that is to be delivered. Crucially, as part of the process of defining the role of communication, agreement should be reached on the proportion of this impact that the marketing communication lever is expected to deliver versus other policy levers.

The discipline of predicting and evaluating the *financial* impact of Government policy as a whole is already well established, but for marketing communication this is not the case. This guide is the first step in establishing such a discipline.

1.3 Who feels the impact of marketing communication?

The impact of marketing communication campaigns may vary across a number of different stakeholders, parts of government and groups of citizens. At the initial stages of the Payback and ROMI process, this should be taken into account so that it is clear what benefit the campaign is expected to deliver, and to whom.

These will include, inter alia:

- **Target group** – a group of people at whom a campaign is aimed
- **Stakeholder** – any party whose actions could affect the outcomes of the campaign
- **Intermediary** – anyone at whom a campaign is aimed so that others may feel the benefit
- **Beneficiary** – anyone (including the service provider) who should benefit from the results of the campaign

1.4 How government campaigns generate impact and Payback

Unlike commercial marketing communication, government communication is NOT primarily about generating financial Payback. Nevertheless, it does have financial implications for stakeholders. And sometimes it is also possible to put a financial value on effects that do not at first glance appear to be financial in nature. Best practice and accountability would dictate, then, that a financial evaluation forms part of any evaluation commitment.

Whether campaigns aim to start, stop, prevent, continue, recruit or inform, the benefits that they aim to deliver can often be shown to deliver financial benefit or **Payback**. They will do so in quite different ways to private sector marketing – which usually delivers Payback through the generation of sales and profit.

With examples that are purely for illustration purposes, the ways are:

- ***Generating economic value***
    - Encouraging activity that will bring increased value to the economy. For example: the recruitment of the best teachers could improve educational outcomes for a generation of children, raising their potential earnings and economic output in future;
- ***Generating revenue***
    - Bringing in money to the Exchequer, usually through tax. For example, a campaign to encourage people to inform on benefit cheats;
- ***Saving public money directly***
    - Making savings that are indisputably a result of changed behaviour. For example, the campaign encouraging more people to complete tax returns online, which saved administrative costs;
- ***Saving public money indirectly***

    - Making savings that can be linked to changed behaviour. For example, smoking cessation campaigns hope to reduce the number of smokers, in turn reducing the cost of their likely future treatment on the NHS;
- ***Spending public money well***
    - Making efficient use of public money by spending it in the right ways. For example, inspiring but candid marketing can help the right people into the RAF application process, reducing administration costs associated with ineligible or unsuitable candidates and delivering a better quality of recruit;
- ***Enabling public money to be invested in priority areas***
    - Government may announce a new investment to benefit the public, so that Payback is actually more money *spent* rather than money saved. For example, a training bursary fund of £100m for young people could be announced and publicised, resulting in more young people taking up the benefit and the planned investment being realised. However, it should be noted that showing that you have spent money on something in order to improve it is not the same as showing that you have actually improved it;
- ***Campaigns with no Payback***
    - Some campaigns will deliver no financial benefit, as they aim to deliver benefits which cannot be quantified. For example, encouraging people to register to vote in local and general elections is part of the duty of the Government to inform the public of their democratic rights, but there is no recognised calculation for the value of this.

This guide will set out how to measure and isolate the impact of Government marketing communication campaigns and put a value on them in order to calculate the absolute value of the benefit, known as **Payback**, and the ratio of net Payback to cost, known as **ROMI**.

However, it should be noted that Payback and ROMI is about measuring the impact on the *ends*, rather than the efficiency of the *means*. This guide will focus on predicting, measuring and evaluating the material outcomes following a campaign, rather than looking at how it may have raised awareness or changed attitudes.

ROMI, rather than looking at how views or intentions on smoking have changed following a campaign, will, for example, examine the money saved by the NHS in several years' time because of those who give up smoking because of a campaign. Rather than looking at how teaching is seen as a great career opportunity by ambitious graduates because the adverts worked, it will look at how many graduates signed up for teacher training, how many will become (and remain) teachers as a result and the money that will be saved on supply teachers over the course of average teaching careers.

1.5 How long does it take for Payback to be delivered?

Government marketing communication often aims to deliver long-lasting changes to individual behaviour and to society as a whole, and it must be recognised that this will not happen overnight. Where a private sector marketing campaign might expect to deliver increased sales within weeks or months, a campaign such as Change4Life, which aims to reduce the burden of obesity on the NHS, will require years, if not decades, to demonstrate effectiveness and financial Payback.

In this guide, we will argue that the ROMI process should start during the planning of a campaign, be an integral part of evaluation throughout and culminate in a retrospective review. This leads us to three different perspectives that the analysis might take:

Predictive Payback & ROMI

- At the start of a campaign, analysis carried out to determine how Payback and ROMI will be measured and to predict the scale of Payback that is expected to be delivered

Projected Payback & ROMI

- During the campaign, examining leading indicators to provide estimates of the campaign's effectiveness and efficiency, feeding back into campaign design or adjustment

Evaluative Payback & ROMI

- The measures calculated as part of a retrospective evaluation of a campaign’s success. This calculation may not be possible for several years following the campaign.

In the Teacher Recruitment case study which forms part of this document, the analysis is **evaluative** because the outcomes driving Payback (the recruitment of teachers between 1998 and 2005) have happened. Even in this case, there is a degree to which the Payback and ROMI analysis is **projected** because it involves looking at benefits delivered 15 or even 40 years from the end of the campaign.

2 Context

2.1 Evaluation of government spending

Government departments invest in public services against fixed, three year Departmental Expenditure Limits and, through Public Service Agreements (PSA), define the key improvements that the public can expect from these resources[8]. The next review is due in 2011 and is unlikely to set out increases in spending given the economic climate at the time of writing this document. It is likely that departments will be faced with having to deliver outcomes with fixed or diminishing resource levels in the medium term and this will include communication directorates, who will be increasingly required to account for their investment in marketing and to demonstrate its value for money and its effectiveness.

HM Treasury sets Departmental Expenditure Limits and monitors delivery through a control and reporting framework, supported by two main bodies:

The **Office of Government Commerce** (OGC) is an independent office of HM Treasury, established to help Government deliver best value from its spending. It focuses on the accountability of large programmes and projects.

The roles of the **National Audit Office** (NAO) are to audit the accounts of all government departments and agencies as well as a wide range of other public bodies, and report to Parliament on the economy, efficiency and effectiveness with which these bodies have used public money.

Departments themselves must assess the impact and benefits delivered by investments, such as policy initiatives, new legislation and marketing communications, and they are financially accountable to the Treasury. Departments often develop and manage marketing communication campaigns through Central Office of Information (COI), which is accountable to the Permanent Secretary for Government Communication and the Minister for the Cabinet Office.

The Treasury Green Book is the central point for access to guidance on the economic assessment of spending and investment and is accompanied by extensive guidance from departments on how to carry out assessments in specific areas of government; for example, health, transport or the environment[9].

A recent development in the area of measuring social benefits is the Cabinet Office *Guide to Social Return On Investment (SROI).* The Office of the Third Sector within the Cabinet Office are running a new consortium project on SROI from 2008-2011, called *Measuring Social Value* – and the guide is a recent output, published in May 2009.

2.2 Evaluation of marketing in the public sector

"I want everyone in the Government Communications Network to think: 'Given the work I did this week, did the taxpayer get good value for money?'"

Matt Tee, Permanent Secretary, Government Communication, July 2009[10].

Demonstrating effectiveness and value for money are two of the highest priorities for government communicators. COI, in conjunction with GCN and other government departments, is currently developing an evaluation service: a programme with the purpose of driving the improvement of marketing evaluation in the public sector. This improvement is much needed. As Matt Tee said in July 2009, "I think we've sometimes been averse to counting things in government communications because it's difficult[11]."

The development of the evaluation service will be an iterative process over the next few years, packaging together existing and new evaluation approaches in government communication, working with government departments on commissioned evaluation projects, in order to test and enhance the approach.

This document is the output of one work stream of this initiative and will feed into the overall, best practice approach to marketing evaluation being developed by the programme. Recent contributions to best practice in evaluation at two government departments outline some of the ideas that will be developed.

The **Department of Health**, working with COI, have recently developed a series of documents that summarise the Department's approach to best practice marketing evaluation. Developed through extensive consultation and a process of academic review, these led to the adoption by DH of these ten principles:

Figure 3: Ten Principles – DH Marketing Evaluation

The principles state that DH will:

Culture

- Hard wire evaluation into every stage of the marketing process focusing on active learning and rapid application
- Evaluate every piece of activity at a proportionate level, between 5% and 10% of total spend

Process

- Always develop a formal evaluation plan at the outset of the marketing process, including clear objectives.

Measurement

[10] GCN Newsletter July 2009
[11] Ibid

- Collect robust, consistent data on our marketing activity
- Ensure all marketing evaluations focus on a range (c. 10) of KPI measures that are critical to success – both in terms of behavioural influence and ROI/cost-effectiveness. We will not use awareness as an isolated measure of success.

Influencing behaviour

- Put behaviour change at the heart of our evaluation thinking, capitalising on existing behavioural theory.

Test-learn-refine

- Use a rigorous test-learn-refine process within and between channels.
- Try to test regionally prior to national exposure, and establish control regions if possible.
- A culture of evaluation is not an excuse for middle of the road mediocrity. We will embrace and test new marketing ideas and methodologies – and evaluate to determine their value.
- If a proposed activity cannot be evaluated appropriately, we will not do it

Source: The DH Marketing Evaluation Handbook, February 2009

The adoption of these principles is intended to deliver several key benefits, to include:

- Developing marketing interventions that are more effective in influencing consumer behaviours
- Improved marketing efficiency by investing in the things that work best
- More informed budgeting processes with reduced overspends and underspends
- Better forecasting of outcomes
- Better management of expectations regarding results

The **Home Office** has recently developed a best practice guide to the evaluation of marketing communication. This has been submitted as a resource to the Government Communication Network (GCN) Knowledge Bank, and is therefore available to communicators across Government.

Figure 4: Home Office Marketing Evaluation

"Evaluation is essentially a process to assess the quality and effectiveness of a project. It is a key element of any communications strategy – campaigns, media, agencies and our communications delivery model must all be evaluated to measure success. In doing so we can learn from our experience and feed back into the planning process to continuously make improvements and build on progress."

Source: Home Office: Evaluating communications – A best practice guide: Version 1 January 2009

2.3 Evaluation of marketing in the private sector

> "Be creative and measure what happens. If it works, do more of it. If it doesn't work, go back and be creative again"
>
> *The Four Pillars of Profit-Driven Marketing (Booz & Company), 2009*

The industry-famous quote, attributed to Lord Leverhulme, and American retailer, Sam Wanamaker, goes, "Half of the money I spend on advertising is wasted, the trouble is I don't know which half". Since this statement was made, huge advances have been made in both marketing and analytics. Leading companies invest heavily in evaluation of marketing activity, to make sure that they only make the most profitable investments, and some have been built around this very principle[12].

However, consistent, accurate and financially accountable evaluation of marketing investment remains elusive. A 2006 survey run by the US Association of National Advertisers found that only 25% of marketers felt they had sufficient ability to predict their impact on sales[13]. Les Binet and Peter Field's 2007 paper, *Marketing in the Era of Accountability*[14], analysed hundreds of case studies submitted for the IPA effectiveness awards and found that:

"Marketers pay too much attention to intermediate attitudinal measures and too little to business and behavioural outcomes", and:

"Much talk of ROI is confused, and some of it leads to poor business decisions",

It is clear that there is still work to be done before the private sector reaches a stage at which measures of financial efficiency and effectiveness are calculated consistently and accurately, and used to inform investment. But the work to be done in the *public* sector is even more difficult, because measuring and putting a value on societal change is far more complex than tracking increases in sales and profit.

[12] From "The Four Pillars of Profit Driven Marketing".
[13] "Most Financial Executives Critical of Marketing Effectiveness Measures" – *Marketing Management Analytics, March* 13th 2007
[14] Marketing in the Era of Accountability, Binet and Field, IPA, 2007

2.4 The role of Payback and ROMI

"Marketing ROI should be used by marketing managers to compare and prioritize investment opportunities in the planning stage and to measure the actual performance relative to expectations in the analysis stage. It is a powerful financial tool that can guide strategies and investments towards greater profits for a company"

Marketing ROI (James D. Lenskold, American Marketing Association, 2003)

When calculated, interpreted and used correctly, Payback and ROMI can be informative and compelling – see Figure 5.

Figure 5: Payback and ROMI – Powerful argument for effectiveness

The Tobacco Control campaign reduced the number of smokers between 1999 – 2004 by over a million, which was calculated as saving the nation £170m in costs to the NHS; by decreasing domestic fire risk and by saving working 'sick' days. In addition, the long term savings – which consider the 'human cost' of the 10,284 lives which would otherwise have been lost to smoking related illnesses – were calculated at £6.9bn. In total over £7.1bn was estimated to have been saved (against advertising spend of £49.3m), giving a ROMI of 145:1.

Source: IPA Effectiveness Awards 2004 "Tobacco Control. How the Integration of Advertisers made Advertising more Powerful than Word of Mouth"

The DWP 'Direct Payment' campaign was aimed to encourage benefits and pensions claimants to opt to receive their money by electronic transfer instead of at the Post Office. The marketing more than paid for itself, generating savings of £450 million per annum, which amounted to a ROMI of around £29 for every £1 spent

Source: 'Direct Payment (Department for Work and Pensions/ COI – "Giving it to you straight", IPA Effectiveness Awards 2007

These types of calculation can be difficult and the results subject to margins of error. However, by carrying out the process in the right way, as defined in this guide, it is possible to reach robust estimates of financial effectiveness and efficiency which can demonstrate the huge potential of marketing communication as a lever to deliver Government policy.

Payback and ROMI have a key role to play in making investment decisions about Government marketing communication campaigns. One strategy could be to focus on the most effective campaigns – i.e. those which return the highest absolute Payback. But, where several different campaign approaches return high Payback,

how do you know that they are doing so cost effectively and that you could not get the same Payback from a smaller investment? This is where ROMI comes in.

However, imagine instead that you focus solely on ROMI and run only the types of campaign which have proven on a ratio basis to be most efficient in the past. Then, you could be deciding not to run campaigns which could be incredibly effective – ones that could return a much greater Payback despite being less efficient. A road safety campaign, for example, which can be shown to have saved 100 lives at a ROMI of 12:1, surely is far more successful than a campaign which saves 50 lives at 24:1, even if the latter is twice as 'efficient' as the former.

For this reason, industry research[15] and best practice recommends that **marketers should not focus solely on ROMI** (ignoring absolute Payback and other measures) when evaluating campaigns. One expert would even advise that marketers should not calculate the ratio at all:

> *"ROI gives a false picture, partly as a result of excluding longer-term cash flows, the effects on the dynamism of the business and brand equity. In fact, a drive for increased ROI will ultimately destroy any business, because the cash-generating activity is penalised relative to short-term profit."*
>
> ROI is dead: Now bury it – Professor Tim Ambler, London Business School, in Admap magazine, September 2004

Finally, it is relatively clear in the private sector that negative Payback and ROMI is a bad thing. If investment in a campaign fails to translate into sales and profits to justify the size of the investment, the decision to discontinue the campaign and to focus on other activity may be an easy one.

In the public sector, though, it might be that the goal of the campaign is to address a perennially intractable social issue and that investments in all policy levers deliver negative ROI. Here, the decision to discontinue the activity is more difficult. In fact, if the ROI of other levers is more negative than the ROMI of a campaign it may well be the duty of Government to focus investment here and look to deliver as much change as possible for the money available.

So, how exactly should Payback and ROMI be used?

The answer is: **alongside a spectrum of measures on a balanced campaign scorecard, in a continuing process of analysis and evaluation**.

This document does not contend or imply that thorough calculation of Payback and ROMI alone represents holistic and complete campaign evaluation.

[15] Various WARC and IPA papers, which appear in the Bibliography

> *"There is no single measure that reliably predicts effectiveness and focusing on individual metrics actually reduces effectiveness"*
>
> Marketing in the Era of Accountability, Binet and Field, IPA, 2007

The balanced scorecard approach is applied successfully in the world of business to enable companies to assess their progress towards strategic and tactical objectives. It is a way of looking at the success of a company, rather than just a report card, and the process of creating and maintaining the scorecard is just as important as the results that are tracked by it.

> *"The Balanced Scorecard complements financial measures of past performance with measures of the drivers of future performance"*
>
> *"The Balanced Scorecard is more than a tactical or operational measurement system. Innovative companies are using the scorecard as a strategic management system"*
>
> The Balanced Scorecard, Kaplan and Norton, 1996

Payback and ROMI (whether predictive, projective or evaluative) should therefore be two key financial measures on a balanced campaign scorecard that also incorporates a range of qualitative and quantitative measures of efficiency, effectiveness and value for money.

3 A Guide to calculating Payback and ROMI

3.1 Introduction to the Guide

This guide describes a rigorous and thorough process for the calculation of Payback and ROMI. If you were to follow *every* step in the guide and investigate *every* avenue of analysis discussed within it, you would reach robust measures of these two metrics. However, it has to be recognised that this could require significant investment in itself – and the assistance of experts in policy, economics and statistics. Even the majority of public and private sector IPA Effectiveness award winning campaigns have not taken the calculations to this level of analysis.

The first goal, then, should be to understand the concepts presented, when looking at financial Payback from marketing and ROMI. Look through the 10 steps and tick off as many items as possible during your analysis, to see which techniques are missing and consider how including them would affect Payback and ROMI. It should be emphasised that the process itself is just as important as the result and it can only enhance your understanding of how a campaign is delivering value.

The next goal will be to take Payback and ROMI further, calculate them to a greater level of accuracy, and to use them on an ongoing basis – as part of a balanced campaign scorecard – to make informed strategic decisions on marketing investment. Calculation of Payback and ROMI should be an integral part of a holistic evaluation process that starts during the development of a campaign and runs long enough to measure its full impact.

Case studies are used throughout the Guide to bring the concepts to life, and a full, worked example (Teacher Recruitment) follows at the end.

Finally, remember that you can calculate **predictive**, **projected**, or **evaluative** Payback and ROMI – the journey through the 10 steps will be slightly different in each case.

3.2 Payback and ROMI: Key Principles

Please bear in mind the following key principles throughout your analysis:

1. Start with an understanding of what your campaign is trying to do and how it will work
2. Isolate the impact of your campaign from the effects of other factors
3. Make conservative but realistic estimates of the value of the impact
4. Be transparent: show all your working and list all your assumptions
5. Net Payback is usually more important than ROMI
6. Do not use Payback and ROMI to make decisions in isolation from other measures

3.3 The Guide: 10 steps to calculate Payback and ROMI

Step 1: Map objectives to outcomes and check expected contribution

- Build a clear picture of how the marketing communication campaign will deliver outcomes to meet its objectives. Determine the contribution that it is expected to make alongside other interventions, such as new legislation or changes in tax.

Step 2: Identify stakeholders and set the scope of analysis

- Before you embark on measuring the outcomes you have identified, pause for a moment, identify who is involved, and set the limits of your analysis.

Step 3: Plan to measure campaign outcomes

- Identify a range of metrics that will measure how outcomes change during the campaign. Set baseline figures for these metrics and identify trends. Consider leading and lagging indicators, by how much they might move and over what period. Build the capture of data on other factors into the measurement plan.

Step 4: Measure the impact of the campaign

- Collect and analyse all the relevant data to determine the forecast, projected or actual outcomes. Identify, quantify and account for other factors – and consider the retention of impact over time. Look for displacement of impact and halo effects.

Step 5: Put a value on the impact of the campaign

- Agree financial values or financial proxies for the outcomes that you have measured with policy experts and economists. Record a range of values where possible and discount to present values.

Step 6: Calculate Payback at present values

- Multiply out the financial values or proxies by the campaign impact (the outcome less the effects of other factors) to calculate Payback. Adjust the Payback to present values and remember to account for negative impact, retention, displacement and halo effects.

Step 7: Calculate costs at present values

- Identify all costs that have been incurred in running, and as a result of running, the campaign. Adjust costs to present values in the same way that you did for Payback.

Step 8: Calculate Net Payback and ROMI

- Calculate Net Payback by subtracting the campaign cost from the total Payback. Then calculate ROMI by dividing the net Payback by the total cost.

Step 9: Understand Payback and ROMI

- Interpret measures of Payback and ROMI, and include them in a balanced scorecard to track the efficiency and effectiveness of your campaign.

Step 10: (Optional) Advanced Payback and ROMI

- Refine your estimates of Payback and ROMI using more advanced techniques. Carry out sensitivity analysis. How would different assumptions affect Payback and ROMI?

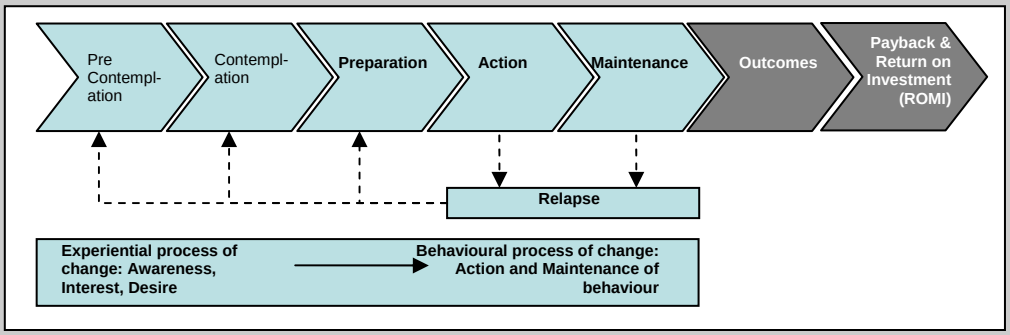
3.4 Step 1: Map objectives to outcomes and check expected contribution

Build a clear picture of how the marketing communication campaign will deliver outcomes to meet its objectives. Determine the contribution that it is expected to make alongside other interventions, such as new legislation or changes in taxation.

Task 1.1: Map objectives to outcomes

Analysis of Payback and ROMI starts by answering one of the following questions:

- Predictive Payback and ROMI
    - *How will your campaign and other factors work?*
- Projected Payback and ROMI
    - *How do your campaign and other factors appear to be working?*
- Evaluative Payback and ROMI
    - *How did your campaign and other factors actually work?*



All campaigns should have clear objectives and a model that maps them to outcomes. This model will answer the questions above and you will be able to build on this to measure the effect of your campaign.

For the purposes of calculating Payback and ROMI, the focus at this stage should be on those ultimate outcomes that will demonstrate financial return.

Figure 6: Smoking – Outcomes of the Tobacco Control campaign

The marketing campaign aimed to help the overall Tobacco Control programme to reduce the number of smokers between 1999 and 2004 by over a million. It used a Stages of Change model to map how smokers could be persuaded to give up.

In this version, we have indicated how stopping smoking leads on to ultimate outcomes which can be used to demonstrate Payback and ROMI.

The campaign team looked at certain outcomes in particular that would demonstrate Payback as smokers began to stop and didn't relapse:

- Fewer people would contract smoking related illnesses
    - Fewer hospital admissions for smoking-related diseases
    - Less working time lost for treatment
    - Reduced mortality from smoking-related diseases
- Fewer domestic fires caused by smoking

Source: IPA Effectiveness Awards 2004 "Tobacco Control. How the Integration of Advertisers made Advertising more Powerful than Word of Mouth"

Task 1.2: Check the contribution expected from marketing communication

At this stage, when working on **predictive** Payback and ROMI, you should work with policy colleagues to understand which levers other than marketing communication are being used to deliver policy as part of the overall programme. What proportion of the overall change is marketing communication expected to deliver versus these other interventions?

This step is not commonly carried out when devising Government marketing communication campaigns, but imagine that it had been carried out for the 'Together' programme (figures are for illustration purposes only).

Lever	Activities	% of outcome to be delivered	How?
Legislation	Increase in workplace bans	20%	More difficult for employees to smoke
Contracts	Increased size of warnings on cigarette packets	20%	Warnings dissuade smokers
Financial	Rising cost of smoking	20%	Smokers can't afford to smoke
Sanctions	Fines for employers who do not uphold workplace bans	20%	Employers can't afford repeated fines so forced to comply
Persuasion	Marketing communications campaign	20%	Smokers persuaded to stop through creative messages

In this example, marketing communication is expected to deliver one fifth of the overall programme impact.

When calculating **projected** or **evaluative** Payback and ROMI, there is a different take on the contribution of marketing communication. The campaign is already in progress, and the other policy levers may have already been pulled – new laws and fines may be in place, or taxes may have been raised.

3.5 Step 2: Identify stakeholders and set the scope of analysis

Before you embark on measuring the outcomes you have identified, pause for a moment, identify who is involved, and set the limits of your analysis.

Task 2.1: Identify Stakeholders

The outcomes from your marketing communication campaign could affect a wide range of third parties, from Government Departments or local authorities to groups of citizens, to businesses and charities.

At this stage, you should identify all the stakeholders who could be affected or who are involved with the project, and decide which ones will be affected the most or could impact the outcome (or are of the greatest priority) and will therefore be involved in your analysis. Later, you may need to consider the actions of these stakeholders as **other factors** that could be affecting outcomes alongside your campaign.

Figure 7: DWP Direct Payments – Stakeholders

The DWP 'Direct Payment' campaign was aimed to encourage benefits and pensions claimants to opt to receive their money by electronic transfer instead of at the Post Office. The communication campaign affected various stakeholders, each of which also had potential to influence the outcome of the campaign. Stakeholders accounted for when evaluating the influence of other factors on the campaign outcomes were:

- **The Post Office**. Sub Post Masters who run 97% of Post Offices actively lobbied against the plans to switch to direct payment, fearing it would result in branch closures
- **Charities**. Age Concern and Scope were vocal in their concerns, though not actively obstructive
- **Opposition politicians**. E.g. John Barrett, MP for Edinburgh West ran a 'Save the Pension Book' campaign in his constituency

Source: 'Direct Payment (Department for Work and Pensions/ COI – "Giving it to you straight", IPA Effectiveness Awards 2007

A common method used to prioritise stakeholder relationships is *influence / interest mapping*. If you want to be sure that your analysis of Payback and ROMI is as accurate as possible and that stakeholders support the analysis, you could rate each of them in terms of their influence on and interest in the issue in question and categorise them into four groups of descending involvement – *partner*, *involve*, *consult*, and *inform*.

The following example shows how this might work for an imaginary Department of Health campaign aimed to reduce binge drinking in the UK. Only four stakeholders are included, for illustration purposes – it is likely there would be more.

Stakeholder	How they will be affected, or how they will affect, the campaign	Influence	Interest	Relationship
Drink Aware	Part of campaign team and part funding campaign	High	High	Partner: work together
Home Office (Police)	Reduced costs dealing with alcohol-related disturbance and crime	High	Medium	Involve: work together where common ground exists
Alcohol retailers	May suffer from decreased revenue	Medium	High	Consult: listen to them and respond
Charity campaigning against violence against women	Knock-on effect of reduction in binge drinking could be less violence towards women	Low	Medium	Inform: tell them what you are doing

Having categorised stakeholders in this way, it becomes clear which ones you need to work with to carry out your analysis, which ones will be interested in the results, and which ones may influence outcomes at the same time as your campaign.

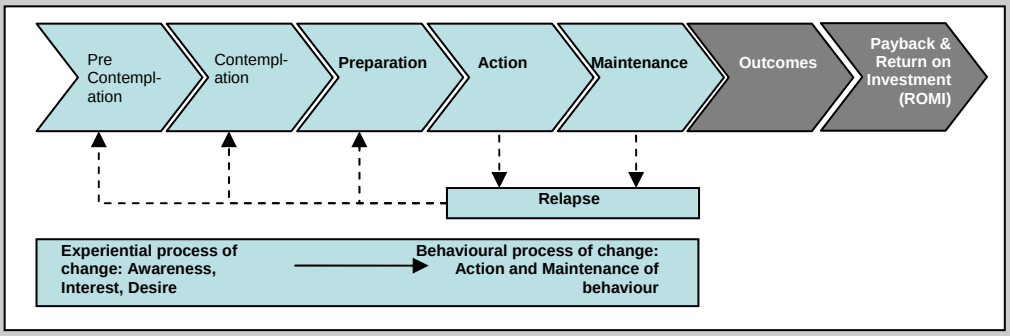
Task 2.2: Set the scope of the analysis

Campaign outcomes and impacts could be analysed endlessly. Because many Government marketing campaigns aim to achieve complex societal change, there is no limit to the number of ways in which causal relationships could be established between innumerable factors in order to arrive at various estimates of Payback.

However, by setting out clearly what you intend to achieve and recording things that will not be included in your analysis, it is possible to reach robust and defensible estimates for Payback and ROMI.

There are four things to take into account when setting the scope of Payback and ROMI analysis, in addition to the inclusion or exclusion of stakeholders and target groups:

Setting the scope of analysis	
Purpose: Why are you analysing Payback and ROMI?	
Predictive	aims to understand what the campaign would have to deliver to break even, to meet policy targets, or to achieve certain levels of ROMI
Projected	takes intermediate, leading measures of campaign impact and projects what the campaign will deliver as it continues
Evaluative	reviews outcomes and determines the actual impact delivered by the campaign
Audience: Who is going to be interested in the results?	
Departmental / Policy experts	will require full detail of how the campaign will deliver, is delivering or has delivered against objectives
Communication professionals	will require clear explanation of techniques and a focus on the effectiveness of specific media interventions
Auditors	will require financial rigour and a focus on the numbers and value for money
The Public & the Media	will require confidential data to be protected, a focus on accountability and very clear explanation of techniques used
Resources	
Capacity	How much time and how many people do you have to carry out analysis?
Capability	Do you have the right set of skills in your team? Do they have the tools that they need? Do you have access to data, to experts and specialist services?
Cost	Do you have a specific budget for the analysis, or will it be included as part of your overall evaluation budget? Is your evaluation budget sufficient?
Timescales	
Time period	You should set a time period over which you intend to collect data for analysis. This time period should be long enough to measure actual campaign outcomes that can be monetised. Where this isn't possible (some campaigns won't realise benefits for decades) then you should allow as long as possible to collect data on intermediate measures and then project these in a rigorous and fair way.



3.6 Step 3: Plan to measure campaign outcomes

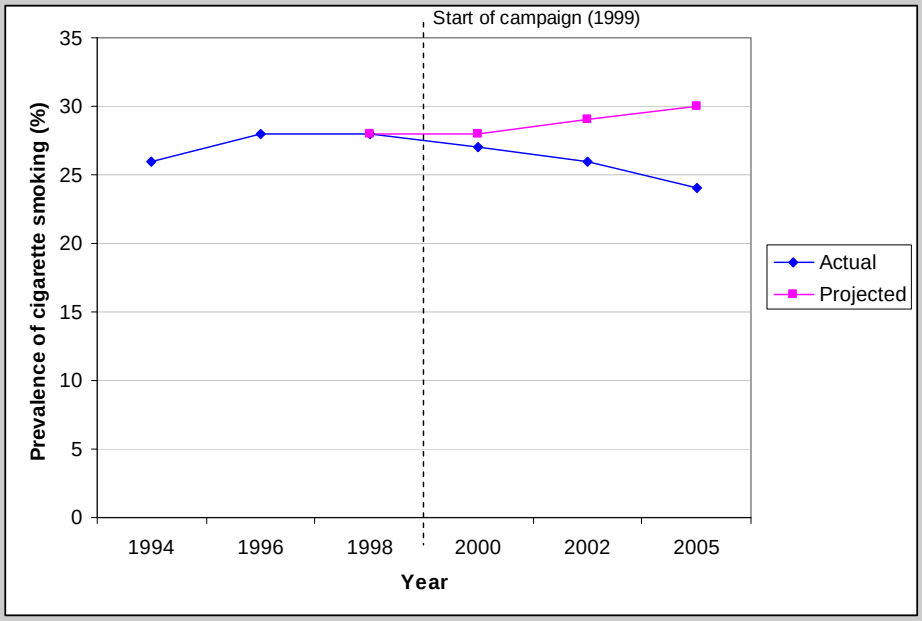
Identify a range of metrics that will measure how outcomes change during the campaign. Set baseline figures for these metrics and identify trends. Consider leading and lagging indicators, by how much they might move and over what period. Build the capture of data on other factors into the measurement plan.

Note: In this guide we focus on ultimate, rather than intermediate, objectives and on overall efficiency and effectiveness rather than day-by-day campaign tracking. So the process of putting together a full range of campaign metrics into a holistic measurement plan is not covered in detail here. It is assumed that this process will be carried out for your campaign – and that these steps will feed into that process.

Once you have a clear model of how marketing communication will drive your intervention from objectives to outcomes, this will allow you to identify a range of metrics that will detect the degree to which the ultimate outcomes are being realised during and after the campaign. You should then plan to measure them throughout, considering the availability of data, lead times to make it available and additional costs of data gathering (for example, commissioning surveys). Where these metrics are not part of your existing measurement plan, you should add them.

Figure 8: Smoking – Metrics for the Tobacco Control

Recall the map of objectives to outcomes for the Tobacco campaign, introduced in Step 1. From the outcomes that were identified, the campaign team chose a number of metrics that they could use to measure the impact of the campaign.



Outcome	Metrics for Payback & ROMI
Improved health	Number of smokers Number of deaths from smoking related illnesses
Saving to the NHS	Number of admissions to hospital for smoking related illnesses
Reduction in accidents	Number of domestic fires caused by cigarettes
Savings to employers	Number of sick days due to smoking related illnesses

The next task is to set baseline figures - what value did the metrics take before the campaign - and look at trends – in which direction are the figures already going prior to the campaign? You have to estimate how much they might move and over what time period, either on an informed basis using historic data from other campaigns or on a speculative basis in order to carry out sensitivity analysis (for the potential effect of different movements in the metrics on Payback and ROMI – see Step 10).

Figure 9: Smoking – baseline figures and trend

Smoking rates fell steadily in the 1970s and 1980s but from 1994 rates began to rise. By looking at this trend it was possible to understand what was happening prior to the campaign and what the campaign was required to deliver. Rates could have continued to rise slowly as shown by the projected figures below, but the government target was to reduce rates to 26% by 2005. The data source for smoking rates was the General Household Survey.

The Tobacco Control campaign, which started in 1999, contributed towards a decline in rates of smoking which exceeded the government target three years early.

Sources: IPA Effectiveness Awards 2004 "Tobacco Control. How the Integration of Advertisers made Advertising more Powerful than Word of Mouth"
Projected figures added by COI for illustration

An important step at this stage is to build into the plan the measurement of data on **other factors**. As explained in step 4, this is essential in accurately quantifying the impact of the campaign and splitting it out from what would have happened without it. In the smoking example in Figure 9 this included tracking the rising cost of smoking, the effects of news coverage and Nicotine Replacement Therapy

3.7 Step 4: Measure the impact of the campaign

Collect and analyse all the relevant data to determine the forecast, projected or actual outcomes. Identify, quantify and rule out other factors – and consider the retention of impact over time. Look for displacement of impact and halo effects.

Task 4.1: Measure outcomes

If you are carrying out a **predictive** Payback and ROMI analysis, now is the time to forecast outcomes. If you are carrying out **projected** Payback and ROMI analysis, now is the time to gather all the data you can so far, and project how it may change to the end of the measurement period. If you are working on **evaluative** Payback and ROMI, then this is the time to gather as much actual data as possible relevant to the measurement period to see what has changed.

Once you have this information, you need to deduce how much of the change will be, or was, caused by your campaign.

Task 4.2: Identify other factors

Underlying trends: stories in the news; the season; changes in the economy; other campaigns; demographic shifts in the target population; new policy interventions; and changes in legislation are just some of the factors that may be at work during your campaign. These will affect the metrics that you have chosen and it is essential to rule their effects out, one by one, to leave only the effect of the campaign – the **impact**.

Bear in mind that other factors could be:

- **Working with you**, so that your campaign only deserves some of the credit for positive outcomes
- **Working against you**, so that your campaign may have been more successful than it first appears
- **Not working at all**, so that your campaign deserves all the credit

The first task is to create a long list of other factors that could be relevant. This could be done at a campaign team meeting, including any agencies involved, and be supported by input from policy teams and economists. From the long list, you should create a short list of those factors which you expect to be most relevant – and **build the capture of data on these factors back into the measurement plan that you put together in step 3**. When carrying out projected or evaluative ROMI you should revisit the discussion of other factors and look out for anything outside the list that appears to be affecting outcomes.

Task 4.3: Account for other factors

Once you have a list of other factors, there are several techniques that can be used to exclude them. None of these techniques are perfect, but applying them will increase the accuracy of your Payback and ROMI calculations.

a) Before and after (no other factors);
b) Trend analysis;
c) Test and control;
d) Claimed attribution;
e) Actual attribution; and
f) Mathematical modelling (econometrics).

a) Before and after (no other factors)

In some cases outcomes may not have been affected by other factors so you can simply compare "before" to "after" and 100% of the outcome can be attributed to the campaign.

Figure 10: DfT – Rear Seatbelts – No other factors

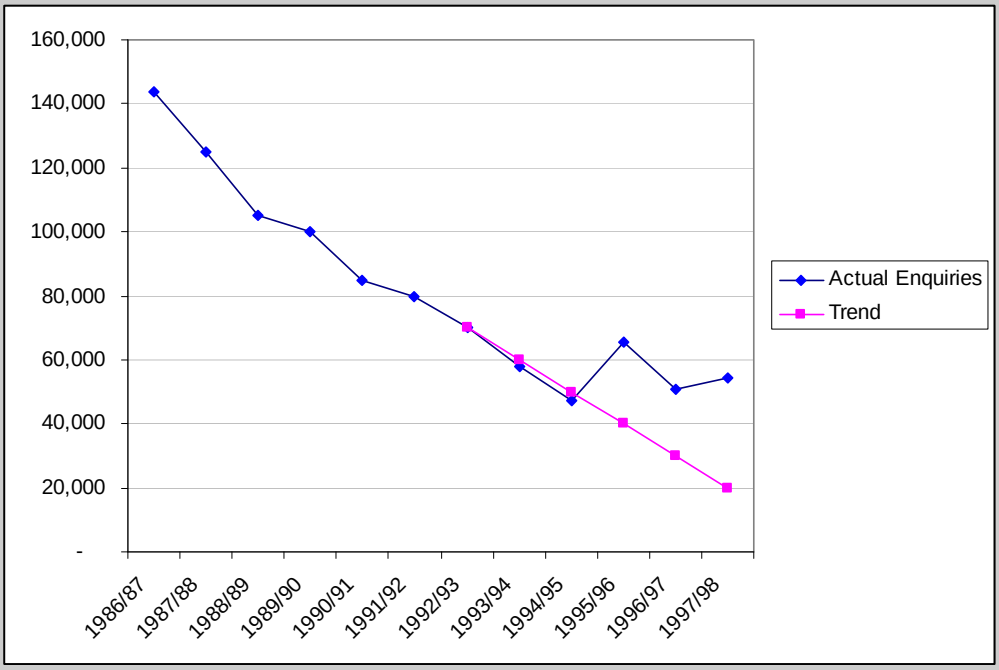
After the 1998 Department for Transport Rear Seatbelts campaign, seat belt wearing increased and it was calculated that 18 lives were saved and 230 serious and 1,650 slight injuries prevented in the following year.

Other potential influences on seatbelt wearing behaviour were ruled out as having a significant effect:

- There was no change in legislation over the campaign period
- The proportion of cars fitted with rear seatbelts (80%) had not changed over the campaign period
- While police support for the campaign message was evident, actual police enforcement did not increase
- The immediate, albeit limited, uplift in wearing rear seatbelts following Princess Diana's death had fallen away prior to the campaign and there were no other high profile car accidents during the campaign

It was concluded that the marketing communication campaign was the main influence behind the increase in seat belt wearing, saving the Government an estimated £73 million.

Source: Rear Seatbelts – IPA Effectiveness Awards 2000



This technique clearly has limitations, as there are very few situations in which other factors are not at work simultaneously with your campaign. Before claiming 100% attribution to your campaign, make sure that you have considered using one or more of the techniques that follow.

b) Trend analysis

You should always examine the direction a metric was going in before the campaign and the direction that it went in following the campaign. For example, if the number of people following a positive pattern of behaviour is in decline and this decline slows during your campaign, this is a good result even though it might not look like one at first glance.

Figure 11: Army Recruitment – Trend Analysis

The Army's 'Be The Best' campaign achieved a dramatic turnaround in recruitment, after years of decline in the early 1990s, and despite a negative social and demographic environment. The graph below shows the downward trend in enquiry levels. They declined 14% year on year from 144,000 in 1986/87 to only 58,000 in 1993/94:

In 1995/6 the enquiry level went up by 34% and reversed the long term decline. Recruitment increased by 60% and enlistments rose towards the target of 15,000 soldiers per year.

Source: IPA Effectiveness Awards, 1998: "Putting the Army back in business: how advertising rose to the Army's challenge to 'Be the Best'"
Trend figures added for illustration by COI

Of course, this technique will not tell you the whole story. Seeing that a trend has turned around during or following your campaign is not evidence that the campaign was responsible for this. How did other factors influence Army recruitment over the campaign period?

c) Test and control

Compare an area in which the campaign ran with a similar area that wasn't exposed to it – what was the difference between the two?

Figure 12: Home Office – Acquisitive Crime

The Home Office ran campaigns between 2004 and 2007 to reduce acquisitive crime (vehicle crime, burglary and robbery) in England and Wales, aiming to meet the government target of a 15% reduction over the four years.

The methodology to isolate the effect of the campaign was to compare acquisitive crime in police regions that received high advertising spend with regions that received low spend. Campaign effectiveness would be proven if the region with the higher spend saw a greater reduction in acquisitive crime than the region with lower spend.

Regions were put into pairs so that they could be considered as similar as possible in terms of the following factors:

- Recorded crime statistics
- Socio economic factors
- Correlation with TV regions

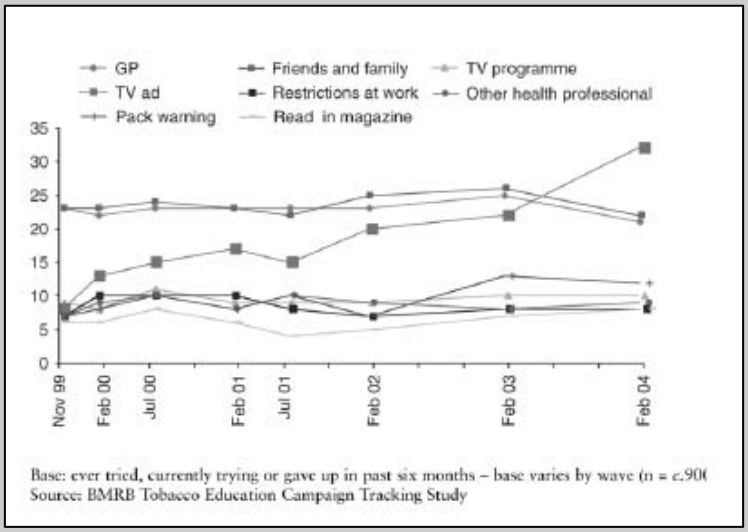
The result was that the effect of the campaign could be isolated from other influencing factors which affected crime levels.

Acquisitive Crime in England and Wales – Econometric Evaluation of the effects of 2004-2007 media activity on crime levels: Final Debrief Jan 2008 (Home Office / Holmes and Cook)

The difficultly with this technique is that there is no such thing as a perfect control group. In medicine, for example, new drugs are tested by giving them to a test group and by not giving them to a control group, then seeing the number of people in each group that got better. But with public service advertising, broadcast through TV, radio, online and a whole host of other channels, it's almost impossible to compare two groups of similar people, one of whom haven't seen or been influenced by a government campaign.

Even in the Home Office Acquisitive Crime example, there were no real control groups, only those who were less likely to have been exposed to the campaign.

This means that a pragmatic and creative approach should be taken when using this technique, as it was in the Acquisitive Crime analysis. Because effects were analysed for at least four different pairs of regions for each different part of the campaign, the team gave themselves a good chance of cancelling out any problems with the test and control approach. They made the groups as similar as possible,



then they categorised them into test and control in the only practical way they could – by looking at relative advertising spend. Finally, they also used econometric modelling to isolate effects - see f) Mathematical modelling, below.

d) Claimed attribution

In some cases it may be possible to capture the numbers of people who claim to have done something because of your marketing campaign – then look at this as a proportion of all other claimed reasons.

Figure 13: Smoking – Claimed attribution

To analyse the effect of advertising, reasons for giving up smoking were measured. By 2004 advertising had become the most influential factor that smokers claimed as their trigger to give up. Previously 'something said by GP' or by 'friends and family' had always outperformed advertising. However, it is difficult to know from this data how the individual influences could have had a complementary and additive effect.

Source: IPA Effectiveness Awards 2004 "Tobacco Control. How the Integration of Advertisers made Advertising more Powerful than Word of Mouth"

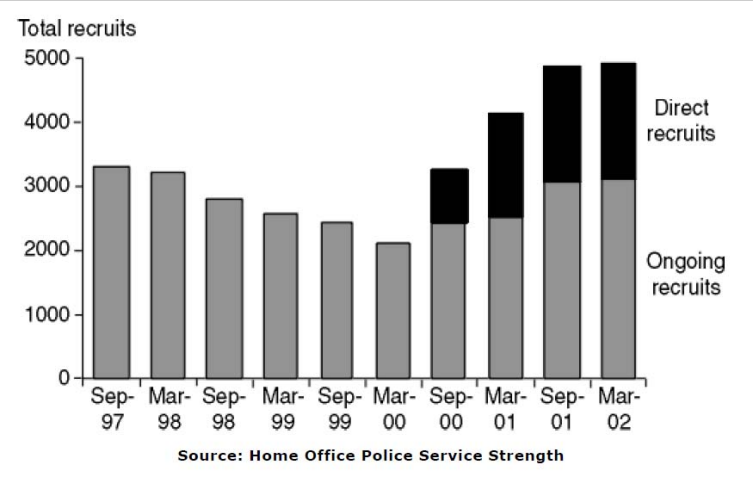
The problem with claimed attribution is that there is no guarantee that, if someone says they were prompted to take an action by advertising, they did so purely because of the advertising.

There are several reasons why claimed attribution data may be suspect:

- people don't always know or remember that they've been influenced by the advertising that they've seen.
- people can be influenced by advertising indirectly (e.g. via word of mouth).
- advertising is usually only one influence among many, but questionnaire design often fails to reflect this (e.g. single response required to "How did you hear about us?").

- people don't like admitting that they're influenced by advertising, even when they realise.
- people often mis-remember the exact source of the influence (so they tend to say "TV advertising", even if you didn't run any TV ads).

e) Actual attribution



With good campaign design, (but only for certain types of campaign, which have a direct response element such as a unique phone line or URL) it is possible to directly link advertising with impact. Recruitment campaigns in particular can be set up to do this. See Figure 14 for an example.

Figure 14: Police – 'Could You?' actual attribution

In 2000, The Police 'Could You?' campaign was designed so that an increase in the number of recruits could only have been attributed to the campaign.

Advertising response channels were unique. Enquirers ringing or clicking on these channels must have been prompted directly by this advertising because they were tracked separately from applicants via ongoing local channels.

The advertising was shown to have driven around 100,000 relevant enquiries, 66,000 application requests and 6,000 new recruits.

Note that the advertising could also have been behind part of the turnaround in ongoing recruitment – people may have seen the advertising and responded later through a different channel. We will discuss 'halo' effects like this later.

Source: Police Recruitment – IPA Effectiveness Awards 2002

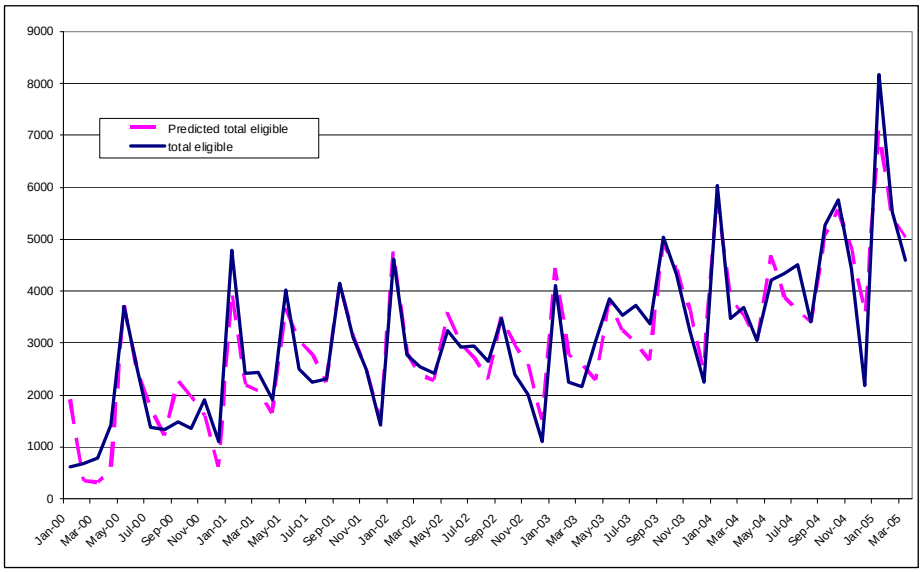
This kind of direct response data has its own problems:

- It is common to attribute a given response entirely to the channel that delivered it – for online this is called "last click attribution". But in reality, that

response will be the result of a number of factors, e.g. previous TV ads. So direct response data may over-estimate the effect of direct response advertising, and underestimate the effect of ads that are intended to change attitudes

- Not all direct responses are incremental. In the police example, some of those recruits might have applied anyway. This will also lead to an over-estimate of the effects of direct response
- Direct response activity may have effects besides direct responses. For instance, someone might see a banner ad but be prompted to make an enquiry through another channel. This will lead to an under-estimate of the effect of the direct activity.

f) Mathematical modelling (econometrics)



One of the most powerful and robust methods of isolating other factors is to create a mathematical model of how these factors affect the campaign metrics. This will require a discrete piece of work to be carried out by experts in **econometrics** – but it brings a high level of rigour to the process of calculating Payback and ROMI. If you don't have access to expertise in this area it can be provided through COI.

An econometrician creates a model in which each of the factors is given a weight on the outcome. They then test all possible different sets of weights until they find the set that best fits the observed data. Imagine a simplified recruitment model:

Number of eligible applicants = $a_0 + a_1$*(unemployment level) + a_2*(campaign spend)

The econometrician finds values of the variable a_0, a_1 and a_2 so that the differences between the graph of the model and the graph of the actual data are as small as possible.

Figure 15: Example of a mathematical model plotted against actual data[16]

[16] From Teacher Recruitment IPA Case, 2005

During their analysis, the econometricians rule out factors that don't have a statistically significant effect and make sure that the model is as representative as possible. This should be a consultative process in which the model is developed, challenged and refined. Tests should be carried out on the model to ensure that:

- All major factors have been accounted for (i.e. the model is not missing a key factor)
- The differences between the model and the data are random in size and not systematic due to an error in the model
- No pair of factors are closely correlated (it can turn out that one factor is only changing because of another factor in the model – in this case it should be removed as it isn't adding anything by being there)

Most importantly, the model should be subjected to a common sense test. Does it match the intuitive view of subject matter experts on how they would expect the different factors to affect outcomes?

Once you have a strong model, it can be used to quantify the relative contribution of the campaign to the outcomes in the form of an absolute number, or percentage of total outcome. This will feed directly into the Payback and ROMI calculation.

The other benefit of such a model, if updated on an ongoing basis, is that it can be used to project into the future and inform investment decisions in marketing communication. If you have a target of 3,000 recruits, for example, then, given the trends, seasons and other factors that will feed into your model over the coming year, how much will you need to spend on advertising in order to meet that target? How much on digital, DRM, sponsorship and PR[17]?

The 10 tips outlined in Figure 16 may help you when opting to use econometrics to measure campaign effects:

[17] Quantitative measurement of the effects of some interventions, such as sponsorship and PR can prove extremely difficult. However, if a strong mathematical model can isolate these as significant effects, it is possible.

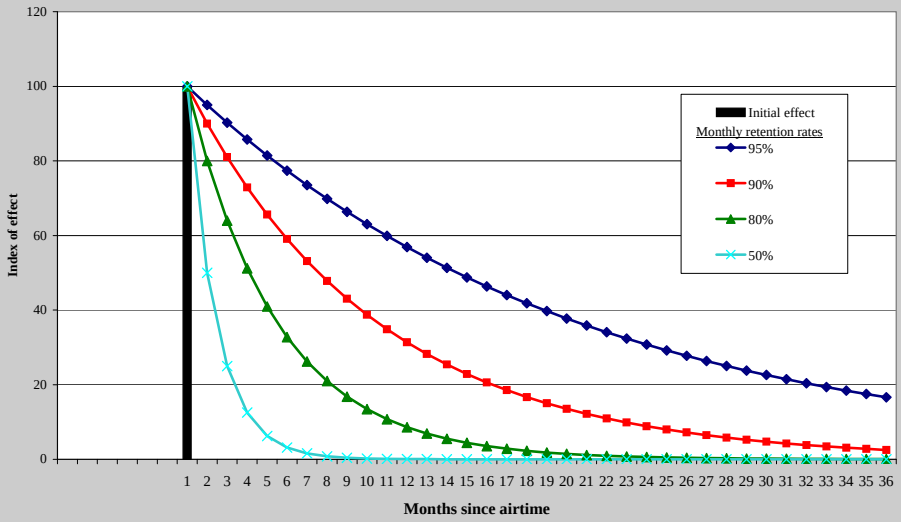
Figure 16: 10 tips for econometric analysis

1. Use a qualified econometrician
    - It's a specialist skill, even experienced statisticians may not be trained in Econometrics;
2. Allow plenty of time (at least 3 months)
    - It sounds like a long time but it is needed to gather and analyse large amounts of data;
3. Brief the econometrician well
    - They need to understand the context to identify all the factors that might affect the model;
4. Allow access to your data
    - You may think that you have the right data to hand, but you often won't and there will be lead times to get access;
5. Don't put poor data in – you'll get poor data out
    - If the data is wrong, the model will be wrong too;
6. Test the model
    - Over the last 70 years, econometricians have devised a huge battery of tests that can tell whether a model is good or not. Make sure that your econometrician uses them;
7. Demand clear results
    - Good technical skills are not enough. Choose an econometrician who can explain the results clearly;
8. Use the model
    - Make sure the model is supplied in a useable form with appropriate support and/or training;
9. Monitor the forecasts
    - Forecasting accuracy is the ultimate test of a model. If it doesn't forecast well, find out why, and if necessary adjust the model;
10. Maintain your model
    - A well-maintained model will grow more accurate over time, but a model that is not updated will eventually become useless.

Refer to the IPA publication Econometrics Explained[18] for further information on the technique of Econometrics or speak to COI about access to Econometricians.

Task 4.3: Estimate retention of effects

The discussion of the longevity of effects is important, because public sector campaigns often run over many years. The concept is known as 'adstock'[19] – the residual effect or retention of advertising after it has finished.



Note: residual effects of previous campaigns, where these are known, should be considered as 'other factors' and eliminated from the effects of the current campaign.

[18] Econometrics Explained – Binet, Holmes and Cook, 2004
[19] Broadbent, S. (1997) Accountable Advertising: Handbook for Managers and Analysts

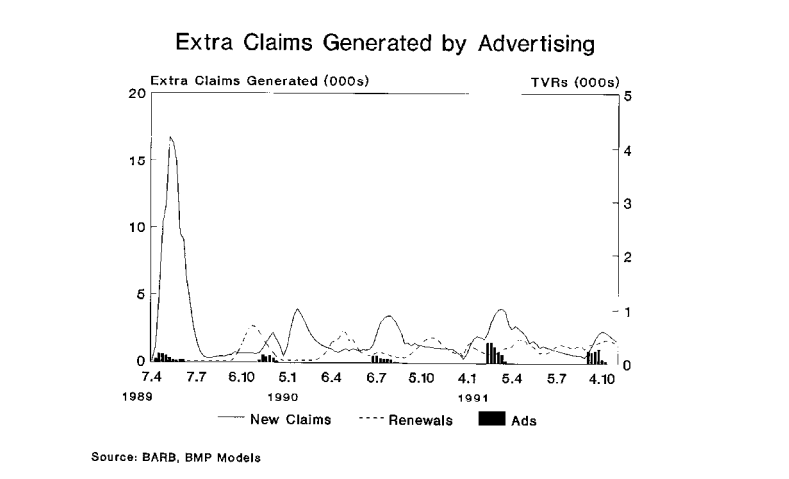
Figure 17: Acquisitive Crime – retention of campaign effects

Home Office campaigns ran from 2004 to 2007 to reduce acquisitive crime (theft, burglary and robbery) in England and Wales.

Econometric models could estimate how long the effect of different parts of the campaign would last in different areas. Some effects wore off quickly (see the light blue, cross-plotted curve) but others persisted (see the dark blue, diamond-plotted curve)

Acquisitive Crime in England and Wales – Econometric Evaluation of the effects of 2004-2007 media activity on crime levels: Final Debrief Jan 2008 (Home Office / Holmes and Cook)

So, even a successful campaign, once it has finished, will eventually fade in the memories of those who were exposed to it and will not have been seen by new generations. New campaigns may take its place, aimed at different target groups and with different messages.



Where you have a good mathematical model, as shown in the Home Office example, retention can be derived. The model can examine how outcomes react for every unit of time that passes and give a decay rate for the campaign impact. This can then be applied to the impact seen over the campaign and estimated in the future, reducing it as appropriate.

Where you do not have a model, retention can be estimated by eye. A common way to visualise the response to marketing communication is to plot outcomes against marketing activity and this can be used to see how the outcomes spike then decay in conjunction with (hopefully in reaction to) the activity. From this type of graph (see Figure 18, for example) it is possible to estimate a rough retention rate by seeing how quickly the rate drops following each spike.

Figure 18: Family Credit – Estimating Retention

The former Department for Social Services (DSS) launched Family Credit in 1988; a weekly payment to parents, the size of which depended upon the number of children in the family and how old they were.

The following graph that overlays the number of extra claims on the weight of advertising, from 1989 to 1991:

Notice the spikes in extra claims, and later, renewals, that follow the advertising. In particular note how they fade as time passes. In this case, the spike seems to have dropped to about 50% of its maximum height after a month, and back to the baseline in three months. These figures could have been used as estimates for retention.

Adapted from An Econometric Analysis of Family Credit claims 1989-91

In some cases it may not be possible to estimate retention rates. Here you should make a note of this and consider it later, when carrying out sensitivity analysis on Payback and ROMI.

It is worth noting that the effects of advertising can last a lot longer than advertising memories. Long after people have forgotten the ad itself, the thoughts and feelings that the ad stimulated in the audience will persist. And the behaviour that is elicited can last even longer, out of sheer habit. Econometrics shows that ads can have effects on behaviour that last years, even though ad memories tend to decay away over weeks.

Task 4.4: Look for displacement and halo effects

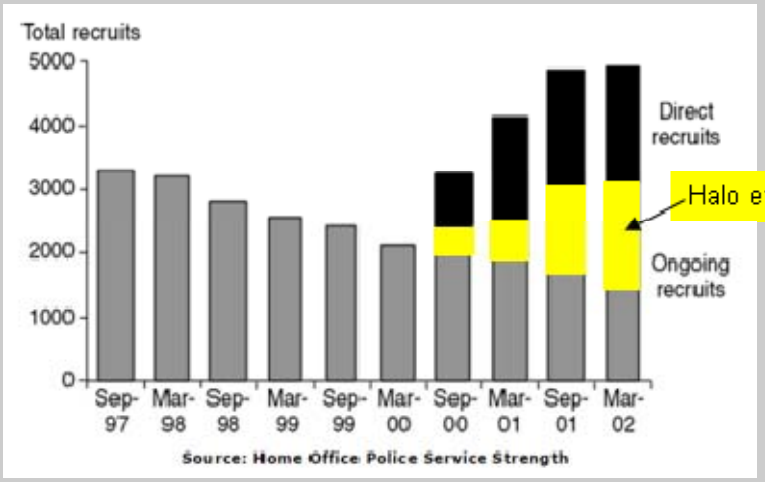
Your campaign may appear to have reduced a type of behaviour, as intended, but in reality it may have simply shifted the problem elsewhere. This is known as **displacement**. It is extremely difficult to measure, even with strong mathematical models.

Figure 19: Acquisitive Crime – Displacement

The Home Office analysis into the success of the Acquisitive Crime campaign identified displacement as an issue for consideration. Potential types of displacement could have been:

- Between types of crime
  - The campaign influencing criminals to carry out robbery instead of burglary
- Between media
  - One medium being successful (e.g. TV) but outcomes offset by another having an adverse effect (e.g. radio)
- Between regions
  - Criminals choosing to operate in a nearby region, having seen a campaign in their own region and believing there may be better opportunities elsewhere

However, even with the extensive econometric modelling that had been carried out, it was not able to find strong evidence of displacement, so deductions from the campaign effect were not made.



Acquisitive Crime in England and Wales – Econometric Evaluation of the effects of 2004-2007 media activity on crime levels: Final Debrief Jan 2008 (Home Office / Holmes and Cook

If you are able to identify and quantify displacement shown to be caused by the campaign, then this should be subtracted from the total campaign impact.

The campaign may also have had other, unintended effects outside the original scope – known as **halo** effects. See Figure 20.

Figure 20: Police – 'Could You?' halo effects

As discussed in the trend analysis section, the Police 'Could You?' campaign could prove the number of recruits that it had driven by tracking responses through specific channels. But, it is reasonable to assume that the positive response to the campaign also resulted in some people joining the Police through conventional channels. This halo effect could be added to the impact of the campaign.

Source: Adapted from Police Recruitment – IPA Effectiveness Awards 2002

If you are able to identify and quantify halo effects, you should consider whether they should be part of your calculations. Would you have included them when you decided the scope of the analysis? Do they deliver benefits to the stakeholders or target groups in this scope?

If the answer is yes, and the effects are positive, then you should add them to the total campaign impact. If the effects are negative, you should subtract them from the campaign impact.

3.8 Step 5: Put a value on the impact of the campaign

Agree financial values or financial proxies to the outcomes that you have measured with policy experts and economists. Record a range of values where possible and discount to present values.

This step is just as challenging as step four and will require expert advice. Once you have identified the impact delivered by your campaign, how will you assign a monetary value to it? After all, the real impact of your campaign may not have an obvious financial proxy with which you may calculate Payback. However, you may have already have identified at a high level how your campaign might deliver Payback by putting it into one of the categories in the introduction – this is the starting point.

The next step is to speak to economists and policy experts in your own department about valuation – you should work with them throughout this step to identify robust and recognised financial proxies. There is extensive departmental guidance on economic evaluation of Government interventions supplementing the HM Treasury Green Book at http://www.hm-treasury.gov.uk/data_greenbook_detguidance.htm and an economist or statistician should be able to help you to interpret this. Even better, they may be able to provide existing financial proxies that you can use to measure Payback.

The table on the following page (Figure 20) summarises the various approaches to valuing the impact of marketing communication. For each of the financial Payback mechanisms we have identified, it discusses the benefits and disadvantages of the approach and identifies some potential sources of data. It also lists some of the techniques used by economists to measure the financial value of Government interventions. For a full list of potential source data, refer to the table in section 5.2.

One important thing to consider is that, because most financial proxies will involve a degree of estimation and assumption, you may later decide to carry out sensitivity analysis (see step 10 on advanced techniques). That is, to what degree would a change in your assumptions affect Payback and ROMI?

This means that, if you find several different figures for the financial value or proxy of an outcome, you should record each of them and their source for future reference.

Figure 21: Methods of putting a value on campaign impact

Valuation Method	Description	Example[20]	Benefits	Disadvantages	Data Sources[21]
Economic value generated	Economic benefits in the form of anticipated increases in future productivity, output or investment	Recruiting more and higher calibre of graduates into teaching could improve educational outcomes for children, who go on to earn more and contribute more to the economy in future	Allows valuation of long-term benefit to society	Very difficult to establish cause and effect Estimates are likely to be subject to large margins of error	Work with departmental economists to identify suitable sources of data
Revenue generated (or lost) through tax	Estimate the gain or loss to the exchequer from the change in behaviour	(+) Encouraging businesses to invest in an area will bring tax revenue to the economy. (–) Persuading people to smoke less will reduce tax revenue	Figures likely to be accurate	Tax calculations may be complex. Difficult to forecast future value of benefits as tax rates will change	The Treasury, HM Revenue & Customs
Public expenditure saved directly	Costs incurred by Government that will immediately cease to be incurred if campaign is successful	Recruiting the required number of permanent teachers avoids the need to pay for supply teachers, who cost the Government more per unit of time employed	Where this method is available it can be calculated to a high level of accuracy	Many campaigns won't be able to demonstrate direct savings	Departmental accounts and annual reports

[20] All examples in this table are for illustration purposes only
[21] Please refer to the *Resources* appendix for details of a wide range of data sources that can be used to value campaign impact

Valuation Method	Description	Example[20]	Benefits	Disadvantages	Data Sources[21]
Public expenditure saved indirectly	Future costs incurred by Government that are unlikely to be incurred if the campaign is successful in the long term	Persuading those who are currently obese to move more and eat less may lead to weight loss. If they cease to be obese they will be less likely to require treatment for obesity-related disorders and their expected lifetime treatment cost to the NHS will be lower.	Can deliver estimates of long-term financial impact of complex behaviour change	Forecasting future benefits is subject to a margin of error Establishing cause and effect can be difficult. Assumptions must be made about the long-term effect of behaviour change	Academic or Government studies into economic impact (e.g. of smoking, obesity, death and injury in transport-related accidents)
Public money spent well	Costs incurred by Government that can be shown to be as low as possible whilst still delivering high quality outcomes against objectives	Marketing helps the right people into the Armed Forces application processes, minimising the administration costs per head associated with ineligible or unsuitable candidates and delivering a better quality of recruit.	Where this method is available it can be calculated to a high level of accuracy and compared against costs elsewhere Payback can be demonstrated relatively quickly	Only applies to a certain type of campaign (usually recruitment) If the costs haven't already been estimated accurately this can take time	Departmental accounts and ongoing operational monitoring of costs

Valuation Method	Description	Example[20]	Benefits	Disadvantages	Data Sources[21]
Enabling public money to be invested in priority areas	Government investment that will be realised if the campaign is successful in persuading people to take up a new benefit or opportunity	Imagine the Government makes a commitment to invest in the education of young people by lending them more money in the form of larger Student Loans. In the long term this may aim to generate economic value (see above) but a medium term goal would be for marketing to persuade more students to take up the loans and for the money to be spent as pledged.	Should be relatively straightforward to calculate the actual size of investment enabled	Unlike other measures in this suite of methods, this focuses more on the short term and does not reflect genuine benefit – i.e. showing that money has been spent on something does not prove that it was effective The resulting Payback and ROMI numbers will be difficult to evaluate in the context of other methods (as the return will be negative)	Departmental policy teams and economists
Stated Preference (Contingent Valuation)	Ask people directly how they value things (values captured are called Willingness to Pay, or Willingness to Accept)	A survey into a campaign promoting nuclear energy might ask direct, indirect or multiple choice questions about how people perceive the value of their homes and quality of life to be affected by living near a nuclear plant	Doesn't involve the same level of assumption implicit in the Revealed Preference method – likely to be more accurate	Requires a bespoke survey and is therefore likely to attract additional cost	Bespoke survey. See Treasury Green Book, Annex 2, point 6

Valuation Method	Description	Example[20]	Benefits	Disadvantages	Data Sources[21]
Hedonic Pricing (a Revealed Preference method)	Infer valuations from the prices of market-traded goods (values captured are called Willingness to Pay, or Willingness to Accept)	How much more do people pay for a house in an area with better schools, as determined from analysis of house price data and exam results?	Doesn't require bespoke research. Analysis could be done from a desk based on available data	Involves inference so may be subject to a significant margin of error Might have to pay for data	Market research. See Treasury Green Book, Annex 2, point 5
Travel Cost Method (a Revealed Preference method)	Infer valuations from the cost of inconvenience that people are prepared to put up with to travel to access a service	A new smoking cessation service is started by a PCT in an area that isn't that straightforward to access. The PCT records the postcodes of those who attend and how they heard about the service. A successful marketing campaign drives patients to use the service and the PCT uses DfT data to calculate how much it cost each patient to get there	If the data is available calculations are relatively straightforward	Travel costs are approximate so subject to a margin of error Requires very specific data capture	Department for Transport research, Bespoke survey
Average Household Spending (a Revealed Preference method)	Infer valuations from the average amounts spend by different household on a relevant category	A Change4Life goal is to get people doing more exercise. One financial proxy for this could be the amount they spend on gym membership and sports activities	If the data is available calculations are relatively straightforward	Requires very specific data capture Might have to pay for data	Consumer surveys

Figure 22: Smoking – Financial Proxies

The Tobacco Control campaign used the following financial proxies to put values on the outcomes it delivered:

Outcome	Metrics for Payback & ROMI	Financial Proxies
Improved health	Number of smokers Number of deaths from smoking related illnesses	N/A Value of a prevented fatality (DfT)
Saving to the NHS	Number of admissions to hospital for smoking related illnesses	Treatment Costs (from academic study)
Reduction in accidents	Number of domestic fires caused by cigarettes	Costs associated with domestic fires (from academic study)
Savings to employers	Number of sick days due to smoking related illnesses	Average cost of a sick day (from academic study)

Source: Adapted from IPA Effectiveness Awards 2004 "Tobacco Control. How the Integration of Advertisers made Advertising more Powerful than Word of Mouth"

3.9 Step 6: Calculate Payback at present values

Multiply out the financial values or proxies by the campaign impact (the outcome less the effects of other factors) to calculate Payback. Adjust the Payback to present values and remember to account for negative impact, retention, displacement and halo effects.

Task 6.1: Calculate Payback

Take the change in outcomes measured or forecast following the campaign. Exclude other factors by multiplying by the proportion of this effect that was attributable to the campaign. Then:

- **Add:** the impact of relevant halo effects
- **Subtract:** negative impacts and displacement
- **Multiply:** the remaining impact by its financial value or proxy, to get Payback, then multiply by retention over time to get future Payback estimates

Imagine calculating Payback for a two-year public sector recruitment campaign, at the end of year one. The calculation could go like this:

Item	***Quantity***	***Details***
Number of recruits (year 1)	1,000	Additional annual recruits observed at end of year 1
% attributable to campaign	75%	Remaining 25% attributed to financial incentives
Year 1 recruits due to campaign	**750**	
Plus halo effects	100	Signed up for a similar public sector organisation
Minus displacement	50	Signed up for a private sector company, initially inspired by the government campaign
Net recruits due to campaign, year 1	**800**	
Retention	50%	Per annum
Net recruits due to campaign, year 2	**400**	
Money saved per recruit	£5,000 (per recruit)	Annual cost of a temporary employee
Money lost in taxes per recruit	£500 (per recruit)	Would have raised more tax from temporary employees
Net saving from one recruit	£4,500 (per recruit)	
Payback (Year 1)	**£3.6m**	**= 800 x £4,500**
Payback (Year 2)[22]	**£1.8m**	**= 400 x £4,500**
Total Payback	**£5.4m**	**= £3.6m + £1.8m**

[22] Note that this value hasn't been discounted to year 1 values yet – we'll look at this later

The following example shows how a basic Payback calculation was carried out for a successful campaign:

Figure 23: Payback – DfT Rear Seatbelts

The DfT Rear Seatbelts campaign took a table of financial proxies,

	Cost element						
	Casualtyrelated costs			Accidentrelated costs			
	Lost output	Medical and ambulance	Human costs	Police costs	Insurance admin	Damage to property	Total
Fatal	399,540	4,730	794,870	1,220	190	7,120	1,207,670
Serious	16,430	9,840	111,700	170	120	3,240	141,490
Slight	1,930	820	9,170	40	70	1,920	13,940
All injury	9,250	2,170	34,350	70	80	2,180	48,100

Base: June 1998

then multiplied out by the number of casualties that the campaign had been calculated to have prevented.

TABLE 5: CASUALTYRELATED COSTS (K)

	Casualties prevented	Lost output	Medical and ambulance	Human costs	Total
Fatal	18	7,192	85	14,308	21,585
Serious	230	3,779	2,263	25,691	31,733
Slight	1,650	3,185	1,353	15,131	19,669
Total	1,898	14,156	3,701	55,130	72,987
Adspend					1,050*

*Adspend includes the media spend in bursts 1 and 2 and production costs.

The total Payback was estimated to have been around £73million (circled).

Source: IPA Effectiveness Awards 2000 "Rear Seatbelts: Sudden Impact, How Can We Measure the Cost of a Life"

When calculating Payback, the concept of *Customer Lifetime Value*, taken from private sector marketing, can be useful. Once marketing has 'converted' the customer to buy your product – or adopt a certain behaviour in most public sector cases, such as stopping smoking – then this pays back over a number of years. If you know the number of people who 'convert' in each year you can project forward to get a total Payback figure.

See the following example of this technique and the *TDA: Teacher Recruitment* case study attached to this document.

Figure 24: Payback – DWP Direct Payment

DWP's Direct Payment campaign converted people from paper-based to online payment. DWP estimated that by increasing take up rates from 43% to 85%, they were saving the Government around £450m per year in direct costs. However, to isolate the specific contribution of the campaign, they had to take into account the natural drift to electronic payment then look at savings year-on-year.

To be conservative in their estimates, the team modelled the natural drift as an exponential rate of improvement (increasing faster and faster), and for 2006 to 2009, assumed that the conversion rate would not increase from the 90% it reached in May 2005.

It was estimated elsewhere that for every 1% increase in conversion, the Government could expect to save around £10m. This was based on the idea of Customer Lifetime Value: that once converted, a customer would save money over a number of years into the future. The resulting analysis showed that the campaign could save the Government a total of £1.5bn over 7 years.

Year	Projected Conversion	Actual Conversion	Difference (% points)	Incremental Savings
2003	47%	58%	11	£ 110m
2004	52%	87%	35	£ 350m
2005	58%	95%	37	£ 370m
2006	*65%*	*95%*	*30*	*£ 300m*
2007	*73%*	*95%*	*22*	*£ 220m*
2008	*82%*	*95%*	*13*	*£ 130m*
2009	*92%*	*95%*	*3*	*£ 30m*
Total				£1,510m

Source: 'Direct Payment (Department for Work and Pensions/ COI) "Giving it to you straight", IPA Effectiveness Awards 2007

One further technique worthy of mention is the Quality Adjusted Life Year (QALY) – used to evaluate the effectiveness of **Health** interventions. A QALY provides an estimate of the extra quantity and quality of life provided to an individual by an intervention.

Using this information, it can then be possible to look at the financial benefit returned per QALY gained and the cost per QALY added. These measures, in a health setting, could be used in a similar way to Payback and ROMI. Further discussion of these concepts is beyond the scope of this document but you can refer to: http://tinyurl.com/l3x8ys[23] for an overview and http://tinyurl.com/yjlnsyr[24] for more detail on how to calculate QALY.

[23] NICE introduction to QALY
[24] Guidance from Bandolier, an independent medical journal set up by Oxford scientists

Task 6.2: Adjust Payback to present values

When calculating the Payback (and cost) of a campaign that runs over several years, the concept of the *time value of money* should be taken into account. This is the concept that £1 now is worth more than £1 in one year or several years' time. It recognises that people prefer to receive £1 today rather than tomorrow because there is a risk that they won't receive the money or there is an *opportunity cost* (i.e. they may be missing out by not investing the money elsewhere).

The HM Treasury Green Book[25] recommends that a **discount factor of 3.5%** should be applied to financial costs or benefits for every year that they are projected into the future (for up to 30 years). For example, imagine a campaign which is forecast to pay back £1m each year for the next 5 years. The value in year 2 is reduced by 3.5%; the value in year 3 reduced by 3.5% again; and so on:

Year	Forecast Payback	Present Value
Year 1	£1m	£1m = £1,000,000
Year 2	£1m	£1m / 1.035 = £ 966,184
Year 3	£1m	£1m / 1.035^2 = £ 933,511
Year 4	£1m	£1m / 1.035^3 = £ 901,943
Year 5	£1m	£1m / 1.035^4 = £ 871,442
Total	**£5m**	**£ 4.7m**

This sum, of all the present values for an investment or saving, is known as the Net Present Value (NPV) – in this case around £4.7m instead of the £5m total Payback.

What are the risks if you don't discount total Payback to Net Present Value? The following table illustrates by just how much you could overestimate Payback. It assumes that you are predicting the same amount to be paid back each year, for a number of years.

Figure 25: Why Net Present Value is important

Number of Years of constant annual Payback	Total Payback overestimates NPV by (%)
5	7%
10	16%
15	26%
20	36%
25	47%

The ready reckoner that follows (Figure 26) can be used as a starting point to discount future values.

[25] Annex 6

Figure 26: Net Present Value – ready reckoner

Number of Years	Present Value of £1 (discount rate of 3.5%)
1	£1.00
2	£0.97
3	£0.93
4	£0.90
5	£0.87
6	£0.84
7	£0.81
8	£0.79
9	£0.76
10	£0.73
11	£0.71
12	£0.68
13	£0.66
14	£0.64
15	£0.62
16	£0.60
17	£0.58
18	£0.56
19	£0.54
20	£0.52
21	£0.50
22	£0.49
23	£0.47
24	£0.45
25	£0.44

Imagine that you expected a campaign to pay back £100k in Year 20. Reading from the table, we can see that each pound is worth 52p, so the present value of the £100k is £100k x £0.52 = £52k.

Finally, bear in mind – when using this table with large future costs – that the figures shown have been rounded and a discount rate of 3.5% has been used throughout. Beyond 30 years, the rate changes and details of this can be found in the HM Treasury Green Book

For further help on discounted cash flow and Net Present Value analysis, you should consult a basic guide to accounting or consult a chartered accountant.

3.10 Step 7: Calculate costs at present values

Identify all costs that have been incurred in running, and as a result of running, the campaign. Adjust costs to present values in the same way as for Payback.

ROMI is the ratio of financial Payback to the cost of a campaign, so the same rigour employed to quantify Payback should be applied to quantify campaign cost, for your measure of ROMI to be accurate and robust.

Task 7.1: Count up the campaign costs

What to include

- All costs associated with the marketing communication campaign, for example:
    - Research
    - Strategy development
    - Procurement (if applicable)
    - Creative work (agency, in-house, including production costs and fees)
    - Media buying (advertising space – TV, radio, online)
    - PR fees and costs
    - Sponsorships
    - Partnership marketing
    - Collateral costs (printing, hosting or distributing materials)
    - Online collateral, sites and tools
    - Evaluation (tracking research, polls, ongoing analysis)
    - Analysing, tracking and calculating Payback and ROMI (where this expense is borne by the Government[26])
- Variable costs arising directly as a result of the campaign impact, for example:
    - Setting up extra phone lines or sites because the campaign is driving greater numbers of people to call
    - Purchasing greater bandwidth, hosting space or data storage due to an increase in online response
    - Employing additional news & PR staff to handle sustained increased media interest in the campaign

What to leave out

- All costs that would have been incurred if the campaign had not been run:
    - Fixed costs and assets
    - Policy implementation costs
    - Costs of changes in legislation

It might be useful to break down costs in several different ways. For example, you could look at costs by:

[26] For the examples in this guide, the measurement of Payback and ROMI was either assumed to be included in the campaign cost, or was borne by the creative agency behind the campaign in preparation for an IPA Effectiveness Award submission

- Stakeholder
- Target group or Region
- Campaign
- Media
- Time period

However – take care, as you did in **Step 4**, when making the link between these investments and the Payback. You should only calculate ROMI broken down in this way if you have a corresponding Payback figure and you have demonstrated that the specific investment was responsible for this.

In other words, it is important not to lose the chain of causation that you established between the marketing and the impact when you isolated other factors. Imagine that you run a TV and PR campaign simultaneously, spending £1m on each, and total Payback is £4m, but you didn't have any measure of their relative success. It would be tempting to say "let's assume that they each contributed 50% of the Payback". In this case, each would have been shown to pay back £2m at a ROMI of 100%, but in reality, one of the campaigns could have driven the majority of change and the other could have been ineffective.

See the section on *Advanced Payback and ROMI* (Step 10) for more information on breaking down the analysis in this way.

Task 7.2: Adjust costs to present values

Finally, just as you should reduce Payback to present values, you should take the same approach with the costs of multi-year campaigns. The overall campaign cost, when calculating ROMI, should be the Net Present Value (NPV) of total costs.

3.11 Step 8: Calculate Net Payback and ROMI

Calculate Net Payback by subtracting the campaign cost from the total Payback. Then calculate ROMI by dividing the net Payback by the total cost.

The Net Payback is the Payback, less the cost of the campaign. Return On Marketing Investment (ROMI) is the ratio of the Net Payback resulting from a campaign, to the investment made in it.

> **Net Payback = Payback (NPV) – campaign cost (NPV)**
>
> Then,
>
> **ROMI = Net Payback (NPV) / campaign cost (NPV)**

Note that ROMI, when calculated this way, represents the number of pounds that the campaign returns for every pound spent, *once it has paid for itself*. For example, if the formula returned the number 6, this would mean that the campaign paid for itself, then paid for itself again another 6 times. **Any ROMI above zero, or 0%, is good**.

The reason for using this version is so that results can be compared with other investments, which are usually stated in terms of what percentage of growth they return beyond their original worth.

ROMI can also be expressed as a percentage:

ROMI (%) = (Net Payback (NPV) / campaign cost (NPV)) x 100%

To use the same example as above, 6 x 100% = 600%.

Recall the fictional public sector recruitment campaign for which we calculated Payback in Step 6. Imagine that the cost of the campaign was £1m.

Measure	***Quantity***	***What it means***
Total Payback	**£5.3m**	= £3.6m + £1.8m discounted to present value (£1.7m)
Total Cost	**£1m**	Assuming all the cost incurred in year 1, so no discounting required
Net Payback	**£4.3m**	The Payback, less the cost
ROMI	**£4.30:1 Or 430%**	The campaign paid for itself, then paid back £4.30 for every pound invested

Finally, note that some people may calculate ROMI without subtracting campaign costs. This is not necessarily wrong, but leads to a different interpretation of the numbers.

In the example above, this would mean that ROMI was £5.30 : £1 or 530% and it could be said that the campaign paid back £5.30 for every £1 invested. In this version, any ROMI above 1, or 100%, is good. This might look like a more intuitive way of stating ROMI, but we recommend using the Net Payback version to allow comparison with types of investment other than marketing.

3.12 Step 9: Understand Payback and ROMI

Interpret measures of Payback and ROMI and include them in a balanced scorecard to track the efficiency and effectiveness of your campaign.

Payback and ROMI should be considered as part of a balanced scorecard that reflects the outcome (or projected outcome) of the campaign. They don't paint the whole picture of how a campaign is performing, but they can give you a very good indication of progress towards targets, financial effectiveness and financial efficiency.

At this stage, remember one of the Key Principles: **Net Payback is more important than ROMI.** The first consideration in this type of analysis should always be whether your campaign has delivered a net benefit (positive Net Payback). Efficiency (large ROMI) is a bonus.

Firstly, we know that we should be looking for Payback to be positive. Positive payback means the campaign is working and generating value.

Secondly, we will **usually** be looking for a positive Net Payback. That is to say, we will usually want the Payback to be greater than the costs. In fact, if we were evaluating our campaign on financial grounds alone, we would want to **maximise** Net Payback. But as we have tried to stress throughout, financial payback is usually only one consideration among many for public sector marketing communication. There will often be occasions when the need to meet a specific policy objective outweighs the need for the campaign to pay for itself.

Thirdly, if we are trying to maximise Net Payback, **and** we have fixed budgets to do this with, then we should aim to maximise the overall ROMI of our campaign. That is to say, we should try to allocate that budget as efficiently as possible.

A high ROMI is an indication that spending money on your campaign is effective and it may imply that you could spend more to gain even greater Payback. Eventually you may reach a situation of diminishing returns, but we will discuss this separately in the *Advanced Payback and ROMI* section – step 10.

A low ROMI should be interpreted with care. There are three main reasons why ROMI might be low:

- The activity in question was inefficient. Stop spending on this activity.
- You spent too much on this activity and got diminishing returns. Reduce spend.
- You spent too little on this activity. Increase spend and reap increasing returns.

In short, low ROMI should be investigated in more detail. See the *Advanced Payback and ROMI* section for more details.

Note that, while ROMI is a useful metric for allocating fixed budgets, it can be a dangerous metric when setting the overall size of the budget. A common mistake that a lot of people make is to think that you should always try to maximise ROMI.

In fact, trying to maximise ROMI when setting budgets will generally lead to budgets being much too small. So, **concentrate on Net Payback, not ROMI**, when working out how much to spend overall. See the *Advanced Payback and ROMI* section for more details.

Because the robust measurement of Payback and ROMI is not yet commonplace across Government, there is no detailed benchmark information for the values of Payback and ROMI that might be expected by different campaigns.

In the private sector, the analysis carried out in *Marketing in the Era of Accountability* listed the ROMI figures calculated correctly for 39 campaigns. This showed large variation, but overall, a high level of return.

Figure 27: ROMI for leading private sector campaigns

ROMI Range	Number of cases	% of total
<= 50%	10	26%
50-100%	3	8%
100-200%	9	23%
200-400%	8	21%
400-600%	4	10%
600-800%	2	5%
>= 800%	3	8%
Total	39	100%

The median ROMI figure for these campaigns was 175%: that is to say for every £1 spent, the company got its £1 back, plus another £1.75. However, there is no strong evidence to suggest that these campaigns were representative of private sector marketing as a whole – it was a small sample, and by nature of the fact that they had been submitted to the IPA Effectiveness awards, these were very successful campaigns.

Finally, as identified in the introduction, there may be campaigns for which there is no sensible financial proxy for the campaign impact and therefore no Payback or ROMI figure. Campaigns to encourage voter registration may be one such example. In these cases, other measures (such as awareness and intended behaviour) on a balanced scorecard become more important. If, in these cases, there are still other ways of evaluating financial efficiency – for example, cost per response – these should take the place of Payback and ROMI as a financial decision-making tool.

3.13 Step 10: (Optional) Advanced Payback and ROMI

Refine your estimates of Payback and ROMI using more advanced techniques. Carry out sensitivity analysis. How would different assumptions affect Payback and ROMI?

The techniques that we have discussed so far will enable you to calculate robust and defensible estimates of the Payback and ROMI for your campaign. However, there are some more advanced techniques that you could consider employing to refine your estimates. We will not discuss these techniques in detail here, but we will aim to explain how they work and why you might use them.

1) Payback and ROMI by channel / medium

If you measure Payback and ROMI by medium, then you can work out (with the help of other evaluation techniques) which media work best, and so improve your media planning. You will normally need econometrics or a test and control design to ensure that you can genuinely separate the effects of the different media interventions.

2) Payback and ROMI by target audience

Doing predictive analysis of Payback and ROMI for different groups (audience segments) could help you to decide who to talk to. Evaluating the same during or after the campaign could help you to understand the relative effectiveness of the campaign among different groups.

A further consideration should be **Distributional Analysis**. This is a term used to describe the distribution of the costs or benefits of Government interventions across different groups in society. Outcomes might have differential impacts on individuals, amongst other aspects, according to their:

- Income
- Gender
- Ethnic group
- Age
- Geographical location or
- Disability

Marketing communication is usually targeted at particular groups in the population, segmented by attitudes, behaviours and the demographics listed above. Therefore it will almost certainly have a different effect on each of these different groups.

Later, it will be possible to calculate Payback and ROMI for each of the different target groups, as long as you record how much is spent on communication with each group and the Payback delivered from each group.

3) Payback and ROMI by campaign/execution

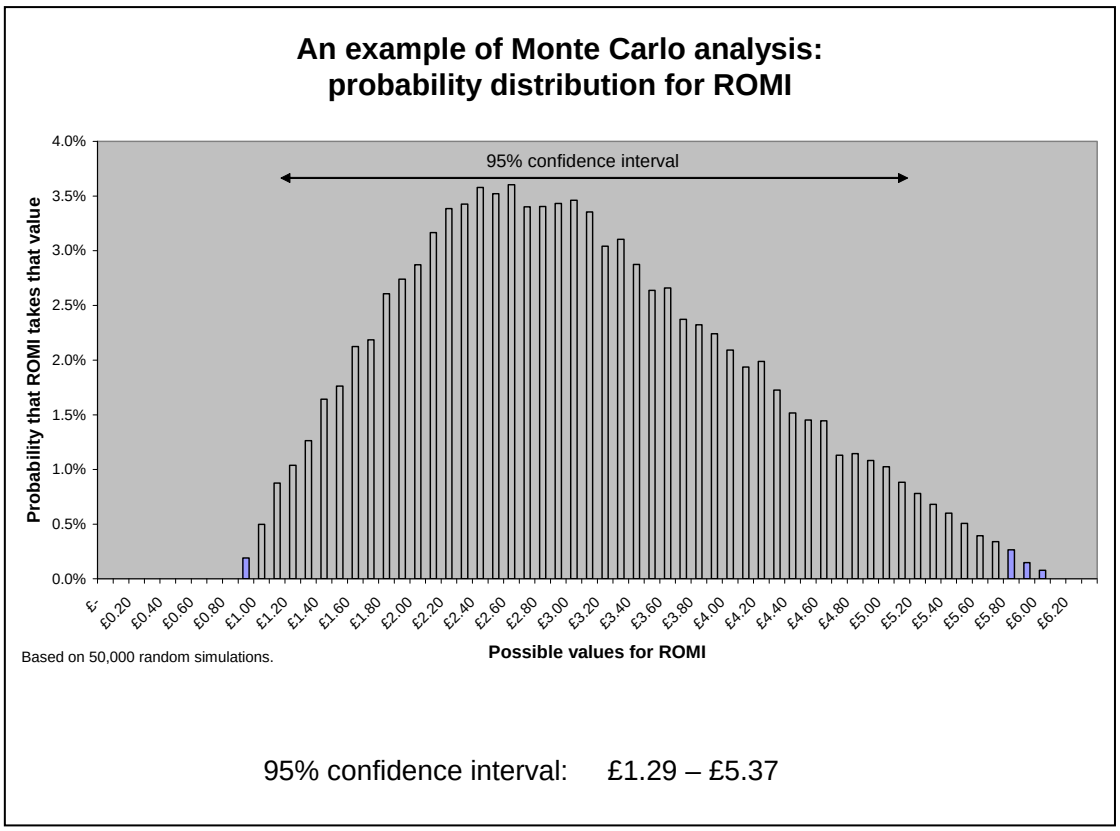
Comparing different campaigns may help you to understand what works and what doesn't, although you'll generally need to use other research to understand why one campaign is better than another. Occasionally, test and control experiments or split copy tests might allow you to compare individual executions directly.

4) Sensitivity Analysis

Measurement of Payback is not an exact science, so good practice would be to undertake some sensitivity analysis to determine how it would be affected by changes in the assumptions, forecasts or projections that you have made so far.

The approach should be to get a **range of estimates** for the real Payback figure, described by a conservative estimate at the lower end, a more optimistic estimate at the other end and central estimate in between.

Imagine doing this for the fictional recruitment example used previously. For the purposes of this example we'll simplify things by leaving off displacement, halo effects, and retention:



Estimate	No of recruits	% of new recruits attributable to campaign	Estimated amount saved per recruit	>>>	Est. Payback	Net Payback	ROMI
Low	1200	50%	£3,000	**>>>**	**£1.8m**	**£0.8m**	**£0.80:1**
High	1200	90%	£6,500	**>>>**	**£7.0m**	**£6.0m**	**£6:1**
Central	1200	75%	£4,500	**>>>**	**£4.1m**	**£3.1m**	**£3.10:1**

In this example, our basic assumptions (the central estimates) give us a ROMI of £3.1:1. However, if we adopt the most optimistic assumptions, it is clear that ROMI could be as high as £6:1. And if we take a pessimistic view, ROMI may be as low as £0.8:1. Thus we arrive at a range of possible values for ROMI, from £0.8:1 to £6:1.

In reality, it is highly unlikely that all of our assumptions are too optimistic, or too pessimistic. It's much more likely that our assumptions will be a mixture of optimistic and pessimistic. As a result, the most likely values for ROMI will be somewhere in the middle of our possible range.

A statistical technique called Monte Carlo analysis can be helpful here. The Monte Carlo Method looks at lots of different combinations of assumptions, to assign probabilities to different outcomes. For example, a Monte Carlo analysis based on the assumptions in the table above shows that the likely range of values for ROMI is narrower than the range of possible values we estimated above. In fact, we can be 95% certain that ROMI lies between £1.29:1 and £5.37:1. [This range is called the 95% confidence interval]

Figure 28: Confidence interval for ROMI

Monte Carlo analysis is a specialised technique, so get a mathematician, statistician or econometrician to help you.

6) Marginal ROMI

The basic calculations for payback and ROMI tell you whether the campaign as a whole paid for itself, and how efficiently the budget as a whole was spent. These are useful measures to include in any evaluation of a campaign, but sometimes you may need to go further.

For example, suppose you make and run a TV campaign. Your initial evaluation suggests that the campaign works quite well, but that the payback is not sufficient to cover all the costs of making and running the ads, and a result, overall ROMI is negative. Should you pull the campaign and start again?

Not necessarily. The basic ROMI calculation subtracts off all campaign costs, including the costs associated with producing the ads. But these are sunk costs, which will not be incurred if you run the ads again. It's possible that, now that you've made the ads, the sensible thing to do is to keep running them.

In a situation of this kind, 'Marginal ROMI' is a more useful metric than the standard ROMI measure. Marginal ROMI measures the financial return from spending an extra (or "marginal") £1 on your campaign. This measure is the most useful one to use

when deciding whether or not to continue with your activity, and how much to spend on it. For instance, if overall ROMI is low, but marginal ROMI is high, then you should probably continue with the activity, perhaps at an even higher budget level.

The simplest way to calculate marginal ROMI is to do the standard ROMI calculation, but without subtracting fixed marketing costs, such as creative development and production. Only variable marketing costs, such as the cost of media, should be subtracted.

A more sophisticated approach to marginal ROMI involves how the response to marketing varies with the level of investment – the so-called ‘response curve’. Knowing the shape of the response curve allows you to fine-tune budget levels so as to maximise payback. However, this technique requires sophisticated econometric analysis, and lies outside the scope of this document.

4 Case Study: Teacher Recruitment 1998-2005

4.1 The Case

This case study, which won an IPA Effectiveness Award, demonstrates the stages that were used during post-campaign evaluation to calculate the campaign's financial Payback. We then demonstrate a basic ROMI calculation, based upon simple assumptions, and also explain how a more advanced ROMI, or range of ROMI, can be reached by varying the assumptions. The case study concludes with an update of teacher recruitment since 2005.

In using this case study to demonstrate our thinking on Payback and ROMI, we have added to the depth and complexity of the analysis. This does not affect the relevance and appropriateness of the original calculation.

We would like to thank the TDA for their assistance in using this case study, which is an excellent example of how public sector marketing can deliver substantial Payback at a high rate of ROMI.

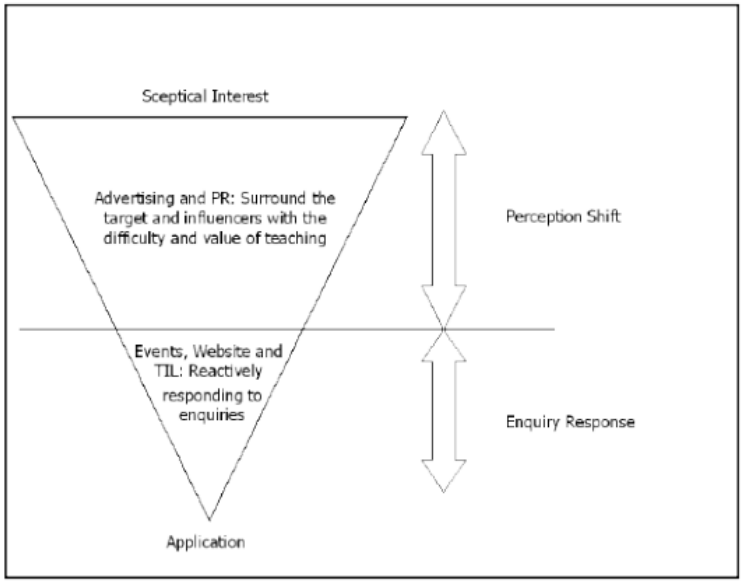
4.2 Background

In 1997 there was a worsening teacher supply problem taking place against a backdrop of England and Wales trailing behind their OEDC competitors for literacy rates in Primary Schools and the achievements of 18 year olds.

Numbers entering teaching were falling rapidly at a time when retirement rates in the ageing teaching workforce were accelerating and the number of pupils in schools was growing. The resultant escalation in vacancies would have forced schools to employ more supply teachers. With the average cost of a supply teacher much higher than a permanent teacher and few Head Teachers confident that supply teachers would be familiar with National Curriculum requirements, this would have been an expensive and less than desirable way of teaching the nation's children.

Without enough high quality teachers in the frontline, the government's investment to improve schools would have been without return. To avert a crisis in schools and to ultimately make the UK economy more competitive, the government started a teacher recruitment campaign through the Training and Development Agency for Schools (TDA) and COI.

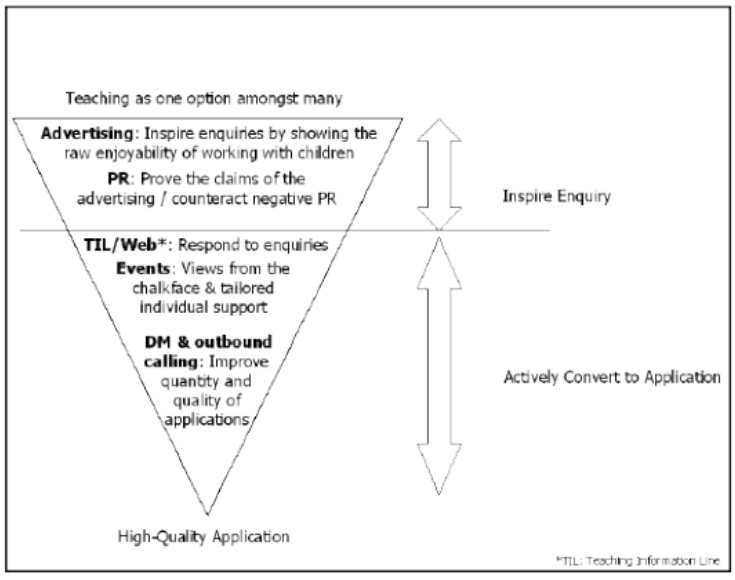
4.3 Timing and scope of the campaign



Phase 1: 1998 - 2003 aimed to maximise the numbers of 'born to teach-ers' entering the profession. The two campaigns were 'No-one Forgets a Good Teacher' (1998 – 2000) and 'Those Who Can, Teach' (2000 – 2003)

Phase 2: 2003 – 2005 aimed to motivate those who would have to 'change to teach'. Two campaigns created were 'Headless' and 'Work with the most exciting people in the world'.

4.4 Nature of the campaign



The first phase campaigns used advertising and PR to demonstrate the difficulty and value of a career at the 'chalkface' and thus raised the status of teaching. The communication model used is shown below in Figure 29:

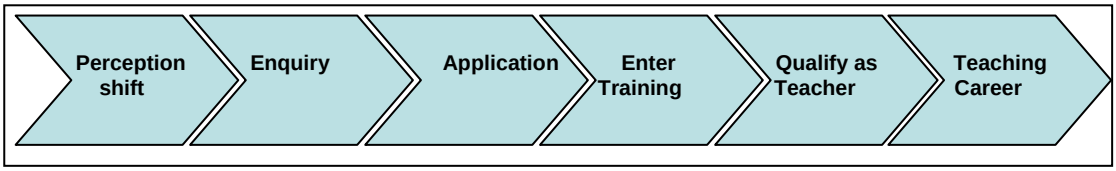
Figure 29: 'Born to teach' communication model

The second phase campaigns aimed to convince those who were potentially interested in teaching that the joy of working with children would provide the positive interaction that their current jobs were failing to give them. Phase two, 'Change to', communications used a more sophisticated model of integration (shown in Figure 30) that tailored communications along the 'customer journey'.

Figure 30: 'Change to teach' communication model

4.5 Using the 10 steps to calculate Payback and ROMI

Step 1: Mapping objectives to outcomes



The scale of the challenge was that a cumulative 78,215 extra teachers needed to be recruited over and above existing levels over 8 years. The objective was to recruit more teachers and recruit high quality teachers. An increase in the numbers entering teacher training of 50% was required inside eight years, without jeopardising quality of applicants.

The stages which helped to reach the ultimate goal of the campaign were:

1. **To recruit a greater number of teachers:** generate more interest in teaching, more applications to training, more individuals starting training, more becoming teachers
2. **To recruit high quality teachers:** better results achieved by school children, and those children eventually doing better in life.

Figure 31 shows the stages through which the campaign aimed to move potential teachers. By changing attitudes towards teaching and communicating the benefits and application routes, it aimed to drive additional enquiries and then applications from the best candidates. These candidates would then enter training, qualify to become teachers and embark on a teaching career, over which they would enhance the prospects of pupils, reducing the discontinuity and additional cost of supply teaching.

Figure 31: Map of teacher recruitment

Step 2: Scope and identification of stakeholders for Payback and ROMI

The scope of the overall campaign was broad: ultimately to increase the quantity and quality of teachers in schools to result in children nationwide being better educated and the economy stronger and wealthier.

For the calculation of Payback and ROMI a clear campaign period was defined to ensure the data was mature (1998 – 2005). It was important to discount all other influencing factors, such as more recent changes to the UK economy, and all marketing activity that fell outside of the period 1998 – 2005.

The marketing costs were borne by the TDA and significant stakeholders were those in government (DFES), schools, colleges that offer PGCE qualifications, and the schoolchildren taught by newly recruited teachers.

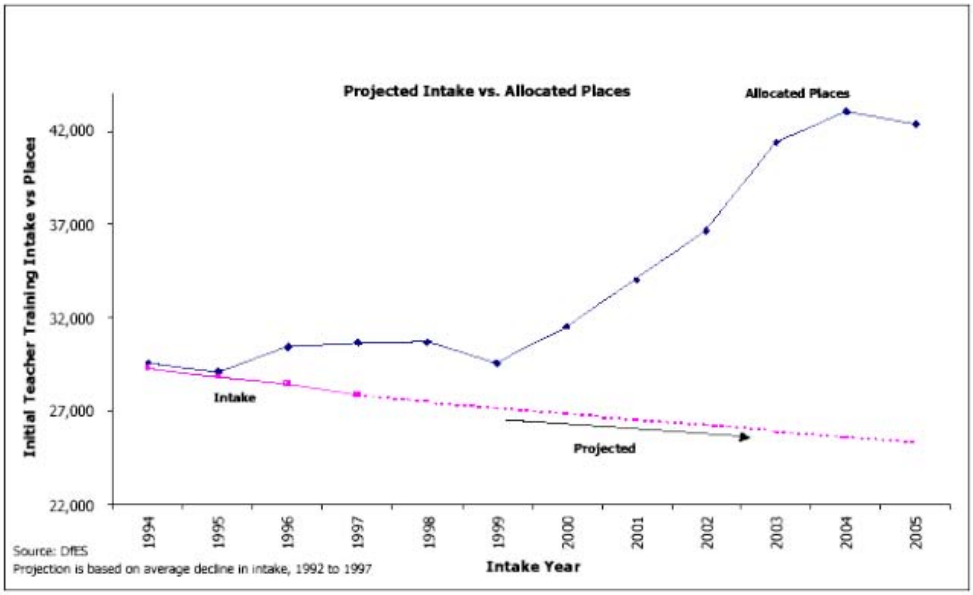
Many indirect and less tangible benefits of the campaign were out of the scope for calculation of ROMI, yet should still be highlighted for consideration, such as the financial advantages for colleges who had more PGCE students available to them as a result of the campaign.

Step 3: Measurement of campaign outcomes

Performance indicators were varied: ranging from meeting recruitment targets; changes in the image of teaching; improvement in exam results; and indicators of wider economic and social Payback such as the competitiveness of the UK economy. For simplicity the cost of supply teacher salaries, which is just one element of Payback, was chosen for ROMI calculations because it demonstrates direct financial impact.

Specific indicators were chosen to measure the campaign's short term and long term goals. The ultimate campaign goal was measured by the number of trainee teachers recruited. The intermediate measures working towards this were:

- Awareness of teacher recruitment advertising
- Positive responses to the advertising
- Image of teaching
- Interested enquiries to the Teaching Information Line
- PGCE applications by subject



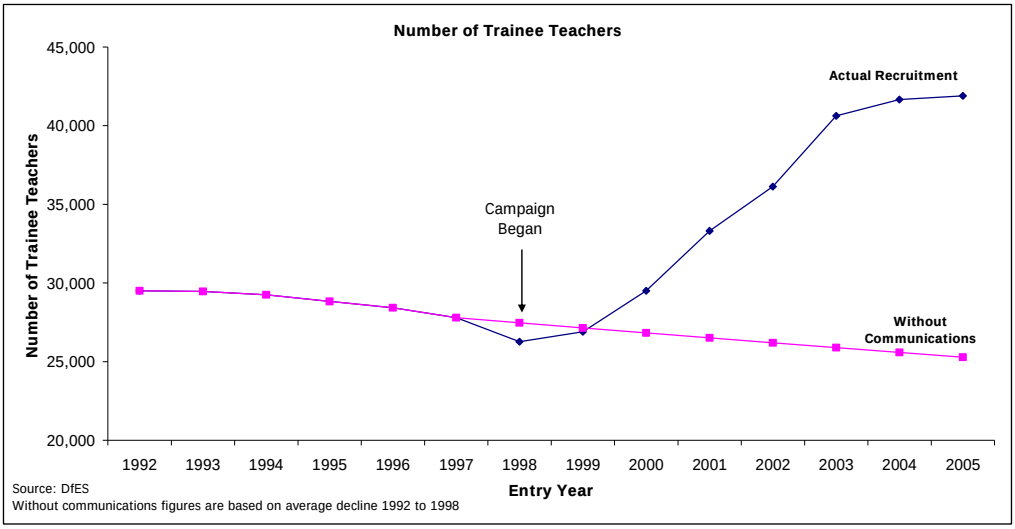
The baseline measures to understand the wider context, prior to the campaign, were:

- The level of education of the UK's workforce in comparison to its competitors such as Germany and France (55% of the UK workforce held post-16 qualification in 1997)
- The UK's productivity rate in comparison with other OECD countries (UK Index of GDP per hour worked was 90% in comparison to a G7 average of 100%)

Baseline indicators chosen for measurement to show the direct benefit of the campaign were defined as follows:

- Intake to teacher training. These rates declined from 29,500 in 1992 to 27,804 in 1997 and teacher retirements were accelerating fast with 50% of all existing teachers due to retire by 2010 – some 200,000 teachers who would need to be replaced.
- Pupil: teacher ratios in primary and secondary schools had risen from 19 in 1987 to 21 in 1997.
- Allocated places categorised by subject. The number of places in 'shortage subjects' of Maths, Physics and Chemistry was 55% of the total numbers graduating in those subjects per year.
- The number of places on teacher training courses increased to 42,000 each year by 2005 and to fill each place would have required 15% of all new graduates to enter teacher training each year. See Figure 32 below:

Figure 32: Projected intake vs. allocated places



To fill these places, a cumulative 78,215 extra teachers had to be recruited over and above existing levels over eight years. A ratio of two applications per place was mandated to ensure that improving the quantity of new teachers did not jeopardise their quality, which meant generating 156,430 more applications from graduates.

Step 4: Measurement of the campaign's impact

Inheriting a legacy of six straight years of decline, the campaigns attracted an additional 67,000 trainee teachers over six years – a successful step towards the eight year target of 78,215. By 2005 the campaigns were recruiting 65% more trainees than one would have expected without communication. See Figure 33:

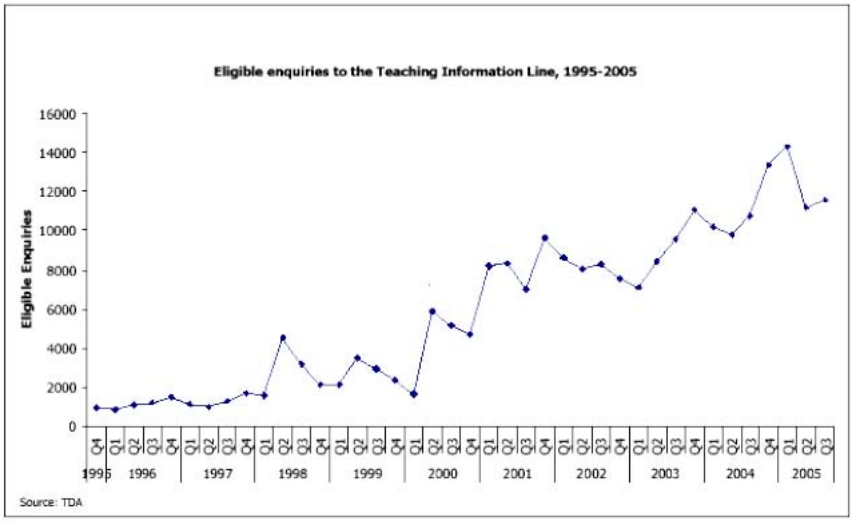


Figure 33: Increase in trainee teachers since 1998

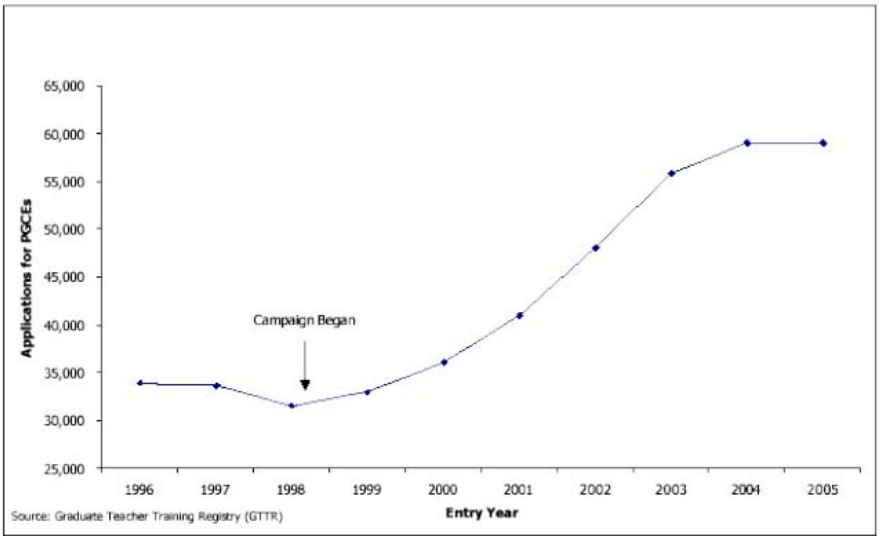
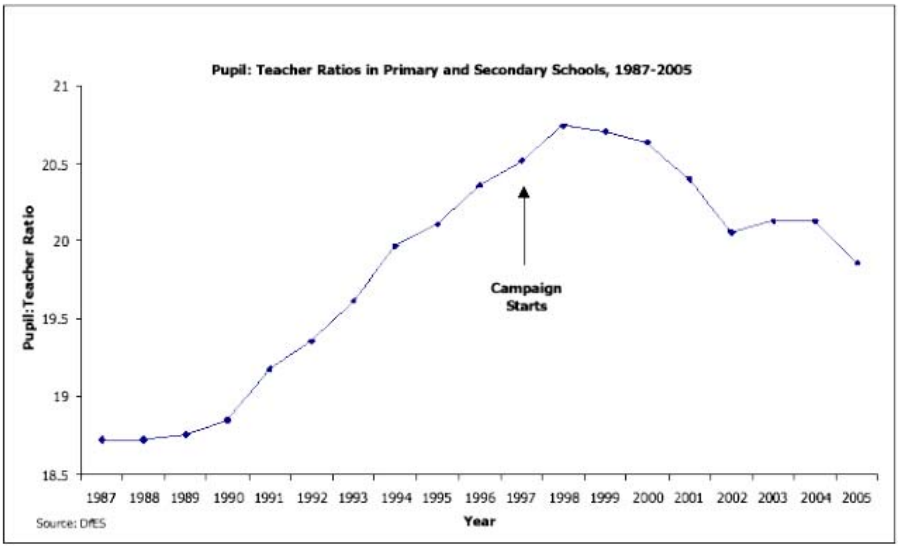
Intermediate indicators demonstrated high advertising awareness and the image of teaching improved. But to what extent did this result in the recruitment of more teachers?



The increasing number of eligible enquiries to the Teaching Information Line (Figure 34) showed that interest in teaching grew strongly:

Figure 34: Eligible enquiries to the Teaching Information Line, 1995-2005



Crucially, applications to PGCEs doubled (see Figure 35), with significant improvements in problem subject areas such as Physics, Chemistry and Maths. Evidence suggested that one effect of the extra teachers in these subjects could have been to raise the numbers studying the subjects at university. This could create a feedback loop which would grow the future pool of potential teachers in these hard-to-recruit subjects.

Figure 35: Applications for PGCE courses

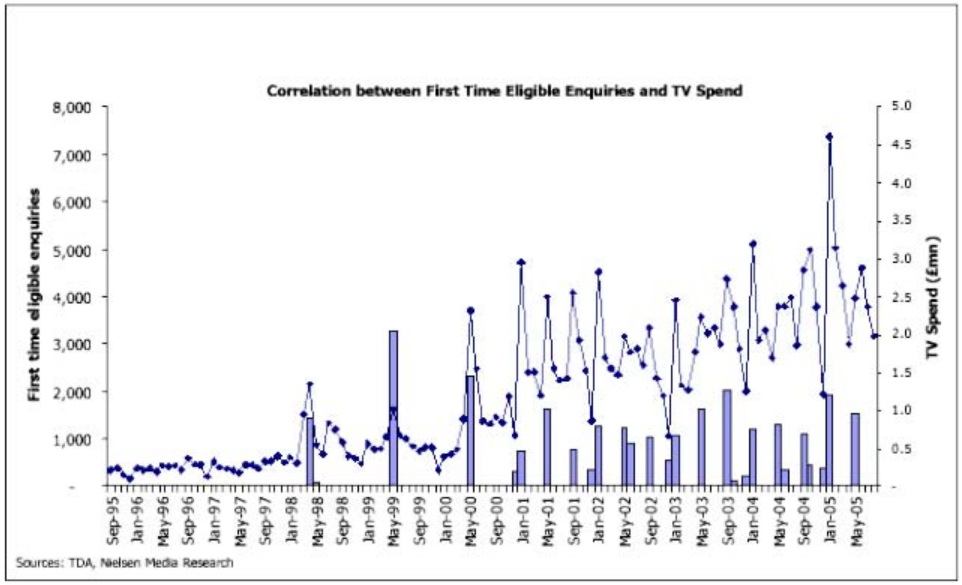
Reductions in pupil to teacher ratios (Figure 36) significantly reduced class sizes, vital in contributing to attempts to improve standards.

Figure 36: Pupil to teacher ratios in primary and secondary schools

The quality of teachers also improved. By doubling the number of applications for teacher training, the campaign raised the ratio of applications to places, from 1 to 1 in 1997 to 1 to 7 in 2005, enabling training providers to pick the best candidates.

The increase in quantity and quality of teachers had a direct effect on pupil achievement. While influenced by a range of factors, the increase in pupil attainment achieved at all levels could not have been sustained without the necessary numbers of well-qualified teachers to deliver the curriculum.

Could these outcomes be attributed to the marketing?



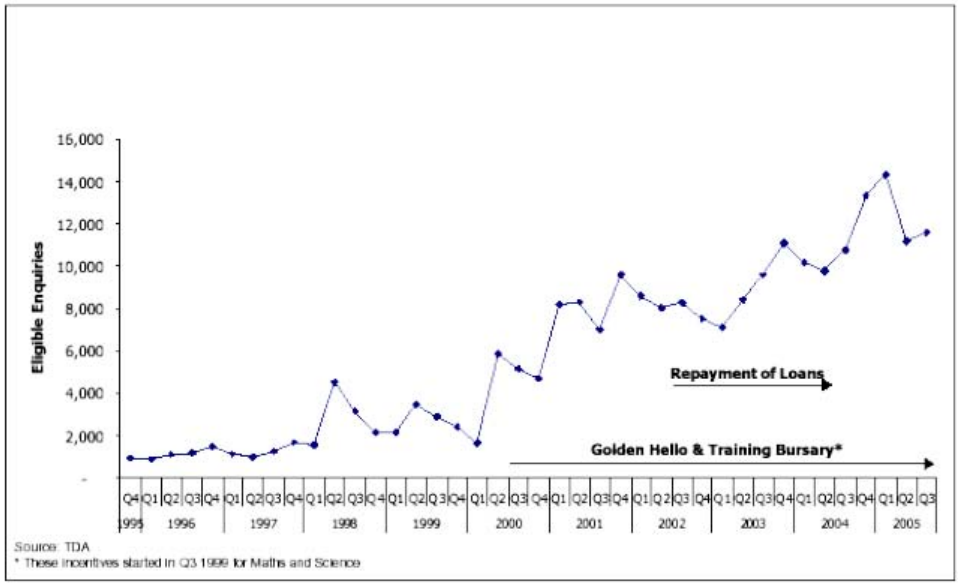
For the purposes of calculating Payback and ROMI, the focus is on the benefit delivered specifically by the marketing campaign and not by policy changes, other interventions or outside forces.

Five pieces of proof collectively pointed to the specific contribution of the recruitment campaign in delivering the increase in trainee teachers:

1. *When advertising messages changed, attitudes to teaching changed with them*. For example, Phase One communications were about raising the status of teaching and at the same time the numbers believing teaching was ‘not a career for high fliers’ halved, with the measure levelling off as the campaign messaging moved onto a different task.
2. *People claimed the advertising had made them feel more positive about teaching and drove them to enquire*. Callers to the Teaching Information Line were more likely to say the advertising drove them there (26%) than the website (16%) or careers advisors and job centres (9%)

3. *Advertised subjects out-performed non-advertised subjects*. This is particularly impressive for maths, physics and chemistry given the small size of the pool of graduates and the numerous (more lucrative) options open to them.
4. *DM and outbound calling programme raised application rates significantly*. Application rates for those who received DM were 20% versus non-DM 10%.
5. *Enquiry spikes to the TIL correlated with advertising spend*: seen in Figure 37.

Figure 37: Correlation between First Time Eligible Enquiries and TV Spend



Accounting for other factors

To isolate the proportion of benefit delivered by the marketing campaigns, the effects of other factors were considered and discounted in the following ways:

1. Financial incentives for teacher training

Alongside the communication campaigns, and within some of them, a £6,000 training bursary and 'Golden Hello' payments for those applying for shortage 'priority' subjects (in 2000) and a scheme to repay trainee teachers' student loans (2002) were introduced. Evidence suggested that by themselves the incentives would not have done the job. Rises in enquiry levels occurred before these incentives were introduced and levels continued rising after they were announced. Enquiries continued to grow after the repayment of student loans scheme had been discontinued (see Figure 38).

Figure 38: Eligible enquiries and the timing of financial incentives

2. New routes into teaching

The introduction of employment based routes to become a teacher from 2000 was discounted because traditional routes into teaching (by PGCE) continued to account for the majority of the increase in trainee teachers.

3. Teacher pay

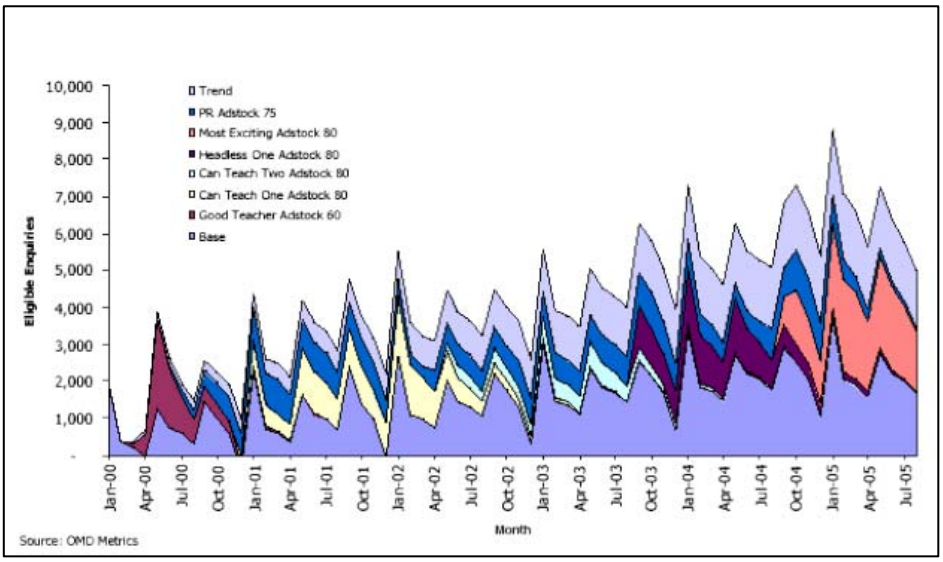
Trainee teacher starting salaries failed to keep up with the median graduate starting salary between 1997 and 2005, which actually made the recruitment task more difficult. Overall, teacher salaries remained a constant proportion of average incomes over the period (1.3 times the average wage)

4. The pool of graduates

The number of graduates had increased during the campaign period. However, a buoyant economy kept graduate unemployment low compared to the years before the campaign began, making the recruitment task harder rather than easier.

5. Changes to eligibility

The criteria for an 'eligible' enquiry became tighter as the campaign went on (now all teachers have to have GCSE Grade C in Science to teach any subject). The fact that the rise in applications had outstripped the rise in acceptances showed that, if anything, entrance requirements had got tougher.



6. Teaching scare stories

The campaign had to work against a background of negative media coverage, especially about violence and bad behaviour in schools. This made the recruitment challenge all the more difficult.

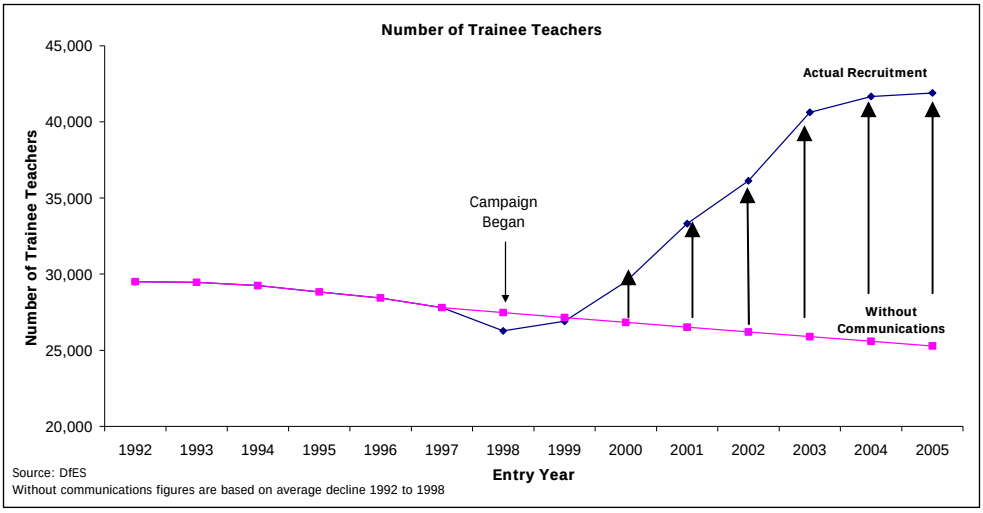
7. Econometric model

The econometric model stripped out the specific effect of different marketing communication activities to demonstrate that campaigns were responsible for driving 50% of all enquiry traffic (see Figure 39).

Figure 39: Eligible enquiries driven by campaigns

Step 5: Putting a value on the impact of the campaign

The relative cost of a supply teacher, greater than the cost of employing a full time teacher, was used as a financial proxy to enable basic Payback and ROMI to be calculated.



Saving on supply teacher salaries was just one element of Payback of the campaign, but for simplicity it can be focussed on because it demonstrates direct, quantifiable financial impact. Some other elements are discussed in Step 10: Advanced Payback and ROMI.

An average cost for a supply teacher of £180 per day was used. With 200 days in a school year, this amounts to an equivalent salary of £36,000 per school year (National Association of Head Teachers Survey 2002). This was compared with average teacher pay, which at the time was £28,580 per annum.

Step 6: Calculate Payback

The calculations in the 2006 IPA paper demonstrated that the campaigns paid back the initial financial investment made in them many times over.

Figure 40: Number of new trainee teachers due to the campaign

The number of trainee teachers recruited as a result of the campaign (Figure 40) was estimated by looking at the difference between the trend and actual recruitment. From 2000 to 2005, this came to a total of 66,829 teachers.

Two further assumptions were made:

1. That 34% of trainees would not go on to become teachers (based on contemporary attrition rates)
2. That once recruited, and retained beyond training, a recruit would go on to work as a teacher for a total of 15 years (the average length of a career in teaching is 15 years)

The calculation of Payback was then carried out as follows:

Figure 41: Teachers – Payback calculation

Total 'extra' trainee teachers	66,829
Attrition rate during teacher training	34%
Total 'extra' teachers in classrooms	**44,107**
Average teacher salary	£28.6k
Cost of equivalent supply cover	£36k
Annual saving per teacher recruited	**£ 8k**
Average length of teaching career	15 years
Total saving per teacher	£120k
Total Saving (Payback)	**£4.9bn**

Step 7: Calculate costs

The total campaign cost was £57 million. This is used, in Step 8, to calculate Net Payback and ROMI.

However, it is also possible to look at the costs incurred each year and discount them to 1998 values. We will do this (and discount the Payback too) in Step 9, Advanced Payback and ROMI.

Step 8: Calculate Net Payback and ROMI

The campaign cost could now be subtracted from the Payback to get the Net Payback, and the result divided by the cost to get ROMI (Figure 42):

Figure 42: Teachers – Net Payback and ROMI calculation

Payback	£4.91bn
Cost of campaign	£57m
Net Payback	£4.85bn
ROMI (Net Payback/Cost of campaign)	**£85:1**
ROMI (as a percentage)	**8500%**

The campaign was shown to have paid for itself, and returned another £85 for every £1 spent – a huge return on the investment.

Of course, these calculations were based on a number of assumptions. But we will show that, even with further refinement and more conservative assumptions, the Teachers campaigns between 1998 and 2005 appear to have delivered a large Payback at a very high ROMI.

Step 9: Understand Payback and ROMI

When this Payback and ROMI analysis was carried out, it was clear that the campaigns had been very effective and efficient. The money saved on supply teachers alone justified the investment in marketing communication many times over – and it is likely that the recruitment of more and higher quality teachers will still be resulting in wider economic benefit that the original calculation didn't take into account.

In 2009, the TDA continue to track the effectiveness of their marketing to inform future investment in marketing communication, working with their agency, DDB.

Step 10: (Optional) Advanced Payback and ROMI

The original Payback and ROMI calculations were fairly simplistic. There are several obvious ways in which they could be improved:

1) Refine the teacher drop-out rate

Our original calculation assumed that teachers have fixed 15-year careers. In reality, new recruits are likely to lapse out of teaching over a much longer period, with some leaving early, and others carrying on right to retirement. However, it turns out that this part of the calculation has almost no effect on ROMI. Even when lapsing behaviour is accounted for properly[27], we still get a ROMI of £85:1.

2) Account for inflation and the time value of money

The original calculation did not take any account of wage inflation or discounting. In fact, these two simplifications more or less cancel each other out. Incorporating both these factors into the calculation yields a ROMI of £87:1.

3) Vary our assumptions about the base level of recruitment

Prior to the campaign, recruitment had been in decline. Once the campaign started, recruitment began to rise. In our calculations, we assumed that this improvement above trend was entirely due to the campaign. But what if the campaign was only responsible for part of the improvement, say 50%? Then ROMI would fall to £43:1.

On the other hand, it's possible that, without the campaign, the decline in recruitment would have worsened. There is in fact some evidence for this. The econometrics tells

[27] An Excel file containing these calculations, and the others in this section, can be supplied

us that, by the end of the campaign, around 50% of all enquiries were being driven by the campaign. If a similar proportion of all recruits were being driven the campaign, then it would imply a much bigger effect than our original estimate. Our ROMI estimate would rise to £143:1.

This exercise tells us three things. Firstly, of the various assumptions that went into our original calculation, only the assumption about the base level has any significant effect on our estimate of ROMI:

Figure 43: Teachers – Refined ROMI calculations

	ROMI for TDA campaigns 1998-2005
Original estimate	**£85:1**
With refined treatment of teacher drop-out rates	**£85:1**
Taking account of inflation and discounting	**£87:1**
Changing assumptions about base level of recruitment	**£43:1 to £143:1**

Secondly, while the original estimate was pretty good (it lies more or less in the middle of our confidence interval), the margin of error is actually quite large. Finally, despite the large margin of error, it is clear that, even on the most conservative estimates, the payback from this campaign was very large indeed.

Before we leave advanced Payback and ROMI there is one further point worthy of discussion. Looking at how the campaign delivered benefits (the map of objectives to outcomes) and how the impact was monetised (putting a value on campaign impact) there are additional ways in which the Teacher Recruitment campaigns could have paid back to the Economy.

If more and better teachers entered schools due to the campaign, then in the long term class sizes could fall (in fact we saw in Figure 36 that they *did*), educational performance could improve and a generation of children could have increased earning potential and contribute to increased UK productivity. If these benefits were quantified, then even if the campaign made a small contribution this could greatly increase our estimates of the size of the Payback.

This leads us to the conclusion that for all the refinements that we have made to our Payback calculation, the actual Payback from the campaign is probably much bigger than the estimate that we reached.

4.6 Epilogue

Recent recruitment figures have continued to be much greater than those seen prior to the teacher campaigns. However, although total recruitment numbers have continued to be impressive when compared with pre 2000 figures, the rapid growth in total enquiries has now slowed and until this year has been in a slight decline.

Since 2005, the objectives have changed from encouraging as many people as possible towards teaching, to gradually being more about recruiting higher quality candidates in specific priority subjects. Because spend is being restricted to smaller pool sizes for the individual priority subjects, there is a slight sacrifice made in recruiting total numbers. This presents a new and unique challenge in the area of measurement and evaluation, and further (but interesting) complications in the Payback calculations.

5 Useful Resources

5.1 Glossary

Term	Definition
Actual Attribution	When direct response channels are used to prove that a campaign drove a certain number of responses
Attribution	The percentage of an outcome that can be attributed to the campaign
Balanced Scorecard	A business approach to understanding and driving achievement of strategic objectives. Involves developing and using a scorecard that tells a rounded story of the status of a business by using a balanced mixture of financial and non-financial measures
Beneficiary	Anyone (including the service provider) who should benefit from the results of the campaign
Campaign	A co-ordinated, discrete programme of marketing communication
Claimed Attribution	When survey data is used to ask people if they changed their behaviour due to the campaign
Customer Lifetime Value	The concept of an individual, having been prompted to action, then saving the Government money over a period of years
Decay rate	The rate at which the impact of a campaign fades after it has finished. Equal to one minus the *Retention rate*
Delivery Chain	The complex networks of organisations, including central and local government, agencies, and bodies from the private and third sectors, which need to work together to achieve or deliver an improved public sector outcome
Discounted Cash Flow analysis	The process of discounting future investments and anticipated income so that they reflect the *Time Value of Money*
Displacement	Campaigns may appear to have solved a problem, yet they have simply moved the problem elsewhere
Econometrics	Mathematical modelling to isolate the effects of other factors from the effect of the campaign
Effectiveness	The degree to which a campaign meets its ultimate objectives
Efficiency	The amount of effort required to run a campaign compared with the degree to which it meets its objectives
Evaluative Payback & ROMI	The measures calculated as part of a retrospective evaluation of a campaign's success. This calculation may not be possible for several years following the campaign.
Financial proxy	An estimated unit financial value that can be given to an outcome
Financial value	The known unit financial value of an outcome
Halo effects	Unexpected outcomes that can be shown to have been caused by the campaign
HEI	Holistic Evaluation Initiative: A COI and cross government programme to further the discipline of marketing communication.

Term	Definition
Impact	The result following directly as a result of the campaign
Intermediary	Anyone at whom a campaign is aimed so that others may feel the benefit
Marketing communication	Communication by the government or public bodies, aimed at the public, with the purpose of raising awareness or changing behaviour
Metric	A number that can be used to track and quantify outcomes
Negative impact	Campaign outcomes which actually result in the Government receiving less money - a side effect to the outcomes which save the Government money. For example, smoking cessation reduces tax revenue
Net Payback	The net financial benefit that can be shown to result from a campaign, at present values. Equal to *Payback*, less *costs*
Net Present Value	The sum of future investments and anticipated income, once they have been discounted using *Discounted Cash Flow* analysis
Objectives	The ultimate goals of a campaign
Other factors	External forces that may be at work at the same time as your campaign, affecting outcomes
Outcome	The result following the campaign, part of which may have been caused by the campaign
Payback	The financial benefit that can be shown to result from a campaign, at present values
Policy Lever	Policy Levers can help give government a control mechanism over public service outcomes. There are a range of Policy Levers, from legislation to codes of practice, from contractual arrangements to financial incentives and from sanctions to marketing communication campaigns
Predictive Payback & ROMI	At the start of the campaign, analysis carried out to determine how Payback and ROMI will be measured and to predict the scale of Payback that might be delivered
Projected Payback & ROMI	During the campaign, examining leading indicators to provide estimates of the campaign's effectiveness and efficiency, feeding back into campaign design or adjustment
Retention rate	The percentage of campaign impact that persists following the end of the campaign, usually per year. Equal to one minus the *Decay rate*
ROI	Return On Investment. The ratio of the net Payback on an investment to the money invested. A general concept that extends beyond marketing communication – we advise avoiding the use of this term to avoid confusion.
ROMI	Return On Marketing Investment - The ratio of the *Net Payback* to the *cost* of the campaign
Sensitivity analysis	Trying out different assumptions to see how they affect results
Stakeholder	Any party whose actions could affect the outcomes of the campaign

Term	Definition
Target Group	A group of people at whom a campaign is aimed
Test and control	Comparing two groups, as similar as possible in every respect except the degree to which they were exposed to the campaign
Time Value of Money	The concept that money is more valuable now that it is in the future. Used in *Discount Cash Flow* analysis to get *Net Present Value*.
Trend analysis	Examining the direction that metrics are travelling in prior to a campaign, to understand what would have happened without the intervention of the campaign

6 About the editors and authors

Les Binet	
	Having read Physics at Oxford and Artificial Intelligence at Edinburgh University, Les joined the Account Planning department at BMP (now DDB London), in 1987. He now heads DDB Matrix, the agency's in-house econometrics consultancy. Les has played an important part in establishing DDB's reputation for effectiveness, having won more IPA Advertising Effectiveness Awards than anyone else in the history of the competition. In 2004 he was elected an Honorary Fellow of the IPA, in recognition of his services to the advertising industry, and in 2005 he was Convenor of Judges for the IPA Awards. In 2007, Les Binet and Peter Field published "Marketing in the era of accountability", a major study of the factors that influence marketing effectiveness.

Sarah Carter	
	Having been awarded a first in Human Sciences at Oxford, Sarah spent 4 years in Marketing at Unilever before joining the then BMP (now DDB London) as a planner. Since then, she has had the great privilege of working alongside some of the best planners in the world across a huge range of brands and sectors. Sarah has a particular interest in new ways of understanding people (e.g. running DDB Grapevine - a "word on the street" panel of cabbies, beauticians and hairdressers and bar men). She has authored papers on a range of subjects for industry publications and won the Market Research Society Best Paper Award. She has also co-edited with Les Binet, more than 40 award wining IPA Effectiveness papers, helping DDB win Effectiveness Agency of the Year for a record 4 times.

Kevin Traverse-Healy	
	Kevin has been involved in communication and strategy consulting for over 30 years. Immediately before joining COI's Strategic Consultancy in 2006, he was a strategy adviser to European Commission vice-president, Margot Wallström. He has since acted as an 'international communication expert' for a number of European evaluations, reviews and feasibility studies. He was previously a director of advertising and PR group Charles Barker; Traverse-Healy & Regester Ltd and the Centre for Public Affairs Studies. Kevin, who has an MA in Mass Communication from Leicester University, is a visiting communication sciences faculty member at the University of Lugano. He is a Fellow and past president of the Chartered Institute of Public Relations.

Matthew Taylor	
	Matthew graduated with a first in Maths from Lancaster University and University of Maryland and joined the Civil Service as an analyst in the Cabinet Office. He went on to work for Accenture as a management consultant, where his public sector clients included NHS Connecting for Health and the National Policing Improvement Agency. Matthew joined COI as a Strategic Analyst in 2008 and has worked on projects for the Royal Air Force, Department of Health, Government Equalities Office, Health and Safety Executive, Department for Business Innovation and Skills and the School Food Trust.

Charlotte Tullett	
	Charlotte graduated with a BA Hons degree in Geography from Oxford University. She worked in Account Management at Tequila before joining Tullo Marshall Warren as a Strategic Analyst. During her time there she managed research projects into audiences, sectors, macro and micro environments for a wide range of clients including Nissan, T-Mobile, British Airways and Sainsbury's. Since joining COI, also as a Strategic Analyst, in 2008, she has worked on projects for Department of Health, the Home Office, the Department for Business Innovation and Skills (formerly DIUS) and The National Patient Safety Agency.

7 Acknowledgements

Writing this document would have been impossible without the help and co-operation of a number of key individuals and government departments.

We would like to thank the editors, Les Binet and Sarah Carter, for their guidance and insight. Their expertise and experience was invaluable in giving this document the right content and an industry perspective. Their DDB colleague, Alex Vass, contributed to discussions on the econometrics of the teacher recruitment case study. We acknowledge the authors and contributors to the numerous books, papers and articles on and around the subject that we list in the bibliography.

The evaluation group at COI are currently working on the development of several key areas of evaluation, of which this is but one. The group aims to publish further pieces in the coming months – for example on behaviour change – and build their thinking into a holistic GCN Evaluation Service. We thank Mark Cross, James Farnham, Martin Dewhurst, Marc Michaels and David Pullinger for their input or oversight.

The document is brought to life by numerous examples of successful, award-winning, government marketing communication campaigns from across the Government Communication Network. We thank Michele Marr, former Head of Campaigns, and Mike Berger-North, current Director of Marketing and Communications at the Training and Development Agency for Schools, for their support in using the TDA case study. We also acknowledge in particular the Department of Health, Home Office, Department for Work and Pensions, Department for Transport and the Army, for the use of their campaigns as case studies.

Thanks also to Glenn Granger, currently working with the Department of Health, for sharing his thinking on advanced Payback ROMI techniques.

A guide to Social Return on Investment

Cabinet Office
Office of the Third Sector

"For FRC Group using SROI has been a fascinating process which has fine tuned our understanding of the impacts that are achieved as we improve our performance, and exposed areas in which we can do more."

Verity Timmins, Impact Manager, FRC Group

"At Impact Arts we have embraced SROI as one of our central evaluation tools, which complements our existing evaluation practice very well. SROI has clear benefits for our organisation in terms of our future funding and business development activities, as well as focusing our day to day practice on where and how we add value."

Susan Akternel, Innovation and Development Director, Impact Arts

"SROI has helped us develop an ongoing relationship with our stakeholders which shows that we are listening to their needs and we can now report how our work impacts on their lives and the lives of others."

Maeve Monaghan, Director, NOW Project

The Scottish Government

Foreword

Liam Byrne, Minister for the Cabinet Office and Kevin Brennan, Minister for the Third Sector

Government wants to strengthen the already powerful impact of third sector organisations in our economy. We are also leading a new drive to transform our public services.

While many third sector organisations have a powerful story to tell, the social and environmental value of the impact being made is often underplayed. As we face tough economic times, it is now more important than ever that we allow for better recognition of those who create social and environmental value, leading to more efficient movement of resources to the right people, in the right place, at the right time.

This new guide to Social Return on Investment is timely, as it will help third sector organisations to communicate better their impact to customers, government and the public, through measuring social and environmental value with confidence, in a standardised way that is easy for all to understand.

The guide should also underpin the thinking of commissioners and investors. For the public sector, it will help show us what really matters to the people who use public services and who benefit from third sector activity.

Ultimately, it is those in our communities in need of real help who will benefit.

Acknowledgements

This guide has been written by Jeremy Nicholls, Eilis Lawlor, Eva Neitzert and Tim Goodspeed, and edited by Sally Cupitt, with additional contributions from Sheila Durie, Jenni Inglis, Karl Leathem, Tris Lumley and Richard Piper.

Comments, guidance and advice were also received from the advisory group and from members of the SROI Network. Thanks to the following members of the SROI Network: Helen Fitzhugh, Adrian Henriques, Martin Kinsella, David Marshall, Kathleen Quinn, Kevin Robbie, Stephanie Robertson, Peter Scholten and Sara Williams.

Thanks to the following members of the advisory group: Saeeda Ahmed, Gustavo Bagattini, Simon Berry, Amitti CanagaRetna, Andrea Chauhan, Ken Cooper, Theresa Crawley, Elly de Decker, David Emerson, Tracy Houston, Pradeep Jethi, John Kingston, Martin Kinsella, Alan Knight, George Leahy, Liz Liston-Jones, Joseph Lowe, Fergus Lyon, Claire Michelet, Ralph Mitchell, Penny Newman, Gerald Oppenheim, Akhil Patel, John Pearce, Tess Pendle, Matthew Pike, Martin Scott, Oliver Sian Davies, Richard Spencer, John Stewart, Chris Walker, Peter Wells and Jo Wheeler. Particular thanks also to Gustavo Bagattini and John Pearce.

A number of people and organisations have contributed to the development of SROI, started by Jed Emerson and the Roberts Enterprise Development Fund, developed by **nef** (the new economics foundation) and members of the SROI Network, and supported by, amongst others, the Hadley Trust, the Adventure Capital Fund and the Equal Social Economy Scotland Development Partnership.

Introduction

The Office of the Third Sector (OTS) and the Scottish Government recognise that demonstrating added social, economic and environmental value is important for third sector organisations and their funders, investors and commissioners, and is becoming increasingly important for the public and private sectors. The OTS has therefore funded a three-year programme on measuring social value. The work began in November 2008 and is being delivered by a consortium of organisations: the SROI Network, nef (the new economics foundation), Charities Evaluation Services, the National Council for Voluntary Organisations and New Philanthropy Capital.

In addition to this programme, the Scottish Government is also supporting SROI, including the development of a database of indicators to support SROI analysis.

This guide, which builds on the work in three earlier SROI guides[1], has been prepared as part of this programme. The purpose of this guide is to standardise practice, develop the methodology, and provide more clarity on the use of SROI. It has been written for people who want to measure and analyse the social, environmental and economic value being generated by their activities or by the activities they are funding or commissioning.

For more information on these programmes, and on other developments in SROI, please refer to the SROI Network website – www.thesroinetwork.org

1 *The SROI Framework*, drafted by Sara Olsen and Jeremy Nicholls; *A Guide to SROI Analysis* by Peter Scholten, Jeremy Nicholls, Sara Olsen and Brett Galimidi; and *Measuring Social Value*, by Eva Neitzert, Eilis Lawlor and Jeremy Nicholls (new economics foundation).

1 What is Social Return on Investment (SROI)?

Every day our actions and activities create and destroy value; they change the world around us. Although the value we create goes far beyond what can be captured in financial terms, this is, for the most part, the only type of value that is measured and accounted for. As a result, things that can be bought and sold take on a greater significance and many important things get left out. Decisions made like this may not be as good as they could be as they are based on incomplete information about full impacts.

Social Return on Investment (SROI) is a framework for measuring and accounting for this much broader concept of value; it seeks to reduce inequality and environmental degradation and improve wellbeing by incorporating social, environmental and economic costs and benefits.

SROI measures change in ways that are relevant to the people or organisations that experience or contribute to it. It tells the story of how change is being created by measuring social, environmental and economic outcomes and uses monetary values to represent them. This enables a ratio of benefits to costs to be calculated. For example, a ratio of 3:1 indicates that an investment of £1 delivers £3 of social value.

SROI is about value, rather than money. Money is simply a common unit and as such is a useful and widely accepted way of conveying value.

In the same way that a business plan contains much more information than the financial projections, SROI is much more than just a number. It is a story about change, on which to base decisions, that includes case studies and qualitative, quantitative and financial information.

An SROI analysis can take many different forms. It can encompass the social value generated by an entire organisation, or focus on just one specific aspect of the organisation's work. There are also a number of ways to organise the 'doing' of an SROI. It can be carried out largely as an in-house exercise or, alternatively, can be led by an external researcher.

There are two types of SROI:

- Evaluative, which is conducted retrospectively and based on actual outcomes that have already taken place.
- Forecast, which predicts how much social value will be created if the activities meet their intended outcomes.

Forecast SROIs are especially useful in the planning stages of an activity. They can help show how investment can maximise impact and are also useful for identifying what should be measured once the project is up and running.

A lack of good outcomes data is one of the main challenges when doing an SROI for the first time. To enable an evaluative SROI to be carried out, you will need data on outcomes, and a forecast SROI will provide the basis for a framework to capture outcomes. It is often preferable to start using SROI by forecasting what the social value may be, rather than evaluating what it was, as this ensures that you have the right data collection systems in place to perform a full analysis in the future.

The level of detail required will depend on the purpose of your SROI; a short analysis for internal purposes will be less time-consuming than a full report for an external audience that meets the requirements for verification.

The principles of SROI

SROI was developed from social accounting and cost-benefit analysis and is based on seven principles. These principles underpin how SROI should be applied and are set out in full in the Resources Section (page 80). The principles are:

- Involve stakeholders.
- Understand what changes.
- Value the things that matter.
- Only include what is material.
- Do not over-claim.
- Be transparent.
- Verify the result.

Judgement will be required throughout an SROI analysis. Often the principle of materiality will guide judgement, so this principle is very important. Materiality is a concept that is borrowed from accounting. In accounting terms, information is material if it has the potential to affect the readers' or stakeholders' decision. A piece of information is material if missing it out of the SROI would misrepresent the organisation's activities. For transparency, decisions about what is material should be documented to show why information has been included or excluded. At certain points we will indicate when it is useful to perform a materiality check. We encourage you to become familiar with the concept as it will inform your decisions throughout the process.[2]

The stages in SROI

Carrying out an SROI analysis involves six stages:

1 **Establishing scope and identifying key stakeholders.** It is important to have clear boundaries about what your SROI analysis will cover, who will be involved in the process and how.

2 **Mapping outcomes.** Through engaging with your stakeholders you will develop an impact map, or theory of change, which shows the relationship between inputs, outputs and outcomes.

2 Guidance from AccountAbility recommends that you consider the views of your stakeholders, societal norms, what your peers are doing, financial considerations, and organisational policies and objectives as criteria for judging materiality.

Introduction

3 **Evidencing outcomes and giving them a value.** This stage involves finding data to show whether outcomes have happened and then valuing them.

4 **Establishing impact.** Having collected evidence on outcomes and monetised them, those aspects of change that would have happened anyway or are a result of other factors are eliminated from consideration.[3]

5 **Calculating the SROI.** This stage involves adding up all the benefits, subtracting any negatives and comparing the result to the investment. This is also where the sensitivity of the results can be tested.

6 **Reporting, using and embedding.** Easily forgotten, this vital last step involves sharing findings with stakeholders and responding to them, embedding good outcomes processes and verification of the report.

SROI has many similarities with other approaches and these are set out in the Resources section (page 80).

2 How SROI Can Help You

An SROI analysis can fulfil a range of purposes. It can be used as a tool for strategic planning and improving, for communicating impact and attracting investment, or for making investment decisions. It can help guide choices that managers face when deciding where they should spend time and money.

SROI can help you improve services by:

- facilitating strategic discussions and helping you understand and maximise the social value an activity creates;
- helping you target appropriate resources at managing unexpected outcomes, both positive and negative;
- demonstrating the importance of working with other organisations and people that have a contribution to make in creating change;
- identifying common ground between what an organisation wants to achieve and what its stakeholders want to achieve, helping to maximise social value;
- creating a formal dialogue with stakeholders that enables them to hold the service to account and involves them meaningfully in service design.

SROI can help make your organisation more sustainable by:

- raising your profile;
- improving your case for further funding;
- making your tenders more persuasive.

3 In the UK, HM Treasury maintains guidance on the methodology that should be used to make an economic assessment of the social costs and benefits of all new policies, projects and programmes. This guidance is set out in the *Green Book*. In the *Green Book* the idea of additionality is comparable with impact in SROI.

SROI is less useful when:

- a strategic planning process has already been undertaken and is already being implemented;
- stakeholders are not interested in the results;
- it is being undertaken only to prove the value of a service and there is no opportunity for changing the way things are done as a result of the analysis.

Comparing social return between different organisations

Organisations work with different stakeholders and will have made different judgements when analysing their social return. Consequently, it is not appropriate to compare the social return ratios alone. In the same way that investors need more than financial return information to make investment decisions, social investors will need to read all of the information produced as part of an SROI analysis. However, an organisation should compare changes in its own social return over time and examine the reasons for changes. Organisations should also endeavour to educate funders and investors on the importance of putting the ratio in the context of the overall analysis.

Certain situations require a different approach

This guide covers most situations. However, for situations where there is investment in assets, or the use of debt finance, there is a note in the Resources section (page 80).

3 Who Can Use SROI?

Types of organisation

SROI has been used by a range of organisations across the third, public and private sectors, including those that are small, large, new and established.

Third sector organisations and private businesses

Third sector organisations and private businesses that create social value can use SROI as a management tool to improve performance, inform expenditure and highlight added value. These may be start-up organisations developing business plans or established organisations. It can be used for analysing the value arising from trading activities whether the organisation is selling to the general public, to the public sector or to other businesses.

Commissioners and funders

Bodies that commission social value or invest in the creation of social value can use SROI initially as a way to help them decide where to invest, and later to assess performance and measure progress over time.

Both social investors and public service commissioners are in the business of securing social value that is delivered by third parties. The mechanisms by which that value is secured may differ but, by measuring that value, better decisions can be made. SROI can be used at three points in the commissioning or investment process:

- **Programme/pre-procurement** – forecast SROI analyses can be used at the strategic planning stage to decide how to set up a programme, for market testing and to determine scope and specification of contracts.

- **Application/bidding** – forecast SROI analyses can be used to assess which applicant or bidder is likely to create the most value. (Where applicants or bidders are already delivering the intervention that is being invested in, evaluative SROI can be used at the application/bidding stage.)

- **Monitoring and evaluation/contract management** – evaluative SROI analyses can be used to monitor the performance of a successful applicant or contractor.

Using SROI to inform public sector commissioning decisions is in line with HM Treasury guidance on value for money appraisals.[4] HM Treasury states that value for money assessments should be based on the 'optimum combination of whole-of-life costs and quality (or fitness for purpose) of the goods or service to meet the user's requirement'. These costs and benefits must include 'wider social and environmental costs and benefits for which there is no market price'.[5]

For developing policy
SROI can be used by organisations that develop public policy, for which recognition of social value is important. For example, it has been used to compare the value of investing in support-focused community penalties for women offenders as opposed to sending them to prison.[6]

Skills required to analyse the SROI report
Carrying out an SROI analysis requires a mixed set of skills. It will be helpful if you have prior experience of engaging stakeholders, outcomes measurement or evaluation, using Microsoft's Excel software and basic accounting skills. Even if you have experience in these areas, it may still be helpful to attend a training course. You can also bring in help from within your organisation, although, in the absence of this, you may need to arrange some external support.

Time requirement
Giving exact guidance on timescales is difficult because it is contingent on many factors, including scope, skills level and data availability, and whether you will be using the report for internal management or external reporting purposes.

All new measurement systems take some resources to implement. However, there are ways to keep the resources you require to a minimum. You could start with a project or contract rather than the whole organisation, or you could start with a forecast SROI analysis, especially when looking at a new business or a new activity. A forecast SROI analysis for internal management purposes, for example to help design information systems, would not need to be as detailed as a report you were planning on making public.

4 www.hm-treasury.gov.uk/data_greenbook_money_sustainability.htm
5 Further guidance on the use of SROI in public sector commissioning is available on the SROI Network website,www.thesroinetwork.org
6 *Unlocking value*, **nef**

An evaluative SROI analysis will be more time-consuming and could take several months, but the time required is much reduced if the organisation already produces good outcomes data or has a system of social accounting in place. However, it can take time to introduce systems to assess outcomes. Doing a forecast SROI analysis first can help one plan and prioritise the introduction of outcome assessment systems.

4 Using this Guide

This guide goes through the SROI process in stages. The completion of a table which maps out the analysis is central to the process. This table is called an Impact Map. There is a loose insert of the Impact Map included in the printed version of the guide, and copies are also available for download from the SROI Network website, www.thesroinetwork.org.

If you are new to SROI, please read the whole guide before starting. This is important because although it works through the process step by step, some of these steps can be completed at the same time, so reading the whole guide first may save you time later. Then return to the beginning and start working your way through. Bear in mind that not everything will be relevant to your analysis.

If you have some experience in SROI you may wish to use the guide as a reference tool. Social investors and commissioners interested in using SROI could focus on the introduction, the principles and the supplement on the SROI Network website,

Symbols
You will see these symbols throughout the guide:

Time for you to put what you have learned into practice. Over to you!

Top Tip: Alerts you to a top tip that can make life much easier for you.

The caution symbol warns you about common mistakes.

The return symbol highlights key points where you may decide you need to go back to an earlier step in the process.

It is important to remember that SROI is a framework based on principles. Often there are no right and wrong answers and you will need to use your judgement to respond to the question appropriately. The main points at which this is required are highlighted with this symbol.

'Involve'. This symbol highlights points where you should involve your stakeholders to refine and confirm your decisions.

Language used
For simplicity we have used the following language throughout this guide:

- 'Social value' is used to describe social, economic and environmental value.
- 'The social return of your activity' is used rather than 'the social return of your organisation'. If you are analysing the social return of all your activities then this would be the same as the social return of your organisation.
- Where 'impact' is used we mean your outcomes after taking into account what would have happened anyway, the contribution of others and the length of time the outcomes last.
- The guide is written for 'you' although 'you' may be a single person or a team.

Wheels-to-Meals – The worked example
Throughout the guide we will use the fictional example of Wheels-to-Meals, which is presented in this format.

This is a hypothetical example. It is used to explore the principles and processes of SROI. Some elements of the impact map have been included to support learning and provide an appropriate example.

Wheels-to-Meals is a charity that developed from a meals on wheels service provided by volunteers. Increasingly, it realised that its clients not only needed the good hot meals it provided but, equally important, the contact and socialising with the volunteers who brought them.

Wheels-to-Meals provides a luncheon club to eligible elderly and disabled local residents and the majority of the volunteers are also elderly. The luncheon club is delivered with the same resources as a meals on wheels service, except that residents are transported to meals, rather than the other way round. The service includes provision of hot, nutritious lunches, transport, opportunities to socialise, and mild exercise. The service is available for up to 30 residents, 5 days a week and 50 weeks a year.

Resources available
There is a loose Impact Map enclosed in the printed version of this guide, which is also available for download from the SROI Network website, www.thesroinetwork.org. The Resources section on page 80 also includes:

- The format for an SROI report.
- A glossary.
- A note on cost allocation.
- A note on capital or loan-financed projects.
- Sources of support and further information.
- A summary of the relationship between SROI and other approaches.
- The seven principles of SROI.
- A checklist for SROI analysis – you can use this to tick off each step as you work through.
- An impact map for the worked example.

5 Future Updates

Like financial accounting and other ways of measuring, SROI is subject to further refinement and development. Users of this guide should check the website www.thesroinetwork.org for updates to the methodology.

Suggestions for changes can be made through the SROI Network website.

Stage 1:
Establishing scope and identifying stakeholders

Before you start your SROI analysis, you need to clarify what you are going to measure and how, and why you are embarking on a measurement process.

If you are carrying out an evaluative SROI analysis it may be useful to set up an SROI planning team. Winning management support at this early stage can help to make resources available for the SROI analysis, which in turn might allow you to extend its scope.

There are three steps in this stage:

1.1 Establishing scope
1.2 Identifying stakeholders
1.3 Deciding how to involve stakeholders

1.1 Establishing scope

The scope of an SROI analysis is an explicit statement about the boundary of what is being considered. It is often the result of negotiations about what is feasible for you to measure and what you would like to be able to improve or communicate. You will need to be clear about why you are conducting the analysis and what resources are available, and define the priorities for measurement. This stage will help ensure that what is being proposed is feasible.

The example below illustrates how a housing foundation made decisions about the scope of its SROI analysis.

Example: Establishing scope for a housing foundation
A large housing foundation was interested in calculating its social return to communicate its impact to its primary funder. The foundation has 35 employees and is involved in many activities, ranging from youth clubs to physical estate improvement projects. As there was no budget for the SROI analysis, it was decided that it would be conducted in-house and responsibility would rest with the quality manager at the foundation.

It was decided to publish the results of the SROI analysis alongside the end-of-year financial accounts in four months' time. The short timeframe, limited resources and the fact that the SROI analysis had to be completed in-house meant that the focus was to be on one project, with a plan to consider other projects in subsequent years. The decision was made to focus on a project which gave debt advice to tenants. This project has direct relevance for the foundation's primary funder, as one of the outcomes of the project is an increase in the number of tenants able to pay their rent.

What to consider in order to set scope
The issues you will need to consider include:

1 **Purpose**
What is the purpose of this SROI analysis? Why do you want to begin this process now? Are there specific motivations driving the work, such as strategic planning or funding requirements?

2 **Audience**
Who is this analysis for? This should cover an initial assessment of how you will communicate with your audiences.

3 **Background**
Consider the aims and objectives of your organisation and how it is trying to make a difference. If you are focusing on specific activities you will need to understand the objectives of those activities. It is important that you have a clear understanding of what your organisation does and what it hopes to achieve by its activities. For sources of further support and information on this see the Resources section.

4 **Resources**
What resources, such as staff time or money, will be required? Are these available?

5 **Who will carry out the work?**
Can you undertake the SROI analysis internally, or will you need to bring in external help? Make sure you have the right mix of skills and support from the start. Generally, you will need skills or experience in finance, accounting, evaluation and involving stakeholders.

6 **The range of activities on which you will focus**
Will you be analysing all the activities of your organisation, or just specific ones? You might want to separate the activities related to a particular source of funding,or those that are a priority for you. Keep your scope small if it is the first time you are doing an SROI analysis.

Clearly describe what you intend to measure. For example, if the activity was 'our work with young people', this may cover several departments within your organisation and you may actually mean something more specific, like 'mentoring support provided to young people'.

7 **The period of time over which the intervention will be considered**
SROI analysis is often annual, corresponding with annual financial accounting timescales. This can vary. For instance, a commissioner may want an evaluation of a specified timescale.

8 **Whether the analysis is a forecast or an evaluation**
If this is your first SROI report it will be much less time-consuming to prepare a forecast than to conduct an evaluative SROI analysis, unless you have the right outcomes data available. Otherwise, a forecast SROI analysis will help you to put in place a measurement framework so that you can come back to do evaluative SROI in the future.

Top Tip: Keep good records
Good record keeping is essential to successfully completing an SROI analysis. When you get to Stage 6, you will see that the SROI report needs to contain a lot more than just the calculation of the social return. It needs to document the decisions and assumptions you made along the way. Keeping a dedicated record of your planning and progress from the start will make writing the report a lot easier.

Adjusting the scope
Adjusting your scope in response to new information is good practice and not unusual. In particular, you may wish to review your scope after considering the numbers and types of stakeholders you need to involve. This will determine the resources required and it may mean you need to start with fewer activities.

The worked example – scope
Wheels-to-Meals is a charity that works with older people. Wheels-to-Meals provides transport for its members to come to a centre, where they are provided with hot, nutritious lunches. While at the centre, members have the opportunity to socialise, attend workshops on health and related issues, and take mild exercise.

The local authority contract for this charity is to become the subject of a joint commissioning approach. Wheels-to-Meals wants to contribute to the joint commissioning process with a credible demonstration of the social value it is creating. Wheels-to-Meals' staff and trustees worked together to define the scope of their upcoming SROI analysis and decided that it would:

- contribute to the joint commissioning process;
- cover all the activities of the organisation over one calendar year;
- be a forecast SROI analysis; and
- be undertaken by internal staff.

Remember that this is an example and is not intended to be a full analysis of scope.

Over to you: Establishing scope and constructing a plan
Consider these questions in relation to the SROI analysis you are undertaking.

1 What is the purpose of the SROI?

2 Who is it for?

3 What is the background?

4 What resources do you have available?

5 Who will undertake the SROI?

6 What activities will you focus on?

7 What timescale (period) will your analysis cover?

8 Is the analysis a forecast, a comparison against a forecast or an evaluation?

Record your answers, as you will need to refer to them during the analysis and when you come to write your report.

1.2 Identifying stakeholders

Listing stakeholders
Now that you are clear about the scope of the analysis, the next step is to identify and involve your stakeholders. **Stakeholders** are defined as people or organisations that experience change, whether positive or negative, as a result of the activity being analysed. In SROI analysis we are concerned primarily with finding out how much value has been created or destroyed and for whom.

To identify the stakeholders, list all those who might affect or be affected by the activities within your scope, whether the change or the outcome is positive or negative, intentional or unintentional.

The example below, which is referred to throughout the guide, relates to an organisation called MillRace IT. This is a real example as opposed to our worked example of Wheels-to-Meals. The example below shows you what a stakeholder list looks like.

Example: Listing stakeholders for MillRace IT
MillRace IT is a social firm offering supported volunteering and employment to people with mental health problems. At MillRace IT, computers are refurbished and distributed to new users, or serve as educational parts for the training programme.

Each year, some participants from MillRace IT move forward into employment after training. However, due to the nature of its core client base, some participants may never enter mainstream employment. In these cases, the goal is to provide a long-term volunteer opportunity, where clients are able to contribute and be productive in a supportive work environment. By spending time at MillRace IT, participants can avoid a relapse in their condition and extend their recovery.

MillRace IT is a former project of InterAct, another mental health charity, and the two organisations still work together. MillRace IT also has a commercial partnership with RDC, a private sector computer-recycling firm.

Here is a list of all those who affect or are affected by MillRace IT:

- Employees
- Individual customers who purchase recycled IT equipment
- Organisations which purchase IT services
- Members of the local community
- Project participants – people recovering from mental ill health
- The family members of project participants
- Local mental health care system
- InterAct, as the founding organisation
- RDC, the commercial company that offers office space to MillRace IT
- Local government
- National Health Service
- UK taxpayers

Over to you: Draw up a list of your stakeholders

Deciding which stakeholders are relevant
You can see from the example above that the SROI process would quickly become unwieldy if you had to involve all possible stakeholders.

When deciding whether a stakeholder is relevant you need to think about what the outcomes may be for them. Which stakeholders are experiencing significant change as a result of your activities? In the next step you will be asking stakeholders about this from their perspective and this may mean you have to change your initial decision about the outcomes. However, at this stage you need an initial, broad understanding of stakeholder outcomes.

There is a tendency to focus on the positive outcomes that were intended (or expected) by your stakeholders, particularly if you focus only on your organisational aims or objectives, which do not usually identify unexpected or negative changes. However, intended and unintended outcomes and positive and negative outcomes are all relevant to SROI.

Some **unintended outcomes can be positive**. For example, a local economic development initiative undertook an evaluative SROI analysis and found that there had been a number of positive outcomes beyond getting a job. Those with children said they were now able to be better parents because getting a job had improved their general mental health and wellbeing. In some cases, unintended benefits can be more important to stakeholders than those that were intended.

However, **some unintended outcomes can be negative**. For example, a London-based charity flies young people from disadvantaged homes to Greece during the summer holidays, to give those children an educational experience and a holiday. Alongside the many positive outcomes for the young people, there is also an unintended negative consequence of carbon emissions from the flights. Including the carbon emissions simply makes the trade-off visible and might encourage ideas on how they achieve their objectives in a less carbon-intensive way.

One type of unintended change happens when your activity displaces someone else's activity. For example, reducing crime in one area may displace criminal activity to another area. In this case, the residents of the neighbouring area should be included as stakeholders. This may mean you need to reconsider your scope.

Top Tip: Unintended consequences and forecasting
If you are forecasting your return it may be more difficult for you and your stakeholders to assess possible unintended consequences. However, you may be able to use other people's previous experience of similar activities to identify unintended outcomes.

The example below continues with MillRace IT to show which stakeholders were included in the analysis and which were excluded. You will see that a reason is given for each decision, often based on a broad understanding of the outcomes for that stakeholder.

Example: Selecting material stakeholders at MillRace IT	
Key stakeholders	**Reason for inclusion**
Employees	Those employed would not otherwise be employed. This is a significant change to their lives
Project participants – people recovering from mental ill health	Primary beneficiaries who are likely to be experiencing significant outcomes if intervention is successful
The family members of project participants	Improvement in mental health of participants is likely to have a significant impact on families who may have previously had significant caring responsibilities
Local government in Essex	The computer recycling may reduce landfill charges for the local authority and help to meet environmental targets
National government (NHS and Department of Work and Pensions)	Savings in health spending if mental and physical health improves. Potential for reductions in benefit payments and increased state income from taxes where employment is increased
Excluded stakeholders	**Reason for exclusion**
Board members	No significant changes to board members were identified
Individual customers who purchase recycled IT equipment	Could buy computers elsewhere
Organisations that purchase IT services	Could buy services elsewhere
Members of the local community	Benefit likely to be too diffuse to measure in this analysis and difficulties in determining who would properly represent stakeholders in the community
Local mental health care system	Savings already captured by the national government (see above)

Make sure stakeholder outcomes link to your activities
Be careful that the stakeholders you have included experience change that is related to the activity in your scope. A common mistake is to include stakeholders that are relevant to the organisation but not to the activities set out in the scope. For example, if you are doing an SROI analysis of one project, be careful not to include stakeholders whose outcomes are achieved as a result of another project.

Make sure your choice of groups of stakeholders doesn't hide significant differences
When stakeholder groups are identified it is often assumed that they share enough common characteristics to form one group, for example 'local residents' or 'participants' or 'young people'. Yet members of these groups may experience and want different outcomes depending on their age, income or some other factor. If you think these differences are likely to be significant, split your stakeholders into subgroups.

Occasionally, you may find that past experiences have a major effect on whether participants achieve a particular outcome. For example, for an organisation working with young people, those who have previously had support from another organisation may do better when they work with you. Splitting them into subgroups now may help you sort out how much of the outcome was due to your intervention.

Over to you: Determining which stakeholders to include
Set up a table like the one below. Put all the stakeholders from your initial list in the first column, together with your initial assessment of how they affect or are affected by the activity, including positive and negative effects. Next decide which of the stakeholders experience significant change and are 'material' to the SROI analysis. Give your decision and a reason in the third column. Leave the remaining three columns blank until the next step.

Stakeholder and how they affect or are affected by the activity	What we think happens to them, positive and negative	Included/ excluded?	Method of involvement	How many?	When?

1.3 Deciding how to involve stakeholders

This section introduces you to methods of involving stakeholders. So far you have based your assessment of stakeholders and change on your own knowledge and experience.

As well as helping you find out what really matters to your stakeholders, involving them can help you to understand more about strengths and weaknesses of the activities you are analysing and may provide useful information that can help your organisation improve.

Methods for involving stakeholders
Collecting information from stakeholders can be as simple as phoning someone or as complex as holding a facilitated focus group session. When gathering information from participants, ask staff that work with them about the best way of engaging them. Here is a list of possible methods for involving stakeholders:

- Get stakeholders together in one place and ask them directly;
- Try a workshop format, with informal discussions and a flipchart to record responses;
- Have stakeholders complete a form during a regularly scheduled meeting – for example, an annual general meeting of an organisation, or other set gathering;
- Ring representatives from key stakeholder groups and ask them;
- Email a short form to representatives from key stakeholder groups;
- Have a social event and ask staff members to walk around and speak to stakeholders;
- One-to-one interviews.

Ideally, you should collect information directly from stakeholders. However, lack of time or resources may mean that some information has to come from existing research with your stakeholders. Where possible these existing sources should themselves be based on asking your stakeholders. Also, there may be stakeholders you cannot involve – future generations, for example. In this case you need to identify people to speak on their behalf.

Top Tip: Be practical about involving stakeholders
It is particularly important to be sensitive to the amount of time and resources stakeholders can give to this process, whether they are staff, funders, or participants. Think about each stakeholder's inputs, outputs and outcomes before meetings to ensure that time is used as efficiently as possible. If it is likely that you will have to speak to them again to collect more data for your analysis, make sure that you tell them this so they know what to expect.

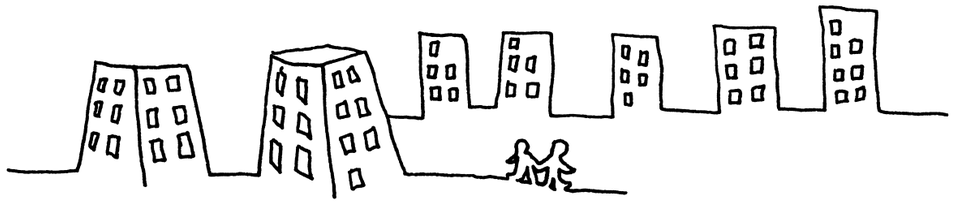
Think about ways in which people already gather, for example public meetings or training sessions, and see if you can make use of any of these. Also, where you are asking people to give a significant amount of time to the process with no obvious benefit to them, consider providing incentives such as lunch, travel expenses or vouchers to encourage attendance.

How much involvement?
At this initial stage you do not have to worry about getting a large sample that is statistically representative. You can stop doing new research when you no longer 'hear' new things and so can reasonably expect to have heard the main points. This approach is commonly used in social research and is called 'saturation'.

Using time effectively
Involving your stakeholders need not be onerous or time-consuming and is often a way of checking and refining your work.[1] However, you can limit time spent on this by being creative.

By planning ahead you may be able to use your time (and that of your stakeholders) effectively by collecting data for several stages at once. So don't feel that you have to keep going back to your stakeholders.

For forecast SROI analyses you can often collect the information needed for stages 2, 3 and 4 in one session.



For evaluative SROI analyses you can collect information for stages 2 and 3.1 in one session – although you will need to collect the information in stage 3.2 as a separate exercise. As a result you may be able to collect the information you need for the remainder of stages 3 and 4 either in the first session or at the same time as you collect the information for stage 3.2.

Regardless of the type of SROI analysis, you will also need to engage with your stakeholders for stage 6.

Over to you: Planning for involving stakeholders
Now that key stakeholders have been identified, fill in the next three columns of the plan for involving stakeholders that you started in section 1.2. Put in the details of how you will involve them, how many you will involve and when. This plan will be summarised and form part of your report.

1 In HM Treasury's *Green Book* the principle of proportionality states that the amount of time spent on analysis should be proportionate to the amount being spent on the activity overall.

Stage 2:
Mapping outcomes

In this section we build an Impact Map informed by our engagement with stakeholders. This details how the activities you are analysing use certain resources (inputs) to deliver activities (measured as outputs) which result in outcomes for stakeholders. The Impact Map is central to the SROI analysis. Sometimes this relationship between inputs, outputs and outcomes is called a 'theory of change' or a logic model – or the story of how your intervention makes a difference in the world. You will gain the information from your stakeholders using the plan you established in the previous stage. By involving stakeholders in constructing the Impact Map you ensure that the outcomes that matter to those who are directly affected will get measured and valued.

There are five steps when filling out an Impact Map:

2.1 Starting on the Impact Map
2.2 Identifying inputs
2.3 Valuing inputs
2.4 Clarifying outputs
2.5 Describing outcomes

2.1 Starting on the Impact Map

A loose Impact Map has been included with the printed version of this guide. You can work with this or you could set up your own using Microsoft's Excel or Word software. A pdf of the Impact Map is also available at www.thesroinetwork.org.

The top section of the Impact Map is for information on your organisation and the scope of the analysis from your project plan. Below this, the first two columns of the bottom section ('stakeholders' and 'intended or unintended changes') are based on the stakeholder analysis completed in step 1.3. The last column on the Impact Map is for you to record things you need to do at a later point as you go along. Throughout this stage, the rest of the Impact Map is filled in step by step. We illustrate each step using the worked example.

Top Tip: Impact Maps
If this is the first time you have done an Impact Map it may be easier to work through all the exercises for inputs, outputs and outcomes in relation to one stakeholder and then repeat this for the next stakeholder.

The worked example – starting the Impact Map
Wheels-to-Meals' first step was to complete the top section of the Impact Map with scope and other details, as follows (to view in full, see pages 102 and 103):

Social Return on Investment – The Impact Map for the worked example		
Organisation	Wheels-to-Meals	
Objectives	Provide luncheon club for 30 elderly local residents with additional health and social benefits by bringing residents to meals	
Scope	Activity	30 places for eligible elderly and/or disabled local residents 5 days a week, 50 weeks of the year
	Contract/Funding/Part of organisation	Local Authority Grant

The second step was to fill out the first two columns. Look at the Impact Map for Wheels-to-Meals on page 102: the orange section shows you how these columns have been completed.

Wheels-to-Meals considered the stakeholders that have an effect on its activity and on whom the activity has an effect. However, it decided not to include them all. For example, the local primary care trust could have been a stakeholder but was not included because a number of other significant stakeholders had been identified and there were insufficient resources to analyse more stakeholders for a relatively small activity.

Over to you: Starting on the Impact Map
Fill in the top section and first two columns of your Impact Map.

2.2 Identifying inputs

The inputs column is the next one to fill in on your Impact Map. The investment, in SROI, refers to the financial value of the inputs. You need to able to identify what stakeholders are contributing in order to make the activity possible – these are their inputs. Inputs are used up in the course of the activity – money or time, for example.

The value of the financial inputs, especially for a single grant or a contract, is usually easy to establish, although it is important that you include the full cost of delivering the services. In some situations there are other contributions being made, including non-cash items, which need to be valued. Further information on valuing non-cash inputs is available in the Resources section (see index on page 81).

Where you are analysing the social value generated by an activity that is financed from several sources, some initial analysis of the costs of these activities is required and there is specific guidance on this in the Resources section (see index on page 81).

Beware of double counting inputs
Be careful that all the inputs you record are used in delivering the activity. Your organisation may not use all the funding for an activity; this 'surplus' relates to the amount of the finance that was not necessary for the activity to happen. If there is a surplus then a different treatment is required: either you should include the additional social value that would be generated if you spent the surplus, or you should reduce the value of the input by the amount of the surplus.

2.3 Valuing inputs

When filling out your Impact Map you may have identified non-monetised inputs; these are inputs other than the financial investment, like volunteer time. If the activity would not go ahead to the same extent without these inputs, then you will want to put a value on them. This will ensure that you are transparent about the full cost of delivering your service. This section is for those that want to give a value to their non-monetised inputs.

Two main types of non-monetised inputs are generally relevant in SROI: volunteer time and contributions of goods and services in kind. Valuing volunteer time can be more difficult.

The hours given by volunteers are often given a value equivalent to the average hourly rate for the type of work they are doing. For example, if an administration volunteer does 5 hours a week in an area where administration work is paid on average £5 per hour, their weekly input would be £25. This value is given regardless of whether any

money is paid to the volunteer; it simply gives the input a value that can be added up with other inputs.

Volunteer inputs can also include an allocation of the overheads that would be incurred if the person was employed. This would cover National Insurance and pension contributions and also the costs of desk space, electricity, and so on.

The current convention in SROI is that the time spent by the beneficiaries on a programme is not given a financial value.[2]

Forecasting SROI
If you are forecasting your social return, the quantity of inputs that will be required will be an estimate based on a mix of:

- your experience;
- data from previous years' activity – if you have it; and/or
- research based on other people's experience of the levels of inputs you may require.

Evaluating SROI
If you are evaluating your social return, you will want to obtain the information from your organisation's management systems, such as records of how many hours or days your volunteers contributed. If this is not available, then you can use an estimate for now and this will be an action point for the future.

The worked example – inputs
Look at the Impact Map for Wheels-to-Meals on page 102: the pink section shows you how the column for inputs has been completed.

The material inputs for the scope and stakeholders are primarily time and money. In this example volunteer time is valued at £6/hr – an estimate of minimum wage for 2010 (the end of the period of the forecast). There are different ways of valuing volunteer time depending on the work being done by the volunteers. In this case, the value used is in line with volunteering England's (www.volunteering.org.uk) figure for a kitchen and catering assistant.

Over to you: Inputs
Once you have asked your stakeholders about inputs, fill in the inputs column on your impact map. Where required, try to attach a value.

2.4 Clarifying outputs

Outputs are a quantitative summary of an activity. For example, the activity is 'we provide training' and the output is 'we trained 50 people to NVQ level 3'. You can work through your list of stakeholders, describing the outputs from the activity.

2 This is currently under discussion within the SROI Network.

Sometimes the same output is repeated for several stakeholders, which are included in SROI at this stage because they form part of the theory of change. They will not be counted in the calculation, so there is no risk of double counting. In situations where stakeholders are contributing their time, the output – a number of hours – may be described in the same way as the inputs: a number of hours.

The worked example – outputs
Look at the Impact Map for Wheels-to-Meals on page 102: the pink section shows you how the column for outputs has been completed.

The activity, in this example, is the same for all stakeholders – the luncheon club. However, it needed to be broken down into outputs. So, 'luncheon club' is an important part of the story and context, but the impact map also quantifies the outputs: group activities, transport and meals.

Over to you: Outputs
Once you have asked your stakeholders about outputs, fill in the outputs column on your Impact Map.

2.5 Describing outcomes

Outcomes for stakeholders
SROI is an outcomes-based measurement tool, as measuring outcomes is the only way you can be sure that changes for stakeholders are taking place. Be careful not to confuse outputs with outcomes. For example, if a training programme aims to get people into jobs then completion of the training itself is an output, getting the job is an outcome. Identifying outcomes is not always immediately intuitive, be sure to spend sufficient time getting to grips with the theory of change to ensure that you are measuring the right things.

You have already set out your view of the intended or unintended outcomes that you expect. Now you need to check with your stakeholders to see if this view was correct. They may describe the effects differently to you, perhaps even in surprising ways. You may find that you need to include a new stakeholder. For this reason, the outcomes description column can only be completed after talking to your stakeholders. It can help identify outcomes if you ask stakeholders some questions. For example: 'How would you describe how your life has changed?; 'What do you do differently now?'.

Remember that this symbol appears throughout the guide but that you may be able to collect information from stakeholders relating to several stages at the same time (see page 26).

Relate outcomes to the right stakeholder
Don't write down outcomes against one stakeholder that relate to changes that happened to another stakeholder. For example, if in step 1.3 you recorded

the 'increased integration of refugees' as an intended change for your funder, you need to recognise that this is really an outcome for refugees. If this is also recorded as an outcome against the funder it would be double counting. Sometimes, although a stakeholder contributes to the activity, they are not significantly changed by it.

In cases where the state is the funder there may be changes to society which you could include. In the above example, integration of refugees may reduce benefit payments which can then be included as a change for the state.

Making a judgement on outcomes
In deciding on outcomes, you should consider other factors, such as the organisation's objectives, as well as the views of your stakeholders. Stakeholders' views are critical but they are not the only factors in deciding which outcomes are significant. SROI is described as stakeholder-informed, rather than stakeholder-led, to recognise this.

This has some practical implications. For example, a substance user may express a desire to continue using. In these cases you may decide not to include the desired outcomes of one of your stakeholders as they conflict with your organisation's own intended outcomes and values.

Top Tip: Soft and hard outcomes
People sometimes use the terms 'soft' outcomes and 'hard' outcomes – the latter being outcomes that are easier to measure or subject to more established means of measurement. It is better to avoid this categorisation because if a 'soft outcome' is significant to the stakeholders it will need to be included in your SROI analysis, so it will be necessary to find a way to measure it.

Intermediate outcomes, or distance travelled
Sometimes it takes years for outcomes to take place – for example, slowing the rate of climate change – but there may be observable changes along the way. You may have heard this described as distance travelled, intermediate outcomes, or a chain of events. It is important to establish what this chain of events is, not least because your activity may only bring about some changes in the chain.

When a new outcome is identified by stakeholders or by your assessment of other factors, you will need to decide whether it is an entirely new outcome, or in fact part of an existing chain of events.

The worked example – describing outcomes
Look at the Impact Map for Wheels-to-Meals on page 102, the pink section shows you how the column for describing outcomes has been completed.

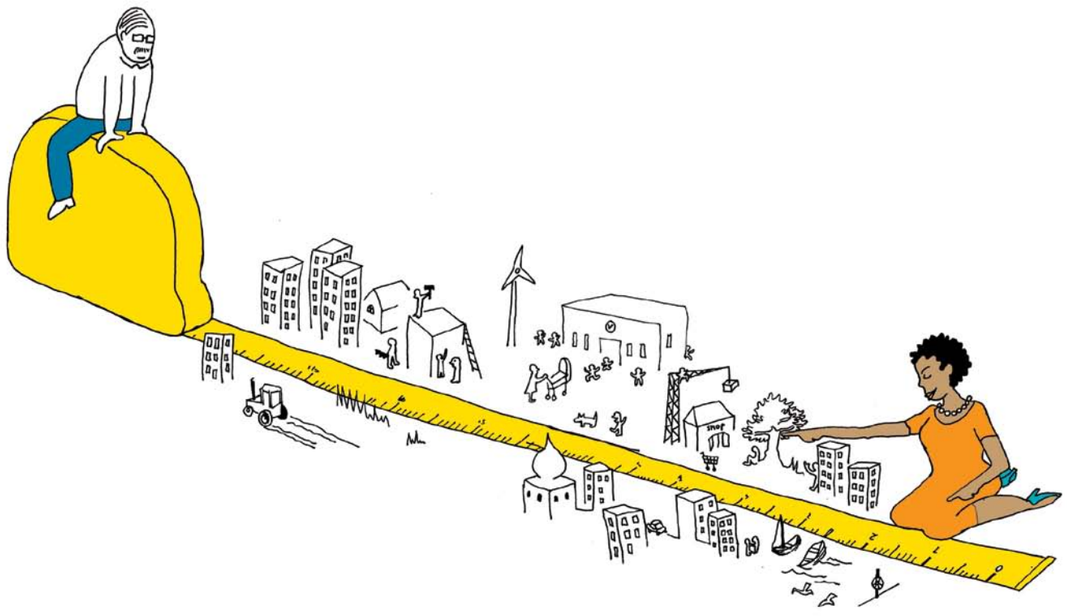
When the initial analysis was undertaken, one of the assumptions was that residents would be healthier. However, during initial discussions with stakeholders, it soon became clear that for many residents this was not where the story ended. As a result of exercise sessions, residents were fitter. This resulted in a reduction in falls. Several residents said things like, "Well, I don't end up in hospital as much for a start!" when they were asked what they thought happened to them as a result of coming to the luncheon club. This outcome had not been identified as significant before but it appeared to be an important part of the story for many of this stakeholder group.

To understand this, Wheels-to-Meals considered the 'chain of events' that was occurring as a result of the outputs. So, for this example of fewer falls, the chain of events was:

Activity	Example output	Outcome 1	Outcome 2	Outcome 3
Luncheon club	group activities, including exercise sessions	as a result residents were fitter	as a result they fell less	as a result they ended up in hospital less

These three outcomes are all describing different stages of one change.
The activity and output(s) are summarised together in the outputs column.
The outcomes are summarised together in the outcomes description column.

By involving stakeholders, Wheels-to-Meals also identified an important unintended negative outcome – by coming to the luncheon club, some residents were no longer being supported by neighbours who had been popping in and doing shopping for them. Neighbours were a new stakeholder group, so a new row was included in the Impact Map and inputs, outputs and outcomes for this group were recorded.



In exploring a chain of events, you may notice that there are different chains for different groups of people within a single stakeholder group. Where this happens you may feel that the differences are significant and you may need to split a stakeholder group into one or more groups, each with a different chain.

Over to you: Finalising what to measure
Once you have asked your stakeholders about outcomes and considered other factors, fill in the outcomes column on your impact map. This chain of events is often described as a theory of change. You can write up the theory of change for each stakeholder and the relationship to the activity covered in your scope. This will form part of your report.

This is also a useful point at which to check your Impact Map to make sure you have only included material outcomes and make any appropriate revisions. Check that you aren't missing anything significant or including something that is not relevant. Take a moment to look at your Impact Map and decide what you will finally include before moving on to measurement. If you make a decision to exclude any outcomes, make sure you document this, and the reasons why, in your SROI report.

Stage 3:
Evidencing outcomes and giving them a value

So far you have mapped out and described the outcomes that are occurring for stakeholders. In this step, we develop outcome indicators and use these to collect evidence on the outcome that is occurring.

There are four steps in stage 3:

3.1 Developing outcome indicators
3.2 Collecting outcomes data
3.3 Establishing how long outcomes last
3.4 Putting a value on the outcome

Stage 3

3.1 Developing outcome indicators

Indicators are ways of knowing that change has happened. In SROI they are applied to outcomes as these are the measures of change that we are interested in.
The next stage in developing the impact map is to clarify one or more indicators for each of the outcomes on your map. You will need indicators that can tell you both whether the outcome has occurred, and by how much.

Time to involve your stakeholders
Stakeholders are often the best people to help you identify indicators, so ask them how they know that change has happened for them.

For example, if the outcome was an increase in self-confidence, ask the people whose self-confidence is increased what they now do as a result, or ask them to tell you what they mean by self-confidence. In this way you are more likely to get to something that you can measure. They might say: "Before [the activity] I would never go out, but now I get the bus into town to meet my friends." In this example the indicator of self-confidence could be whether people go out more or spend more time with other people.

Balancing subjective and objective indicators
Sometimes you need to use more than one indicator. Try to mix subjective (or self-reported) and objective indicators that complement each other. There are risks of relying on self-reporting measures that can be offset by supporting them with objective indicators. Check your indicators with your stakeholders. For example, frequency of use of GP services is commonly used to measure health outcomes but could be either positive or negative depending on the circumstances (eg increased use of GP services is often a positive outcome for homeless people who are less likely to present with health problems when they arise).

The example below is for a mental health day service.

Example: Choosing indicators	
Outcome	Indicator
Reduced social isolation	• Whether participants are taking part in new activities (eg taking up new sports or hobbies, visiting new places) • Whether participants report having more friends • Level of social skills reported by participants • Whether participants are accessing relevant public services that they had not used in the past, like public transport
Decreased stigmatisation of people with mental health problems	• Number of activities participants are involved in outside the mental health services • Number of incidents of discrimination reported by participants • Involvement of local community in organisation's activities • Change in attitudes within the local community

The worked example – indicators
Look at the Impact Map for Wheels-to-Meals on page 103: the blue section shows you how the columns for indicators has been completed.

The indicators for some outcomes were quite straightforward. For example, the outcome 'fewer hospital admissions' has a simple indicator: number of hospital admissions.

In other cases – healthier residents, for example – indicators needed to be identified to measure the outcome described. In this case, Wheels-to-Meals chose an objective indicator ('fewer GP visits') and a subjective indicator ('number of residents reporting improved health'). The subjective and objective indicators support each other.

Checking your indicators
Now that you have indicators that are relevant to the stakeholder and scope, you need to check that they are not only measurable but that you will be able to measure them within the scope and the resources you have set.

If you are completing a forecast SROI report you need to check that you could reasonably measure your indicators in future. If you are doing an evaluative SROI analysis, you need to check the cost of collecting information about outcomes that have happened, if the information is not available. This can be expensive as it can involve surveys of people who are no longer involved with your organisation. If, for example, a survey is not possible, one of the recommendations is likely to be to change the way you capture information in future.

Sometimes your stakeholder will only achieve the outcome they seek later on, when they are no longer working with you. You will need to maintain contact with your stakeholders to make sure you capture this and that you therefore have indicators that are relevant to your stakeholders. This can be done through postal and telephone surveys and can be limited to a representative sample. You may need to provide a financial incentive for your stakeholders to respond.

Measure what matters
A common mistake here is to misinterpret what we mean by measurable. A basic principle of SROI is to measure and value the things that matter. Measurability means expressing the outcome indicator in terms that are measurable, rather than finding an indicator that is easy to measure.

Avoid the trap of using inappropriate indicators just because they are readily available. If the outcome is important you will need to find a way to measure it.

Stage 3

Top Tip: Knowing the numbers
In an Impact Map, indicators are often expressed using terms like 'more', 'fewer', 'less' or 'increased' – such as 'a 20% decrease in school exclusions'. Strictly speaking the indicator is 'number of exclusions'. In order to know whether the number of exclusions has changed you will need to know the actual numbers of exclusions before and after the activity.

Over to you: Choosing indicators
Return to your Impact Map. For each outcome, choose indicators that will tell you whether the outcome has occurred, and to what extent. Try to think of more than one indicator per outcome to strengthen your findings and help you be sure that the outcome has occurred.

3.2 Collecting outcomes data

You will now need to collect data on your indicators. This may be available from existing sources (internal or external) or you may need to collect new data.

If you are doing a forecast SROI analysis, use existing data where available. If you have delivered this activity before, you can base your estimation on your own previous experience. If this is the first time you have undertaken the activity, then your estimate will be based on research or other people's experience in similar activities. Look at information from:

- Membership organisations, government departments, market research firms, consulting companies, partner organisations; and
- Published research from universities, government departments and research organisations.

As part of your forecast SROI analysis, it is important to change the way you collect data so that you have the right information in place to carry out an evaluative SROI study at a later date. Think about ways that you can incorporate this into everyday activities to make it as cost-effective as possible. For example, a childcare intervention could engage with parents at regular intervals as they collect their children and record outcomes that way.

If you are doing an evaluative SROI analysis, use and review the data the organisation already collects and what is available from other sources. It is more time-consuming and costly to gather data about impact after the event, and existing data and self-reported change may have to suffice.

New data will usually come from people directly involved in the creation of social value – project participants or employees, for example – and will be gathered by your organisation. You may be able to get another organisation, like the local authority, to agree to let you include questions in a standard questionnaire that it would administer.

The most commonly used techniques for primary data collection include:

- One-to-one interviews
- Record keeping (such as case files)
- Focus groups
- Workshops and seminars
- Questionnaires (face-to-face, over the phone, in the post, on the Internet).

A common question is how big the sample of your clients should be. There is no hard and fast rule here. If you work with twenty young people, you should try and speak to all of them. If you work with thousands of people, you should use a representative sample and statistical tests to support your arguments. If this is not feasible it is recommended that you choose a sample size that you feel is defensible and within your budget. See the sources of further information in the Resources section (page 80) for help in calculating sample sizes and for drawing conclusions from samples.

Finding relevant data can be difficult, so use the best available information or make assumptions or estimates. Do not worry about not being able to collect every piece of data. You may even conclude that it would be best to go back to Stage 1 and redefine your scope until more resources are available and organisational priorities permit. Remember that in order to be transparent you will need to explain what you have used. The table below gives you some examples of collecting outcomes data for a community-based employment-mentoring programme.

Stakeholder	Outcome	Indicator	Data Collection
Unemployed person	Gains and maintains employment	Whether in work after 12 months	Annual postal survey of stakeholders and telephone follow up
Participant with physical disability	Reduced social isolation	Frequency of social contact with friends	Gathered systematically at six month review between client and worker
Young person	Improved behaviour	Number and type of school exclusions	Report by teacher
Local authority	Increase in recycling	Amount of waste going to landfill	Monitoring of change in amount of waste
Local community	Reduced fear of crime	Number of local people who report feeling safer	Home Office crime mapping tool

Top Tip: Tap into innovation on outcomes measurement
Sometimes you will find that there is an indicator but there is currently no way of measuring it and new methods need to be developed[1]. It was once commonly thought that confidence, self-esteem and other experiential outcomes could not be measured. However, there are many techniques for measuring a range of wellbeing outcomes that are now widely accepted by government and charities.
Look into what is already being done in this area that could be used or adapted for your purposes, or consider how you can work with others to develop new ways of measuring outcomes.

Local Multiplier (LM3) is an example of a tool that was developed by **nef** in order to measure local money flows. See www.procurementcupboard.org for more information. A tool called the Outcomes Star has been developed to assist homelessness charities to capture the distance travelled by their clients. This is a good example of how you can measure progress towards an outcome. You can find more information about the Outcomes Star at www.homelessoutcomes.org.uk

Worked example – source and quantity of indicators
Look at the Impact Map for Wheels-to-Meals on page 103: the blue section shows you the source and quantity of the indicators.

Do not double count outcomes
When you are dealing with a chain of events, be careful not to double count. For example: ten people want to gain work through training and all ten gain qualifications. But only five gain work. When you come to value the outcome for the five that gained work, valuing both the qualification and the employment will double count the value of the training.

Another situation where there is a risk of double counting is when looking at savings to the state. For example, an SROI study might include the financial saving to the state of reducing homelessness. However, such calculations can include savings to the NHS on healthcare. You shouldn't then separately include the savings to the NHS as it would be double counting. But remember this is subtle. For example, if a disabled person gets a job, benefits might accrue to them (expressed in part through income), to their carer (respite), and to the state (tax and benefits). Counting all three is not considered double counting in SROI because the value is experienced separately by all three stakeholders.

To distinguish between the two, ask yourself: am I counting the same value, for the same stakeholder, twice?

1 Go to www.thesroinetwork.org for information on the indicator database.

Over to you: Outcomes data collection
Complete the column on the Impact Map for sources of information. Once you've collected your data, fill in the 'quantity' column.
Don't forget that you are communicating to different audiences and may need a number of different types of information. Almost always it will help people understand what you do and explain how you create change if you can record short case studies of one or two people or organisations in each stakeholder group. These would form part of a full SROI report. You should now have enough information to be able to prepare these.

3.3 Establishing how long outcomes last

The effect of some outcomes will last longer than others. Some outcomes depend on the activity continuing and some do not. For example, in helping someone to start a business it is reasonable to expect the business to last for some time after your intervention. Conversely, providing a service so that people do not visit their GP so often may depend on the service being available all the time.

Where you believe that the outcome will last after the activity has stopped, then it will also continue to generate value. The timescale used is generally the number of years you expect the benefit to endure after your intervention. This is referred to as the duration of the outcome or the benefit period.

You will need an estimate of the duration of each of your outcomes. Ideally this would be determined by asking people how long an intervention lasted for them – this will give you evidence of the duration. However, if information is not available on the durability of different outcomes, you can use other research for a similar group to predict the benefit period, such as the likelihood that ex-offenders will begin offending again, or that people in employment will lose their jobs. Look for research to support your decision. It is important to use data that is as close as possible to the intervention in question so as not to inappropriately generalise. This is an area where there can be a tendency to overstate your case and lose credibility.

Sometimes the duration of the outcome is just one year and it only lasts while the intervention is occurring. In other instances it might be 10 or even 15 years. For example, a parenting intervention with children from deprived areas may potentially have effects that last into adulthood. You will need to have longitudinal data to support the duration of the outcome and should consider how you might start to collect this (if you are not already doing so). If you don't have this information you will need to make a case based on other research. The longer the duration, the more likely it is that the outcome will be affected by other factors, and the less credible your claim that the outcome is down to you. This is addressed by looking at the rate at which the outcome drops off and is considered in Step 4.4.

Beneficiaries	Duration	Rationale
Participants on a year-long IT training programme that go on to get related employment	4–5 years	The move into successful employment could set participants on a career path. Although they might stay on this for some time (eg 15 years), the period is kept to 4-5 years as increasingly the effect of the training will wear off and their work experience will become more important
Carers that get brief respite (1 week)	Up to 1 year	Respite care needs to be regular in order to sustain the benefits
Children that get a preschool intervention.	10–15 years	Evidence from some other early interventions with children suggests that the benefit can be long lasting, setting children on a different path
Businesses that get support with cheap workspace	3–4 years	The support could set up businesses that last for much longer than 3-4 years. However, it is likely that after the initial set up other factors (eg the general economic climate) will become more important
Participants that get better-quality wheelchairs	2 years	The benefit of the new wheelchair will depreciate much like other assets

Duration and life expectancy are different
In the case of capital projects it is important to recognise the difference between the duration of the benefit and the life expectancy of the asset. For example, a new building may last 20 years and in each year create benefits which last several years. There is a note in the Resources section on using SROI with capital projects.

Keep a record of the rationale you used for determining the benefit period for each outcome. This will need to go into your SROI report.

To date, the convention in SROI has been to account for outcomes from the time period after the activity, even if they occur during the activity.[2]

The worked example – duration
Look at the Impact Map for Wheels-to-Meals on page 103: the blue section shows you how the column for the duration of the outcome has been completed.

For Wheels-to-Meals, most of the benefit occurs during the activity and would not be sustained if the luncheon club ceased to operate. However, in line with convention, this is accounted for as if it happened in the period after the activity. We will consider two examples: fewer falls as a result of the mild exercise and fewer GP visits as a result of the practice nurse sessions.

- Fewer falls
  The activities were designed to maintain and improve general wellbeing in older and less mobile people. We have assumed that residents would not have mild exercise sessions without coming to the luncheon club and so, for our impact map, residents will stop having these sessions at the end of the year and the benefit will not endure. The duration is one year.
- Fewer GP visits
  Here, the change is due to increased awareness of health issues and contributing factors. Residents are given knowledge. When they stop having the practice nurse sessions at the luncheon club they do not lose the knowledge. They might use it less as time goes on (the effect of which on our analysis is picked up later in "drop-off"), but the change is not reversed. So the benefit endures beyond the activity. We have estimated the duration to be 5 years.

Over to you: Duration of outcomes
Complete the 'Duration' column on your Impact Map.

3.4 Putting a value on the outcome

Now that you have quantities of each outcome indicator the next step is to give each outcome a financial value. Remember that you are identifying a value for the outcome and not the indicator. You will then be able to complete the columns on the impact map relating to financial proxies, their value and their sources.

What is valuation?
This process of valuation is often referred to as monetisation because we assign a monetary value to things that do not have a market price. All the prices that we use in our day-to-day lives are approximations – 'proxies' – for the value that the buyer and the seller gain and lose in the transaction. The value that we get will be different for different people in different situations.

For some things, like a pint of milk, there is considerable agreement on and consistency in the price. For other things, such as a house, there is likely to be a wider spread of possible prices. For others – a new product that has never been sold before, for example – there may be no comparison.

All value is, in the end, subjective. Markets have developed, in large part, to mediate between people's different subjective perceptions of what things are worth. In some cases this is more obvious than in others. But even where prices are stable and have the semblance of 'objective' or 'true' value, this is not really the case.

2 This is a simplification of the approach used in HM Treasury's *Green Book*, where the outcomes are accounted for in the time period they arise. There is a risk that the simplification used in SROI will distort the calculation of social value in some situations. Although SROI uses this simplification, it is perfectly possible to calculate the SROI based on the time periods in which the outcomes occur, in which case it is important to state that this is what has been done.

If we take the house example again, how much it is worth depends who we are referring to. If you are selling a house, you will have a sense of what you are prepared to accept for it – how much value it has for you. If I am thinking of buying your house, I have my own view of what I am prepared to pay – how much value it has for me. What the market does – in fact, what it is effectively for – is to bring together people whose valuations happen to coincide. This 'coincidence' is called 'price discovery' – but it is not uncovering any 'true' or 'fundamental' value, rather it is matching people who (broadly) agree on what something is worth.

Arriving at an estimate of social value is the same as this in almost every way. The difference is that goods are not traded in the market and so there is no process of 'price discovery'. This does not mean, however, that these social 'goods' do not have a value to people. If I want to buy a house but there are no sellers, this does not mean that it does not have a value to me or that I don't have an idea of what this is. Similarly, if a local authority creates a park for residents, where I can go, this too has a value to me. The fact that I have not had to pay for this does not negate this fact.

In SROI we use financial proxies to estimate the social value of non-traded goods to different stakeholders. Just as two people may disagree on the value of a traded good (and so decide not to trade), different stakeholders will have different perceptions of the value they get from different things. By estimating this value through the use of financial proxies, and combining these valuations, we arrive at an estimate of the total social value created by an intervention.

This is no different in principle to valuations on a stock market, which are simply a reflection of the cumulative subjective valuations of buyers and sellers. With SROI, however, the total valuation arrived at is likely to be more complete. Why? Because share prices only reflect the valuations of a very limited group of stakeholders (institutional and retail investors), while an SROI analysis, if done properly, captures the different types of value relating to an activity, intervention or organisation, as seen from the perspective of those that are affected – ie the stakeholders.

The process of valuation has a long tradition in environmental and health economics; SROI is building on the methodology and extending it to other fields. While it may seem initially daunting, it is relatively straightforward and gets easier with practice. As SROI becomes more widespread, monetisation will improve and there will be scope for pooling good financial proxies. Now we will take you through some guidance drawn from different disciplines for identifying proxies for each of these.

Proxies that are easy to source

Sometimes monetisation is a fairly straightforward process – where it relates to a cost saving, for example. This might be the case where you are interested in the value of improved health from the state's perspective; you may decide to use the cost of attending a GP clinic.

Sometimes this will not result in an actual cost saving because the scale of the intervention is too small to affect the cost in a significant way (see section on marginal costs, below) but it still has a value.

The flipside to cost savings is an increase in income. Rises in income for people through salary or for the state through tax increases are obvious examples. However, be careful of double counting here. For example, if an individual gets a job, they increase their income and the state receives increased taxes. In this case the increase in income should be recorded after deducting taxes.

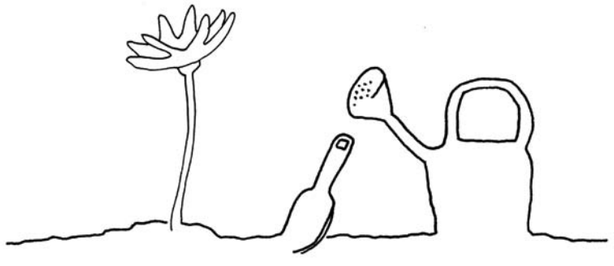
The increase in income may also not be additional to either the person or the state. For the person the increased income may be offset by an increase in taxes or loss of benefits. For the state the increase in taxes will only result in an increase in government income if no one else loses work and the total level of employment increases. However, there may still be a value to the state of that person getting a job that should be included – perhaps because inequality has been reduced.

Remember we are talking about proxies here, as some of these outcomes will not result in actual financial savings. However, for some stakeholders, such as the funders, you may want to demonstrate cash savings. If you want to do this credibly you will need to approach it rigorously and should consult the guidance on marginal costs and displacement. The information you collect on costs will help you with this but it may require a separate calculation.

Proxies that are more challenging

SROI also gives values to things that are harder to value so are routinely left out of traditional economic appraisal. There are several techniques available.

In **Contingent valuation** we ask people directly how they value things. This approach assesses people's willingness to pay, or accept compensation, for a hypothetical thing. For example, you may ask people to value a decrease in aircraft noise in their town – their willingness to pay for it. Conversely, you may ask them how much compensation they would require to accept an increase in crime.



Revealed preference techniques infer valuations from the prices of related market-traded goods. One form of revealed preference builds up a value from the market values of constituent parts of the service or good being considered. This method could be used to value environmental amenities that affect the price of residential properties. For example, it can help us value clean air (and the cost of pollution) by estimating the premium placed on house prices in areas with clean air (or the discount on otherwise identical houses in polluted areas). Another example might be to look at wage differentials that people require to take on certain risks, to calculate how they value different aspects of their lives. This is called hedonic pricing.

Another approach recognises that people are generally willing to travel some distance to access goods and services on which they place a value. This inconvenience can be translated into money to derive the estimate of the benefits of those goods and services. This is called the **travel cost method**.

You can also look at **average household spending** on categories like 'leisure', 'health' or 'home improvement' to reveal how much people value these types of activity, relative to others. This type of data is often available from government surveys. In England, the Family Spending Survey can be a useful source.

When identifying proxies it is important to remember that we are not interested in whether money actually changes hands. It also doesn't matter whether or not the stakeholders in question could afford to buy something – they can still place a value on it. We assume that health has a similar value to people on any income. So, for example, you may want to use the average cost of health insurance as a proxy for improved health amongst children in care. The fact that those children would not be in a position to take out such insurance is beside the point – it gives generic guidance on how people value health.

There are problems with each of these techniques, and there are no hard and fast rules as to which you would use in given situations. We offer them to support you in deriving proxies. Nonetheless, this section requires creativity and research on your part, as well as consultation with your stakeholders to identify the most appropriate values. The following table gives examples of proxies that have been used in previous SROI analyses. For most outcomes we suggest a range of different possible proxies to help your own brainstorming.

Stakeholder	Outcome	Indicator	Possible Proxies
Person with mental health problem	Improvement in mental health	• Amount of time spent socialising • Extent to which participants engage in new activities • Level of use of mental health services	• Cost of membership of a social club/network • Percentage of income normally spent on leisure, • Cost of counselling sessions
Local community	Improved access to local services	•Take-up of those services, and by whom	• Savings in time and travel costs of being able to access services locally
Person with physical health problem	Improved physical health	• Number of visits to GP surgery • Extent of improvements in health (self-reported) • How often they exercise	• Cost of visiting private GP clinic • Cost of health insurance • Cost of gym membership
Care giver	Improved wellbeing	• Number of hours respite/ spent in leisure activities	•Value of hours spent engaged in these activities
The environ-ment	Less waste	• Amount of waste going to landfill • Level of carbon emissions	• Cost of landfill charges • Cost of CO2 emissions
Prisoners' families	Improved relationships with family and social ties	• Number of family visits • Satisfaction with family visits	• Cost and time spent on travel
Young people	Decrease in drug use	• Level of drug use	• Average amount spent by young people on drugs
Offenders	Reduced reoffending	• Frequency of offences for which participant is charged • Nature of offence	• Forgone wages due to time spent in prison or doing community service
Care leaver	Reduced homeless-ness	• Access housing upon leaving care • Satisfaction with appropriateness of housing	• Rent • Cost of hostel accommodation
Woman offender	Improved family relationship	• Child continues living in the family home	• Amount that parents spend on their children annually •Value of time spent with children • Cost of childcare
Local community	Improved perception of the local area	• Residents report improvements in local area	• Change in property prices • Amount spent on home improvements

Stage 3

Identifying your financial proxies
Your stakeholders will be a good starting point for finding your proxies because only they know what it is they value and so know best how this might be captured.

While they may not be able to identify a tangible value, they can guide you as to what the change is worth to them.

As you check the proxy with stakeholders and see increasing agreement, the proxy may gain credibility. Where there is disagreement on values it is possible that the outcomes need to be expressed differently, otherwise it may be necessary to use average values. Often you can find academic articles or other research that has already assigned a monetary value to the outcome you are interested in. You'll still need to check that it is appropriate to your case.

Information on unit costs may be available from:

- websites maintained by the stakeholder who might gain from the cost saving (eg government departments like the Department for Work and Pensions);
- research into costs by government or independent bodies. The Personal Social Services Research Unit (www.pssru.ac.uk), for example, publishes comprehensive unit cost data for health and social care on an annual basis;
- your own estimates or research with the stakeholder on how much the saving would be.

Information on changes in income can be obtained from a range of places, including:

- data from stakeholders;
- reference to the average increase in a sample of your stakeholders;
- reference to other research of average increases that occur as a result of similar activities relating to the same outcomes.

Be careful with unit costs when calculating actual financial savings
Information on cost savings is often available in the form of unit costs. Unit costs are sometimes calculated as the total cost of an activity divided by the number of people benefiting from the activity. This includes both fixed costs, like the cost of a building, as well as variable costs, eg day-to-day running. The fixed costs may remain the same regardless of the number of participants in an activity. For example, the unit cost of housing a prisoner is in the region of £40,000 per annum when the total cost of the prison estate is divided by the number of prisoners. But if 100 people are prevented from going to prison that does not affect the fixed costs and is unlikely to achieve the full unit cost reduction per prisoner.

When you use unit costs be careful not to overstate the savings. The cost savings that you use should be the change in costs arising from your activity, called the **marginal costs**. Marginal costs will vary depending on the scale of the activity.

The problem is that data on marginal costs is harder to access, whereas unit costs are more routinely calculated.

Remember also that the department investing is not necessarily the one that makes the final saving. It is quite common for central government to benefit from cost savings that result from a local government initiative (eg prison savings from a reduction in crime) and vice versa. Even within an organisation it is possible that the cost saving would not be made by the department funding the activity but by another. Separating out stakeholders is necessary to avoid confusion and help communication.

Choosing credible financial proxies
It is important when communicating social value to understand that some proxies are more credible than others for different stakeholders. The most credible proxies have been used before (by third party sources with existing credibility), or are at least based on research undertaken by your organisation. Other proxies are market comparisons (what it would cost to achieve the same outcome) or working assumptions that will need to be related to proposed future improvements. These latter two may be necessary but are usually less credible.

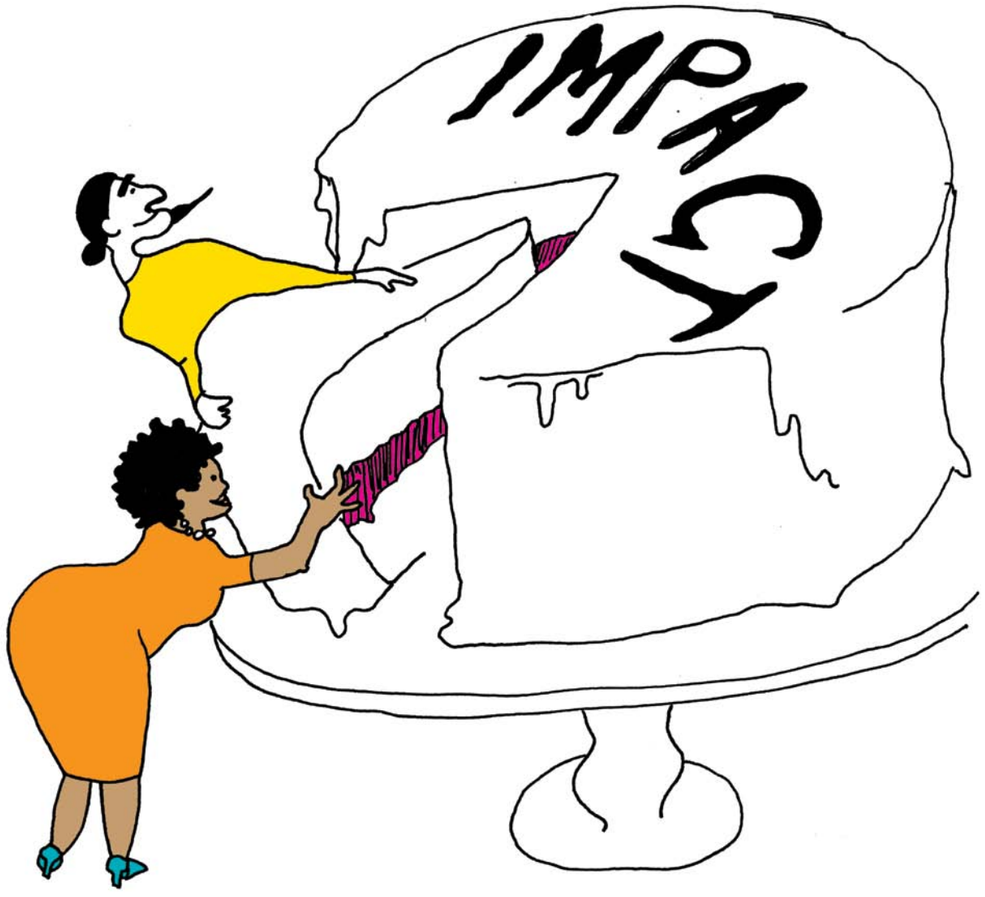
When we get to sensitivity analysis you will have the opportunity to test the overall impact that the proxies have on your analysis. If you are having difficulties choosing between two proxies, make a note of them and later test what difference using either of them would make.

Top Tip: Proxies and double counting
It is possible to have the same financial proxy for different indicators without double counting. For example, if an activity improves the relationship between family members the same proxy (for example, the proportion of family income spent on children) may be applicable for both parents and children because it represents the value to each of them of the intervention. The total value is therefore the sum of these.

The worked example – financial proxies
Look at the Impact Map for Wheels-to-Meals on page 103: the blue section shows you how the column for financial proxies has been completed.
For example, for the outcome of 'fewer hospital admissions', desk research showed that this was not accounted for as a single figure. A hospital admission and stay was built up of a number of interventions from admission through to continuing care. Furthermore, costs varied for different patient groups, so the proxies chosen by Wheels-to-Meals were specific to older people. The source of these was the NHS cost book.

These proxies are examples of indirect cost savings. The change would not by itself result in a smaller budget or reduced spend for nearby hospitals in following years as there would be many more people in need of these services. Also, seven fewer

admissions would not make a signifi cant difference amongst all the other factors that affect the budgets. However, the costs identifi ed are good proxies for this outcome and produce an appropriate way of valuing the change.



Other proxies were considered for the reduction in 'neighbourly care/shopping and breakdown of informal community networks' outcome. For example, Wheels-to-Meals considered whether the value of the neighbour's time might be a better financial proxy to use. They found a median wage using NOMIS (Annual Survey of Hours and Earnings – www.nomisweb.co.uk). If a neighbour were going shopping anyway, then the time involved would be the extra time they spent with residents before and/or after the shopping trip; they guessed this would total about half an hour. At the hourly median wage of £11.97 for half an hour per shopping trip this would be £5.99 per trip. As this was similar value to that used on the Impact Map for a supermarket online delivery fee, they felt more certain using the latter proxy.

Over to you: Financial proxies
You can now complete the sections on the Impact Map relating to fi nancial proxies.

Stage 3

Stage 4:
Establishing Impact

This section provides a number of ways of assessing whether the outcomes you have analysed result from your activities. These methods provide a way of estimating how much of the outcome would have happened anyway and what proportion of the outcome can be isolated as being added by your activities. This is what we mean when we use the term impact.

Establishing impact is important as it reduces the risk of over-claiming and means that your story will be more credible. It is only by measuring and accounting for all of these factors that a sense of the impact that the activity is having can be gained. Otherwise there is the risk of investing in initiatives that don't work, or don't work as well as intended. As you will see, establishing impact may also help you identify any important stakeholders that you have missed.

There are four parts to this section:

4.1 Deadweight and displacement
4.2 Attribution
4.3 Drop-off
4.4 Calculating your impact

Stage 4

4.1 Deadweight and displacement

Deadweight is a measure of the amount of outcome that would have happened even if the activity had not taken place. It is calculated as a percentage. For example, an evaluation of a regeneration programme found that there has been a 7% increase in economic activity in the area since the programme began. However, the national economy grew by 5% during this time. Researchers would need to investigate how much of the local economic growth was due to wider economic changes and how much to the specific intervention being analysed.

To calculate deadweight, reference is made to comparison groups or benchmarks.[1] The perfect comparison would be the same group of people that you have affected, but seeing what happened to them if they had not benefited from the intervention.

Therefore, measuring deadweight will always be an estimate since a perfect comparison is not possible. Instead, you need to seek out information that is as close to your population as possible. The more similar the comparison group, the better the estimate will be.

Ask stakeholders about their services
In an evaluative SROI analysis, information on deadweight can be gathered during the data collection phase. For example, you may be able to ask stakeholders what other services they access and how helpful they find them. Or they may be able to tell you if they could have accessed another similar facility in the area anyway.

However, you will often have to go elsewhere for the kind of information you need. Data on some indicators will be available from government sources, both from individual departments and from organisations like the Office for National Statistics. Other information is sometimes available from infrastructure, member, trade or sector groups that represent the interests of particular stakeholders.

The simplest way to assess deadweight would be to look at the trend in the indicator over time to see if there is a difference between the trend before the activity started and the trend after the activity started. Any increase in the trend after the activity started provides an indication of how much of the outcome was the result of the activity.

There is a risk that the same change in the trend is happening elsewhere in a wider population of which your stakeholder group is a part. It is therefore better to also compare the trend in the indicator with trends in the wider population.

There is still a risk that whilst there is a change in the indicator relative to the wider population, the change happened to similar groups elsewhere, relative to their wider populations, where a similar intervention or activity was not available. The solution to this risk would be to calculate and compare the relative changes for both your stakeholder group and a similar group elsewhere.

1 Sometimes referred to as the counterfactual.

Here are some examples of data you could use to calculate deadweight for different kinds of outcome.

Outcome	Benchmark indicator
Reduction in reoffending rates among young ex-offenders (16-24 yrs) taking part in a rehabilitation programme	National average reoffending rate among 16-24-year-olds
Improvement in educational outcomes for young people in high-quality residential care homes	Educational outcomes for children in the residential care population as a whole
Increase in number of long-term unemployed gaining a job after participating in an employment training programme	Average rate at which the long-term unemployed come off benefits in the same region
Decreased crime in a borough after a borough-wide initiative increasing the number of police on the streets	Change in crime rate in a borough with similar socio-economic profile, but not subject to a specific crime-reduction initiative

Whether you want to understand your impact, or be more credible in your discussions with stakeholders, one advantage of calculating deadweight is that it weights the social value towards outcomes for stakeholders where deadweight is low. For what are sometimes called 'hard to reach' groups, deadweight is likely to be lower than for other groups. For example, the likelihood of someone who has been long-term homeless moving into employment without support is low; the likelihood is that much, if not all, of the change is due to the support received. This means that if the two groups experienced similar outcomes the impact would be higher for the harder to reach group.

As deadweight increases, your contribution to the outcome declines. When deadweight is high this may mean that the outcome is no longer material to your analysis.

Deadweight will be measured as a percentage and then that percentage of the outcome is deducted from the total quantity of the outcome.

Displacement is another component of impact and is an assessment of how much of the outcome displaced other outcomes. This does not apply in every SROI analysis but it is important to be aware of the possibility. Two examples show where displacement is most relevant:

1. An evaluation of a state-funded street lighting programme in one borough found a reduction in crime; however, the neighbouring borough reported an increase in crime during the same period. It is possible that the reduced crime was simply displaced.

2. A project supporting ex-offenders into employment counted the contribution to economic output, decreased benefit payments and increased taxes in its analysis. From the point of view of the state these benefits would have a high displacement rate as these are most likely jobs that are now denied to someone else that could have made similar contributions. This is irrespective of any other economic benefits to the individual or community that this project might produce.

If you think that displacement is relevant and your activities are displacing outcomes, you may find that there is now another stakeholder being affected by the displacement. You could go back and introduce the new stakeholder into the impact map or you could estimate the percentage of your outcomes that are double counted because there is some displacement, calculate the amount using this percentage and deduct it from the total.

Top Tip: Set yourself a limit on how much time you spend gathering data to establish impact
Do not spend too much time searching for information that you think should be available. You might consider setting a time limit on this stage. Always remember: the purpose of establishing impact is to help your organisation manage change. Avoid spending too long chasing false accuracy. This means you should be comfortable with estimates that are based on the best available information.

The worked example – deadweight and displacement
Look at the Impact Map for Wheels-to-Meals on page 104: the yellow section shows you how the column for deadweight has been completed.

For example, for the outcome of 'healthier volunteers', although the luncheon club had a demonstrable effect on the amount of physical activity reported by all volunteers, it was considered that if they hadn't been volunteering for Wheels-to-Meals they might have been volunteering somewhere else or doing other things with this time (such as going for a walk) that would have led to the same outcome. However, as part of the volunteer annual assessment the volunteers identified that the luncheon club involved more physical exercise than they might have otherwise sought. Volunteers were asked to estimate how much more. The average was around 45% more. So if the benchmark is 100%, because all of them would have done some other exercise anyway, the increase is therefore 145%. The estimate of deadweight is 100%/145% or 70%. This was used as the estimate for the activity that would have happened anyway.

For the outcome of 'residents having nutritious meals', the nutritious meals, and resulting health improvements, were identified as the change that the council expected. However, this change would have happened anyway: if Wheels-to-Meals were not delivering this contract, the council would have another provider deliver it, as a meals-on-wheels service, to a similar standard of nutrition (specified in the contract). So deadweight is 100%. This will result in no impact on our impact map for this row. However, we will still show the row as it is a part of the story of change.

In this example, displacement has not been considered.

Over to you: Deadweight and displacement
You can now complete the section on the Impact Map relating to deadweight and displacement. Although there is no space to record the rationale and the sources, you need to keep a record of these so that they can be included in your report.

4.2 Attribution

Attribution is an assessment of how much of the outcome was caused by the contribution of other organisations or people. Attribution is calculated as a percentage (ie the proportion of the outcome that is attributable to your organisation). It shows the part of deadweight for which you have better information and where you can attribute outcome to other people or organisations.

For example, alongside a new cycling initiative there is a decrease in carbon emissions in a borough. However, at the same time, a congestion charge and an environmental awareness programme began. While the cycling initiative knows that it has contributed because of the number of motorists that have switched to cycling, it will need to determine what share of the reduced emissions it can claim and how much is down to the other initiatives.

It will never be possible to get a completely accurate assessment of attribution. This stage is more about being aware that your activity may not be the only one contributing to the change observed than getting an exact calculation. It is about checking that you have included all the relevant stakeholders.

Reassess your stakeholders
The first question is whether there are any organisations or people that contribute to the outcomes that you haven't included – these are missing stakeholders.

It is also possible that the contributions made by organisations and people in the past should be taken into account. For example, a person seeking work may gain that job because of your support in training as well as another organisation's support with preparing CVs and helping with interview techniques.

Where different stakeholders had other support in the past it may be useful to consider them as different groups of stakeholders. For example, children in care may have different journeys through the system depending on their experiences prior to coming into care.

As a result you may want to reconsider your stakeholders and split them into groups that had different experiences before their involvement with your activity. If you don't go back and include the new stakeholder and the inputs that they make then you will need to estimate the attribution. Either you will increase the overall inputs included in the Impact Map or you will have to reduce the outcome attributed to the existing inputs.

There are three main approaches to estimating attribution. You may want to use a combination of these methods to make your estimate as robust as possible:

1. Base your estimate on your experience. For example, you have been working with other organisations for a number of years and have a good idea of how you each contribute to the outcomes.

2. **Ask stakeholders** – both existing ones and any new ones you have identified – what percentage of the outcome is the result of your activity. In an evaluative SROI analysis this could be conducted during the data collection phase, through surveys, focus groups or interview.

3. Consult with the other organisations to which you think there is attribution. You could find out how much they all spend towards meeting the objective and attribute according to the amount they spend on a unit of outcome. Of course, this assumes that all expenditure is equally effective. Alternatively, you could have conversations with these organisations (even a joint meeting) to understand how they all contribute to the client's journey and then work out percentages that they can claim credit for on that basis.

Common mistakes with attribution
There are three common mistakes that people make with attribution:

1. Remember that the purpose of the estimate of attribution is to help your organisation manage change – but it will be an estimate. So don't spend too long on this, but do explain how you have reached your estimate.

2. Take care not to attribute outcomes to organisations or people that are being paid out of the inputs (investment) that you recorded in Stage 2, as the investment takes account of their contribution.

3. As attribution may have been included as part of your estimate of deadweight, take care not to take off more than you should from your outcomes. This will depend on the quality of the benchmark used.

The worked example – attribution
Look at the Impact Map for Wheels-to-Meals on page 104; the yellow section shows you how the column for attribution has been completed.

For example: for the attribution of 'more socialising' outcome, Wheels-to-Meals used a questionnaire to ask residents if they had joined clubs and groups as a result of the luncheon club. Because it is difficult to justify that this is entirely down to Wheels-to-Meals the questionnaire also asked if other friends and organisations had recommended or promoted clubs and groups, and, if so, how important this had been to the decision to join. Based on the results in the questionnaire it was possible to estimate that 35% of the outcome was the result of the contributions of others.

Over to you: Attribution
You can now complete the section on the Impact Map relating to attribution by putting in a percentage. Although there is no space to record the rationale for your attribution and its source you need to keep a record of this somewhere so that it can be included in your report.

You should record a description of any organisations or people relating to attribution and a description of the relationship to your work. This will form part of your report.

4.3 Drop-off

In Stage 3.3 we considered how long the outcomes lasted. In future years, the amount of outcome is likely to be less or, if the same, will be more likely to be influenced by other factors, so attribution to your organisation is lower. Drop-off is used to account for this and is only calculated for outcomes that last more than one year.

For example, an initiative to improve the energy efficiency of social housing has great short-term success in reducing energy bills and carbon emissions. However, as time passes, the systems wear out and get replaced with cheaper but less efficient systems. Unless you have built up some historical data on the extent to which the outcome reduces over time, you will need to estimate the amount of drop-off, and we recommend a standard approach in the absence of other information. You can inform this estimate with research, such as academic sources, or by talking to people who have been involved in similar activities in the past.

Drop-off is usually calculated by deducting a fixed percentage from the remaining level of outcome at the end of each year. For example, an outcome of 100 that lasts for three years but drops off by 10% per annum would be 100 in the first year, 90 in the second (100 less 10%) and 81 in the third (90 less 10%).

Over the longer term you will need to have a management system that allows you to measure this ongoing value more accurately. However, it is likely that you will need to track your participants as part of your data collection anyway, so questions to evidence drop-off can be included.

Over to you: Drop-off
You can now complete the section on the Impact Map relating to drop-off by putting in a percentage. Although there is no space to record the rationale for your drop-off and its source, you need to keep a record of this so that it can be included in your report. You won't make use of this until Stage 5, Calculating your SROI.

4.4 Calculating your impact

All of these aspects of impact are normally expressed as percentages. Unless you have more accurate information it is acceptable to round estimates to the nearest 10%. In some cases you might consider that there is an increase in the value rather than a reduction. However, we do not recommend that you increase your impact as a result of considering these issues. In this situation you would simply not make a deduction. Your Impact Map should now have percentages filled in for deadweight, attribution, drop-off and (if applicable) displacement. You can calculate your impact for each outcome as follows:

- Financial proxy multiplied by the quantity of the outcome gives you a total value. From this total you deduct any percentages for deadweight or attribution.
- Repeat this for each outcome (to arrive at the impact for each)
- Add up the total (to arrive at the overall impact of the outcomes you have included)

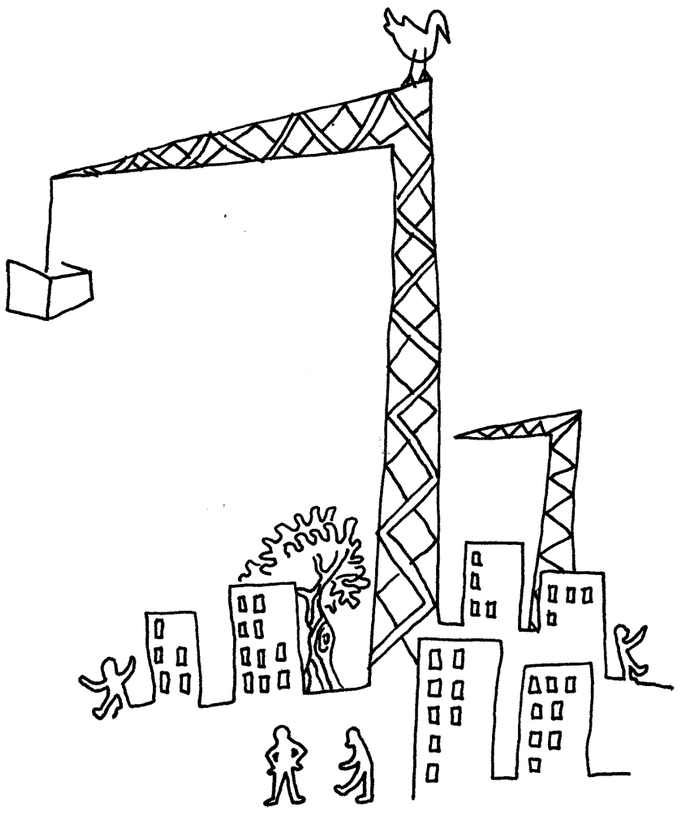
The worked example – calculating impact
This is how Wheels-to-Meals staff calculated the impact for one of the indicators, 'clubs and groups joined'.

First, they took the quantity of each outcome and multiplied by the financial proxy. This gives the total value of the outcome.

Total outcomes	16 x £48.25	= £772.00

Then they deducted the deadweight, or what would have happened anyway.

Less deadweight	£772 - 10% (or 90% of £772) 90% of £772 0.9 x £772	= £694.80



Next they accounted for attribution, or how much of the change was down to others.

Less attribution	£694.80 - 35% £694.80 x 0.65	= £451.62

For that row, this is the value of the impact created during the period of the scope – the year of the luncheon club being analysed.

Look at the Impact Map for Wheels-to-Meals on page 104; the yellow section shows you how these columns have been completed.

Over to you: Impact
You can now complete the section on the Impact Map relating to impact.

Stage 4

Stage 5:
Calculating the SROI

You will now have collected all the information together to enable you to calculate your SROI. You will also have recorded qualitative and quantitative information that you will need in the report. As you will want people to read your report, remember to keep the information you include to a minimum. This stage sets out how to summarise the financial information that you have recorded in the previous stages. The basic idea is to calculate the financial value of the investment and the financial value of the social costs and benefits. This results in two numbers – and there are several different ways of reporting on the relationship between these numbers.

If you are carrying out an evaluative SROI analysis, then the evaluation should ideally take place after the period for which the outcome was expected to last. However, interim evaluations will still be useful in order to assess how well the intervention is working and to provide information to support any changes. If you are comparing actual results against a forecast you will need the information relating to the time periods over which your outcomes last.

There are four steps to calculating your ratio, with an optional fifth:

5.1 Projecting into the future
5.2 Calculating the net present value
5.3 Calculating the ratio
5.4 Sensitivity analysis
5.5 Payback period

All these stages will be outlined below. We will discuss each step before asking you to do your own calculations.

Stage 5

5.1 Projecting into the future

The first step in calculating your ratio is to project the value of all the outcomes achieved into the future. In step 3.3, above, you decided how long an outcome would last. Using this, you will now need to:

- set out the value of the impact (from step 4.4) for each outcome for one time period (usually 1 year);
- copy the value for each outcome across the number of time periods it will last (as recorded in the Duration column on your impact map); then
- subtract any drop-off you identified (step 4.3) for each of the future time periods after the first year.

In the worked example this was done using Excel. We have not included an example of a blank Excel sheet because different people have different approaches to Excel and because we have found that standard approaches cannot be easily used for different situations. It is easier to set up your own spreadsheet using the worked example and the description in the text as a guide.[1]

The worked example – drop-off and impact projected in future years
Look at the impact map for Wheels-to-Meals on page 104: the yellow section shows you how the columns for impact have been completed.

If we take the line for GP practice nurse group sessions, the duration is 5 years and the drop-off 10%. The 10% is an estimation of the likelihood that residents will use the knowledge they gain less as time goes on as they forget the sessions.

So the calculation Wheels-to-Meals used to work out the effect of drop-off on the projected impact into future years goes like this:

Impact in year 1 = £1,539.00

This is the same as the impact calculated at the end of the project. We only account for the outcomes in the year after the activity and only calculate drop-off in following years.

Impact in year 2
yr1 impact less drop-off
£1,539.00 less 10%
£1,539.00 x 0.9 = £1,385.10

Impact in year 3
yr2 impact less drop-off
£1,385.10 less 10%
£1,385.10 x 0.9 = £1,246.59

Impact in year 4
yr3 impact less drop-off
£1,246.59 less 10%
£1,246.59 x 0.9 = £1,121.93

Impact in year 5
yr4 impact less drop-off
£1,121.93 less 10%
£1,121.93 x 0.9 = £1,009.74

5.2 Calculating the net present value

In order to calculate the net present value (NPV) the costs and benefits paid or received in different time periods need to be added up. In order that these costs and benefits are comparable a process called discounting is used. Discounting recognises that people generally prefer to receive money today rather than tomorrow because there is a risk (eg, that the money will not be paid) or because there is an opportunity cost (eg, potential gains from investing the money elsewhere). This is known as the 'time value of money'. An individual may have a high discount rate – for example, if you would accept £2 in one year's time, instead of £1 now, that implies a discount rate of 100%.

This is a controversial area and one where there is ongoing research and discussion. The main problem with using discounting in SROI is that it encourages short-termism by discounting the future. This is especially problematic for environmental outcomes, where the value may even increase. This betrays the extent to which people actually value their future and their children's future.

There is a range of different rates. For the public sector, the basic rate recommended in HM Treasury's *Green Book* is 3.5%. The Stern Review on the economics of climate change argued that it was not ethically defensible for pure time preference to be applied to cost-benefit calculations where these involved significant wealth transfers from the future to the present and used lower rates. Following the Stern Review, HM Treasury published supplementary guidance on intergenerational wealth transfers, in which a reduced discount rate of 3%, which eliminates the pure time preference element, is applied alongside the usual discount rate.[2]

This issue is under review by the Measuring Social Value consortium, and the aim is to produce further guidance on discounting in due course.

The process is to discount the projected values over time, as you set out in stage 5.1, above. This can be easily done if you are using Excel, which has functions for calculating Present Value and Net Present Value.

Although this calculation is automated in Excel (=NPV, discount rate, value1, value 2…), it may be useful to know how the calculation for Present Value works and this is shown below ('r' represents the discount rate):

1 See www.thesroinetwork.org for information on developments in software that will assist in completing this stage.

2 More information on the different elements that make up the discount rate is set out in Annex 6 of the *Green Book*.

Present Value	=	Value of impact in Year 1 / $(1+r)$	+	Value of impact in Year 2 / $(1+r)^2$	+	Value of impact in Year 3 / $(1+r)^3$	+	Value of impact in Year 4 / $(1+r)^4$	+	Value of impact in Year 5 / $(1+r)^5$

Here is a fictional example for an organisation called Youth Work, where r = 3.5%, or 0.035.

		Year 1		Year 2		Year 3		Year 4		Year 5
Benefits		£448,875		£414,060		£389,935		£355,648		£319,005
Discounted Values	=	£448,875 / (1.035)	+	£414,060 / (1.035)2	+	£389,935 / (1.035)3	+	£355,648 / (1.035)4	+	£319,005 / (1.035)5
Present Value	=	1,750,444								

Having calculated the Present Value of your benefits, you can deduct the value of your inputs (the investment) to arrive at the Net Present Value (NPV).

NPV = [Present value of benefits] - [Value of investments]

In the Youth Work example the investment was £576,000. Therefore, the net present value would be calculated as follows:

NPV = £1,750,444 - £576,000
= £1,174,444

5.3 Calculating the ratio

You are now in a position to calculate the initial SROI ratio. This is a very simple sum. You divide the discounted value of benefits by the total investment.

$$\text{SROI ratio} = \frac{\text{Present Value}}{\text{Value of inputs}}$$

An alternative calculation is the net SROI ratio. This divides the NPV by the value of the investment. Both are acceptable but you need to be clear which you have used.

$$\text{Net SROI ratio} = \frac{\text{Net Present Value}}{\text{Value of inputs}}$$

The worked example – calculating the SROI (discounting and net present value)

Look at the Impact Map for Wheels-to-Meals on page 105: the green section shows you the value of the discounted benefits.

Using Excel and the NPV function, the total present value of our example has been calculated following the above method. Wheels-to-Meals also used the 3.5% discount rate.

Total present value = £81,741.93

Net present value — total present value - total inputs
£81,741.93 - £42,375 = £39,366.93

SROI — total present value / total inputs
£81,741.93 / £42,375 = £1.93: £1

So for Wheels-to-Meals, there is £1.93 of value for every £1 of investment.

5.4 Sensitivity analysis

One of the strengths of setting up a spreadsheet is that it is possible to assess the importance of elements of the model relatively easily; by altering the figures, the spreadsheet will make all the changes to the calculation for you. After calculating the ratio, it is important to assess the extent to which your results would change if you changed some of the assumptions you made in the previous stages. The aim of such an analysis is to test which assumptions have the greatest effect on your model.

The standard requirement is to check changes to:

- estimates of deadweight, attribution and drop-off;
- financial proxies;
- the quantity of the outcome; and
- the value of inputs, where you have valued non-financial inputs.

The recommended approach is to calculate how much you need to change each estimate in order to make the social return become a social return ratio of £1 value for £1 investment. By calculating this, the sensitivity of your analysis to changes in estimates can be shown. This allows you to report the amount of change necessary to make the ratio change from positive to negative or vice versa.

We are interested in which changes have a significant impact on the overall ratio. It is these that you would consider as potential priority areas in managing the value you are creating. For example, if your result is sensitive to changes in a particular indicator you may want to prioritise investment in systems to manage (and resources to improve performance in) that indicator.

In general the greater the change that you need to make in order for the SROI to become £1 for every £1 invested, the more likely it is that the result is not sensitive. It is also possible that a choice you made earlier between two proxies is now resolved because the choice doesn't affect the overall ratio. All of these findings should be discussed in the final SROI report.

This focus on the significant issues will help you keep your report short.

The worked example – sensitivity analysis

Let us consider, as an example, how Wheels-to-Meals explored the sensitivity of the top row of the Impact Map, which covers the outcome 'fewer falls' (you will need to consider all rows). This was a useful row to work with as it resulted in the biggest financial value on the Impact Map, so needed scrutiny.

- Impact. Low deadweight and attribution were identified in this row. This could be an issue. What if this was wrong and, for example, more of this change was down to others than Wheels-to-Meals had realised? How far out would the attribution figure have to be for the SROI to fall to £1: £1?

  Using the spreadsheet to change the numbers and repeat the calculations, attribution would have needed to be 53% for the SROI to become £1: £1 rather than the 5% we have identified. If this were the case, the impact would fall from a total for this row of £81,648 (for all three financial proxies) to £40,394, reducing the SROI to £1: £1.

  The change in attribution from 5% to 53% is a 960% increase.

- Financial proxies. There are three financial proxies in this row. As an example, we will see how Wheels-to-Meals assessed the sensitivity of the financial proxy from the NHS cost book for 'geriatric continuing care inpatient'.

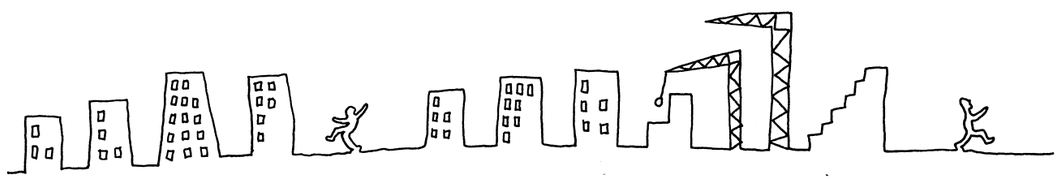
  The change required to this figure (in this case a reduction) for the SROI to fall to £1:£1 is for the financial proxy to drop from £7,220 per admission/stay to £1,093 – a change of 85%. This figure is, therefore, more sensitive, although the value would still need to change significantly, so Wheels-to-Meals felt that the proxies it had chosen were adequate.

Remember that the SROI figure is based on an incomplete example and this has implications for the sensitivity analysis. The point of the example is to show how it is applied.

It would also be possible to now present the results from a different perspective. For example, if the cost of admission/stay fell to just over £1,093, the social return of Wheels-to-Meals would still be more than £1: £1.

5.5 Payback period (optional)

The 'payback period' describes how long it would take for an investment to be paid off. Specifically, it answers the question: at what point in time does the value of the social returns start to exceed the investment? Many funders and investors use this kind of calculation as a way of determining risk in a project. While a short payback period may be less risky, a long payback period is often a feature of activities that can generate significant long-term outcomes, thus longer-term core funding is required.



Often the investment will be paid back over a period of months rather than whole years and so is reported in months. Assuming that the annual impact is the same each year, the first step is to divide the annual impact for all participants by 12 to get impact per month. Then divide the investment by the impact per month to get payback period in months.

The basic formula is:

$$\text{Payback Period in Months} = \frac{\text{Investment}}{\text{Annual impact}/12}$$

Over to you: Financial projections

You can now complete your financial projections on your Impact Map.

Stage 6:

Reporting, using and embedding

Congratulations! You now have a completed SROI analysis.

However, the process is not complete. There is a final important stage: reporting to your stakeholders, communicating and using the results, and embedding the SROI process in your organisation. This stage gives guidance on how to make the most of all of your hard work so far.

The three issues to consider are:

6.1 Reporting to stakeholders
6.2 Using the results
6.3 Assurance

6.1 Reporting to stakeholders

You need to make sure that the way in which you communicate the results is relevant to the audiences that you decided upon when you set your scope. Your findings may be for internal management use, for public distribution or as the basis for different discussions with different stakeholders. Preparing a report is useful because it is the place where you can make recommendations to influence what happens as your organisation or project moves forward.

SROI aims to create accountability to stakeholders. As such it is important that the results are communicated to stakeholders in a meaningful way. This involves more than publishing the results on your website. You may well find that external stakeholders are very interested to hear about your work with SROI – both the process you went through and the results.

Your final report should comprise much more than the social returns calculated. The SROI report should include qualitative, quantitative and financial aspects to provide the user with the important information on the social value being created in the course of an activity. It tells the story of change and explains the decisions you made in the course of your analysis.

The report should include enough information to allow another person to be assured that your calculations are robust and accurate. That is, it needs to include all the decisions and assumptions you made along the way. To help your organisation improve it should include all the information that you were able to find out about the performance of the organisation which might be useful to strategic planning and the way it conducts its activities. You will need to be aware of commercial sensitivities in deciding what you include in the report.

An SROI report should be as short as possible while meeting principles of transparency and materiality. It should also be consistent, using a structured framework that allows comparison between reports. Details of the contents of an SROI report can be found in the Resources section. However, the following quantitative and qualitative information is usually included in a comprehensive and considered SROI report:

- information relating to your organisation, including a discussion of its work, key stakeholders and activities;
- description of the scope of the analysis, details of stakeholder involvement, methods of data collection, and any assumptions and limitations underlying the analysis;
- the impact map, with relevant indicators and any proxies;
- case studies, or quotes from participants that illustrate particular findings;
- details of the calculations, and a discussion of any estimates and assumptions. This section would include the sensitivity analysis and a description of the effect of varying your assumptions on social returns;
- an audit trail for decision-making, including which stakeholders, outcomes or indicators were included and which were not, and a rationale for each of these decisions;
- an executive summary aimed at a broad audience, including participants.

Try and present your findings in a balanced way; how you phrase your recommendations may affect how they are taken up. It is important, therefore, to stress the positive as well as negative findings and to present them in a sensitive fashion.

It is also important to be able to distinguish between benefits that are not happening and benefits that may be happening but cannot be evidenced. Make sure to include recommendations for ways to improve data collection and evidencing outcomes.

Top Tip: Presentation of social return calculations
There is a risk, and perhaps a temptation, to focus on the social return ratio. However, the number by itself does not have much meaning – it is merely a shorthand way of expressing all of the value that you have calculated so far. In the same way, financial investors need more than the ratio – it would be an unwise investor who based their investment decisions purely on one number. Therefore, the ratio should be presented alongside the other information, such as the story of how change is being created and case studies from participants.

Example: Executive summary for MillRace IT
This is an extract from the executive summary of MillRace IT's SROI report. It is an example of how to combine the rest of the story about social value creation with the numbers generated by the calculations.

'The aggregate social value created by MillRace IT each year is projected to be approximately £76,825. MillRace IT's SROI ratio of 7.4:1 implies that, for every £1 invested, £7.40 of social value is created each year for society in terms of reduced healthcare costs, reduced benefits costs, and increased taxes collected.'

As the SROI analysis demonstrates, MillRace IT creates value in two key ways. First, by participating in MillRace IT, clients get long-term support and avoid a relapse in their condition. Second, a number of participants leave MillRace IT to go on to employment. By creating a supportive environment and teaching marketable skills in an area where there is much demand, MillRace IT effectively combines financial sustainability and high-quality support for those recovering from mental ill health.

Over to you: Preparing the SROI report
Prepare your SROI report. Include findings, analysis, and recommendations as to what the organisation can learn from the information generated through the entire SROI process.

Stage 6

6.2 Using the results

Unless you do something as a result of carrying out your SROI analysis there was not much point in undertaking it in the first place. This is one of the most important parts of the SROI analysis but, often, one to which the least time and resources are dedicated. It is easy to overlook it after the 'excitement' of reaching the SROI ratio.

To be useful, the SROI analysis needs to result in change. Such change might be in how those that invest in your activities understand and support your work, or how those that commission your services describe, specify and manage the contract with you. However, there will also be implications for your organisation, whether you carried out an evaluative or forecast SROI analysis.

Changes following a forecast SROI analysis
The results of a forecast SROI analysis may make you review your planned activities in order to try and maximise the social value you plan to create. Its findings may also require you to review your planned systems for gathering information on outcome, deadweight, attribution and displacement. See if they need to be adapted for your next SROI analysis and change them accordingly. Following a forecast SROI analysis you may also want to build in ways to:

- systematically talk to your stakeholders about their intended outcomes and what they value; and
- work with partners to explore attribution.

Changes following an evaluative SROI analysis
An evaluative SROI analysis should result in changes in your organisation. Your organisation will need to respond to findings and think through implications for organisational objectives, governance, systems and working practices. Ensure that the organisation acts on the recommendations and that findings feed into your strategic planning process.

Your ratios will be very useful in communicating with stakeholders. However, where the ratio has most value is in how it changes over time. This can tell you comprehensively whether your activities are improving or not. This should also give your organisation information about how to change its services to maximise social value in future.

It is important to secure commitment to further SROI analyses. The way you approach this will vary depending on your role in the organisation. A starting point might be to present the findings from the study to staff, trustees and stakeholders, stressing the benefits as well as the challenges of the process. This would give you the opportunity to also present a plan for making SROI analysis a routine and regular component of the organisation's reporting. Such a plan should set out:

- a process for regular data collection, particularly for outcomes;
- a process for training staff to ensure knowledge and expertise is retained in your organisation even if there is turnover;
- a clear timeline for the next SROI analysis;
- a description of the resources that will be required for ongoing monitoring of SROI; and
- how data security will be ensured.

Change can be difficult, especially if you are a large organisation with complex management systems. Remember that the extent to which recommendations are taken up by your organisation will depend on the level of organisational buy-in you have achieved. This is why we have stressed involving stakeholders throughout the process. It is helpful to allocate responsibility for future SROI analyses. It may be that once the data collection mechanisms are in place the responsibility for assessing SROI can sit with your finance team and become integrated with the financial accounting system. Remember that these changes do not have to be put in place overnight, so set yourself a realistic timescale.

Top Tip: External stakeholders' comparison of SROI reports
The way in which external stakeholders and the wider public use published SROI reports will vary. Comparison of social return ratios is unlikely to be helpful, whereas an analysis of the different judgements and decisions made in completing an individual SROI report, and the proposed changes that those responsible for the activity are planning to make, will be much more useful. Similarly, comparing the changes in an organisation's ratios over time will guide investors as to the scale of improvements organisations are making. This highlights how important it is that the information is presented in ways that meet the requirements of different stakeholders and that there is independent assurance of the information.

See www.thesroinetwork.org for guidance for social investors and commissioners.

Over to you: Communicating and using findings, and embedding SROI
In presenting the results of your analysis, consider your audience, tailoring the discussion to each group of stakeholders. Stakeholders will have different objectives, and the relationship of each stakeholder to your organisation will vary.

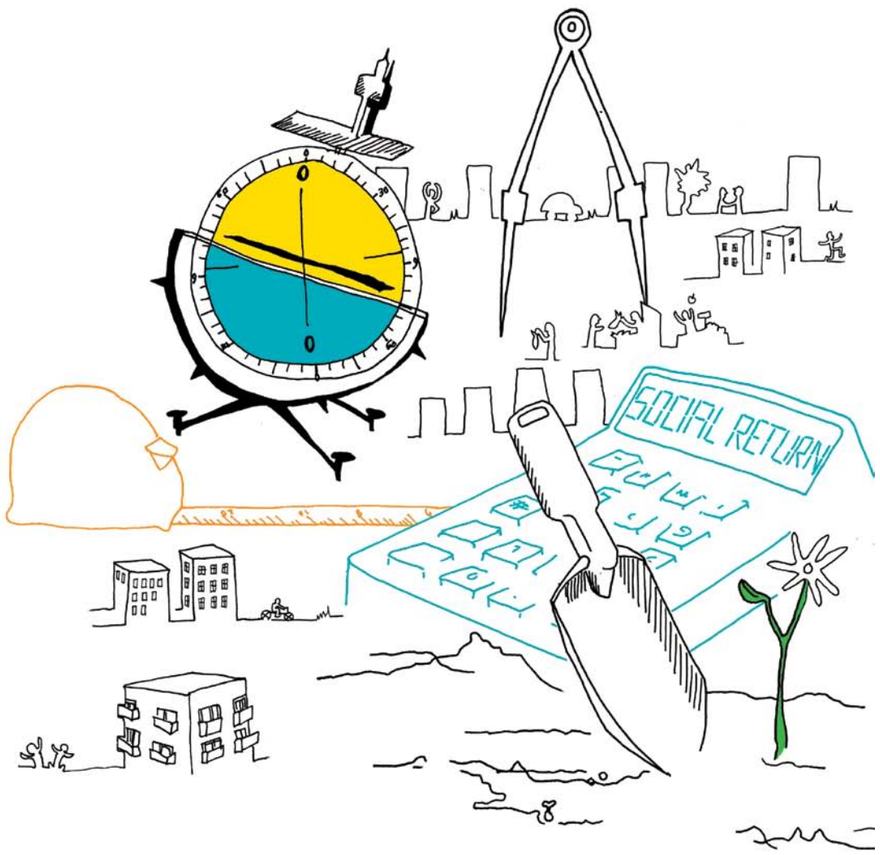
Prepare a plan for using the findings and embedding the process within your organisation.

Stage 6

6.3 Assurance

Assurance is the process by which the information in your report is verified. The principle requires that there should be appropriate independent assurance of your report's claims. There are two levels of assurance:

Type 1 Assurance focuses on assurance that the analysis has complied with the principles of good practice in SROI.



Type 2 Assurance covers assurance of both principles and data.

For more information on the assurance processes and sources of support, refer to www.thesroinetwork.org.

Stage 6

Resources

This section contains a number of resources that can be used as you go along.

1 Format for an SROI report
2 Glossary
3 Note on cost allocation
4 Note on capital or loan-financed projects
5 Sources of support and further information
6 Downloads
7 A summary of the relationship between SROI and other approaches
8 The seven principles of SROI
9 Checklist for SROI analysis
10 The worked example
11 A blank Impact Map (provided as a loose insert in the printed version of this guide, and also available as a download)

Resources

1 Format for an SROI report

The following sets out the key elements of an SROI report. Within the structure of the six stages there is flexibility about how the information can be presented. The information will be a balance between qualitative, quantitative and financial data that together describe the value resulting from the activities set out in the scope. The aim will be to provide enough information to comply with the principles and to provide evidence that the process has been followed.

Executive summary

1 Scope and stakeholders
A description of your organisation: its activities and values, the activity under analysis, including location, main customers or beneficiaries.

An explanation of SROI, the type undertaken and the purpose of the analysis. The time period of the activity.

One or two stakeholder case studies from the point of view of each stakeholder and a description of their journey of change.

A description of the theory of change: of how the activity is expected to achieve its objectives. A summary of organisations involved in attribution.

The analysis of the stakeholders and stakeholder groups.

The numbers of people or organisations in each stakeholder group.

Description of how stakeholders were involved.

The numbers of people or organisations from each group that were involved in developing the theory of change for that stakeholder group.

2 Outcomes and evidence
Description of inputs, outputs and outcomes for each stakeholder group. Outcomes will include changes that are positive, negative, intended and unintended.

Description of the indicators and data sources used for each outcome.

Quantity of inputs, outputs and outcomes achieved for each stakeholder group.

Analysis of the investment required for the activity.

The length of time over which the outcome is expected to last, or against which the outcome will be attributed to the activity.

Description of the financial proxy to be used for each outcome, together with the source of the information for each proxy.

3 Impact
Description of the other areas or groups against which deadweight is estimated.

Description of the other organisations or people to which outcomes have been attributed.

The basis for any estimates of attribution and deadweight.

% attribution for each indicator of outcome with a financial proxy.

% deadweight for each indicator of outcome with a financial proxy.

% drop-off for each indicator of outcome with a financial proxy.

Description of displacement, if included.

The total impact.

4 Social return calculation
Calculation of the social return, showing sources of information, including a description of the type or types of social return calculation used.

A description of the sensitivity analysis carried out and why.

A description of the changes to quantities as a result of the sensitivity analysis.

A comparison of the social return in the sensitivity analysis.

5 Audit trail
Stakeholders identified but not included, and rationale for this.

Outcomes identified but not included, for each stakeholder, and the rationale.

Any financial proxies not included, and the rationale.

Resources

2 Glossary

Attribution An assessment of how much of the outcome was caused by the contribution of other organisations or people.

Cost allocation The allocation of costs or expenditure to activities related to a given programme, product or business.

Deadweight A measure of the amount of outcome that would have happened even if the activity had not taken place.

Discounting The process by which future financial costs and benefits are recalculated to present-day values.

Discount rate The interest rate used to discount future costs and benefits to a present value.

Displacement An assessment of how much of the outcome has displaced other outcomes.

Distance travelled The progress that a beneficiary makes towards an outcome (also called 'intermediate outcomes').

Drop-off The deterioration of an outcome over time.

Duration How long (usually in years) an outcome lasts after the intervention, such as length of time a participant remains in a new job.

Financial value The financial surplus generated by an organisation in the course of its activities.

Financial model A set of relationships between financial variables that allow the effect of changes to variables to be tested.

Impact The difference between the outcome for participants, taking into account what would have happened anyway, the contribution of others and the length of time the outcomes last.

Impact Map A table that captures how an activity makes a difference: that is, how it uses its resources to provide activities that then lead to particular outcomes for different stakeholders.

Income An organisation's financial income from sales, donations, contracts or grants.

Inputs The contributions made by each stakeholder that are necessary for the activity to happen.

Materiality Information is material if its omission has the potential to affect the readers' or stakeholders' decisions.

Monetise To assign a financial value to something.

Net present value The value in today's currency of money that is expected in the future minus the investment required to generate the activity.

Net social return ratio Net present value of the impact divided by total investment.

Outcome The changes resulting from an activity. The main types of change from the perspective of stakeholders are unintended (unexpected) and intended (expected), positive and negative change.

Outputs A way of describing the activity in relation to each stakeholder's inputs in quantitative terms.

Outcome indicator Well-defined measure of an outcome.

Payback period Time in months or years for the value of the impact to exceed the investment.

Proxy An approximation of value where an exact measure is impossible to obtain.

Scope The activities, timescale, boundaries and type of SROI analysis.

Sensitivity analysis Process by which the sensitivity of an SROI model to changes in different variables is assessed.

Social return ratio Total present value of the impact divided by total investment.

Stakeholders People, organisations or entities that experience change, whether positive or negative, as a result of the activity that is being analysed.

Resources

3 Note on cost allocation

The value of the contribution made by whoever is financing the activity will often be relatively easy to calculate – for example, where the activity is funded completely by one or more sources then the value of the contribution is known.

If the analysis relates to part of an organisation then it may be more difficult to calculate the investment being made. It is important to get this right so that the cost of producing social value is not understated. This is similar to full cost recovery in grant applications. Unless you identify the full cost of your activities (not just the grant funding, for example), you will not get an accurate ratio.

For example: in an organisation with two departments, where the analysis only relates to one department, it will be necessary to start by calculating how much the department costs. Most of the costs will be known and could be obtained from the accounts. The problem arises if the organisation buys things that are used by both departments (such as electricity or the organisation's manager). It will be necessary to allocate these costs to the department and then identify who provided the inputs (the investment that covered the costs). This may need some proportioning between sources of finance. It may be helpful to involve your accountant, if you have one, at this point.

Even when you are analysing the social return arising from, say, a grant, you will need to take care that the activity does not depend on other contributions from elsewhere in the organisation that are not being funded through the grant.

The steps are:

A. Identify costs for goods and services that are required for the activity you are analysing.

B. Identify and allocate the costs of goods and services that are shared by different departments.

C. Identify the sources of income for these goods and services.

D. If necessary, identify proportions of income from different sources.

A. Identify costs for goods and services that are required for the activity you are analysing

This can normally be done by reference to the organisation's accounts. If expenditure is not divided between different departments you will need to go through each type of expenditure and identify which costs wholly relate to the department you are analysing.

B. Identify and allocate the costs of goods and services that are shared by different departments

For those costs that are shared, you will need to decide how to allocate them. There are three main methods.

For **salary costs**, the costs can be allocated according to how much time the member of staff spends working for each department. If there are timesheets, these will provide the information. If there are not, then you will need to estimate. Some staff, such as the chief executive, may work across all the departments. In this case you can allocate their costs according to the relative size of the budget for each department.

For **non-salary costs**, it may be appropriate to allocate costs based on a measure of activity within the department – such as allocating electricity costs according to the overall expenditure on goods and services.

For **rent**, however, it would be more appropriate to allocate using the share of the overall floor space.

Resources

Example 1:

Costs in £000	Total costs	Department 1	Department 2
Manager (see point 1 below)	45	26	19
Training manager (see point 2 below)	40	24	16
Department staff, 1 in each department	30	15	15
Department non-staff costs, 20 for Department 1and 10 for Department 2	30	20	10
Subtotal for departments	60	35	25
Heat and light (see point 3 below)	20	13	7
Rent (see point 4 on next page)	20	5	15
Total	185	103	82

Figures have been rounded to the nearest whole number.

1 The manager's costs of £45,000 can be allocated according to the relative project costs. Overall, the project costs are £30,000 for staff and £30,000 for non-staff, a total of £60,000. However, this is not split evenly between the two departments. For Department 1 the costs are £35,000 (£15,000 for staff plus £20,000 for non-staff) and £25,000 (£15,000 for staff and £10,000 for non-staff) for Department 2.

£35,000 divided by £60,000 multiplied by £45,000 equals £26,250 for Department 1. £25,000 divided by £60,000 multiplied by £45,000 equals £18,750 for Department 2. Rounded up or down, these are the relative costs of the manager's time spent on each project.

2 The training manager, who costs £40,000, spends 60% of their time in Department 1 and 40% in Department 2. 60% times £40,000 is 24,000.

3 The organisation cannot measure electricity usage by department and so has allocated costs based on department non-staff costs. £20,000 divided by £30,000 multiplied by £20,000 equals £13,333.

4 For rent, 20% of the available space is used by Department 1 and 70% by Department 2The remaining 10% is used by the manager. 20% of £20,000 is £4,000. 70% of £20,000 is £14,000.

This still leaves £2,000 unallocated (£20,000 minus £14,000 minus £4,000) that relates to the manager. If this were allocated according to the share used by the manager (the departmental subtotal of £35,000 divided by £60,000), it would be split £1,200 and £800. So the total rent for Department 1 is £4,000 plus £1,200 equals £5,200 (rounded to £5,000).The rent for Department 2 is £14,000 plus £800 equals £14,800 (rounded to £15,000).

Resources

C. Identify the sources of income for these goods and services

These costs must now be allocated a second time, to those financing the activity. In Example 2, below, one of the sources has stated that all the finance must be used for Department 1 costs and has accepted the method for allocating these, as used above. The other source of income covers the balance in Department 1 and all of Department 2.

Example 2

Income	£000	Department 1	Department 2
Funder 1	100	100	
Funder 2	85	3	82
Total	185	103	82

D. If necessary, identify proportions of income from different sources

In contrast to Example 2, in Example 3, below, the sources can be used for the whole organisation's expenditure. £100,000 divided by £185,000 multiplied by £103,000 equals £56,000.

Example 3

Income	£000	Department 1	Department 2
Source 1	100	56	44
Source 2	85	47	38
Total	185	103	82

You are now in a position to include the stakeholders for income sources 1 and 2, and the contributions of £100,000 and £3,000 in Example 2, or £56,000 and £47,000 in Example 3, can be entered in the input column on the Impact Map.

4 Note on capital or loan-financed projects

This is an area in which the SROI Network will be developing further guidance.

Where the investment is for an asset that will have a long life expectancy, such as a building, the calculation of the social return is more complex. It is made more complex still if the investment is financed by a loan.

Firstly, a building may have a life expectancy of many years and the activity in the building will generate value each year – a value that may itself last for more than one year. The value created depends, however, on the activities that happen in the building: activities that can only be supported by additional regular income.

Secondly, in the case of a loan, repayments over the period of the loan offset the investment in the first year. The only net cash flows over the life of the loan are the interest payments on the loan.

Currently, the guidance for using SROI in these situations is to focus on one year only and to emphasise that the SROI only examines the social value created by inputs that were necessary for the activity in that one year. Again, it may be helpful to involve your accountant here, if you have one.

In the case of a building, the inputs would be the costs of the activity, as discussed above, plus the depreciation for one year of the expected life of the building. There are accounting conventions for the life of buildings and your accounts will state what these are. This represents an allocation of the cost of the building to the overall costs that are required for the activities in the building.

5 Sources of support and further information

General
There are a number of online tools that are available to help you with SROI.
For more information go to the SROI network website:
www.thesroinetwork.org

nef has been working on SROI since 2001 and has pioneered its use in public policy.
For more information go to:
www.neweconomics.org

For an overview of evaluation in the voluntary sector, see *Practical Monitoring and Evaluation: a guide for voluntary organisations*, by Jean Ellis:
www.ces-vol.org.uk/index.cfm?pg=140

There is also information on many of the issues covered in this guide at:
www.proveandimprove.org

There are a number of tools on, including ones for full cost recovery, at:
www.philanthropycapital.org

For guidance on the economic assessment of spending and investment, and for related guidance, including the preparation of business cases for the public sector, see:
www.hm-treasury.gov.uk/data_greenbook_index.htm

To learn more about social accounting and social audit, see the SAN *Social Accounting and Audit Workbook*, Social Audit Network:
www.socialauditnetwork.org.uk

Really Telling Accounts!, by John Pearce and Alan Kay, can be found at:
www.socialauditnetwork.org.uk

Materiality
A number of reports relating to AccountAbility's work on redefining materiality can be found at:
www.accountability21.net

There is also a useful discussion of materiality in nef's report Investing in Social Value, which is available at:
www.thesroinetwork.org

Stage 1: Establishing scope and identifying stakeholders

Stakeholder involvement
Lots of information on engaging with people can be found at:
www.peopleandparticipation.net/display/Involve/Home

Participation Works! is available from:
www.neweconomics.org

AccountAbility has also produced a standard and a manual on stakeholder engagement, both of which are available from its website:
www.accountability21.net

Stage 2: Mapping outcomes

Cost analysis
A guide and a toolkit on cost allocation are available from ACEVO at:
www.acevo.org.uk/index.cfm/display_page/FCR_3rdsec_tools

Valuing inputs
Further information on valuing inputs is available at these three websites:
www.esf.gov.uk/_docs/July2006Rules_regs_-_Match_funding_trac.doc

www.volunteering.org.uk/NR/rdonlyres/0F4C3354-82C4-4306-907D-FBC31DCD0B04/0/Calculatingvolunteervalue.pdf

Details of how to value goods in kind can be found at:
www.wefo.wales.gov.uk/resource/Annex%20C%20-%20Guidance%20note%20on%20Match%20Funding%20in%20Kind%20February%2020073414.pdf

Stage 3: Evidencing outcomes and giving them a value

Sampling
Creative Research Systems provides information on sample design at:
www.surveysystem.com

Mapping outcomes and indicators
The Charities Evaluation Services website contains a range of resources on outcomes assessment in the voluntary sector:
www.ces-vol.org.uk

The Urban Institute's Center on Non-profits and Philanthropy has developed an outcomes framework for non-profit organisations. The framework has example outcomes and indicators for many different areas of activity:
www.urban.org

The website Homeless Outcomes is dedicated to resources for assessing outcomes in the homelessness sector, but the resources within, including Outcomes Star, are applicable to many organisations in the voluntary sector:
www.homelessoutcomes.org.uk

The following publications give guidance on outcomes assessment and outcomes tools:

Managing Outcomes: a guide for homelessness organisations, by Sara Burns and Sally Cupitt:
www.ces-vol.org.uk/index.cfm?pg=171

Your Project and its Outcomes, by Sally Cupitt:
www.ces-vol.org.uk/index.cfm?pg=165

Review of Outcomes Tools for Homelessness Sector, Triangle Consulting:
www.homelessoutcomes.org.uk/resources/1/PDFsguidetotool/ReviewofOutcomesTools.pdf

Indicator databank
An indicator bank is being developed by the SROI Project supported by the Scottish Government.

Valuation
These websites provide more information on approaches to non-market valuation:
www.csc.noaa.gov/mpass/tools_nonmarket.html

www.ecosystemvaluation.org/contingent_valuation.htm

www.fao.org/DOCREP/003/X8955E/X8955E00.htm

HM Treasury (2003) *Green Book*:
www.hm-treasury.gov.uk/data_greenbook_index.htm

The following publications focus on valuing social goods:
Measuring the Value of Culture, Snowball J, Springer Verlag, Heidelberg DE, 2008.
A Primer on Nonmarket Valuation, Champ, Boyle and Brown, Kluwer, Dordrecht NL, 2003.

Using Surveys to Value Public Goods; the Contingent Valuation Method, Carson and Mitchell, Washington, USA, 1989.

Stage 4: Establishing impact

Deadweight
English Partnerships' Additionality Guide is available at:
www.englishpartnerships.co.uk/communitiespublications.htm

Stage 5: Calculating SROI

There are a number of case studies on the SROI Network website which include examples of how SROI has been calculated:
www.thesroinetwork.org

Stage 6: Reporting, using and embedding

Assurance
For more information on the options for the assurance of your report go to:
www.thesroinetwork.org

Other
Procurement
nef and the London Borough of Camden jointly developed an outcomes-focused commissioning model based on SROI principles. Further details of the Sustainable Commissioning Model can be found on the Sustainable Procurement website:

An example of an SROI report based on the worked example

7 A summary of the relationship between SROI and other approaches

Cost-benefit analysis
One difference between SROI and economic appraisal as described in HM Treasury's Green Book is that SROI is designed as a practical management tool that can be used by both small and large organisations, rather than from a macro perspective. SROI focuses on, and emphasises, the need to measure value from the bottom up, including the perspective of different stakeholders, while the Green Book appraisal is about valuing costs and benefits to the whole of UK society. The main similarity between SROI and the Green Book is that they both use money as a proxy of costs and benefits arising from an investment, activity or policy.

Social accounting
Both SROI and social accounting are approaches used to measure the creation of social value. SROI focuses on the perspective of change that is expected or happens to different stakeholders as a result of an activity. Social accounting starts from an organisation's stated social objectives. SROI and social accounting share a number of common principles but social accounting does not advocate the use of financial proxies and a 'return' ratio. SROI and social accounting can be compatible: the completion of an SROI report is much easier if it is built on the basis of a good set of social accounts, for example.

Resources

Outcomes approaches
The process of measuring outcomes as part of a theory of change is common to other outcomes models, such as that used by Charities Evaluation Services. The involvement of stakeholders is also a key feature of SROI that is emphasised, to a greater or lesser extent, in other outcomes models. The main difference between SROI and many other outcomes approaches is the importance of giving financial value to their outcomes.

The common ground between the initial stages of SROI and other outcomes approaches means that organisations that have already done a lot of work on outcomes are likely to find undertaking an SROI analysis much easier than organisations looking at outcomes for the first time.

Sustainability reporting
SROI shares basic principles, such as the importance of engaging with stakeholders, with approaches like the Global Reporting Initiative and AccountAbility's AA1000 standards.[1] SROI differs in that it develops simple theories of change in relation to significant changes experienced by stakeholders and includes financial proxies for the value of those impacts.

Other methods of economic appraisal
SROI is similar to other economic analyses that attempt to value and compare the costs and benefits of different kinds of activities that are not reflected in the prices we pay. This approach is particularly well developed in environmental economics.

Environmental impact assessment (EIA)
EIA is a methodology for assessing a project's likely significant environmental effects. It enables environmental factors to be considered alongside economic or social factors. EIA has to be completed as part of planning consent for major projects, as defined by European Community legislation. Like SROI, the assessment of what is considered 'significant' is critical.

8 The seven principles of SROI

1 **Involve stakeholders:**
Inform what gets measured and how this is measured and valued by involving stakeholders.
Stakeholders are those people or organisations that experience change as a result of the activity and they will be best placed to describe the change. This principle means that stakeholders need to be identified and then involved in consultation throughout the analysis, in order that the value, and the way that it is measured, is informed by those affected by or who affect the activity.

2 **Understand what changes:**
Articulate how change is created and evaluate this through evidence gathered, recognising positive and negative changes as well as those that are intended and unintended.
Value is created for or by different stakeholders as a result of different types of change; changes that the stakeholders intend and do not intend, as well as changes that are positive and negative. This principle requires the theory of how these changes are created to be stated and supported by evidence. These changes are the outcomes of the activity, made possible by the contributions of stakeholders, and often thought of as social, economic or environmental outcomes. It is these outcomes that should be measured in order to provide evidence that the change has taken place.

3 **Value the things that matter:**
Use financial proxies in order that the value of the outcomes can be recognised. Many outcomes are not traded in markets and as a result their value is not recognised.
Financial proxies should be used in order to recognise the value of these outcomes and to give a voice to those excluded from markets but who are affected by activities. This will influence the existing balance of power between different stakeholders.

4 **Only include what is material:**
Determine what information and evidence must be included in the accounts to give a true and fair picture, such that stakeholders can draw reasonable conclusions about impact.
This principle requires an assessment of whether a person would make a different decision about the activity if a particular piece of information were excluded. This covers decisions about which stakeholders experience significant change, as well as the information about the outcomes. Deciding what is material requires reference to the organisation's own policies, its peers, societal norms, and short-term financial impacts. External assurance becomes important in order to give those using the account comfort that material issues have been included.

5 **Do not over-claim:**
Only claim the value that organisations are responsible for creating.
This principle requires reference to trends and benchmarks to help assess the change caused by the activity, as opposed to other factors, and to take account of what would have happened anyway. It also requires consideration of the contribution of other people or organisations to the reported outcomes in order to match the contributions to the outcomes.

1 AccountAbility's standards, the AA1000 Series, are principles-based standards that provide the basis for improving the sustainability performance of organisations. They are applicable to organisations in any sector, including the public sector and civil society, of any size and in any region.

Resources

6 **Be transparent:**
Demonstrate the basis on which the analysis may be considered accurate and honest, and show that it will be reported to and discussed with stakeholders.
This principle requires that each decision relating to stakeholders, outcomes, indicators and benchmarks; the sources and methods of information collection; the difference scenarios considered and the communication of the results to stakeholders, should be explained and documented. This will include an account of how those responsible for the activity will change the activity as a result of the analysis. The analysis will be more credible when the reasons for the decisions are transparent.

7 **Verify the result:**
Ensure appropriate independent assurance.
Although an SROI analysis provides the opportunity for a more complete understanding of the value being created by an activity, it inevitably involves subjectivity. Appropriate independent assurance is required to help stakeholders assess whether or not the decisions made by those responsible for the analysis were reasonable.

9 Checklist for SROI analysis

This is for your own use, to check your progress as you work through the guide.
For more information on the assurance process, go to: www.thesroinetwork.org

Checklist	Complete?
Stage 1: Establishing scope and identifying stakeholders	
Have you provided background information on the organisation?	
Have you explained why you are carrying out the analysis and for whom, including considering how you will communicate with them?	
Have you decided if you are analysing part of the organisation or all of it?	
Have you decided if you are analysing the social return in relation to a specific source of income or for activities funded by a number of sources?	
Have you decided whether this is an evaluation of the past or a forecast of the future?	
Have you decided what timescale to cover?	
Have you identified the resources you need (eg sufficient time, resources and skills)?	
Have you drafted a list of your stakeholders and completed the stakeholder table?	
Have you considered that some of these changes may happen to stakeholders that are outside your scope and whether you should revise the scope to include them?	
Stage 2: Mapping outcomes	
Have you completed the first two columns of the Impact Map for stakeholders and what you think happens to them?	
Have you documented your decisions on which stakeholders are material?	
Have you involved stakeholders in completing the next sections?	
For each stakeholder, have you included their contribution (input) to the activity (there may be some stakeholders that do not make an input)?	
Have you given the inputs a value?	
Have you checked to make sure that the inputs you have recorded include whole costs of delivering the service (eg overheads, rent)?	
Have you identified the inputs and outputs for the stakeholders?	

Resources

Have you included a description of the outcomes?	
Have you included intended and unintended changes?	
Have you included positive and negative changes?	
Have you completed the columns on the impact map for inputs, outputs and outcomes?	
At this point, do you want to add or remove stakeholders or stakeholder groups?	
Stage 3: Evidencing outcomes and giving them a value	
Have you identified indicators for the outcomes?	
How long do the outcomes last?	
Do you already have information in relation to each indicator?	
If not, do you have a plan for how you will gain this information?	
Have you completed the column for the source of the information?	
Have you completed the column for each indicator?	
For each outcome where you have not recorded one or more indicators, have you included the reason in your report?	
Can you record or forecast the amount of change in relation to each indicator?	
Have you identified a financial proxy for each outcome?	
Have you completed the column for the financial proxy?	
Have you completed the column for the source of the proxy?	
Are there any indicators for which you have not recorded a financial proxy? Have you included these in your report?	
Stage 4: Establishing impact	
Do you have information for deadweight in relation to each outcome?	
Do you think any of your estimates for deadweight can be explained by reference to displacement or attribution?	
If some deadweight can be explained by displacement, have you decided to add a new stakeholder (and/or change the scope)?	
If there is attribution, does this mean that you have missed out contributions made by other stakeholders who should now be added?	
Have you estimated attribution and recorded how you made the estimate?	

If the outcomes last for more than one time period, what happens to the outcome over this time period (drop-off)?	
Have you calculated impact (indicator multiplied by financial proxy minus percentages for deadweight, displacement and attribution)?	
Have you calculated any drop-off?	
As a result, are there any changes where the activity(ies) in the scope do NOT contribute to a significant change?	
Have you completed the columns for deadweight, attribution, displacement and drop-off?	
Stage 5: Calculating the SROI	
Have you set out the financial values of the indicators for each time period?	
Have you selected a discount rate?	
Do you have a total value for the inputs?	
Have you calculated: a) social return ratio, b) net social return ratio, c) payback period?	
Have you checked the sensitivity of your result for amounts of change, financial proxies, and measures of additionality?	
Stage 6: Reporting, using and embedding	
Have you summarised the changes required to the organisation's systems, governance or activities in order to improve ability to account for and manage social value created?	
Have you prepared a plan for these changes?	
Have you planned how to communicate your value in formats that meet your audiences' needs?	
If you have decided to produce a full report, does it include an audit trail of all decision-making, assumptions and sources?	
If you have decided to produce a full report, have you included a qualitative discussion of the assumptions and limitations underlying your analysis?	
Have you reviewed whether your communications created the desired effect in your audiences, and whether they liked the content and format?	
Have you decided on your approach to verification?	

Social Return on Investment –The Impact Map for the worked example (continues on the next page)

Organisation	Wheels-to-Meals	**Name**	
Objectives	Provide luncheon club for 30 elderly local residents with additional health and social benefits by bringing residents to meals	**Date**	

Scope	**Activity**	30 places for eligible elderly and/or disabled local residents 5 days a week, 50 weeks of the year	**Objective of Activity**	**Time Period**	1 year (2010)
	Contract/Funding/Part of organisation	Local Authority Grant	**Purpose of Analysis**	**Forecast or Evaluation**	Forecast

Stage 1 → **Stage 2** →

Stakeholders	**Intended/unintended changes**	**Inputs**		**Outputs**	**The Outcomes**
		Description	Value £		Description
Who do we have an effect on? Who has an effect on us?	What do you think will change for them?	What do they invest?		Summary of activity in numbers	How would you describe the change?
elderly / disabled residents	residents use health services less	time	£0	luncheon club: – group activities (board games, craft, mild/ therapeutic exercise, info and awareness sessions)	the mild/therapeutic group exercise sessions made residents fitter, they had fewer falls and ended up in hospital less
					the GP practise nurse group sessions helped residents manage their health and symptoms better and they were healthier
	residents get out of the house more				residents made new friends and spent more time with others through the group activities
					residents had nutritious meals with 3 (out of) 5-a-day and they were healthier
local authority	residents provided with nutritious meal	meals on wheels contract (annual)	£24,375		material outcomes for residents only (not for council). All outcomes for this stakeholder already considered above.
Wheels-to-Meals volunteers (retired)	keep active	time (at min wage) 4 volunteers x 3 hrs x 5 days x 50 wks x £6 (forecast)	£18,000	– transport for 30 people	healthier volunteers (retired)
neighbours of elderly/ disabled residents	look out for neighbours	time	£0	– 7500 hot meals annually	reduction in neighbourly care/shopping and breakdown of informal community networks
Total			£42,375		

Stage 3 →

The Outcomes (what changes)						
Indicator	Source	Quantity	Duration	Financial proxy	Value £	Source
How would you measure it?	Where did you get the information from?	How much change was there?	How long does it last?	What proxy would you use to value the change?	What is the value of the change?	Where did you get the information from?
fewer falls and associated hospital admissions/stays annually	oneoff research	7	1 year	accident&emergency	£94.00	NHS cost book 07/08
			1 year	geriatric assessment inpatient	£4,964.00	
			1 year	geriatric continuing care-Inpatient (average 5 wks x £1,444)	£7,220.00	
fewer GP visits annually (appointments) and residents report improvement in physical health	questionaire and interviews	90	5 years	GP consultation	£19.00	NHS cost book 2006
new clubs/group activities joined during year and residents report an increase in personal wellbeing/ feeling less isolated	questionaire	16	1 year	average annual membership/cost	£48.25	current average costs of bus trips, bingo and craft clubs
fewer District Nurse visits and residents reporting increased physical activity of 3 hours or more a week	questionaire	14	2 years	District Nurse visits	£34.00	NHS cost book 07/08
volunteers report increased physical activity of 3 hours or more a week since volunteering	volunteer annual assessment	4	1 year	annual elderly residents swimming pass	£162.50	local authority
fewer instances of neighbours shopping for residents annually	One-off survey	275	3 years	supermarket online shopping delivery fee	- £5.00	www.tesco.co.uk

Net Present Value					£39,366.93
Social Return £ per £					£1.93: £1

* See page 68 for an explanation of these calculations

"Our departmental researchers necessarily tend to focus very much on the costs and benefits in terms of 'pure' costs of prisons or community sentences. Through using SROI in our work on women offenders and women at risk of offending – women who are often primary carers too – it vividly illustrates the broader costs that need to be considered within and beyond the department."

Liz Hogarth, Criminal Justice Women's Strategy Unit, Ministry of Justice

"I think the guide is excellent – it works through the processes clearly and logically; sets out the different elements of judgement, caution, and looking back; and overall I was very impressed."

David Emerson, Chief Executive, Association of Charitable Foundations

HL Paper 7

The Select Committee on Communications

The Select Committee on Communications was appointed by the House of Lords with the orders of reference "to consider communications".

Current Membership

Baroness Bonham Carter of Yarnbury
Lord Corbett of Castle Vale
Baroness Eccles of Moulton
Lord Fowler (Chairman)
Lord Hastings of Scarisbrick
Baroness Howe of Idlicote
Lord Inglewood
Lord King of Bridgwater
Lord Macdonald of Tradeston
Baroness McIntosh of Hudnall
Bishop of Manchester
Lord Maxton
Baroness Scott of Needham Market

Publications

The report and evidence of the Committee are published by The Stationery Office by Order of the House. All publications of the Committee are available on the intranet at:
http://www.parliament.uk/parliamentary_committees/communications.cfm

General Information

General information about the House of Lords and its Committees, including guidance to witnesses, details of current inquiries and forthcoming meetings is on the internet at:
http://www.parliament.uk/about_lords/about_lords.cfm

Contact details

All correspondence should be addressed to the Clerk of the Select Committee on Communications, Committee Office, House of Lords, London SW1A 0PW
The telephone number for general enquiries is 020 7219 8662.
The Committee's email address is holcommunications@parliament.uk

Government Communications

CHAPTER 1: INTRODUCTION

1. One of the most important tasks of government is to provide clear, truthful and factual information to citizens. The accurate and impartial communication of information about government polices, activities and services is critical to the democratic process. Government communications embrace two separate but complementary areas of activity—Government communication with the media, and Government communication directly with the public.

2. In recent years, governments have had to re-assess how they approach the media and the public because of changes in expectations and demands from both these groups. New technology has led to an ever-larger media with a 24-hour appetite to feed, and has also made it considerably easier to communicate directly with the public, which in turn has changed public expectations about access to information.

3. One result has been that the size and cost of Government communications have grown considerably in recent years. This growth means that it is more important than ever to scrutinise this area and ensure that it is effective and delivering value for money.

4. The last external review of Government communications took place in 2003–04 and was conducted by Sir Robert Phillis, then Chief Executive of the Guardian Media Group. Since that review, there have been some significant changes to the structure and focus of Government communications.

5. At the beginning of this inquiry, we called for evidence on whether the reforms since Sir Robert's Review have resulted in a more effective system of communications. The purpose of this report is to consider what progress has been made since the Review and to make recommendations for further improvements in specific areas.

6. The membership of the Committee is set out at Appendix 1. We received valuable written and oral evidence from the witnesses listed at Appendix 2.

CHAPTER 2: THE PHILLIS REVIEW

Events that led to the Phillis Review

7. In his evidence, Sir Robert explained that "the Labour opposition before the election was very, very effective in its news management, and on taking power I think the view was that much of the old [Government Information Service] system was not well equipped in the skills of news and media management … as the Labour opposition had been before they took power" (Q 8).

8. In the two years following the 1997 election, 17 of the 19 departmental Heads of Information left office (Q 534), and a number of political special advisers (see paragraph 85 for further background) were appointed to work in communications.

9. In September 1997, the then Cabinet Secretary, Sir Robin (now Lord) Butler appointed Sir Robin Mountfield to review the Government Information Service (GIS). The Mountfield Report was published in November 1997. It identified a number of weaknesses with the existing system, including wide variation in the practice and effectiveness of press offices across departments. In some instances, there had been a breakdown in effective co-ordination between civil service press officers and special advisers briefing the media. There had also been accusations of pre-emptive briefing by one department against another, and criticism from some senior journalists of the loss of impartial and press office service providing a function of record[1]. Most of the report's recommendations were adopted (see paragraph 35).

10. However, despite clearer guidance to both civil servants and special advisers on their respective functions and duties, further problems arose. Most notable were the high-profile events in 2001–02 within the then Department for Transport, Local Government and the Regions, which led to the resignation of both the special adviser, Jo Moore, and the Director of Communications, Martin Sixsmith.

11. In July 2002, the House of Commons Public Administration Select Committee conducted an investigation of the incident and made a number of recommendations intended to stop any such problems arising in the future. One of the main recommendations was for a "radical external review of Government communications" to "examine not only the effectiveness of the Government Information and Communication Service, but also the roles played by other civil servants and special advisers who have a responsibility for communications".[2] The Government accepted this recommendation.

The Phillis Review's terms of reference and principles

12. The Government subsequently appointed Sir Robert Phillis to chair the Review, which began work in February 2003. Its terms of reference were to:

---

1 *Report of the Working Group on the Government Information Service*, Cabinet Office (Office of Public Service), November 1997, paragraph 4.

2 Public Administration Select Committee, 8th Report (2001–02): *"These Unfortunate Events": Lessons of Recent Events at the former DTLR*, (HC 303), paragraph 64, p 19.

> "conduct a radical review of government communications. This will include the examination of different models for organising and managing the government's communication effort, the effectiveness of the current model based on the Government Information and Communication Service, and the roles played by other civil servants, including those special advisers who have a responsibility for communications."[3]

13. The Review's main recommendations are reproduced at Appendix 6. It published an interim report in August 2003 and a final report in January 2004. The final report suggested seven main principles should underpin all Government communications. They were:

- Openness, not secrecy.
- More direct, unmediated[4] communications with the public.
- Genuine engagement with the public as part of policy formation and delivery, not communication as an afterthought.
- Positive presentation of government policies and achievements, not misleading spin.
- Use of all relevant channels of communication, not excessive emphasis on national press and broadcasters.
- Co-ordinated communication of issues that cut across departments, not conflicting or duplicated departmental messages.
- Reinforcement of the civil service's political neutrality, rather than a blurring of government and party communications.[5]

14. It is important to keep these principles in mind as they underpin all the Review's recommendations. It is against these principles that our inquiry has sought to examine the present effectiveness of Government communications.

What the Phillis Review found

A breakdown in trust

15. Sir Robert told us that the "major theme that dominated" (Q 20) the final report was a "three-way breakdown in trust between government and politicians, the media and the general public".[6] The Review suggested that this breakdown had led to increasing disillusion among parts of society, particularly the young and certain ethnic groups and concluded that the "traditional culture of secrecy in British government has not helped this breakdown".[7] The main focus of the recommendations was therefore to help restore "trust in, and the credibility of, government communications".[8]

16. The Review's recommendations were aimed at the Government, but we did ask Sir Robert what reciprocal responsibility rested with the media. He explained that although "the media was not a specific part of our brief and

7 Ibid.

8 Ibid.

review … we felt that both government and the media and the press should ask themselves what their responsibilities were in the reporting of accurate, credible, timely and truthful information during the process" (Q 13). We agree.

The communications structure

17. The fundamental problem the Review identified related to the structure of Government communications. The influence of the Government Information and Communications Service (GICS), which had replaced GIS, was minimal. It was not involved in policy formulation in individual departments, or the process of co-ordinating information between departments (QQ 8, 14). It had no formal role in departments' recruitment or development of communications staff.[9] The Review concluded in its interim report that GICS had "neither the authority nor the capability to enforce standards in communications".[10]

18. Membership of GICS was voluntary, and, according to Howell James CBE, who was a member of the Phillis Review, it was very hard to identify the criteria for membership (Q 45).

19. The weakness of GICS resulted in a lack of co-ordination in the event of crises or policies that involved several departments. The Review found "duplication of effort, contradictory messages and a damagingly slow response to crises".[11] Sir Robert described the lack of co-ordination during the foot-and-mouth crisis of 2001 as "extraordinary" (Q 31). These "structural and systems weaknesses" made GICS "no longer fit for purpose".[12]

20. The Review's identification of this fundamental problem resulted in a recommendation in the interim report that the Government replace GICS with "a more powerful, authoritative centre"[13] that used "a wider definition of communications professionals encompassing all those involved in communication activity". This new centre was to be led by a new post of Permanent Secretary, Government Communications.[14]

21. The Review suggested that the new Permanent Secretary, Government Communications should have responsibility for appraising departments' communications performance, in order to encourage consistency, transparency and high standards. His functions would also include setting standards in recruitment and instigating a development programme in order to improve skills[15], and co-ordination of cross-government communications activity.[16]

Special advisers

22. Sir Robert told us that the weaknesses of Government communications had led to the incoming administration in 1997 trying to take greater central control. One way it sought to do this was to expand the number and role of

16 Ibid., p.13.

special advisers skilled in handling the media (Q 8). He suggested that the approach of many of the special advisers working in communications was to favour an "inner circle" of reporters that led to "a sense of exclusion" among the rest of the media (QQ 13, 18). Sir Robert told us that this increased the adversarial relationship between the Government and the media, which resulted in a "tendency to challenge every piece of government information from whatever source" (Q 13). This tendency was exacerbated by the timing of the publication of Government statistics and facts, which Sir Robert believed were sometimes "used to reinforce a political point" (Q 19). This "use of information as a political weapon" had "contributed to the atmosphere of mutual suspicion between the government and the national media".[17]

23. To address the particular issue of the use of statistics, the Review recommended that "core central government statistical information should be automatically, routinely and systematically made available, with schedules published in advance and strictly observed"; and proposed "a new statute to define a clear remit for the National Statistician and the Statistics Commission"[18], which would underline their independence from political interference.[19]

24. In 1997, the Prime Minister's Director of Communications and Strategy, Alistair Campbell, had been given the power to direct civil servants. This arrangement made Sir Robert "very uncomfortable" (Q 29).

25. The Review also found that, in some departments, special advisers' relationships with Civil Servants, and their respective roles and responsibilities, were not always clear. Such relationships had the potential to create confusion over the point at which advocacy compromised impartiality.[20]

26. The Review therefore recommended that the new Permanent Secretary, Government Communications should develop clear guidelines to cover all staff involved in communications, including special advisers[21], with new rules to cover the conduct of special advisers and boundaries with the civil service[22]. It also recommended that complaint procedures should be introduced for civil servants experiencing difficulties as a result of the demands of special advisers.[23]

27. With particular reference to the arrangements at Number 10, the Review recommended that shorter-term media handling and cross-government crisis co-ordination should be shared between two posts—first, a politically appointed Director of Communication, and second, the Prime Minister's Senior Official Spokesperson, a civil service appointment, with management responsibility for Number 10's communications civil servants to fall to the civil service appointment.[24] The executive powers given in 1997 to

24 Ibid., p. 14.

Alistair Campbell in his role as Director of Communications and Strategy should not apply to the successor appointment at Number 10.

The Lobby

28. A further area that the Review examined was the Lobby system. The 'Lobby' is the name given to a group of parliamentary journalists who enjoy privileged access to briefings and to certain parts of Parliament. The chief privilege is the right to enter Members' Lobby (adjacent to the Commons Chamber)[25] in order to interview MPs. The other main privilege is access to Lobby briefings given twice daily by the Prime Minister's Spokesperson. One is held in the Treasury at 11am, hosted by Number 10 and now open to all journalists. The other is held in the Palace of Westminster at 3.45pm, hosted by the Lobby itself and restricted to journalists with Lobby passes. (See Appendix 4 for the current number of Lobby passholders for each news organisation and Appendix 5 for an example of a summary of a Lobby briefing.)

29. The Review was concerned that there was a perception among journalists that an 'inner circle' received more information than other reporters. This was partly to do with the Lobby. The Review found that the Lobby system was "no longer working effectively for either the government or the media"[26], both of which had had "their credibility damaged by the impression that they are involved in a closed, secretive and opaque insider process".[27]

30. The Review therefore recommended that "all major government media briefings should be on the record, live on television and radio and with full transcripts available promptly online", and that "Ministers should deliver announcements and briefings relevant to their department at the daily lobby briefings, which should also be televised, and respond to questions of the day on behalf of the government".[28]

The focus of Government communications

31. Although the term 'Government communications' embraces both media handling and direct communication with the public, the Review was concerned that the Government had concentrated its time and resources too much on the national media. This led to the Review's "central recommendation"—that "the role and scope of government communications" be redefined to mean a citizen-focussed "continuous dialogue with all interested parties"[29], based on the principle of "direct, unmediated communications to the public"[30]. The Review further recommended empowering the public through "Customer-driven online communication"—the presentation of Government information on the internet to reflect user need and perceptions.[31]

---

25 Only journalists with Lobby passes may enter Members' Lobby. Journalists with general parliamentary passes have access to other areas, including Portcullis House, where many meetings between journalists and MPs now take place.

27 Ibid., p. 25.

28 Ibid., p. 4.

29 Ibid., p. 3.

30 Ibid., p. 2.

31 Ibid., p. 5.

32. In evidence, Sir Robert said that the public has more trust in information that is not mediated by journalists and that this was the driver behind the Review's recommendations (Q 20).

Government communications and the regions

33. The Review cautioned against the "excessive emphasis on national press and broadcasters", and urged, as a matter of principle, that the Government use "all relevant channels of communication".[32] It found that "much can be done to improve the relevance and appeal of communication from government by tailoring it to the different communities of the United Kingdom." Two advantages were cited for this "more localised approach"—the potential both to "harness the greater trust often placed in local media"; and to "engage" audiences directly affected by Government policy in a particular way in particular regions.[33]

34. An important element of this new approach would be the value regional offices could add to the Government's message by providing information on local or regional impact—and communication of local views back to Whitehall. It was also suggested that the Government "should involve local and regional newspapers and regional radio and TV to a much greater extent".[34] In addition, it was suggested that more "frequent visits to the regions by Cabinet Ministers are important, particularly when there is a controversial live issue to address such as a major road or airport development."[35]

[33] Ibid., p.18.

[34] Ibid.

[35] Ibid., p. 19.

CHAPTER 3: CHANGES TO GOVERNMENT COMMUNICATIONS

The Mountfield Report

35. The Government implemented many of the recommendations in the 1997 Mountfield Report (see paragraph 9). For example, a Strategic Communications Unit was set up in Number 10, answerable to the Prime Minister and working through the Chief Press Secretary. The Government also implemented reforms to the Lobby system, including on-the-record briefings and attributable sources. In addition, it encouraged closer co-operation between departmental press officers and special advisers. The Government Information Service was renamed the Government Information and Communications Service (GICS) in order to reflect a new focus on two-way dialogue with the public.

Government innovation in communication

36. We also note that this Government has established new ways of communicating. These include the Prime Minister's twice-yearly appearances before the House of Commons Liaison Committee; the Prime Minister's monthly press briefing; 'Ask the PM' (which allows citizens to submit their own video questions to the Prime Minister); and 'E-Petitions' (a system for submitting online public petitions).

From GICS to GCN

37. The Government accepted many of the Phillis Review's recommendations. GICS was replaced by a stronger central structure, called the Government Communications Network (GCN). GCN incorporated all communications disciplines, not just press officers. In addition, the Government accepted that GCN should be led by a Permanent Secretary, based in the Cabinet Office and reporting directly to the Head of the Home Civil Service.

38. In his evidence to us, Howell James (who held the position of Permanent Secretary, Government Communications from July 2004 until June 2008) outlined his vision for the role and described it as "head of profession for all government communications … taking on the senior Civil Service leadership for all government communicators [and] responsible for the professionalising agenda across government for the communicators". He went on to say that his focus was on "cross-government comms activity—not the sort of short term news management stuff that Number Ten tends to focus on, but some of the longer term planning activity, which also touched on counter terrorism, crisis management, foot-and-mouth, avian flu, pandemic flu planning" (Q 34).

Number 10

39. The Government accepted the Phillis Review's recommendations for restructuring communications at Number 10. The post of Director of Communications was split in two, with a politically appointed Director of Communications, and a career civil servant as the Prime Minister's Spokesperson. The Order in Council allowing the politically appointed Director of Communications to direct civil servants was revoked, in June 2007.

40. The current Prime Minister, Gordon Brown, subsequently combined both roles into one position—the Prime Minister's Spokesperson, who is still a civil servant, currently Michael Ellam. He told us that "as well as being the Prime Minister's spokesman I am the Director of Communications in Downing Street and that means I have responsibility for managing the civil service staff in Downing Street who deal with communications" (Q 474). Sir Robert told us this change did not concern him "providing that that centre has the strong Permanent Secretary and professional leadership of the civil servants working to the Cabinet Office and therefore Number Ten" (Q 30).

Regional Government communications

41. Recent changes within regional Government communications fall broadly into two main areas. First, the Government has its own regional news service, which at the time of the Phillis Review was called the Government News Network (GNN) and based in the Cabinet Office. In 2005, GNN was moved to the Central Office of Information (COI), restructured and renamed the News Distribution Service (NDS). The NDS now has regional directors in all nine English regions, as well as in Scotland, Wales and Northern Ireland. In many cases they are co-located within the regional Government Office, in an attempt to improve co-ordination of Government communications between Whitehall, the devolved nations and the English regions.

42. The second area of change is within central Government departments. In its written submission, the Cabinet Office said that "the way that departments deal with the regional media is changing. Many departments now have dedicated regional press officers who work closely with regional media on issues of importance to the local area. They are responsible for working with national colleagues to deliver key information around rights and responsibilities." The Government points to a number of examples, such as at HM Revenue and Customs (HMRC), where 45 members of staff volunteer to act as spokespeople on local radio, answering questions on all aspects of HMRC operations from filling in a self-assessment form to paying the national minimum wage (p 126).

Government statistics

43. The most important reform in this area has been the creation of an independent United Kingdom Statistics Authority[36], which was established by statute[37] as a non-ministerial department in order to depoliticise the release of official statistics. It oversees the release of all official statistics by the Office for National Statistics and reports directly to Parliament. The Cabinet Office states that the Statistics Authority's *Code of Practice for Statistics* "will reinforce the existing requirement that the release of all official statistics should be pre-announced one year ahead, with the exact date of release announced either six months ahead (in the case of market-sensitive statistics), or one month ahead (in the case of other official statistics)" (p 126).

---

36 Known, legally, as the Statistics Board.

37 Statistics and Registration Service Act 2007.

Freedom of Information

44. In this inquiry we have not focussed on the Government's implementation of the Freedom of Information Act (which came into force on 1 January 2005). However, it was considered by the Phillis Review, and some witnesses did raise the issue with us. The Review stated that FOI "offers a real opportunity to make government at every level more accountable, breaking the current culture of secrecy and partial disclosure of information which is at the root of many of the problems we have examined"[38] and that "when implementing the main provisions of the Freedom of Information Act, the overriding presumption should be to disclose".[39]

Training and support for Government communicators

45. The GCN has been mandated to improve communications within the civil service, as well as providing new tools for supporting civil servants to improve their own communication skills. It has established two programmes to achieve this aim, Engage and Evolve. The first programme, Engage, was launched in April 2006 as a best practice communications planning model and guide, which allows staff to identify their audiences and tailor messages suited to that audience. The second programme, Evolve, began in March 2007, and is an interactive professional development framework designed to improve skills and strengthen both recruitment and training across departments (p 122). Sir Robert Phillis was supportive and commented that Evolve "involves a comprehensive programme of recruitment, a selection of training … of testing one's own skills … combined with a sensible and judicious bringing in from private sector of skills in that area" (Q 20).

Online communication

46. Growth in the use and popularity of the internet over the past few years has opened up opportunities for the Government to supply information directly to the public in a cost-effective manner. We recognise the considerable progress the Government has made in harnessing the potential of online communication to improve and increase communications directly with the public. As one way of achieving better communication of information to the public, the Phillis Review advocated one central Government website "within which the output of the various different departments and agencies can be found."[40]

47. The Government accepted this recommendation and launched the Directgov website (www.directgov.uk). This website was designed to provide a single point of access to public sector information and services. It contains information from 18 different Government departments and is structured from the point of view of users. Users therefore do not need to know the structure of government in order to find the information they want (p 125).

Conclusion

48. Sir Robert told us that members of the Review were pleased with the Government's "very speedy response" to their recommendations (Q 21). We,

---

38 Phillis Review, p.23.

39 Ibid., p.4.

40 Ibid., p.26.

too, welcome and acknowledge the aspects of the Phillis Review that have been properly and fully implemented. Nevertheless, Sir Robert told us there were areas of his report "where perhaps all that we had hoped for has not been achieved" (Q 22). The purpose of the rest of this report, therefore, is to consider in what areas there is still need for improvement.

CHAPTER 4: WHAT STILL NEEDS TO BE DONE

Openness not secrecy

49. The first of the Review's seven principles, "openness not secrecy"[41], is of fundamental importance. This is the key to improving Government communications. If all Government departments and Ministers fully embraced this principle, many of the problems identified during this inquiry would be substantially reduced.

50. Evidence we received suggested that the Government has made some improvement in its efforts to be more open in the provision of information, particularly in making more information available directly to the public through the internet (see paragraph 115). However, in other areas there is still progress to be made by the Government to ensure it adheres to the principle of openness, not secrecy. We are particularly concerned about the way in which governments sometimes choose to make announcements.

Making announcements

51. In their evidence to us, some journalists were critical of what they said were Government statements being selectively trailed in advance of the official announcement, as well as policies being announced prior to Parliament being informed.

52. We are particularly concerned about the selective trailing of announcements. The evidence we received from journalists suggested that 'friendly' journalists are sometimes told the content of Government announcements before they are made formally. An obvious reason for doing this is to secure favourable and prominent coverage for a Government policy in return for exclusivity.

53. Jackie Ashley, (*Guardian* columnist); Steve Richards, (*Independent* columnist); Benedict Brogan, (*Daily Mail* Political Editor); and Nigel Hawkes (Health Editor, *The Times)* all agreed that selective trailing is not a new phenomenon but is more common now (QQ 153, 251, 255). Nigel Hawkes told us that "everything is trailed … usually to journalists who are more likely to take a favourable view" (Q 153). Nicholas Jones, a journalist and member of the Campaign for Press and Broadcasting Freedom, agreed. He suggested:

> "What is needed is a change of culture and a new presumption that the flow of information from the state to the media should be de-politicised and that all news providers outlets should have equal access … The practice of trailing government announcements in advance—almost invariably on an off-the-record basis—has now become institutionalised within Whitehall departments. To all intents and purposes it has become the state-sanctioned leaking of official information" (p 170).

54. Nigel Hawkes argued that selective trailing is unfair, as it advantages certain media outlets over others. He also said that:

> "certain things will get trailed in advance, sometimes on the understanding that you will not make any phone calls to stand them up

[41] Ibid., pg 12.

> or to get criticism of them. The stories appear and they are slightly half-baked stories: when the actual report appears, the appetite for writing about it has gone. Very often big announcements will be made, they will be so extensively trailed that by the time the report actually appears I cannot persuade my news desk it is of the slightest importance. 'We knew all that already, did we not?' That leads to bad reporting" (Q 154).

55. A closely associated issue is the making of announcements through the media that should properly have been made first to Parliament. Again, this may make it easier for Government to secure positive coverage of their policies. Nick Robinson, Chief Political Editor at the BBC, suggested that the nature of the modern media is also responsible. There can be huge pressure on the Government to respond to breaking stories immediately rather than wait until Parliament is sitting. Referring to one case where the Home Secretary announced a new Government policy on knife crime directly to the media, he explained that:

> "despite the genuine desire of Gordon Brown when he became Prime Minister to do things in Parliament first, the pressure to give something to the papers … to fill the time between the headlines on knife crime and the announcement on Tuesday, meant that it was not said to Parliament first, it was not said formally, it was not said by the departmental press team … So all of those things stem from the political pressure that Number 10 feels under, under any administration, to have things to say when they are in trouble" (Q 130).

56. The Minister for the Cabinet Office and Chancellor of the Duchy of Lancaster, the Rt Hon. Liam Byrne MP, told us that all substantial announcements should be made to Parliament first with no pre-briefs (Q 568). We agree with this aim but doubt whether it is always fulfilled. We witnessed one example in the course of this inquiry. In October 2008, the Pensions Bill was being considered by the House of Lords. The Government had previously resisted a backbench amendment to make it easier for women to buy back years to improve their basic pension. The *Daily Mail* was particularly critical of the Government's refusal to act. Then, on 24 October, the *Daily Mail* carried an exclusive story splashed on its front page which announced that the Government had reconsidered its policy and would table its own amendment that day. The article included direct quotes from the Secretary of State for Work and Pensions, the Rt Hon. James Purnell MP. The announcement was made first on an exclusive basis to a newspaper that was likely to give it a positive reception.

57. The Ministerial Code states: "When Parliament is in session, the most important announcements of Government policy should be made in the first instance, in Parliament."[42] This is an important principle. Members of Parliament are the democratically elected representatives of the people and they have been elected to Parliament in order to scrutinise the Executive on behalf of their constituents.

58. In Parliament, substantial announcements should be made orally by the relevant Minister. (Statements made in the House of Commons may be repeated in the House of Lords.) Other announcements may be made by

---

[42] Ministerial Code, Cabinet Office, July 2007, paragraph 9.1, p 19.

written statement to both Houses or in the course of debate or passage of a Bill.[43]

59. When an announcement is made to Parliament, the information is put in the public domain in an open and transparent manner. All journalists and members of the public have access to that information at the same time and the opportunity of opposition parties and backbenchers to question the Government means that policy is scrutinised from different perspectives as soon as it is announced. The release of information through a statement to Parliament is fully in line with the Phillis principle of "openness, not secrecy".

60. Recently, some departments have published prior press releases in order to maximise press coverage of the parliamentary statement. Sian Jarvis, Director General of Communications at the Department of Health, told us that it was common and accepted practice to "put out information" in advance about the major themes of a statement in order to be on "the front foot" in promoting government policy. She argued that this was "entirely appropriate" (Q 361). Whether it is appropriate or not depends on the facts of the individual case. What is clear, however, is that in employing this practice the Government risks breaking its own rules (see paragraph 57) on making announcements to Parliament. Government departments must be very careful not to pre-empt Parliament.

61. In October 2000, the Speaker of the House of Commons, the Rt Hon. Michael Martin MP, made it clear that the content of ministerial statements should not be trailed before they are made to Parliament:

> "I must make it clear that if Ministers were to release information to the press before the House was informed of major policy developments I would regard that as an unacceptable discourtesy to the House. If that occurred, I would expect the Minister concerned to apologise to the House … I expect Ministers to take measures to ensure that other authorities, who are privy to confidential information, protect it until the House has been informed."[44]

62. **We appreciate that in the case of market sensitive information, or certain EU-wide announcements, it may not be practical or possible to inform Parliament first. In such cases, we recommend the Government should commit to return to Parliament at the earliest opportunity in order to give an account of developments.**

63. We also readily acknowledge that both selective trailing and announcements that pre-empt Parliament can raise difficult issues of judgment. It is not always black and white. Journalists themselves compete for "exclusive" stories and some of these will result from "leaks" rather than briefings. Specialist correspondents who know their area can often make an informed guess of which way Government policy is developing. A Minister may make a remark at a lunch with political correspondents that fills in a gap in the journalist's knowledge. Steve Richards observed that "information will get out in all its different forms whatever structure is put in place" (Q 217).

---

[43] Written ministerial statements are a procedure introduced in 2004 that we welcome, as they make the process of written Government announcements to Parliament much more open and transparent; HC Deb 13 February 2001 col 160.

[44] HC Deb 30 October 2000 col 513.

64. It is important, however, that neither selective trailing nor a willingness to pre-empt Parliament should ever become part of any Government's communication strategy. It is vital that Ministers of any administration should understand clearly the standards expected of them. To help achieve this, we make two recommendations.

65. **First, we recommend that the Prime Minister draw all Ministers' attention to the guidance in the Ministerial Code that the most important announcements of Government policy should be made in the first instance to Parliament. Ministers should be reminded that trailing the content of announcements is incompatible with the Ministerial Code and the guidance of the Speaker of the House of Commons. This should be repeated at the start of every new Parliament.**

66. **Second, the Prime Minister should also issue clear instructions to all Ministers, and their staff, that new information should always be provided on a fair and equal basis to all interested journalists. This instruction, too, should be repeated at the start of every new Parliament.**

The Lobby

67. Another barrier to openness is the Lobby system. The Phillis Review suggested that there was "an 'inner circle' of reporters who have good access, but a disenfranchised majority who do not."[45] In 2008, the Lobby had 176 members, with the BBC alone having 30. The Review recommended reform of the Lobby, including televising briefings.[46] In his evidence to us Sir Robert said that the Review's recommendations about televising Lobby briefings had not been adopted because there was "no enthusiasm at all … in relation to media briefings in the role of the Lobby" (Q 22).

68. Benedict Brogan, current Chairman of the Lobby, said that, previously, the Lobby had been "closed", "secretive and quasi Masonic" (Q 211). He suggested that the modern Lobby is not like this. Howell James, former Permanent Secretary, Government Communications, agreed. He told us that the Lobby had opened up slightly in recent years, with summaries (but not verbatim transcripts) of briefings available on the internet. He questioned, however, whether there was any appetite for televising the briefings (Q 80).

69. Other witnesses supported broadcasting the Lobby. They included the Chartered Institute of Public Relations (CIPR), which told us:

> "Recent reforms to the Lobby system have been useful, but have not addressed the central issue—which is the concept that there is some kind of 'magic circle' of privileged journalists who are granted special access to the thinking of ministers. The current system encourages an unhealthy closeness between government and a small elite group of journalists, and the kind of anonymous briefing which exacerbates the cynicism with which the general public views the political system and politicians themselves. Briefings should be open and transmitted live along similar lines to White House press conferences, where the

45 Phillis Review, p.10.

46 Ibid., p. 26.

spokesperson (a professional communicator) can choose to respond to questions" (pp 163–4).

70. Nicholas Jones told us: "Despite its acceptance of the Phillis recommendations, the government made only a half-hearted attempt to persuade Lobby correspondents to accept on-camera briefings and it was no surprise that the Lobby voted to maintain the status quo, anxious to defend at all cost the un-attributable and anonymous briefings which have become the lifeblood of modern political journalism." He went on to state: "On-camera briefings would introduce a sense of discipline … Greater certainty about the government line would also assist departments and agencies" (p 170).

71. Benedict Brogan said that he would have no particular objection to televising Lobby briefings but wondered whether any real benefits would derive from such action (Q 212). Jackie Ashley said that she "would love to see it on camera. I would not spend my time going there because as a columnist it is not a good use of your time, but I would love to be able to just turn on my computer and click in every day and see what is going on" (Q 213).

72. However, some witnesses had concerns about a particular aspect of broadcasting Lobby briefings. Benedict Brogan argued that the reason the briefings were not televised was that "civil servants are perhaps reluctant to become faces on television" (Q 211). Howell James was "nervous" (Q 81) about televised briefings, and questioned whether it would be an "appropriate role for a civil servant to appear on television every day". He suggested that, if such briefings were televised, alternatively the Government could consider creating a Minister for Communication to lead the briefings (Q 80).

73. Civil servants conducting public briefings is not unprecedented. For example, during the Falklands War, a Ministry of Defence civil servant, Ian McDonald, provided press briefings that were broadcast on television and radio. More recently, prominent civil servants such as Liam Donaldson, Chief Medical Officer, and Sir David King, Chief Scientific Adviser 2000–07, have both conducted media interviews on screen discussing Government policy.

74. The morning Lobby briefing is already open to all journalists, and although the afternoon meeting is not, this is at least in part because of security and space considerations (it is held in Parliament). Summaries of both briefings are available on the Number 10 website and quotes are attributable to the Prime Minister's Spokesperson. We see no reason, therefore, why the Prime Minister's Spokesperson should not continue to speak at the Lobby briefings if they were broadcast. He would not need to change the nature of what he said: the briefings would continue as they are. Broadcasting them will make them more transparent and open. The Lobby would be more open if briefings were broadcast. This would also help dispel any continuing myths about the Lobby and the sense of secrecy it still engenders.

75. We see no good reason for not broadcasting the daily Lobby briefings but we note that no progress has been made to break the log-jam. Broadcasting such briefings would give the public and all parts of the media confidence that they are not being excluded from an "inner circle", and would give them information to which they are entitled. **We therefore propose that, as a first step, the morning briefing, which is already open to all journalists, should be live on the Number 10 website. If television or radio broadcasters wished to use clips from that footage they could do so.**

76. In the Government response to the Phillis Review, the then Minister for the Cabinet Office, the Rt Hon. Douglas Alexander MP, stated: "The Government remains committed to the principle, reflected in the Ministerial Code, that when the House is sitting announcements of Government policy should, in the first instance, be made in Parliament."[47] From what we have said it is clear that we have no intention of challenging this principle, but the point is that these briefings already take place and should not include pre-announcements. (See Appendix 5 for a summary of a lobby briefing). We are proposing nothing new in that respect. All that televising the briefings would do is make them available to a larger audience.

77. Historically, the Leader of the House of Commons gave a weekly Lobby briefing after Business Questions. This no longer happens. Adam Boulton, Political Editor, Sky News, explained:

> "One of the longstanding conventions of the lobby has been that the Leader of the House had a weekly lobby briefing which was the main point of direct contact between the Government and the lobby. That was something that fell into abeyance but was brought back by Jack Straw. Harriet Harman, although we sought her out, discontinued it. I think that is a real shame and damages Parliament, not least because it was concentrated around business and what was going on" (Q 139).

78. Benedict Brogan said it was to his "deep regret" that this practice had been discontinued (Q 208). Previously, this briefing ensured direct contact between the Lobby and Ministers each week and also helped raise the profile of parliamentary business. **We recommend that the Leader of the House of Commons should reinstate a weekly briefing on parliamentary business.**

Open access to press conferences

79. A related concern is open access to Government press conferences. In his written evidence William Horsley, Chairman of the Association of European Journalists (UK), argued: "If the government accepts the Phillis recommendations, ministers should take responsibility for ensuring that press officers allow open access to press conferences, and wherever possible to background briefings as well" (p 168).

80. We received evidence of one case where a journalist was excluded from a press conference at the Department of Health. Mr Tony Collins, Executive Editor of *Computer Weekly*, told us about a time in 2005 when the department had held a press conference about an NHS information technology project:

> "An invitation was sent to a number of magazines and national journalists, one of whom sent a copy of the invitation to me … it was the first time I have seen an invitation to a press conference which was confidential and the journalist was asked not to pass on the invitation. I rang and asked whether I could go and we were told that the conference was full. My editor asked me to go anyway and about 18 journalists filed through the electronic turnstiles at Richmond House and when I went through, I had my way barred by the minister's adviser" (Q 142).

Mr Collins was told that he could not attend because the matter would not be of interest to him but he believes that "they did not want me to ask informed questions" (Q 146).

---

[47] http://archive.cabinetoffice.gov.uk/gcreview/News/governmentresponse.pdf

81. Sian Jarvis defended the Department of Health's actions in this case. She said that the event was a "bespoke briefing" rather than a press conference and that: "Sometimes we want to bring a group of journalists up to speed on a particular subject and in this case we identified that the health lobby did not have as much information about the national programme for IT ... We did not invite the trade press—Tony Collins is part of the trade press—because they had so much information about it" (Q 347).

82. Whatever the details of this case, we are concerned that there should never be a perception that access to press conferences or briefings is dependent on the kind of coverage a journalist is likely to give. This perception can only fuel the breakdown in trust between the media and the Government. **We recommend that all Government press conferences should be as open as possible and that all major press conferences should be live on the internet so that they are open for anyone to listen to.**

The roles of civil servants and special advisers

Civil Service neutrality

83. The Phillis Review recommended that one of the seven principles underpinning all Government communications should be reinforcement "of the Civil Service's political neutrality, rather than a blurring of government and party communications."[48] In his evidence to us, Sir Robert stated: "The professional Civil Service communicator must remain impartial, and it was one of the bulwarks of what we said in our report, that this division had to be clear" (Q 16).

84. In its written evidence, the Cabinet Office stated:

> "All government communications activity is subject to strict propriety guidance, which, along with the Civil Service Code, defines how civil servants can properly and effectively present government policies and programmes. The following basic criteria have been applied to government communications by successive administrations. The communication:
>
> - should be relevant to government responsibilities;
> - should be objective and explanatory, not biased or polemical;
> - should not be—or liable to be—misrepresented as being party political; and
> - should be conducted in an economic and appropriate way and should be able to justify the costs as expenditure of public funds" (p 120).

Special advisers

85. Special advisers are temporary civil servants appointed by Ministers (with the written agreement of the Prime Minister). While they must adhere to the Civil Service Code, they are exempt from the stipulation to behave with impartiality and objectivity.[49] The Code of Conduct for Special Advisers states:

> "Special advisers are employed to help Ministers on matters where the work of Government and the work of the Government Party overlap and where it would be inappropriate for permanent civil servants to become involved. They are an additional resource for the Minister providing

---

48 Phillis Review, p 2.

49 Civil Service Order in Council 1995, Article 3.

assistance from a standpoint that is more politically committed and politically aware than would be available to a Minister from the permanent Civil Service."[50]

86. The Code attaches further conditions because of special advisers' political status. For example, although they may represent Ministers' views on Government policy to the media, the relevant political party must handle briefing on purely party political matters. The Code also establishes that all contacts with the news media should be authorised by the appointing Minister and conducted in accordance with the Guidance on Government Communications.[51]

87. We note that, since 1995, the number of special advisers employed by the Government has risen from 38 to 73—a 92 per cent increase. According to the Rt Hon. Liam Byrne MP, Minister for the Cabinet Office, 13 of the Government's special advisers deal primarily with the media, including two media specialists at Number 10 (Q 561). We believe that it is extremely important that special advisers adhere to the same rules as civil servants, with respect to selective trailing and pre-announcements. For example, the Government's own propriety guidance for its own communications staff clearly states: "Any announcement of a new policy must always respect the primacy of Parliament. If a minister announces a new policy outside the House, they risk being reprimanded by the Speaker."[52] Ministers appoint their own special advisers and only they have the power to remove them. Ministers therefore have a special responsibility to ensure this occurs.

TABLE 1

Number of special advisers employed by the Government

Financial Year	Number
1995–96	38
1996–97	38
1997–98	70
1998–99	74
1999–00	78
2000–01	79
2001–02	81
2002–03	73
2003–04	84
2004–05	77
2005–06	82
2006–07	68
2007–08	73

50 Code of Conduct for Special Advisers, paragraph 2, p.1. The Code was first published in 1997; the current version is dated November 2007.

51 Ibid., paragraphs 10, 11, p 3.

52 *Propriety Guidance*, Cabinet Office, p 7.

88. **We believe it is of key importance that Ministers make clear at all times that special advisers must follow the guidance available and stay within the limits set down. As well as sending the guidance to all new special advisers, we believe it is imperative that the guidance is brought to the attention of all new Ministers.**

Structure of departmental communications

89. During our inquiry, it became clear that some Government departments have a better reputation than others for the way in which they communicate. This was also the case when the Phillis Review was taking place. The Review noted that "more needs to be done to increase the professionalism and effectiveness of communication within individual government departments and agencies. The implementation of the Mountfield recommendations has been patchy."[53]

90. In evidence to us, Sir Robert said that one of the problems at the time of his Review was that communications was seen as a second-class role by the civil service and therefore it did not always attract the top people (Q 14). The Review stated: "The standards for entry should be at least as rigorous as those in other areas of the Civil Service. We want communications staff to become what they already are in theory—part of the mainstream Civil Service."[54]

91. In addition, the Phillis Review advocated greater movement of career civil servants between policy and delivery jobs and communications jobs: "Two-way traffic should be commonplace, both as a means of spreading communication skills through the wider Civil Service and as a way of breaking down the 'them and us' attitude that we have witnessed." It states:

> "All policy officials identified as having the potential to reach the very top levels of the Civil Service (SASC level) should have appropriate communications knowledge or experience. Those entering the senior levels of the Civil Service should be able to demonstrate good understanding of the wider role of communications within government and where they have successfully applied those skills in previous jobs."[55]

92. However, despite the leadership of the Permanent Secretary, Government Communications, and some significant progress made in developing training and development programmes for communications professionals, it is clear there are still some departments that fail to attract top staff to communications posts. The Chartered Institute of Public Relations (CIPR) told us:

> "In some, particularly the outward-facing and delivery departments, communications has been re-positioned and resourced as an important function with an increasing number of Communications Directors taking on more senior roles. However, there are still a number of departments that neither position and resource communications appropriately nor do they appreciate the contribution that communications can make. In this respect the civil service has fallen

---

53 Phillis Review, p 15.

54 Ibid., p 19.

55 Ibid., p. 21.

behind best practice in industry, where the director of communications almost invariably has a seat at the top table" (p 161).

93. CIPR also characterised civil service performance as patchy, due largely to a de-centralised professional structure, disparities in budgets and the varying commitment of senior officials and Ministers (p 160).

94. We also took evidence from the senior communications officials of three large Government departments—the Ministry of Defence, the Foreign and Commonwealth Office and the Department of Health. Ian Hargreaves, Strategic Communications Director at the Foreign and Commonwealth Office, told us: "The ideal person joining the Foreign Office Press Office is somebody who has a combination of good knowledge of the Foreign Office by having done a number of postings in the Office combined with some hands-on experience of doing communications work, perhaps in an overseas mission working on the press side" (Q 390).

95. In contrast, Sian Jarvis explained that it is less common for the Department of Health press office to have staff with significant experience of policy work: "They are mostly professional press officers" (Q 391). She went on to explain that the department does sometimes have fast-stream civil servants with policy experience to do "stints" in the press office, but these rarely last more than six months (Q 393).

96. Attracting high-calibre staff to communications positions helps ensure that communications is seen as an important role in all departments. The departments that have high-flying staff in their communications offices are better equipped to deal with complex press enquiries. Many of the journalists who gave evidence to us spoke of their frustration in dealing with press officers who were not qualified to discuss policy.

97. Adam Boulton told us that departmental press offices are "much punier and more insignificant than they were once" (Q 116). He added that in contrast special advisers are now more influential in Government communications, but this had not always produced a good outcome. He said that there had been "a number of instances where the Government have ended up getting into trouble because … the briefing has been done by the special adviser, who frankly did not know what they were talking about and in any case was trying to put a political spin on it" (Q 128).

98. Nigel Hawkes agreed, saying "you would not these days ring departmental press officers to find out what is going on" (Q 151). Frank Gardner, BBC Security Correspondent, suggested the Ministry of Defence has a mixed record in this area:

> "Generally I find that there is an enormous difference between speaking to serving officers who have recently been on operations, who are now manning a desk at the MoD, and civilians who, frankly, do not know nearly as much and will often be reading from a prepared script which has very much the stamp of central government on it; not quite spin but 'This is the official line and we're sticking to it' … the MoD have come on in leaps and bounds in the last two years; they are making more of an effort to talk intelligently to us and treat us as grownups, but they still have a way to go" (Q 161).

99. In contrast Tim Marshall, Foreign Affairs Editor at Sky News, held the FCO up as a shining example of best practice: "I am a bit of a patsy perhaps but I

do think the FCO is possibly the best press department in Government" (Q 165). He went on to explain:

> "I am able, on a daily basis, to talk through why HMG went down that line on the Zimbabwe vote recently, why they do this, what would have happened if they had done that and they are happy to talk through that and that really informs you as a so-called specialist to be able to get the context. I do not know of any other department which does that. They have a piece of paper in front of them which has the line and they will read it to you and if you try to ask a question about it, it says "Computer says no" and they will read it to you again. The FCO by far and away does exactly what was recommended in Phillis and I am ashamed to say that I am a fan" (Q 166).

100. The importance of attracting high-quality staff to civil service communications jobs is paramount. If the media are expected to cover Government announcements accurately, journalists must have access to officials who are able to discuss policies rather than simply parrot press releases. We note that, as part of the Professional Skills for Government programme, communications is recognised as a core skill for all senior civil servants. The departments with the best records on communications are those in which many high-flying career civil servants spend time in communications roles.

101. **We therefore recommend that where possible the careers of such civil servants should include a period of service in departmental press offices or communications generally. The Permanent Secretary, Government Communications (in line with his existing responsibility to develop professional standards and spread best practice) should oversee the implementation of this reform, in consultation with the Permanent Secretaries of each department.**

Greater emphasis on the regional and local media

102. An important recommendation of the Phillis Review was that the Government should improve its communications in the regions partly by nurturing its relationship with the regional and local media.

103. The Government explained that a regional press office service has been part of the COI since 2005 and that in early 2008 the service was significantly restructured "to reduce financial losses and to provide a more integrated service with public relations to support Government campaigns, enabling COI to provide a full mix of marketing communications required by departments." The Cabinet Office also stated: "Many departments now have dedicated regional press officers who work closely with regional media on issues of importance to the local area" (pp 125–6).

104. However, in evidence to us, Sir Robert felt there was still progress to be made in this area: "we did urge about the importance of shifting investment away from London and national communications operations into regional—the investment actually made in the communications function outside London … I suspect [that] has not happened quite as fully as we might have hoped" (Q 23). Other witnesses agreed. The CIPR stated: "There is in the view of our advisors still work to be done to improve regional communications to connect local people to national agenda issues. Generally communications are initiated, driven and controlled by the centre" (p 162).

The Newspaper Society said: "Regional press editors, political editors and Lobby correspondents continue to note the 'never-ending problem of recognition of the regional press' within government press offices whose focus tends to be on achieving broadcast media coverage" (p 179).

105. Chris Fisher, Political Editor of the *Eastern Daily Press*, went so far as to say that there had been no improvement in communication with the regional media since 2004:

> "Well, if there has been an improvement … it has somehow passed me by. I think it is the case that the more things change, the more they stay the same. In my experience, communications with the regional media by the government information system have always been mediocre at best, and I think that is still true today" (Q 262).

106. However, others believed that there was now more information available for the regional media, even if its quality was still poor. David Ottewell, the Chief Correspondent of the *Manchester Evening News*, told us:

> "My view would be that the quantity of information we get has certainly improved since the review, but … the quality, as far as we are concerned, is often too low and I think that is based on, and I am sure this is something we will talk about a lot, a fundamental misunderstanding sometimes of the requirements and the nature of the regional press" (Q 263).

107. One of the complaints of regional journalists was that press releases for the regional and local media are rarely more than copies of national press releases with a few local statistics added on. If so, it clearly does not realise Phillis' ambition that each region should do more than "regurgitate" Whitehall press releases.[56] David Ottewell said:

> "there is a sense that what we are often getting from the government information service is a sort of attempt at a regional spin on something we will have already seen nationally and which will already have come out nationally perhaps or a fairly half-hearted attempt to regionalise something which is not necessarily the most up-to-date or interesting news" (Q 264).

108. Mr Fisher agreed: "Their press releases often try to regionalise national announcements with a sort of barrage of statistics … and those statistics are of extremely limited value. The figures need to be broken down to a much better local level" (Q 275).

109. One way to engage the regional and local media more effectively would be to add more than local statistics to national press releases and to guide journalists through the local implications of an announcement. David Ottewell suggested that regional press officers should explain how a policy "impacts on a particular region in a certain way. I am sure there are creative ways of finding a genuinely regional line or message and that is what we need" (Q 266).

110. Another complaint about Government communications is that regional press teams were not proactive in their relationships with the local media. Mr Fisher said: "I have spoken to my paper's news editor, Paul Durrant, and I was rather shocked to discover that he gets a phone call about only once

---

[56] Ibid., p. 18.

every three weeks from the people at Cambridge actually flagging something up and usually communication is done by means of the website" (Q 286).

111. Bob Ledwidge, Editor of Regional Political Programmes at the BBC, suggested that the Government press teams did not really understand the role or needs of the local and regional media. He said that there was a need for more "media literacy amongst some of the press office teams in Whitehall departments and elsewhere" (Q 265). David Ottewell said: "At the top of my wish-list, and it is perhaps not practical or feasible, would be one person, a sort of cross-departmental head of communications for my region based in my region who understood my region and was both confident and well-informed enough to instantly brief on a range of subjects" (Q 280).

112. Another way of engaging the local and regional media is for Ministers themselves to be more available for interview and comment on the local aspects of stories. This was a point the Phillis Review made: "The importance of senior Ministers trying to redress their remoteness from the people they serve by more direct communication outside London cannot be overstated. More frequent visits to the regions by Cabinet Ministers are important, particularly when there is a controversial live issue to address such as a major road or airport development."[57] The advent of regional Ministers provides a new opportunity to increase meaningful ministerial contact with the regional and local media. However, Ministers' regions often do not correspond to traditional and well established local and regional identities and locations, such as those used by local and regional media themselves.

113. It is clear from the evidence we received that the government media machine is still very much focused on national press and broadcast coverage. The Prime Minister's Spokesperson**,** Michael Ellam, said that the Government could and should do more to help people understand how national policies will impact on their local areas. We believe that the Government should take steps to improve how it works with the regional and local media.

114. **We therefore recommend that the Chief Executive of the Central Office of Information should take the lead in improving standards. Special attention should be paid to the training and guidance available to regional press officers to ensure that they have a better understanding of regional and local media. They should tailor regional press releases; become more pro-active in their engagement with the local and regional media; and make more senior officials and Ministers available for interviews about the local impact of polices.**

Online communication

115. We welcome the progress the Government has made in improving online provision of Government information. The Chartered Institute of Public Relations told us: "Directgov and Business Link are good examples of single points of access to government information and services for individuals and businesses" (p 164). Citizens' Advice said: "Directgov is, on the whole, a very good source of government information for the public and we admire its plain English style and its ease of use. It is an improvement on the previous arrangement of multiple sites" (p 97).

---

[57] Ibid., p. 19.

116. However, our witnesses also had criticisms of Directgov. Citizens' Advice noted that the site often links to local authority sites for information about an issue such as housing benefit. It is concerned about this as the quality of local authority sites varies greatly (p 100).

117. There is also concern that improvements made to the online provision of information have been at the expense of more traditional information sources such as leaflets and phone lines. Citizens' Advice told us: "In recent years the Government has switched from providing public information in the form of leaflets, letters and other written communications to providing information on the internet or by electronic communication" (p 97).

118. Such a shift in emphasis is of concern because, despite the Government's intention over time to make broadband available to all, not everyone as yet has access to the internet. Nor is everyone able to use it. Indeed, it is often the most vulnerable citizens, most in need of Government help, who are least likely to be able to access and use the internet. Citizens' Advice particularly highlighted the problems for the elderly and those from the poorest backgrounds. They explained that:

> "it is not evident to us that government departments are recognizing in their delivery plans that switching information to web channels may have the effect of increasing the need for voluntary sector information and advice providers to act as a bridge to reach the most excluded members of our society … If certain groups in society need to turn to advice agencies and intermediaries simply to help them locate and 'translate' government information, then the government's methods of delivery are not working effectively for those expected to benefit. What is more, such actions effectively displace the responsibility to deliver services equally well to all government service users away from government" (pp 97–8).

119. In 2006, Sir David Varney, then Chairman of HM Revenue and Customs, was asked by the Chancellor to advise him on the opportunities for transforming the delivery of public services. According to Citizens' Advice, the Varney report found that a multiplicity of different helplines led to confusion and problems in accessing information (p 98).

120. Citizens' Advice also supported the aim of simplifying phone access to government information and services, but pointed out that, like internet services, telephone services are not accessible to all. They said that there:

> "are other people for whom the phone is simply not the most suitable or appropriate method that they would choose to deal with government, or any service provider. This is true of many people with mental health problems, people with physical and in particular hearing and speaking disabilities. Telephones may often be inappropriate for people in hospital or for prisoners who may face very high call costs and for other people who have no access to landlines or have to rely on expensive pay as you go mobiles" (p 98).

121. **We recommend that Government information should always be available and accessible to as many people as possible. In particular, the Government must be clear about its target audiences in communicating information and use the most appropriate method.**

Working with the voluntary sector

122. There is considerable scope for the Government and the voluntary sector to work together to improve the provision of information about public services and policies. In 2007–08, Citizens' Advice helped 1.9 million people with 5.5 million new problems on issues such as debt, benefits, housing, employment and consumer matters (1.5 million of these problems concerned benefits). Its public information website (www.adviceguide.org.uk) has 7.3 million visitors a year (p 95). Citizens' Advice said that the fact that so many people rely on them to provide and explain information suggests that Government services in this area are not in themselves sufficient (Q 436).

123. Citizens' Advice highlighted particular ways in which the Government could help them improve services. These included:

- Providing Citizens' Advice with drafts of new Codes etc before they are published and giving clear notice of their expected publication date. This would enable Citizens' Advice to make sure the information was in their system and their advisers were knowledgeable about the changes before people started asking for information about them.
- Being responsive to requests by Citizens' Advice to check their material (Citizens' Advice report huge variations between departments to requests for support to enable them to get accurate information out to bureaux in time).
- Advising Citizens' Advice when all/any government leaflets are revised and reissued and alerting them when government websites are amended.
- Bringing the UK Statute Law Data Base (http://www.statutelaw.gov.uk/) fully up-to-date with revised legislation.
- Drawing on Citizens' Advice's expertise by consulting at an early stage on whether an information campaign makes sense, and when it might be best to run it.

124. We can see only benefits from a closer working relationship between Government communications departments and recognised voluntary sector organisations involved in information provision. **We therefore recommend that Government departments should consult the voluntary sector about appropriate delivery mechanisms at an early stage when planning new information campaigns or revising old guidance.**

125. **We recommend that the Office of the Third Sector and the GCN, both of which are based in the Cabinet Office, should develop guidance for all departments on working with and consulting voluntary-sector organisations, in order to ensure the public can get help in accessing reliable, up-to-date information from well-informed sources. There is a similar case to be made for the importance of local government and other stakeholder consultations being held at an early stage.**

CHAPTER 5: TRENDS IN GOVERNMENT COMMUNICATIONS

126. The Phillis Review stated: "Our work was made harder by the lack of readily available statistics on the scale of the government's communications effort—an illustration, perhaps, of its current status."[58] Four years after the Phillis Review made this observation, little has changed. Like the Phillis Review, we found it difficult to obtain figures detailing the cost of Government communications.

127. The Cabinet Office told us that it was not possible to say how much each Government department spends on communications because it is "very difficult to specify … what constitutes 'communications' civil servants" and because "different departments will organise their business in different ways. Not all the communications functions in a department will be part of a single communications directorate with a single budget for communications" (p 130).

128. Because of this, the Cabinet Office failed to supply us with any figures about the costs of communications in each department, although the heads of communications at the Foreign and Commonwealth Office, the Ministry of Defence and the Department of Health were each able to give us figures for their communications budgets. (See Appendix 8).

129. It is significant that the Government does not record or monitor the overall cost of communications across departments. For example, the Cabinet Office could not give us a figure for the overall cost of Government communications (p 159). The apparent lack of such statistics not only makes it difficult for external reviews of Government communications, but also it must hamper the Government's own ability to monitor performance. If the Government cannot keep track of communications costs, it cannot adequately measure the value for money it is achieving in this area.

130. The cost of communications was not the only area where it was hard to obtain reliable statistics. We also struggled to obtain reliable and comparable figures on the number of people employed in communications across government.

131. After repeated requests for information about the size and growth of Government communications, the Cabinet Secretary, Sir Gus O'Donnell supplied us with the figures in Tables 2 and 3. Table 2 shows the growth in the number of entries in the *White Book of Contacts in Government Departments and Agencies*, which is a list of contacts for the media and other agencies. It is clear from the Government's own estimates that the number of communications staff has increased by 73 per cent in the past 10 years. However, the Cabinet Office warned against reading too much into these figures: "The White Book figures are only ever a snapshot in time and are not intended to be a comprehensive guide to 'communication staff' in the Civil Service" (p 130).

132. It is important to consider the context of this growth. Since 1998 the internet has become a more important communications tool. The public expect information to be provided on the internet, and they expect it to be used as a consultation tool. This has meant that new staff have been recruited in areas such as website design and operation.

---

[58] Ibid., p 9.

133. However, there has been no corresponding decrease in numbers of staff working in traditional forms of communication because the Government has had to maintain existing channels of communication and information provision (see paragraph 117). The definition of 'communications' is wider than ever. The Phillis Review called on the Government to engage more in a two-way dialogue with the public. This and other changes have required an increase in the number of staff employed.

TABLE 2

The number of communications staff employed by each Government department

Department	December 1998	September 2008
Cabinet Office	23	38
Ministry of Justice	-	77
Lord Chancellor's Department	16	-
Department for Culture, Media and Sport	13	21
HM Customs and Excise	10	-
HM Revenue and Customs	-	58
Board of Inland Revenue	17	-
Ministry of Defence	109	255
Department for Communities and Local Government	-	77
Department for Education & Employment	100	-
Department for Children, Schools and Families	-	68
Department for Innovation, Universities and Skills	-	42

Prime Minister's Office	14	31
Department of Trade and Industry	82	-
Department for Business, Enterprise and Regulatory Reform	-	London only: 67
Department for Transport (*including agencies*)	-	105
HM Treasury	18	28
Department for Social Security	60	-
Department for Work and Pensions	-	113
TOTAL	**795**	**1,376**

Source: Cabinet Office written evidence, p 130.

134. The definition of 'communications staff' is broad and open to interpretation, but the post of 'press officer' is better defined and understood. We asked Sir Gus for figures comparing the number of departmental press officers now and 10 years ago and these are shown in Table 3 (the figures do not include support staff, vacancies or special advisers). They show that the number of government press officers employed in central Whitehall departments has grown by 72 per cent in the last 10 years—practically the same percentage as for communications staff. They also show significant differences in the number of press officers each department employs.

TABLE 3

The number of press officers in central Whitehall departments

Department	December 1998	September 2008
Cabinet Office	14	11
Lord Chancellor's Department	3	-
Ministry of Justice	-	34
Department for Culture, Media and Sport	8	11
HM Customs and Excise	3	-
HM Revenue and Customs	-	34
Board of Inland Revenue	7	-
Ministry of Defence (*Central press office staff only*)	12	33
Department for Communities and Local Government	-	21
Department for Education and Employment	27	-
Department for Children, Schools and Families	-	20
Department for Innovation, Universities and skills	-	13
Department for Environment, Food and Rural Affairs	-	19
Department of the Environment, Transport and the Regions (*Central staff only*)	32*	-
Ministry for Agriculture, Fisheries & Food	9	-
Foreign and Commonwealth Office (*Not including overseas posts*)	17	20

135. The growth in the number of civil service press officers is very considerable. Again, it is important to consider the context of this growth. In the last decade, the size of the media has grown considerably, not only because of the internet but also 24-hour news channels and new digital television channels. The culture of the news media has also changed. Instead of a set number of daily news bulletins each day there is now an expectation for stories to be updated and broadcast 24 hours a day. This was Sir Gus' explanation for the growth in the number of press officers:

> "In terms of why the numbers have gone up, well, the demands placed upon press offices have gone up. If you look at that number of 373 … there are more than 373 journalists newly accredited to these two Houses ... There are 3,000 journalists in the BBC alone and that is just one institution. If you look at TV broadcasters in terms of the licences over the last ten years the number of licences for TV broadcasters has gone up by a factor of 15; the number of local radio stations has gone up during the same period by 220 per cent. I do not actually have any data on what the number of political blogs was 10 years ago but there are now over 1,600" (Q 469).

136. While we recognise this argument, we also think it can be misleading. During our last inquiry, into the ownership of the news, we found that although there has been an increase in ways to access the news, there has been no corresponding increase in the amount of newsgathering. The core of the information revolution is the repackaging of existing information rather than newsgathering.[59] We do not accept that changes in the media necessarily explain the need for more press officers. However, the increase in staff numbers does underline the importance of the Government properly and accurately assessing its spending in this area.

137. Phillis recommended that each department should conduct an annual review on the effectiveness of its communications, and that the Permanent Secretary, Government Communications should collate this information to produce an annual report on the overall effectiveness of Government communications. This recommendation has not been implemented. Without reliable and comparable figures showing how much departments spend on communications, it is impossible to ascertain whether value for money is being achieved; to measure the success of new communications initiatives; or to compare departmental performances in order to learn from good and bad practice.

138. **We therefore recommend that the Cabinet Office should collate annual statistics on the costs of Government communications across departments. The Permanent Secretary should lead this reform. He should report annually to the Head of the Home Civil Service, and to Parliament, on the overall size, budget and effectiveness of Government communications.**

---

[59] Select Committee on Communications, 1st Report (2007–08): *The Ownership of the News*, (HL 122), paragraphs 205–10.

CHAPTER 6: SUMMARY OF RECOMMENDATIONS

139. **We appreciate that in the case of market sensitive information, or certain EU-wide announcements, it may not be practical or possible to inform Parliament first. In such cases, we recommend the Government should commit to return to Parliament at the earliest opportunity in order to give an account of developments.**

140. **We recommend that the Prime Minister draw all Ministers' attention to the guidance in the Ministerial Code that the most important announcements of Government policy should be made in the first instance to Parliament. Ministers should be reminded that trailing the content of announcements is incompatible with the Ministerial Code and the guidance of the Speaker of the House of Commons. This should be repeated at the start of every new Parliament.**

141. **The Prime Minister should also issue clear instructions to all Ministers, and their staff, that new information should always be provided on a fair and equal basis to all interested journalists. This instruction, too, should be repeated at the start of every new Parliament.**

142. **We propose that, as a first step, the morning briefing, which is already open to all journalists, should be live on the Number 10 website. If television or radio broadcasters wished to use clips from that footage they could do so.**

143. **We recommend that the Leader of the House of Commons should reinstate a weekly briefing on parliamentary business.**

144. **We recommend that all Government press conferences should be as open as possible and that all major press conferences should be live on the internet so that they are open for anyone to listen to.**

145. **We believe it is of key importance that Ministers make clear at all times that special advisers must follow the guidance available and stay within the limits set down. As well as sending the guidance to all new special advisers, we believe it is imperative that the guidance is brought to the attention of all new Ministers.**

146. **We recommend that where possible the careers of high-flying civil servants should include a period of service in departmental press offices or communications generally. The Permanent Secretary, Government Communications (in line with his existing responsibility to develop professional standards and spread best practice) should oversee the implementation of this reform, in consultation with the Permanent Secretaries of each department.**

147. **We recommend that the Chief Executive of the Central Office of Information should take the lead in improving standards. Special attention should be paid to the training and guidance available to regional press officers to ensure that they have a better understanding of regional and local media. They should tailor regional press releases; become more pro-active in their engagement with the local and regional media; and make more senior officials and Ministers available for interviews about the local impact of polices.**

148. **We recommend that Government information should always be available and accessible to as many people as possible. In particular, the Government must be clear about its target audiences in communicating information and use the most appropriate method.**

149. **We recommend that Government departments should consult the voluntary sector about appropriate delivery mechanisms at an early stage when planning new information campaigns or revising old guidance.**

150. **We recommend that the Office of the Third Sector and the GCN, both of which are based in the Cabinet Office, should develop guidance for all departments on working with and consulting voluntary-sector organisations, in order to ensure the public can get help in accessing reliable, up-to-date information from well-informed sources. There is a similar case to be made for the importance of local government and other stakeholder consultations being held at an early stage.**

151. **We recommend that the Cabinet Office should collate annual statistics on the costs of Government communications across departments. The Permanent Secretary should lead this reform. He should report annually to the Head of the Home Civil Service, and to Parliament, on the overall size, budget and effectiveness of Government communications.**

APPENDIX 1: SELECT COMMITTEE ON COMMUNICATIONS

The Members of the Committee which conducted this inquiry were:

Baroness Bonham Carter of Yarnbury
Lord Corbett of Castle Vale
Baroness Eccles of Moulton
Rt Hon the Lord Fowler (Chairman)
Lord Grocott (*until 26 November 2008*)
Lord Hastings of Scarisbrick
Baroness Howe of Idlicote
Lord Inglewood
Rt Hon the Lord King of Bridgwater
Lord Macdonald of Tradeston (*from 9 December 2008*)
Baroness McIntosh of Hudnall
Rt Rev the Lord Bishop of Manchester
Lord Maxton
Baroness Scott of Needham Market

Declarations of Interest

BONHAM CARTER, Baroness

12(f) Regular remunerated employment
Television Executive, Brook Lapping Productions, a subsidiary of Ten Alps Communications plc
13(c) Financial interests of spouse or relative or friend
I also disclose the interests disclosed by Lord Razzall
16(b) Voluntary organisations
RAPT—Rehabilitation of Addicted Prisoners Trust
Other relevant information
Employee, BBC (1984–1993)
Editor, Channel 4's "A Week in Politics" (1993–1996)

CORBETT OF CASTLE VALE, Lord

12(i) Visits
Visit to Hungary (21–23 March) with All-party EU Accession Group. Fare paid through Parliamentary travel scheme. Accommodation and hospitality provided by Hungarian Parliament
Visit to Romania (29 May—2 June). Fare paid through Parliamentary travel scheme. Accommodation and hospitality provided by Romanian Parliament
Visit to Liverpool (23–24 June 2006) with my wife, with European Capital of Culture 2008 All-party Parliamentary Group—accommodation and hospitality paid for by Liverpool Culture Company
13(d) Hospitality or gifts
The costs of the plaintiffs in the case of Lord Alton and others v. The Secretary of State for the Home Department of whom I was one, were met by contributions from Iranian residents in the UK through the National Council of the Iranian Resistance (12 February 2008)
15(a) Membership of public bodies
Chairman, Castle Vale Neighbourhood Partnership Board, Birmingham
President, Josiah Mason College, Erdington, Birmingham
15(c) Office-holder in pressure groups or trade unions

The Member is an office-holder in various all-party parliamentary groups; details will be found in the register of all-parliamentary groups at www.publications.parliament.uk/pa/cm/cmparty/memi01.htm
15(d) Office-holder in voluntary organisations
Patron, Training for Life
Patron, Hospice of St. Francis, Berkhamsted, Herts
Patron, Chilterns MS Centre, Halton, Bucks
Patron, Hope for Children

ECCLES OF MOULTON, Baroness

12(e) Remunerated directorships
Independent National Director, Times Newspapers Holdings Ltd (11 December 2007)
15(b) Trusteeships of cultural bodies
Director, Opera North, company limited by guarantee ***(unpaid)***
Trustee of York Minister Trust Fund (not a company limited by guarantee) ***(unpaid)***
16(a) Trusteeships
London Clinic Company limited by guarantee ***(unpaid)***
Other relevant information
Director, Tyne Tees Television plc (1986–1994)

FOWLER, Lord

12(e) Remunerated directorships
Non executive Director, Holcim Ltd
Member Advisory Council, Electra QMC, Europe Development Capital Fund plc (24 July 2007)
Chairman, Thomson Foundation (24 July 2007)
15(d) Office-holder in voluntary organisations
Vice Chairman, All-party Group on AIDS
16(a) Trusteeships
Trustee, Terrence Higgins Trust
Other relevant information
Non Executive Chairman, Midland Independent Newspaper plc (Birmingham Post Group) 1991–1998
Non Executive Chairman, Regional Independent Media (Yorkshire Post) 1998–2002
Staff, The Times newspaper 1961–1970
Life member, National Union of Journalists

GROCOTT, Lord

15(d) Office-holder in voluntary organisations
President, Telford Steam Railway (17 June 2008)
Other relevant information
Reporter then Producer, ATV and Central Television 1979–1987
Member, National Union of Journalists

HASTINGS OF SCARISBRICK, Lord

12(e) Remunerated directorships
British Telecom PLC
12(f) Regular remunerated employment
KPMG
Former BBC employee (1994–2006) in receipt of BBC Pension
15(d) Office-holder in voluntary organisations
Chairman, Crime Concern
Patron, Volunteering England

Patron, Springboard for Children
Patron, Zane
Patron, Toy Box

HOWE OF IDLICOTE, Baroness

15(b) Trusteeships of cultural bodies
Trustee, Architectural Association School of Architecture
15(d) Office-holder in voluntary organisations
Member, Council of the Institute of Business Ethics
Patron, Institute of Business Ethics
President, The Peckham Settlement
Member of the NCVO Advisory Council
Board Member, Veolia Environmental Trust plc (formerly Onyx)
16(a) Trusteeships
Trustee, Ann Driver Trust

INGLEWOOD, Lord

12(c) Remunerated services
Political Adviser, House of Lords ***(unpaid)*** *for the Estates Business Group*
12(e) Remunerated directorships
Chairman, CN Group (Media)
Director, Pheasant Inn (Bassenthwaite Lake) Ltd (hotel)
Chairman, Carr's Milling Industries plc (food and agriculture)
12(f) Regular remunerated employment
Farmer
13(a) Significant shareholdings
Pheasant Inn (Bassenthwaite Lake) Ltd (hotel)
13(b) Landholdings
Hutton-in-the-Forest Estate (farmland including residential property in Cumbria)
Wythop Estate (farmland including residential property in Cumbria)
Owner Hutton-in-the-Forest (historic house open to the public)
13(d) Hospitality or gifts
20 November 2007: The costs of the plaintiffs in the case of Lord Alton and others v. The Secretary of State for the Home Department of which I was one, were met by contributions from Iranian residents in the UK through the National Council of Resistance of Iran (4 March 2008)
15(a) Membership of public bodies
Chairman, Reviewing Committee on the Export of Works of Art
Governor of Skinner's Academy Hackney (from February 2008)
15(c) Office-holder in pressure groups or trade unions
Friends of the Lake District (nominated by the Committee for the National Consultative Council)
President, Cumbria Tourist Board
Member, Historic Houses Association Finance & Policy Committee
16(a) Trusteeships
Trustee, Elton Estate, Cambridgeshire
Trustee, Raby Estates, Co Durham and Shropshire
Trustee, Thoresby Estate, Nottinghamshire
Trustee, Calvert Trust
Trustee, Settle-Carlisle Railway Trust
Trustee, Whitehaven Community Trust Ltd
16(b) Voluntary organisations

Member, Bar
Member, Royal Institution of Chartered Surveyors
Fellow, Society of Antiquaries of London
Other relevant information
Director, CN Group (1997; Chairman from 2002)
Consultancy, ITV (June 1998—June 1999)
Consultancy, BBC (October 1998)
Patron, Voice of the Listener and Viewer (March 2000)
Consultancy, BBC (April 2000)
Member, Commercial Steering Group, BBC (July–November 2004)

KING OF BRIDGWATER, Lord
12(e) Remunerated directorships
Non-executive Director, London International Exhibition Centre plc and London International Exhibition Centre (Holdings) Ltd
13(b) Landholdings
Minority partner in family farm in Wiltshire (including cottages)
Partner in woodlands in Wiltshire
15(d) Office-holder in voluntary organisations
Patron, UK Defence Forum
President, English Rural Housing Association
Vice President, Royal Bath and West Society

MACDONALD OF TRADESTON, Lord
12(f) Regular remunerated employment
In an advisory capacity, Chairman—Macquarie Capital, Europe
Member of the Advisory Board of Scottish Power
15(a) Membership of public bodies
Chancellor of Glasgow Caledonian University
16(b) Voluntary organisations
Member, Fabian Society
Patron, Brighton & Hove Philharmonic Society
Patron, Dystonia Society

McINTOSH OF HUDNALL, Baroness
12(e) Remunerated directorships
Non-executive Director, Artis Education ***(unpaid)***
15(b) Trusteeships of cultural bodies
Board Member, Roundhouse Trust
Council Member, Royal Academy of Dramatic Art
Trustee, South Bank Sinfonia
Board Member, National Opera Studio
15(d) Office-holder in voluntary organisations
Trustee, Art Inter-Romania
Trustee, Theatres Trust
Trustee, Foundation for Sport and the Arts
16(a) Trusteeships
Trustee, Thaxted Church Trust

MANCHESTER, Lord Bishop of
12(f) Regular remunerated employment
In receipt of episcopal stipend
15(a) Membership of public bodies
Chair, Sandford St Martin (Religious Broadcasting Awards) Trust
General Synod of the Church of England

Manchester Diocesan Board of Finance
Manchester Church House Co
Manchester Diocesan Council of Education
Manchester Diocesan Association of Church Schools
Life Governor, Liverpool College
Governor, Hulme Hall
15(d) Office-holder in voluntary organisations
Lord High Almoner to HM The Queen
National Chaplain, Royal British Legion
Chairman, Council of Christians and Jews
16(b) Voluntary organisations
Manchester Diocese Mothers' Union
Arches Housing
Disabled Living
Hulme Hall Trust
Wigan & Leigh Hospice
St Ann's Hospice
Manchester University of Change Ringers

MAXTON, Lord

13(b) Landholdings
Holiday home in the Isle of Arran
A London flat

SCOTT OF NEEDHAM MARKET, Baroness

12(d) Non-parliamentary consultant
Centre for Transport Studies (judging and presentation of transport awards)
Atkins (Consultancy)
12(i) Visits
Visit to Norway (29 August—3 September) hosted by the Norwegian Government under the auspices of the All-Party Parliamentary Norway Group
Visit to US (September 2005) under the auspices of BA APPG (British American All-party Parliamentary Group)
Visit to Trinidad (May 2006) under the auspices of C.P.A
Visit to Guatemala and El Salvador (June 2006) under the auspices of I.P.U
Visit to Taiwan (July 28—3 August 2007) meeting with the Ministers, members of the People's Democratic Party (fellow members of Liberal International), the British Trade and Cultural Office, parliamentarians and others. Travel and hotel costs paid by the Taipei office in the UK. Courtesy gifts received and given (18 September 2007)

APPENDIX 3: CALL FOR EVIDENCE

The implementation of the Phillis Review of government communications

The House of Lords Select Committee on Communications is announcing today an inquiry into the implementation of Sir Bob Phillis' 2004 review of government communications. The Independent Review of Government Communications, chaired by Bob Phillis, was published in January 2004. It is available at: www.cabinetoffice.gov.uk/reports/communications_review.aspx.

This will be a relatively short inquiry focusing on whether the recommendations were adopted by the Government and whether the changes that have been made effectively underpin the principles that the review was based on.

The Committee would welcome evidence on the following question:

Has the implementation of the reforms of government communications since the Phillis Review resulted in a more effective system of communication and underpinned the principles set out in the report?

The principles set out in the Phillis Review are:

- Openness, not secrecy.
- More direct, unmediated communications with the public.
- Genuine engagement with the public as part of policy formation and delivery, not communication as an afterthought.
- Positive presentation of government policies and achievements, not misleading spin.
- Use of all relevant channels of communication, not excessive emphasis on national press and broadcasters.
- Co-ordinated communication of issues that cut across departments, not conflicting or duplicated departmental messages.
- Reinforcement of the Civil Service's political neutrality, rather than a blurring of government and party communications.

Summary of Phillis Review Recommendations

The twelve main recommendations of the Phillis Review are listed for the information of those responding:

(1) A redefinition of the role and scope of government communications

"Our central recommendation is that communications should be redefined across government to mean a continuous dialogue with all interested parties, encompassing a broader range of skills and techniques than those associated with media relations. The focus of attention should be the general public" (page 12).

(2) A strong central communications structure

"We have recommended, and the government has already accepted, a new structure, led by a new Permanent Secretary, Government Communications who will be Head of Profession, provide strategic leadership for communications across government and build a new and

authoritative communications service within government. The Prime Minister's Senior Official Spokesperson will report to the Permanent Secretary, Government Communications, and will work alongside the Prime Minister's Director of Communication" (page 12).

(3) Strong, integrated departmental communications structures

"We found inconsistencies between departments on the significance attached to the communications function. We recommend that, led by the Director of Communication, each department's communications activity must clearly contribute to the achievement of the department's overall policy aims and objectives" (page 15).

(4) Disband the Government Information and Communication Service (GICS)

"We found structural and systems weaknesses that diminished the work of many able staff within GICS. These weaknesses made GICS no longer fit for purpose. We recommend that the government adopt a new approach and structures, replacing the existing network with a wider definition of communications professionals encompassing all those involved in communication activity and led by the new Permanent Secretary, Government Communications" (page 17).

(5) Greater emphasis on regional communication

"Research told us the public want information that is more relevant to them and where they live. We recommend that more investment should be made in communicating at a local and regional level and more communication activity should be devolved into relevant regional government or public service units" (page 18).

(6) Recruitment and training to raise professional standards and maintain Civil Service impartiality

"We found inconsistency in recruitment and inequality in training opportunities. We recommend that all communication specialists should be recruited to the same high standards. All those involved in communications should have training that allows them to perform in a professional and effective manner. Ministers should not be involved in the selection process for communications professionals during open, external competitions" (page 19).

(7) New rules governing the conduct of special advisers and defining more clearly the boundaries with the Civil Service

"We accept the role of special advisers but found a lack of clarity in their relationship with civil servants. We recommend that new propriety guidelines and induction training should be developed by the Permanent Secretary, Government Communications to cover all those involved in communication, including special advisers. The principle of Civil Service impartiality must underpin these guidelines" (page 21).

(8) Effective implementation of the Freedom of Information Act 2000

"We found a culture of secrecy and partial disclosure of information which is at the root of many of the problems we have examined. We recommend that, when implementing the main provisions of the Freedom of Information Act, the overriding presumption should be to disclose" (page 23).

(9) Clearer rules for the release of statistical information

"We found cases of selective release of information and lack of clear timetables as to when information was to be released. We recommend that core central government statistical information should be automatically, routinely and systematically made available, with schedules published in advance and strictly observed. There should be a new statute to define a clear remit for the National Statistician and the Statistics Commission" (page 24).

(10) A new approach to briefing the media

"We found that the lobby system is no longer working effectively for either the government or the media. We recommend that all major government media briefings should be on the record, live on television and radio, and with full transcripts available promptly online. Ministers should deliver announcements and briefings relevant to their department at the daily lobby briefings, which should also be televised, and respond to questions of the day on behalf of the government" (page 25).

(11) Customer-driven online communication

"We found that, although significant resources are being devoted to government websites, the impact has been diluted by a lack of integration within departments and across government. We recommend that the central government website should be redesigned to meet the needs and perceptions of users, with individual departments only becoming "visible" when this makes sense to the users. Information on local public services should be prominent and easily found. There should be increased investment in websites to reflect the increasing importance of this method of communication" (page 26).

(12) A reappraisal of the relationship between politicians and the media

"We found a three-way breakdown of trust between politicians, the media and the general public. We recommend that politicians and the media should consider the extent to which their behaviour might support or undermine the objective of these recommendations—to help restore public trust in legitimate government communication" (page 26).

APPENDIX 5: MORNING PRESS BRIEFING FROM 20 NOVEMBER 2008

Briefing from the Prime Minister's spokesman on: Baby P, economy, Iceland, SME meeting, Gurkha petition and pirates

Baby P

The Prime Minister's Spokesman (PMS) began by telling the assembled press that the Baby P statement from Ed Balls was an update and followed on from the exchanges at DCSF Questions earlier this week. Asked if the statement would be substantive, the PMS repeated that he expected it to be an update. It was about keeping the House informed, as there had not been a full statement on the issues relating to the Baby P case so far.

Economy

Asked if there was any response to mortgage figures and retail sales, the PMS said that we didn't normally comment on monthly figures. These figures fluctuated from month to month and this was clearly a difficult time for the British economy as it was a difficult time for the global economy. This was why the Government was determined to take action and give real help to people now, in order to help them get through this period.

Asked for his assessment of the effectiveness of the stamp duty changes that came into effect in September, the PMS said it was far to early to make an assessment at this point. Insofar as there would be any assessment, it was really for the Treasury to comment on in the PBR.

Iceland

Asked about where we were on the package for Iceland, the PMS replied that there was a joint statement that had been put out by the UK, Dutch and German governments which read:

"In supporting the IMF programme the UK, the Netherlands and Germany welcomed Iceland's commitment to meet its obligations to depositors and ensure the fair, equal and non-discriminatory treatment of creditors. As part of the international support for Iceland, the UK, the Netherlands and Germany would work constructively in the continuing discussions with Iceland to conclude agreements on pre-financing that enabled Iceland to meet its obligations towards depositors shortly."

Asked if the support given by the UK was due to assurances made by the Icelandic Government on non-discriminatory treatment of creditors, the PMS said he did not have enough information on the specifics of the discussions, so people should check with the Treasury.

Asked if the amount given by the UK Government was in the region of £5 billion, the PMS said he was not in a position to comment on any specific numbers and he advised people to speak to the Treasury.

SME Meeting

Asked for a read-out of the meeting, the PMS said that this was one of a series of meetings that the Prime Minister was having, listening to the concerns of businesses. We recognised that some small and medium-sized businesses were

facing tough times and that was why, as the Prime Minister had said in the House yesterday, we would be taking action and announcing the action in the PBR in order to help small businesses at this time. We were only able to do that because of the commitment that we were making to support the economy through a fiscal stimulus.

Asked if the small businesses had any particular areas where they wanted more assistance, the PMS said that it would probably be best for people to speak to the small business organisations themselves to get a view as to what they were asking of the Government. The PMS added that it was a very useful and constructive meeting.

Gurkha Petition

Put that the Gurkhas would be handing in a petition at No10 today and would there be any further Government announcements on the issue, the PMS said that the Government position on this was set out by the Home Secretary at the time of the recent court case judgement. Where there was a compelling case, soldiers and their families should be considered for settlement. The judge did agree that our cut-off date of 1997 was a fair date, but as the Home Secretary had made clear after the ruling, we would revise and publish new guidance and we would honour our commitment to the Gurkhas by reviewing all cases by the end of the year.

Pirates

Asked about a possible EU force in the Gulf of Aden to combat piracy, the PMS emphasised that this was something that had been under consideration and been looked at and planned for, for some time. Planning was under way for an EU mission to the region to help combat pirating as a successor to the NATO mission. Subject to contributions from other member states, we had offered to host the operational headquarters for that EU mission, command the operation and to provide a frigate. Discussions were still ongoing and this was still at the planning stage.

Asked if he knew where and when these discussions were taking place, the PMS said that on process questions it would be best to speak to the MoD.

APPENDIX 6: SUMMARY OF PHILLIS RECOMMENDATIONS

(1) A redefinition of the role and scope of government communications

(2) A strong central communications structure

(3) Strong, integrated departmental communications structures

(4) Disband the Government Information and Communication Service (GICS)

(5) Greater emphasis on regional communication

(6) Recruitment and training to raise professional standards and maintain Civil Service impartiality

(7) New rules governing the conduct of special advisers and defining more clearly the boundaries with the Civil Service

(8) Effective implementation of the Freedom of Information Act 2000

(9) Clearer rules for the release of statistical information

(10) A new approach to briefing the media

(11) Customer-driven online communication

(12) A reappraisal of the relationship between politicians and the media

For further details of the recommendations of the Phillis Review, please see our Call for Evidence, reproduced at Appendix 3.

APPENDIX 8: COST OF GOVERNMENT COMMUNICATIONS

We questioned the heads of communications at the Foreign and Commonwealth Office, the Ministry of Defence and the Department of Health about the costs of their departments' communications operations and received supplementary written information from them. Their responses can be summarised as follows.

Foreign and Commonwealth Office

The cost of the FCO press office in London, which has a total of 30 staff, is £11.5 million. There are a further 70 staff in London employed directly on communications-related activity (for example website work, events, publications). There are also about 390 staff engaged on communications work in UK missions overseas. The total budget for which the Strategic Communications Director has managerial responsibility is £497 million, but this includes the FCO's funding of the BBC World Service, the British Council, Wilton Park and scholarship programmes.

Ministry of Defence

The Directorate General of Media and Communications in MoD has 184 staff and a budget of £15.6 million in 2007/08 (up from £14.9 million in 2006/07). There are a further 157 staff in the MoD (but outside DGMC) whose primary work is communications. This includes staff in the Meteorological Office, the Estates Organisation and the Equipment and Support Organisation. MoD estimates the expenditure associated with these other staff at about a further £15 million, though this does not include direct manpower costs.

The three armed services also have staff engaged in communications work (for example public relations officers in regiments and on ships) and make use of PR agencies. The main PR expenditure in 2007/08 by the armed services on nationally organised campaigns and events, including recruitment campaigns, was over £44 million. Of this, the largest expenditure was by the Army, at £24.3 million.

Department of Health

DoH has 122 staff engaged in communications work, of whom 30 are press officers. The total budget for the communications division of DoH in 2007/08 was £52.2 million. This was made up of an administrative budget of £7.1 million covering the cost of the 122 staff and their day-to-day operations, and £45.1 million of programme costs.

In 2008/09 the total budget allocation rose to £107 million. The administrative budget rose by 7 per cent to £7.6 million, while the programme costs more than doubled to £99.6 million. The main reasons for the large increase in the programme costs were the launch of a major campaign on obesity and a significant increase in expenditure on tobacco control.

Minutes of Evidence

TAKEN BEFORE THE SELECT COMMITTEE ON COMMUNICATIONS

WEDNESDAY 9 JULY 2008

Examination of Witness

Witness: Sir Robert Phillis, Chairman of the Independent Review of Government Communications 2004, examined.

Q1 ***Chairman:*** Welcome, Sir Robert. Let me set out what we are doing. In a relatively short investigation we want to look at the progress since your report of 2004 on the Government Communications System. We want to look at issues like whether the culture of secrecy and partial disclosure which you talked about has changed; whether the relationship between special advisers/civil servants, that is now settled; and whether communications in the regions has improved. If I could say that we welcome evidence from the public on this because communications is really what it is all about, and we also welcome evidence from working journalists who have experience of the day to day handling of the situation. So, Sir Robert, let me start. You have a long history in the media; you were Managing Director of Central Television back in 1981 and you have done a whole range of jobs, yes?
Sir Robert Phillis: I have been very fortunate, yes, in the way that my career has moved through the media.

Q2 ***Chairman:*** You have gone from Central Television to ITN to BBC, to the Guardian Media Group and you are now President of the Royal Television Society?
Sir Robert Phillis: That is correct.

Q3 ***Chairman:*** Why were you set up as a committee in the first place?
Sir Robert Phillis: Our brief came from the eighth report of PASC—Public Administration—following the Martin Sixsmith/Jo Moore event, the report entitled *These Regrettable Events*, where PASC felt it, I think, of grave concern that the standards that had emerged in terms of the communications function within the Civil Service had not met the standards that had been expected, and they asked the government to conduct a radical review of government communications, not limited simply to media management and press management, but to consider a whole range of alternative structures or alternative models that might give some learning to us in Great Britain and the United Kingdom in terms of government communications. We were given that brief by the Cabinet Office, initially charged with reporting within six months, which at the time I felt was an impossible task. In fact we spent the entirety of 2003 on our work; and though the Prime Minister called for an interim report in the August of 2003 our final report was submitted, as you say, Chairman, in January 2004.

Q4 ***Chairman:*** So the genesis of it all was the Jo Moore/Martin Sixsmith affair, was it?
Sir Robert Phillis: Yes, it was.

Q5 ***Chairman:*** Just remind us very briefly what that concerned.
Sir Robert Phillis: "A good day to bury bad news" when it came to the World Towers bombing outrage. It rather highlighted the tensions between a particular special adviser and the communications professional within the department; and it was that tension and conflict between the respective responsibilities of the Civil Service professional communications staff and the role of the special adviser at the time.

Q6 ***Chairman:*** In that situation was the special adviser able to instruct the communications staff to do a particular thing?
Sir Robert Phillis: I think the message "A good day to bury bad news" was an indication, was certainly the strongest possible advice, and not one that Mr Sixsmith subscribed to.

Q7 ***Chairman:*** In your assessment—and you looked at the whole situation—what was the root cause of the problems?
Sir Robert Phillis: I think we came very early in our review to the rather startling conclusion that there had been a fundamental three-way breakdown in trust—trust between government and politicians on the one hand, the media on the other and the general public thirdly. That breakdown in trust about credibility and belief in information and in government information gave us concern on several grounds. Firstly, we found in our research a considerable disillusionment with the quality and the timeliness of government information in general. That disillusionment certainly was giving rise to disengagement in certain quarters, particularly the young, people of an ethnic background, people of poorer financial circumstances, and the evidence of that disillusion and disengagement was evidenced by the continual falling in the turnout in local and general elections. I think that gave our review group particular concern about the impact over time and the report, I think both historically refers to movements over the last 30 years or so and, as this Committee will well know, there has not been a significant improvement from the higher levels of participation in local and general elections in the 1970s to that in the last two elections which have fallen respectively to I think 59% in 2000 and 61% in the 2005 general election.

Q8 ***Chairman:*** In your assessment when you carried out your inquiry was the government communications machine impartial? Was it fit for purpose?
Sir Robert Phillis: I think the government communications machine then, which was the Government Information Service—GICS—first of all was a voluntary organisation; it was a virtual organisation. It did not cover all the departments of state; it did not have the influence either departmentally across the board that one might have expected and it did not have the influence centrally at Number Ten that one might have expected. So at the time I think it is fair to say, Chairman, that the old GICS structure was not fit for purpose and it had been exacerbated somewhat by the new government's approach coming in, in 1997. As we know, the Labour opposition before the election was very, very effective in its news management, and on taking power I think the view was that much of the old GICS system was not well equipped in the skills of news and media management alone as the Labour opposition had been before they took power. There was at that time, therefore, quite significant movement of the old Civil Service communication staff out of many departments—not all—down to many departments, and there was a considerable strengthening at the centre with the appointment of three individuals in Number Ten who uniquely had been given special powers to direct and manage civil servants. I think only one of those posts were directly enacted and that was the position of Alistair Campbell who, as Director of Strategy and Communications, had power to direct civil servants, and that was a significant change at the time. Again, the emphasis on news management, media management did tend to predominate the much broader role of communications that my review group chose to look at because we do not believe—and never did believe—that government communications were simply about individual news management or media management, but had a much wider role in communicating to a broader body of people.

Q9 ***Chairman:*** So the position that you investigated, it was the culture of spin, was it, that characterised that period going up to your review?
Sir Robert Phillis: Part of that but not uniquely so. I think my distinguished predecessor, Mountfield, who conducted a review in November 1997 did focus very much on news management and elements of spin, and of course it would be wrong to say that spin and the role of the specialist adviser and the professional civil servants was not an element, but it was too narrowly defined if I might observe that. We felt as a group that effective government communications had to shift its focus more to that of the general public, the citizen, than simply the media. And if you are going to communicate government information to the citizen then it is not simply a question of news management and the newspapers of today and the *Today* programme, it covers the whole range of marketing, of direct communications, of online, of interactivity, of consultation, of involvement and indeed of transaction with the citizen, the general public who, after all, elect their Members of Parliament and eventually result in the creation of a government. So spin was an element but by no means the overriding element, and we did find plenty of evidence in our work that in many departments the relationships between special advisers and civil servants was working effectively. There were others where that could not be said.

Q10 ***Chairman:*** So this whole issue of special advisers was really central to what you were doing?
Sir Robert Phillis: It was a very important element, yes, but I do put it in the context of the importance of the broader communication skills, which, going back to your earlier question, perhaps the old Government Information Service, GICS, did not have, and it was the way in which communication skills were seen within the Civil Service. Very much one has to say, firstly as a group of, shall we say, second class citizens who in some departments were often more used

simply to issue the press release when something had been decided, rather than a communications function that was involved in the development of strategy and policy and the planning of that communication process and the consultation involved. So the fit for purpose question I think comes back to the point you made earlier, Chairman.

Q11 ***Chairman:*** What I had not fully realised from what you said—and perhaps I am mistaking your reply—that professionals were actually moved out or moved to one side.
Sir Robert Phillis: Some indeed were, yes; some of the professionals within departments were not deemed appropriately skilled by their political masters, their ministers coming in, and there was quite some movement of some of the communication professionals at that time.

Q12 ***Chairman:*** Who was moved in?
Sir Robert Phillis: Certainly in some departments special advisers were put in to strengthen the press management teams and some of those were special advisers brought in by the ministers concerned. Other posts were advertised through the proper Civil Service procedures by open competition and just a change in personnel within the Civil Service appointments process.
Chairman: We will obviously come on to all these points.

Q13 ***Lord Grocott:*** Can I just pick up? You said something very important about communications being fundamentally about communications to the citizens—that is the government's prime responsibility in terms of presenting information which is important. Is that not inevitably mediated in one way or another via the press and the broadcasters? I am simply asking you, if that is the responsibility of government to see that citizens know what is happening in respect of government policy was it any part of your review to put some of that responsibility on the broadcasters or on the media? Was there any sense in which they shared the responsibility in the view of your committee to ensure that accurate, impartial and direct information was provided?
Sir Robert Phillis: There are two parts to that question and if I might perhaps take it the other way around. I think from our methodology and from our research the question of trust in the eyes of the citizen and in the eyes of the general public was very much related to its source, and putting it bluntly there was a higher level of trust in information that came at a local level or that came through the institutions they dealt with directly, like the local schools or the local hospitals that was locally provided to them; that was provided by the COI and often provided by COI advertising campaigns. There was a high level of trust in, if you like, those secondary sources than from the mouths of politicians themselves. That came through in a number of the pieces of research we both reviewed and conducted ourselves. In answer to your first question the media was not a specific part of our brief and review but we did include it in our report because you are quite right, I think that much of the information that gets to the general public is mediated by the press and by the broadcasters, and there is no doubt that the breakdown in trust between politicians and the media in the early years of the government was quite high, not least because it is said—and we were told—that there was an inner circle of particularly national press reporters that certain ministerial figures and their special advisers favoured in terms of briefing. That led to quite an adverse reaction from other media sources who were not so privileged, and we found that after 1997 that the increase in the adversarial role between government and politicians and the press intensified without any question of doubt and there was a tendency to challenge every piece of government information from whatever source in the ways that it was being used. So, yes, we certainly believed that the relationship between the media and government was an important element—not directly within our terms of reference, but we did comment on it in the report and we did say that we felt that both government and the media and the press should ask themselves what their responsibilities were in the reporting of accurate, credible, timely and truthful information during the process. We put it in the report; we are not denying—and never would deny and would not deny now—that there is a proper adversarial role between politicians and between the media, particularly the national press, but we felt very much that the more one could separate factual, truthful, accurate information from comment and interpretation and that terrible word "spin" would help reduce some of that tension. I am sure later in our discussions you will ask the question whether there is evidence that that has happened.

Q14 ***Lord Corbett of Castle Vale:*** Going back to the situation as you saw it in 1997 after the change of government, do you feel looking back on that now that that is where the roots of the press taking the role of the Opposition may have been born, given that it took the former government some long time to adjust to Opposition?
Sir Robert Phillis: I think it was certainly one of the factors but it was not that alone. I think that, as I said earlier, the fact that the old Government Information Service was not complete, it did not cover all departments, it was not coordinated, it did not have a strong presence in the centre at Number Ten were relevant factors. I think that the second class citizen

positioning of the communications professionals compared with lawyers, economists or statisticians, for example, did not help. I think the lack of involvement in communications professionals in helping to develop both policy and strategy and prepare for that was at a very, very low level, and that goes back to recruitment, training and promotion opportunities amongst the communications professionals. I think what our report did was to say that this is not fit for purpose; it is not comprehensive in range or skills or some of the elements I have just mentioned, and we urged that they should be addressed and, as I am sure will emerge from this in the next session, many of these issues have been addressed with some vigour.

Q15 ***Chairman:*** It is fair to say, is it not, before 1997 there was a fairly—how can I put it?—antagonistic relationship between the press and government then. It was not exactly from my memory exactly calm water.

Sir Robert Phillis: I am sure that is true, my Lord Chairman; I am sure it ever was thus, and I am sure it is right and proper that it should be. It would be naïve and simplistic to believe that there should not be a somewhat combative and adversarial relationship between the media—and particularly the national press, and I do distinguish between the national and the regional press. It was ever thus, it ever will be. It is the question of the degree and the separation between factual and accurate and, if you like, non-contentious information as opposed to political advocacy and comment, and I think it is that balance that has changed.

Q16 ***Baroness McIntosh of Hudnall:*** This relates very directly to what you have just said, Sir Robert. It is about the nature of certain kinds of information. There is information which can be assessed against measures to do with accuracy, transparency and openness and, indeed, factual accuracy, but there is another kind of communication that I wonder if you have any comment to make about, which is what I suppose what you might call the "kite flying" tendency of all administrations—the need to see whether a particular trend in policy is going to gain support. And the fact that, as I perceive it as a non-professional, one of the ways in which that is achieved—one of the ways—is through non-attributable briefing and the development of relationships with people who will then put information out there in order for the government to assess what kind of reaction it is going to get. Within the context of all that you have said about openness and transparency, have you anything to say about the place of that kind of non-attributable briefing?

Sir Robert Phillis: Yes, I think I have two points and I think it is a very pertinent and perceptive point you make. I think the first response to your question is the latter point about non-attributable briefing, which seems to me to fall very squarely in the role of the special adviser who may be, as you say, testing, flying a kite, exploring advocacy of a particular policy point of view. That is clearly not the role of the professional Civil Service communicator. The professional Civil Service communicator must remain impartial, and it was one of the bulwarks of what we said in our report, that this division had to be clear. A civil servant of course can brief on achievements, can brief on facts, can brief on declared policy against which these communications activities should be judged, but cannot and should not stray into the role of political advocacy or kite flying in the way you describe. However, I think we have a number of very interesting examples where over and beyond the non-attributable briefings we have had a number of departments in recent years who have taken that communications message on board and embarked on an open and informal process of consultation with the public before deciding on policy, and I think there are two examples that spring to mind. One was the Department of Health *Your Health Your Say* where the Department of Health went out and certainly consulted very widely in terms of the issues at which they were looking. The second was DWP that similarly went through a consultation, an open consultation procedure—not kite flying but consulting through a series of fora in getting feedback before determining on what they regarded as the appropriate policy. Again, in answer to your question, non-attributable briefings and testing things out—yes, the role of a special adviser but not the professional civil servant; but as a professional civil servant if they are involved in that consultation process in terms of the forum that I have described, that is another way of getting feedback before deciding any change in policy or moving strategy.

Q17 ***Lord King of Bridgwater:*** You have talked about that you felt that part of the problem was concentrating just a few particular contacts—important media relationships—at the expense of the other wider media outlets, leading to some friction in that respect. Was that the unanimous view of your committee that that is what had happened? I only ask that point because I just noted that you had on your committee David Hill, Tom Kelly, Godric Smith and Sue Jenkins who in one way or another have all been involved during that period, and they agreed that, did they?

Sir Robert Phillis: They were indeed. I think unanimity would be putting too rosy a picture on it; there were shades of opinion, there were degrees of opinion, but I do think it was recognised—

Q18 ***Chairman:*** We know that feeling!
Sir Robert Phillis: I do think we recognised from the evidence we took from the broader journalistic and even broadcasting community that there was a sense of exclusion and access which was given to some and denied to others. So not unanimity but shades of opinion.

Q19 ***Lord Maxton:*** That in a sense leads on because in our last inquiry one of the things we discovered was that over the last 25, 30 years there has been a blurring between factual reporting and opinions among the media, among the reporters in particular. Does that not make it more difficult for the government to get its message across to the media, and does it not in fact lead to exactly the problem that you have been talking about, that the government will tend to say, "We know that reporter is not on our side so why would we give him or her that information?" So it is that blurring between opinion and fact which has led to some of the problems you have.
Sir Robert Phillis: I think that is right; I think that is a very fair comment. I would say that there are other things which contribute to it and I think that the competitive pressures that exist because of the number of media outlets there are—you all know about the explosion of channels and online and the different way people can access—I have to say—and I saw it in various of my media incarnations—the pressure to publish something and the pressure to publish something ahead of your competitors often leads to less rigour than there used to be in a more simplistic media era where you had specialists in foreign policy, home policy, health or whatever, who had rather more time to actually research and publish accuracy, and that has been a real problem; that the level of training across the media—with some notable exceptions, and the BBC is one—in terms of journalistic standards and specialised knowledge is not as thorough as it used to be. I think the competitive pressure leads people to publish when perhaps they have not researched as fully and as thoroughly as they might. But there is another thing which I have to say concerned us and which has been addressed both in the report and the action subsequently taken, and that is where government statistics and government information of a factual nature might not always have been published to a regular schedule and would sometimes be used to reinforce a political point. That concerned us greatly and it seemed important to us as a group that one should distinguish between, as I was asked earlier, that unquestionable set of facts and statistics and information which should and ought to be released regularly to a known schedule, and therefore free from the possibility or the temptation of releasing it when it suited a minister or political argument. That question has clearly been addressed. Last year the Treasury took steps in terms of the separation of the Office of National Statistics and the creation of the Statistics Board, accountable to Parliament, with a regular schedule of published information, which I think is an important move. And I think that that statutory separation and the appointment of Michael Scholar in terms of chairing that independent body is very, very important in ensuring that there is a clear separation between the factual and the informational, which cannot be used or manipulated, which might have been the temptation previously. So I think that that clarification might help some of the issues that have been raised in the last question.

Q20 ***Baroness Scott of Needham Market:*** I wanted to ask about the seven principles that you used on which to base your report and I wonder if you can say a word or two about how you came up with those and whether, in a sense, you got the principles first and then judged what you heard against them, or whether they emerged as you went along. Secondly, it is difficult to imagine that one would take issue with some of these—you would not say, "We want more secrecy, we want more misleading spin"—they are the sorts of principles that everyone would agree with, but when it comes to measuring objectively whether government is actually achieving those how do you think that could be done? If you are government genuinely wanting to buy into your principles how could you be sure that these were actually happening? And if you were the public how would you judge?
Sir Robert Phillis: A general point on process and then to try to answer your particular question. We started out by focusing initially in our discussions on what was the problem? Was the problem simply press management or spin or was there a wider problem? We say right at the head of the report that the major theme that dominated the whole report was the question of trust—the breakdown of trust, the fundamental breakdown of trust between government and politicians, the media and the general public. As I say, that concerned us so greatly because of the disillusionment, disengagement, turnout at general elections and the whole democratic process of elections. So we started by asking ourselves what the problem was and that is where we came from. Against that we said that if that is the problem and a lot of that problem is cultural, a lot of that problem is behavioural, a lot of that problem is structural, can we identify a number of principles against which we can test any subsequent ideas or recommendations that come through? In some cases it is possible to test and to measure but in others, because they are behavioural, cultural, structural and deeply imbued in the mindset of the Civil Service, in the mindset of the press, in the

mindset of politicians, no, that would not change easily, would not change speedily—and it is very difficult to measure. But unless you recognise the issue and put it on the table and make people think about those principles then we felt we would be avoiding difficult issues. So we started with the principles. Just to comment on one or two of them. Openness not secrecy, sounds obvious, sounds important but I think a long tradition within the Civil Service itself and within governments going back over time is how little do you need to say and what can we get away with, rather than the question being, why should we not be prepared to release this information and turn the question on its head, as one of our witnesses suggested to us, and say "What is it that we really cannot say now, for very good reasons?"—and there will always be things that we cannot say now, that government cannot say now for very good reasons. But it is the cultural and the behavioural aspect there which does not change easily and which would only change over time. The second principle, direct and unmediated communications, that is not to ignore the role of the press but as a citizen, as a member of the general public, having direct communication which might be through paid advertising, which might be through direct marketing, which might be through those brands which people have a higher level of trust in, like the NHS—one might have said HMRC—or other organisations where there is a branding difference, of course part of government but a different brand and a different position. The level of trust that comes through unmediated without the press and the media is something that we thought was an important principle and, as you will hear from your witnesses later, certainly has been addressed with great effect. I think the positive presentation of government policies and not misleading spin—as I said earlier it would be naïve to pretend that this will not continue to happen, but I think by distinguishing the role of the special adviser and the political message from that very important impartiality, neutrality of the professional civil servant communicator at least helps make it clear where the message is coming from, and it is for the individual to decide the extent that the spin factor or policy issue is there. I think progress has been made under Howell James and the team in terms of coordination of communications across government, which is something that was very, very patchy in the 1980s and 1990s; significant improvements have been achieved in that area, and the professional culture, which now the Government Communications Network across the entire government process has improved immeasurably in recruitment and in selection, in training and in opportunity. I think the three major initiatives that I would highlight that come from those principles are within the professional Civil Service communications. The Permanent Secretary has launched very successfully within the Civil Service a programme called *Engage* where communications professionals in the Civil Service have been concentrating on that shift in balance towards the citizen rather than exclusively the media outlets. I think in terms of public engagement Directgov, meaning the direct communications online systems to the general public involving integrated communications, involving transactional opportunities has been one of the great successes coming from this, and I think within the profession of Civil Service communications staff a programme called *Evolve*, which now very openly in terms of the Civil Service professionals involves a comprehensive programme of recruitment, a selection of training, of advertising jobs, of testing one's own skills about the suitability for job availability, combined with a sensible and judicious bringing in from private sector of skills in that area. So, in answer to your question, I think some of these things are more difficult to measure, intangible, behavioural, cultural and will take time to change and will be patchy, and some departments—I am aware—will take these things up with greater enthusiasm than others, and circumstances in different departments change over time. But has it made that shift difficult to measure? Yes, I believe it has. And on other of the items—

Chairman: Bishop of Manchester, I think we are getting into your series of questions.

Q21 ***Bishop of Manchester:*** We are. Can I just go back a little before we come to that area again? Going back to your interim report, when that was published and the Prime Minister of the day taking three of the main recommendations and putting those into practice— presumably you were very pleased by that, although there may have been other things in the interim report you would have liked him to have taken up as well. But when we come to 2004 and the final report is published, by contrast it seems that there is a less formal response and indeed it seems no formal response from the government at the time. I wonder, therefore, if there was a sense of disappointment on your part about that. Then coming back to where you just left off a moment ago in talking about the measuring of the success—and you defined some of the things which you are very pleased about and some of the things which have taken time—could you then go on to define some of the things that you feel have not been implemented and which you would like to see work done on?

Sir Robert Phillis: In one sense I was not pleased with the Prime Minister's request for an interim report because it came right at the beginning of what I thought was going to be a family holiday and we had to work rather hard to get the report to the Prime Minister during August at the time! But it was I think

a fair and reasonable request from the Prime Minister, as he addressed the question of the organisation of communications at the centre. So I think I and the group were pleased with his very speedy response to the interim report which you recall led in September of that year to a change in the structural arrangements where Alistair Campbell stood down as Director of Communications, and the Prime Minister did accept—I think this is absolutely key—the core separation between the role of the communications professional within the Civil Service, and the creation and the appointment of the Permanent Secretary, Government Communications, separating that from the political advisory role, which was subsequently filled by David Hill. So, yes, in that sense I think the request was a reasonable one, the response was a prompt one and the core acceptance of that clear separation between the civil servant role and political advisory role was, I think, welcomed. I do not believe that in the final report that element was significantly changed or removed. We had embarked on the process of a very proper Civil Service search and selection for the new Permanent Secretary and the team, responsible to the Cabinet Office and the Cabinet Secretary. As you will explore later, I think that structural change has worked effectively in most areas that we have considered. I think as an aside that it is for the Prime Minister of the day to decide the sort of support role he needs in Number Ten, and the current Prime Minister has chosen a slightly different model. One of the questions I had noticed—and if you would rather I leave that?

Q22 ***Chairman:*** Yes, just leave that for the moment.
Sir Robert Phillis: Moving on then to areas where perhaps all that we had hoped for has not been achieved, yes there are some and that is not surprising. The one obvious area where I have to report there was no enthusiasm at all was in relation to media briefings in the role of the lobby—there was no enthusiasm from either the journalists in the lobby nor, it would seem, from government Ministers to televise, record, put on line the daily press conference, and that is the one area where I certainly have not seen any significant change.

Q23 ***Chairman:*** That is done in the United States, is it not?
Sir Robert Phillis: It is done in the United States, televised conferences, transcripts available, information on line access, and it was one of the things we picked up from one of the forums we conducted with other international models—little movement there. We were concerned, secondly, about FOI and the enthusiasm with which that might be taken up, and I would say that there has not been as much progress as I would have personally hoped for—a little slower than one might have expected, but then the new rules did not come in until 2005. There has been a learning experience, there has been learning from within the Civil Service, there has been learning from within government; there has been some learning—though maybe not enough—from elements of the press; and in terms of vexatious and silly requests for freedom of information. Similarly the number of vexatious and silly private requests for freedom of information, I think there is evidence that those are slowing down. But inevitably progress is patchy and it was bound to be—some departments seemed more relaxed and more willing to implement the full intent of the Freedom of Information Act, and in other areas it is slow. That is hardly surprising given the size and scale of government communications, but a little slower than I would have hoped. Was there anything else that I would highlight—that very fair question where maybe things have not happened quite as quickly? I think they are the two major areas I would highlight. A third one, which I cannot answer but your next witnesses may be able to, we did urge about the importance of shifting investment away from London and national communications operations into regional—the investment actually made in the communications function outside London. I cannot answer the question because I do not have the statistics but it was certainly on our agenda and I suspect has not happened quite as fully as we might have hoped.
Chairman: It is certainly on our agenda as well and we will certainly come to that. Let us move on to Lord Corbett.

Q24 ***Lord Corbett of Castle Vale:*** Sir Robert, you reminded us that right at the start of your report you were concerned about this tripartite relationship between politicians, the media and public and how that all interacted. Could you just say something about how much of a start has been made on putting that right? I suppose the two active partners in terms of improving that communication has to be the government and the media, and would you like to make some comments about how far you feel that each of those partners have sought to improve the communications with the public, with the citizen?
Sir Robert Phillis: I think from government's point of view the fact that led by government, led by senior civil servants many of the recommendations that we put forward have been acted upon with some vigour and, as we all know, that is not always the case when you have independent reviews reporting of this sort. The emphasis placed there on the shift in focus—even thought it might be slow and taking time—to the citizen and to the public by the various initiatives that have been taken has certainly contributed in distinguishing between fact and comment, and I

think that is helpful. I think the development of the services, which others will talk about later, again has allowed the citizen and general public to find out for themselves, if they do not believe or trust what they hear from the politicians, to have the ability now to say, "I am going to find out about my local hospital or my local schools or my local crime statistics", or whatever, and has helped to create a shift where individuals can question it for themselves and challenge it for themselves, and that can only have been achieved if it was led by government and the Civil Service itself to try to make that happen. I think as far as the media is concerned it varies from the particular media source. You will know that national newspapers are still the least trusted of all information sources by the general public. In the piece of work we did only 6% felt that national newspapers were trusted; 14%, as I recall, radio; over 70% for the regulated broadcast television output. So I think it varies as far as the media is concerned. There is no doubt that the regulated broadcast media are much more careful in terms of the separation of information and comment than others, and it even varies at the other end of the scale within the national press—it would be invidious of me to mention those newspapers that I thought take more care than others—it is a fact that amongst the national press the temptation for vigorous comment, critical comment we are all aware of from certain sources of the press, whichever government is in power at the day. Again, in answer to your question—variable. I think government has acted indirectly in the sense of picking up on professional communication within the information we have talked about, and I think amongst the media some may have listened and have taken action, and that is true—but many of them have not, and we see that by the continued and not unexpected criticism.

Q25 ***Baroness McIntosh of Hudnall:*** Sir Robert, can I tie that back to your earlier separation between the kinds of information that it is appropriate for civil servants to be in charge of, as it were, and the kind of relationship between special advisers and the public through the media. This issue of trust strikes me resides more seriously in the area of the relationship between special advisers and the various people to whom they talk, simply because—as you yourself pointed out—those relationships tend to be conducted on a more private and non-attributable basis, but what comes out of those relationships is often extremely significant in terms of how public opinion is influenced and how the media present the way government policy might be developing. Do you think it is possible to have a relationship of trust where there is an inevitable disposition for any government to want to protect some element of what it is, so to speak, up to by not quite declaring its hand, but by making sure none the less that information is available?
Sir Robert Phillis: I think uncritical trust and total trust is a totally unachievable and unrealistic objective. We know from research that we conducted and research we reviewed and we know over time that sadly two of the least trusted professions are journalists and politicians—whether that is justified or not it is a fact—and it would be totally unrealistic to believe otherwise. And it would be wrong—it would be a pretty bland world if we were all in the area of totally trusting everything we hear from politicians of any government of any colour of any day, or indeed from the media.

Q26 ***Baroness McIntosh of Hudnall:*** Forgive me for interrupting, but you have made the question of trust a very major part of your pitch, as it were.
Sir Robert Phillis: Yes.

Q27 ***Baroness McIntosh of Hudnall:*** You did in your report and you are continuing to do so today and I am interested to know whether you think the improvements that may have been achieved since your report are significant in terms of changing the culture of mistrust, which you referred to earlier—the fact that people behave in certain ways, that they have a disposition towards secrecy or whatever it is—whether in fact the improvement is such that there is a real shift now, or whether actually the element of mistrust, which is inherent, as you have just described, is at an irreducible minimum and we are never going to get better from where we are.
Sir Robert Phillis: No, I do genuinely believe there has been a shift because of the distinction between the types of information that is provided; and I think with leadership from government and the Civil Service I see no reason why that should not continue, because I think the citizen is becoming more and more empowered—if they do not trust what they hear they are going to find out for themselves; they are going to search, they are going to look, they are going to try and provide or find the information to allow them to make their judgment as a member of the public. I think that is entirely healthy and a good thing and I see no reason why that should not continue. So, yes, I think the movement has been significant; I think with the right leadership it can and should continue. I will just make the point that in the vast majority of cases special advisers and Civil Service professionals work very well together, and special advisers are themselves now covered by certain of the Civil Service procedures, with the one key exception, of course, is that their jobs are always at risk when government changes or when the Minister changes, and that is a rather important difference between the communications professional within the Civil Service.

Q28 ***Lord Maxton:*** I accept absolutely that the citizen now does have that ability, if they wish, to find out what they want. However, it does mean that there are fairly large sections of the public, of course, which do not have the availability of the sources of information to be able to find out for themselves. Is that a worry for you?
Sir Robert Phillis: Yes, it is; and it is a very, very fair point, and sadly they happen to be those that are less fortunate, less privileged, less economically able to access, for whatever reason. It is a very fair point.

Q29 ***Baroness Bonham-Carter of Yarnbury:*** Sir Robert, you referred earlier to the fact that one of your key recommendations affected the communications team at Number Ten, the appointment of a civil servant and a special adviser, which was taken up. The present Prime Minister has of course changed that and there is now just a civil servant. To what degree was your original idea—if I can put it delicately—to deal with what was perceived as a bit of an Alistair Campbell problem, and to what degree are you concerned by the fact that there is now just a civil servant dealing with Number Ten communications?
Sir Robert Phillis: No, the development does not necessarily concern me. It does seem to me that the Prime Minister of the day is going to decide on the support system that he wants. The fact that the current Prime Minister has put the two roles together under a civil servant does not concern me—in fact, if anything, I find it somewhat encouraging in that those appointments will be subject to proper civil servant selection procedures rigorously applied in determining who moves into that role. It seems to me that, yes, at the time of our report in 2003, it was to a large extent the Prime Minister's preference to have a political Director of Communications and Strategy and, yes, that was Alistair Campbell, and particularly given that Alistair was the only one of the three political appointments at No. 10 who was given powers to directly manage civil servants, which we felt very uncomfortable with. The current Prime Minister has reverted perhaps to a different role where he has his communications role now under the control of a civil servant, and that does not concern me; and he has separated out the strategy role, which seems to be the role that Stephen Carter plays, which is much more akin to the role that Baroness Hogg or Brian Griffiths played in a different administration. So, no, not concerned by that particular shift because we were addressing the problem at a time in a particular structure. Yes, it is true to say that that did centre very much around the role of the political appointment in managing professional civil servants and that is where we became concerned about the question of the impartiality and the neutrality which one always comes to expect of the civil servant operating for the government of the day.

Q30 ***Baroness Bonham-Carter of Yarnbury:*** I gather from that answer that you would be concerned if there was not a civil servant in that role at Number Ten? You do not mind that there is only the one role but that is because it is a civil servant rather than a political appointment?
Sir Robert Phillis: Rather than a political appointment, yes, although if a future Prime Minister or this Prime Minister changed his mind and wanted to revert to the model that we were looking at at the time, then providing there is a distinction between one, the Permanent Secretary sitting behind me in terms of the Civil Service responsibility at the centre, if the Prime Minister of the day chose to have his political adviser on those other aspects of strategy and communication then that clearly is the decision of the Prime Minister, but it does not concern me that the shift between Mr Blair and Mr Brown's thinking has come up with a different solution, providing that that centre has the strong Permanent Secretary and professional leadership of the civil servants working to the Cabinet Office and therefore Number Ten.

Q31 ***Lord Grocott:*** Did your study throw any light on the practical day to day work of those involved in communications in Number Ten, in two particular respects? Number one, what was the balance between incoming requests to which the machine had to react, as opposed to what was an attempt by the Prime Minister to convey a particular aspect of government policy to the world outside? I do not like reactive and proactive, but what was the balance between the two? Secondly, in respect of what was the balance between clearly administrative types of questions and political questions? For all the difficulty in making the distinction, what was the balance of the requests coming in between those two types of question? This is not entirely facetious but when one hears that the Prime Minister is being asked, for example, what is his favourite Beatles' record or something like that, that is presumably the kind of thing that the communications system has to deal with. I am not sure myself whether that is a political question or a government responsibility, or what it is—it depends on what the answer is! No doubt someone has the job of answering it, poor soul!
Sir Robert Phillis: I will do my best. We had a number of sessions of oral evidence from Alistair Campbell and his team and Mike Granatt and his team, from professionals around the service, and you will find that detailed in the report. There is actually no doubt

that Alistair Campbell introduced some very effective and necessary innovations. The famous grid, the fact that Alistair and his team did the obvious and said, "If we as a government are trying to coordinate our messages across the board should we not be aware of what is being announced when and by whom and whether they fit together and whether they sit together?" And Alistair introduced a very effective grid of knowledge of communications releases: one, in order to coordinate them where they were addressing the same thing; two, to plan them in terms of the release of messages—wholly sensible, a need for coordination which did not exist previously. The shortcoming in that was that the old Government Information Service, not fit for purpose, were not involved in that process at all because they did not have a centralised function and the Civil Service did not have a centralised function; and whether it was in the daily meetings or indeed the occasional attendance at Cabinet meetings, which we believed would be necessary for the Permanent Secretary, as indeed it was for Alistair himself, this was not institutionalised in that sense. So I think the emphasis was very much then, when we were conducting our review, requests for information from the centre coming in, rather than from the departments volunteering—or, if you like, using your outward description. I think there was a disconnect between the communications activities between at least some, and some of the very large Departments of State in the centre, that was not being coordinated. I think where that became obvious—to think of one or two examples when I go back—the lack of coordination over the foot-and-mouth crisis was just extraordinary—different departments were doing different things and there was not that central pull in the middle. That had improved somewhat by the time the fire fighters dispute broke on the scene, and crisis management is again one of the things which Alistair Campbell and his team, working with their Civil Service professionals, did put a very proper focus on in terms of crisis management. So there were a lot of initiatives that the then new government and Alistair brought in, and it would be absolutely wrong to deny it; but it was very much a central control function, but from Alistair in his political role, because there was no Permanent Secretary, Government Communications; there was not the structure to make sure that was replicated within the Civil Service.

Q32 ***Baroness Howe of Idlicote:*** Sir Robert, I think you have answered a lot about where the very tight line between special adviser and professional comes, so I am not going to go into all of that again. Having said that, I think the training side is perhaps quite interesting and you seem to have implied that through various methods—Evolve and Engage and so on—the standing of the professional communicator within the Civil Service has indeed gone up. There are two questions I want to ask. One is that I am thinking of the Foreign Office process which, from early days, they actually did have one of their emerging top people responsible right the way through for communications. So you have the actual professional being, for a period of time as part of their evolved training, the communicator. If that is one of the models that are now being followed throughout the rest of the Civil Service that is one thing. The other thing is, having gone through these processes you felt that professionals were rather regarded as second class citizens; are they still now regarded as second class citizens or has all that now changed? It would be interesting to hear your views on that.

Sir Robert Phillis: As I am not part of the Civil Service myself I can only answer through hearsay and impressions and my general day to day contact with Whitehall rather than detailed knowledge, and I am sure that Howell James will be able to correct any of my inaccuracies or impressions and give you a thorough answer. Yes, I do believe that the general standing of the communications professional under the communications network has changed. Firstly, because it is comprehensive; it does cover all departments of state; it does cover all of the skills that were perhaps not present in 1997 or even 2003. It has been much broadened and much helped by the outstanding work of the COI and now of the Strategic Marketing Board by—patchy, but by some of the online initiatives that have taken place, with a great reduction of the number of individual websites. I think the point to make there is that an individual now does not have to access a plethora of sites to find their information needs; it is becoming more focused on the ability for it to be personalised in terms of the many aspects of government communications that might affect an individual. Again, I would have to say that these things are inevitably patchy. I think, as you rightly say, Lady Howe, we found in our initial investigation some departments who had very high standards of professionalism on the communication front. It was not universal but it certainly existed. And we had others that we visited—and we visited quite a large number of departments—where the communications function was really: "Issue the press release, please, tomorrow". And it was a very limited role in that sense. I think Howell will be able to be more precise in the significant progress that some departments have made, the learning that has come from those best of class, which certainly existed—and I suspect if you push him very hard he would say there might be some departments that are not quite yet up to pace; but that is inevitable, I think, given the scale of government activities. From what I hear,

from what I listen to, from what I see, I think that the standard of professionalism is significantly different from that which it was just five years ago, but it is going to need to be watched and monitored and sustained going forward because nothing is forever and things can slip.

Q33 ***Baroness Eccles of Moulton:*** Sir Robert, really leading on from the answer you have just given to Lady Howe, would you say that optimistically, providing the developments you have explained to us continue, that the government information machine will be fit for purpose and able to fulfil its more complicated role going into the next general election, whenever that should be?
Sir Robert Phillis: Yes, I do genuinely believe that. I think the differences—however long it is going to be before the next election—from the 2001 election are tangible, they are visible and I think that in terms of their fit for purpose question which you put there is no doubt that the government communications network is more fit for purpose now than it would have been then.
Chairman: Thank you very much indeed. It has been very interesting and it has now given us a background which we can now work on; so I am very grateful to you for taking the time to come and give evidence.

Examination of Witnesses

Witnesses: MR HOWELL JAMES CBE, former Permanent Secretary, Government Communications and MR ALAN BISHOP, Chief Executive, Central Office of Information, examined.

Q34 ***Chairman:*** A suitable starting point might be for you both to very briefly set out your respective responsibilities. Howell James, would you like to start?
Mr James: Good morning. I was until June 13 the Permanent Secretary of Government Communications and that made me the head of profession for all government communications; it was the role that Bob outlined so clearly there, of taking on the senior Civil Service leadership for all government communicators. In that role you are responsible for the professionalising agenda across government for the communicators. Quite a lot of cross-government comms activity—not the sort of short term news management stuff that Number Ten tends to focus on, but some of the longer term planning activity, which also touched on counter terrorism, crisis management, foot-and-mouth, avian flu, pandemic flu planning, those sorts of things; and the propriety and ethics piece. When Gus O'Donnell took over as Cabinet Secretary he also asked me then to look after Cabinet Office comms so for the last three years I have also been the sort of titular head of the Cabinet Office communications function as well; and I sat on the Cabinet Office board.

Q35 ***Chairman:*** Thank you very much indeed. Mr Bishop at the COI?
Mr Bishop: I have been responsible for running the COI for the last six years or so. It essentially provides a common service for all of government in providing and procuring any sort of marketing and communications service, and my responsibility is to make sure that all the research insights we get from that are shared, that we develop best practice, and that we take advantage of the purchasing power that that gives us to get the best possible deals through in our commercial arrangements. For the last three years we have also been responsible for what was the Government News Network, and that was partly as a result of a Phillis recommendation, in order to develop an integrated news and marketing service in the regions. Until this year I was also responsible for Directgov, which is now going to be the principal consumer website, for a sort of incubation period, and now that it is more grown up it is being handed over to the Department for Work and Pensions.

Q36 ***Chairman:*** You have a total marketing expenditure of over £300 million a year?
Mr Bishop: That is correct, yes.

Q37 ***Chairman:*** How many staff do you have in the COI?
Mr Bishop: Around 600.

Q38 ***Chairman:*** Howell James, can I turn to you first. How big was your communications staff? How many communications officers did you have?
Mr James: I had a very small team at the centre, so to run the Government Communications Network, which we set up to replace the Government Information and Communications Service—GICS—that Bob was talking about, I had five people who ran both the website, the training and development courses and the relationship with external bodies, the National School for Government, etcetera. Then I had a team of three that did cross-government comms and coordination. They were small deliberately because we just wanted to do strategic work; we did not want to get ourselves sucked into actual delivery.

Q39 ***Chairman:*** I obviously did not phrase the question correctly. How big is the staff in the whole network?

Mr James: The whole of the government comms community, the best way of knowing its size is a thing called the White Book, which is published every summer by the COI and it is an opportunity for all organisations to list all their comms divisions and put them out there for mainly journalists and outside bodies to be able to access them and know who to contact. Our figure at the moment is about 3000 people across the whole of government are involved in some form of communications role, according to that book, of which about 400 are press officers.

Q40 ***Chairman:*** 3000, so who are the other 2,600?
Mr James: They are doing website work, they are doing events, they are doing sponsorship, they are doing stakeholder, they are doing corporate communications, print publications, a whole range of all the other comms activity.

Q41 ***Chairman:*** Does that include what in newspapers one calls the backroom staff? Does it include secretaries, people like that?
Mr James: It probably would not, no; these would be communicators.

Q42 ***Chairman:*** Excuse me putting it this way, but it reminds me of taking over the Health Service: no one can ever tell me how many people are employed by it. It does not seem to be exact.
Mr James: The briefing I have tells me that there are 3,218 entries in the White Book. In the White Book there are also various public sector bodies which list their contacts in there because it is a very useful manual—any of you who have worked closely with journalists will know that they always carry it around with them—so the BBC, the CBI, the Metropolitan Police, the TUC, ACPO, others, are also listed. So if you remove them we come down to about 3,104, of which 398 are registered as press officers or media handlers in central Whitehall departments.

Q43 ***Chairman:*** What is the total cost of all this?
Mr James: We do not gather a total cost. Each department is responsible for its own budgetary and personnel matters and I never instituted a process where I called on every department to provide me with lots of facts and figures every year—that was not deemed to be an economically sensible scheme.

Q44 ***Chairman:*** I thought one of the purposes was to get best value for money.
Mr James: In terms of best value for money in terms of paid communication any campaign would always be subject to a proper research and evaluation. Each Permanent Secretary in their own department is responsible for making sure that their personnel and head count is within their budget and that they can justify that in terms of running their own business. This is the interesting balancing act here between a role at the centre where you are steering and driving and shaping your profession, but you are not hands-on managing it. I did not hands-on manage any of the communicators—the communicators work for their own departments; they work and report through the management lines up to their Permanent Secretaries, they serve their own Ministers. Clearly the role at the centre is not to try and interfere and add additional burdens to all of that but to facilitate and encourage better and more professional working. Some of the stuff, as we progress no doubt we will explore—what is the enabling role at the centre, as opposed to the hard management issues that each department has to deliver.

Q45 ***Chairman:*** Do we know how the strength of the Government Communications Network compares with what the position was ten or 20 years ago? Is it possible to make any comparison?
Mr James: The problem we have with trying to do that is that the Government Information and Communications Service had a declared number of people—I think about 1,350 people declared as members of the GICS when we were doing the Phillis Review. What became clear as we went round from department to department was that there were people working in comms who were not part of GICS, and what Bob was talking about earlier in terms of why did we think it was not fit for purpose, one of the problems was that some people were in and some people were outside it and we could not understand why. As a member of the committee we could not really get a grip on what was the process that nominated people as members of the GICS and what was the process that got you a job in comms but you were not part of the GICS. This was the historical oddity—that some people applied for jobs through the GICS process; they got ticketed as a professional communicator; they came in predominantly as a press officer or a marketeer and that was deemed to be a proper comms job. There were other comms jobs—internal communications, stakeholder communications, increasingly web communications—where people were not part of the GICS, they were a separate unit. What that led to was a fragmentation within comms functions inside departments, where some people were seen to be part of one gang but not entirely integrated into the whole. So we found that rather unsatisfactory, which is one of the reasons why we called on the GICS to be reformulated as a different community. So the Government Comms. Network has within it people who have all of these different communication skills, so we look to include everybody whatever their communications discipline, in order to be able to have sight of what they are doing, in order to be able to give them support for training, development, professional

encouragement, all of that, so that we have a proper functioning community out there, all of whom have access to opportunities to improve and move on and get jobs around the network.

Q46 ***Chairman:*** I want to ask you this as a matter of clarification. How did you get your appointment? From memory you were a special adviser in the last Conservative Government, were you not?
Mr James: I was not a specialist adviser actually; I was the Political Secretary to the Prime Minister—

Q47 ***Chairman:*** That sounds even worse!
Mr James: Actually you are not even a special adviser, you are a political appointee; you work inside Number Ten but you are a party employee actually and you do not assign a special adviser role. I was a special adviser in the government between 1984 and 1987 where I worked at the Cabinet Office, Department of Employment and DTI. I have gone out at various times. I went to do a job as a comms director at the BBC; I was a comms director at a company called Cable and Wireless and after 1997 I went and set up my own business, and in that business I was asked to go and sit on the Phillis Review and at the end of the Phillis Review I went back to running my business and then representatives of the then Cabinet Secretary phoned me up and said, "Would you like to put your hat in the ring for this job?" So I then went through a Civil Service Commission led process applying for this role, which I auditioned for or was interviewed for in competition with others.

Q48 ***Chairman:*** Self-evidently, being part of the last Conservative Government was not a bar?
Mr James: It did not appear to be. I thought it might well be actually, and it made me rather hesitant about applying! But I was assured by various people that that would not be the case, so I threw my hat in the ring and I got appointed by the board that sat and interviewed me, which included Andrew Turnbull, the then Chairman of the Civil Service Commission Baroness Prashar, and my name went forward in the normal way of senior civil servant appointments through the Prime Minister.

Q49 ***Lord Maxton:*** I will not make any comment on that at all!
Mr James: I think we were in the big tender period!

Q50 ***Lord Maxton:*** That was a major error of judgment! Can I, however, ask, as it is quite specific, whether or not—and both of you might be involved in this—the people who work in communications in the devolved administrations come under your department or not? Because civil servants in Scotland are still part of the main Civil Service.
Mr James: Absolutely.

Q51 ***Lord Maxton:*** Is that true of the communications?
Mr James: Yes.

Q52 ***Lord Maxton:*** Does that not cause problems?
Mr James: No. I am pretty clear in my own mind that I have a head of profession role where I am supporting all civil servants who are professional communicators, whether they are working in Wales, Scotland or in the Northern Ireland Civil Service and they have always had the opportunity of joining the GCN; they have done so, they have access to all of our training and opportunities, and as civil servants they are allowed to apply for any of the jobs that we have on the website. So we have always included them. Where I think the dividing line then comes is wearing my hat as a coordinator of cross-government communications there will be some issues on which actually it would not be appropriate for me to try and include civil servant communicators from the devolved Assemblies, regions, Parliaments because, actually, they are operating on different policies. There is a separation there between the hands-on comms stuff and the head of profession role.
Mr Bishop: From my point of view there are obviously some communications programmes and activities which are particular to the devolved administrations, but where they are national we are involved and we do do work for them. There is also regular and formal cooperation. To give an example, when the smoking ban was introduced in Scotland earlier than in England we were helped very much by the experience that they had there in applying that to England.

Q53 ***Lord King of Bridgwater:*** Just a very quick question. You are a very substantial placer of advertising; you have to book a lot of media space and you are a very desirable customer. Have you ever come under any political pressure to put your advertising in places that are more favourable to the government than others, and to not put it in outlets that might be thought to be unsympathetic to the government?
Mr James: Never and there has never been any pressure whatsoever.
Chairman: I would like to go into a part which the Committee considers important but which we did not get into in the last session.

Q54 ***Lord Inglewood:*** I am going to start with a slightly more general introductory point and then lead on to the specific one. We are looking at the period since the Phillis Report and the way that government information has developed. Within that

period, in our previous inquiry which was to do with news and news gathering, the thing that was absolutely startlingly clear is the way in which the net has changed the way information is collected. So in looking over the period since the Phillis Report that is the period when in the newspaper world and in other parts of the media world the internet has completely changed in a whole variety of ways what is going on. In the context of from where you are sitting, delivering government information, clearly since the Phillis Report you have tried to clean up and re-demarcate the line between what is political and what is Civil Service, and steps have been made in that regard, and that has been improved. But of the things that have changed in that period surely it is the net which now enables the individual citizen, who I suspect still thinks that politicians and governments are scoundrels, on their own initiative to discover things derived from the information you have put there as much as anything else which has changed matters. Following on from that, one of the underlying objectives behind Phillis was that you should try and get your regional delivery of information improved. How much has that been done by changing processes and how much is that simply done by the fact that the net makes it easier for people who want to know to find out themselves?

Mr Bishop: Dealing with the first part of that, of course you are absolutely right that there has been a huge change since Phillis reported. The number of people in the country who are now online has hugely increased—we are probably looking now at around about 70% of people. There has been this most exciting project to try and make as much information as the citizen wants easily accessible on line and then to be able to more and more combine then with the actual transactions that the citizen has to do with government. So, for example, not only finding out what your car tax is but then also at the same time being able to pay it on line. As I mentioned earlier, a radical decision was made to focus that activity in order to make it easier and more accessible to the citizen in two websites—for the normal citizen the Directgov; and for the business user Business Link. That was combined with a programme to try and sort out the confusion of the plethora of government websites that existed. There had been over 1,500 government websites, which I am not sneering at, by the way—that was all well intentioned to take advantage of this new way of relating to the people. But of course it became counterproductive and became very, very confusing. So there is also a programme to close down the great majority of those sites, leaving only major departmental websites and to converge all their functions and information on to these two websites, Directgov and Business Link. Then within Directgov, if you visit it and have a look at it, you will see that as part of that accessibility what we were trying to do is point people to related thoughts and information which are in the same area of interest. So if you go to pay your car tax you can also be pointed to anything else that might be relevant to you as a motorist, either private or commercial. If you are a parent you will find out things other than perhaps the education information that you originally went there to see. We are also conscious that there is still a considerable proportion of the country that is not online and they are some of the most disadvantaged people in the country, which also accounts for the very large amount of activity we still do in the traditional media and conventional media and in the conventional media channels. In terms of the regional media, one of the earliest decisions that was made with Directgov was to tie up in a programme called Local Directgov with all the local authority websites, which was a huge programme as you might understand. But now if you go into Directgov at the central point you can get to your local authority. You might see a bit of a change of style as you do it but you do not have to go through another home page—it works pretty well by and large. So that again is reinforcing the accessibility for any local interest you might have, and for any individual who has to deal with several local authorities it is an absolute blessing. Again, I will say on the other side of the fence we are still using regional media very extensively—radio and local press, which again covers those areas for people who are not online or to direct them to other sources of information.

Q55 ***Chairman:*** Do you have anything to add, Mr James?

Mr James: Clearly the online space is the one where I think the request in the Phillis Report that government comms should become more direct to the citizen and less mediated through other channels is our biggest opportunity. Early last year the Cabinet Office commissioned a report from Tom Steinberg, who is an independent consultant in this area, and the National Consumer Council, called *The Power of Information*. It was a very, very complete report about what the opportunities of government are here, but also the risks and the problem for those who do not have access to the digital technologies. Within that there was a lot of urging for government to use the web more effectively, but also questions about how civil servants should engage in that space. So we have been working for the last year on writing some very thorough guidelines and looking at what people are comfortable about, where they expect civil servants to enter. So, for instance, you have a website like something called Netmums, which is a very, very active and engaged website for mothers, and clearly it is a space where people are talking a lot about child

benefits, opportunities, getting into schools, nursery spaces and all of that. Government needs, I think, to go on to sites like that and support them with factual information about what services government provides; and also set things right because sometimes people get the wrong end of the stick about a service and then they promulgate misleading information through the website. We have been thinking quite a lot about how do we go into that space—is that the role of the press officers, is it the role of policy officials and how should they do it? Do they declare themselves; do they go in as a user? How does the rest of the department know that that discussion and debate is going on? And how do we learn the policy lessons out of that? So that goes well beyond comms straightforwardly and starts touching the whole area of policy and delivery within departments. So I think this is a very, very interesting and evolving space. What is most reassuring about it though—and Alan did not mention this—is the levels of trust that we have. Going back to your point about trust earlier, trust is on a continuum. We all as citizens ourselves watch the political knockabout, and the stuff that you talked about kite flying, and we discount a lot of this space. But actually as you move across government information and then you come to this online space people have huge trust; so I think the trust measures for Directgov are on the same level as Amazon and the BBC's online websites.

Q56 ***Chairman:*** They are indeed.
Mr James: And that is very reassuring, because we have found a channel now where we can put government information in a space where it is trusted and believed, and people can start to do their transactions. Nine million car taxes were renewed last year on line; so something very fundamental is changing here.

Q57 ***Lord Inglewood:*** But if you have your government site with these various links, if you are not careful are you not going to end up that the links are operating on a basis which is entirely different from the Phillis principles, and because you have gone into it through the government site is there not a danger that you may suddenly find the blurring between the administrative and the political, if I can put it that way, has been lost again?
Mr Bishop: No, precisely because of what Howell has just said. We are all highly aware of the preciousness of this trust in these sites. So embedded in the governance of it is the principle of protecting these sites, of being absolutely non-political.

Q58 ***Lord Inglewood:*** So completely non-political by those criteria.
Mr Bishop: Absolutely.

Q59 ***Lord Inglewood:*** The other question I wanted to ask was, when you are formulating an initiative do you start by thinking about the web offering or start by thinking about the conventional offering?
Mr James: Can I talk about Engage a bit on the back of that? Phillis in my mind fell into two bits, when I took up this post. One was the structures at the centre, how do I make this role work in terms of its relationship with Number Ten, its relationship with departments, directors of comms, Permanent Secretaries, and that was the structural management job. The other bit which I thought was most interesting about Phillis was how do you communicate these days? The interesting thing that we observed in the Phillis Review was how various departments operated very differently; they had different levels of competence; they were reinventing wheels between departments; they were not sharing case studies and experiences very effectively across the piece. It is that space that we sought to address by creating a framework to say to people, "How should you do good comms; what does good communications feel like and look like in each department and where should you start? Your point about do we incorporate a web, or what you might call normal, media, what I have been trying to encourage the government communications community to do is to move away from being a product deliverer. I would caricature that as saying policy officials bounce into the comms function and say, "Hi, I need a press notice; hi, I need a brochure; hi, I need a leaflet". And for quite a lot of time, perfectly understandably, pressures of time and so on, they say, "Okay, yes". I try to encourage people to stand back and say, "Actually, what is it we are trying to achieve here? What attitudinal or behavioural change are we trying to drive?" Once we have our head around that what is the appropriate way to try and do that? Do we know enough about what people currently know and understand about our policies and whether they are in a space where they are persuadable about this? What is it that they are resisting? For instance, why were young men not putting on seatbelts in the back of their cars? Partly they thought they were immortal; partly they just could not understand what the danger was. So a deeper and better understanding of where the audience was and what the resistance was to implementing stuff then drives a much more considered communication strategy, where you start thinking, "Actually, what is it we ought to be saying here to these different audiences? How do we segment these audiences intelligently? Having segmented them what media do we use? What is the most appropriate? Are we properly media-neutral?" We should not just be putting out press notices; we

should not just be issuing old-fashioned leaflets; we should actually be thinking much more holistically about how you persuade people that what government is doing—either through legislation or regulation—that impacts on our lives, how does that affect me and how can I shift my behaviour and my understanding to actually take account of that. I think that is where comms can start to play a really powerful role alongside policy and delivery colleagues, and once you start a conversation on those terms you are moving to a different space.

Q60 ***Lord Maxton:*** One or two points here. First of all, I think it is great what is happening, and that is from someone who does use it to fill in and get his road tax—and I actually got my 70-year old driving licence, etcetera, on line, and it is great. But one thing is that so often, even though you have brought it down to basically one website, that is not on what we might term the "front page". Do you make any effort to ensure that when I turn on my Yahoo! or my Google—bang! there is the government website available to me?
Mr Bishop: We obviously do at the moment take advantage of the various search marketing techniques to try and make sure that if you do essentially Google randomly you will get to us quickly and Directgov, and they will be displayed. Obviously in the, I hope, pretty short term where the ambition is for Directgov to be the kind of super site, which is widely known to all, which you can go to directly in the same way that you would, maybe, to your own bank's website or to the BBC, or whatever your particular personal passion is, and get book marked in the same way if people go on doing that sort of thing.

Q61 ***Lord Maxton:*** The other thing is this 30% that is still left of people. How do we allow them because they are, as you say, very largely—there are one or two in the room here!—they are the disadvantaged in our society who do not use the internet as others do. But there is a much larger percentage of course who now have digital television and that is interactive; are you doing anything on that as well?
Mr Bishop: Yes, Directgov is also on digital television; you can access Directgov.
Chairman: I would like to explore the theme of the Phillis Report and where it has been put into effect. Lady Howe.

Q62 ***Baroness Howe of Idlicote:*** Can I ask you one other question about how communication specialists are now perceived because I have the impression—certainly from talking to Sir Robert too—that the standing of communications specialists has really gone up quite considerably and has been recognised as such. Regardless of that, to what extent does the rest of the Civil Service regard them as fully professionals, no longer second class citizens, as it were? And is that consistent between departments or is there still some ambivalence there? When you have answered that I have another question.
Mr James: I hope that is true. My sense is that it is. Clearly where it matters is in departments; do the directors of communications have the clout and the regard to make their run to deliver effectively both for senior policy colleagues and for Ministers? My sense is that they do these days. What is that based on? It is based on the fact that I think we attract very interesting candidates for these jobs now, and I do not think people will be looking to come into the government comms service at a director of comms level from a range of both private sector and wider public sector roles if they did not feel that the job was well regarded. That has not just happened because of what we have been doing in comms; it has been happening because there has been an across Civil Service drive to institute a thing called *Professional Skills for Government*. This is where the comms function has sat and I have been greatly supported by initiatives across finance, IT, programme and project management, HR, where all of these corporate functions within departments have become slightly neglected. As we look at the challenges for government departments in delivering what Ministers want, having people in each of those disciplines which are clearly expert and can clearly deliver are absolutely vital to make a department effective. So Permanent Secretaries now are very pleased to see in each of these areas support from the Cabinet Office and from the centre coming at them around all of these different areas. So comms does not sit all alone there. So I do not think we are seen as second class citizens any longer. The point you made earlier about do we have a mix here of both specialists who come in as communicators who have been in the outside world and people who have come through the comms function or people who have come out of policy—we do have a mix. I have sat on the appointment boards for every single Director of Communication across Whitehall now and some have changed twice in the course of my time. I have seen an appreciable shift in the sorts of people that are coming forward and the focus the department has put on these appointments; the time and trouble they take in identifying what is the role here, what are the people we are looking for, what are the skill sets that we expect these people to bring? So I think all of that has changed and that is not just happening in isolation. As I say, they are applying the same kind of focus on senior financial appointments, IT appointments, HR appointments and others.

Q63 ***Baroness Howe of Idlicote:*** I am glad to hear that and I am now coming to the whole business about more openness and transparency, and is it your

view that government communications have become more open and transparent, and can we have some examples? Let me ask you one direct question. It certainly has been brought to my notice that on at least one occasion a journalist was denied access to a particular briefing. It may have been in the time before your reign, as it were, but there seems to be plenty of evidence that that has happened. There was some favouritism going on on certainly briefings. Would that be happening any more in the future? Did it happen in your time?
Mr James: The honest answer about partial access to information and singling out individual publications or journalists is that at one level we know it happens. People have relationships with journalists—politicians have relationships. There is a lot of communication goes on away from government comms but happens in what you might call political communications here in this building—relationships between the lobby and others. One cannot be naïve and close oneself to that. What I am absolutely clear about is that as civil servants in a press office you have an obligation to tell everybody what you are doing and to involve and invite everybody to press briefings and to ensure that that is happening across the board, and I think if we were not doing that as a Civil Service we would hear about it.

Q64 ***Baroness Howe of Idlicote:*** Can you give me some practical examples of how this is working now?
Mr James: Any briefing that the Home Office set up or Number Ten set up, as civil servants they would ensure that they invited the full range of journalists, full range of publications, broadcasters, specialist writers to any briefing; and actually Ministers would expect them to.

Q65 ***Chairman:*** So if a journalist turned up—had heard about the press conference or the briefing, whatever it is, but was not on the official invitation list?
Mr James: I cannot imagine they would be denied entry. The Civil Service recognises that we are there to provide a service both for the department and the Minister and for the media, and they do that to the very best of their ability. There are always constraints; we occasionally have to roster things. You have all in one part of your lives or others been at events where you do not want three of four crews following you around; you do not want a gaggle of ten, 15, 20 journalists, so then we reduce numbers, we negotiate with the media and others. The issue about openness and transparency, of course, in the first report derived out of quite a lot of debate we had around FOI, and a nervousness that the FOI, which was yet to be introduced at the time, might be watered down or reduced in some sense. So I think the issue in Phillis about openness and transparency also touches on has the FOI been brought in and implemented effectively; are departments shifting the way they behave about opening themselves up to information? And I would say that it has been painful but it is evolving. It has probably been most painful actually around the retrospective nature of it. Where people have recognised that as they do things in real time they are going to be subject to FOI requests, therefore they make arrangements to put things into the public domain at a nominated date, that way when they get FOI they can say, "We are going to publish this list at a certain moment; we are going to open ourselves up, put this up on the website," whatever it is. The retrospective nature has been probably the most agonised. I think there is a cultural change happening across Whitehall and we just have to get used to this very different environment where things are much more open. So I do think that there has been a shift but I do not want to pretend that it is there yet.

Q66 ***Baroness Howe of Idlicote:*** Does the COI also have anything to say?
Mr Bishop: I think the Phillis recommendation that Sir Bob referred to earlier on moving towards more direct and unmediated communications has happened, and by definition all those things, whether they are online, TV commercials or whatever, are as open and transparent as they can be. In fact we are actively trying to draw people's attention to them. The only other thing we could really do was to also try to make as much of the process of how we do it, particularly in the selection of suppliers and all the rest of it, to make that as open as possible and to publish as much as possible about it.

Q67 ***Lord Corbett of Castle Vale:*** There you are Mr James, this time four years ago there is the Phillis Report—did the Cabinet Office suggest any priorities about the way you set about implementing those representations or did you take those decisions yourself?
Mr James: I suppose I broadly took them myself, in the sense that I put forward to Andrew Turnbull, who was my boss at that point, a work programme for my first year, which included two key things. One was get the GICS involved into a GCN and get that properly launched up and up and running, and we did that; and the other thing was to start to explore and to launch a framework that would address the issue in Phillis about those various behaviours between departments and how do we get to be a more professional communications function across the piece. So those were the two things on which I focused, so GCN and then the framework which we called Engage; and we managed to get the GCN up and running—I joined in the summer of 2004 and I think GCN was launched at the end of 2004,

beginning of 2005; and Engage we launched in April 2005.

Q68 ***Lord Corbett of Castle Vale:*** When you left which bits of Phillis were you sorry that you had not seen better progress on?
Mr James: I think the biggest challenge is going to be the cross-government working on some of the big policy issues. Most of the drivers in department—and you will be aware of this, and I hesitate to use the word silo—but people do work within their departments; departments have particular cultures and all the incentives are about doing work in your department, reporting to your boss, getting on delivering for your Minister. What the cross-government PSAs are now going to require is a lot more matrix working between departments, where departments are going to have to trade off good people and money, not just for their own objectives but for objectives that they might not see are central to their agenda because they are playing a part in another department's primary objective. I think that is going to be a challenge for the comms function because whenever I call comms people together and I say, "We have this big issue that we need to pull together on," they were very responsive and in the main because there was a long heritage and history of communicators working together inevitably across government they were up for these projects. What was more difficult was finding a way for policy officials and Ministers to come together around these cross-government objectives and I think that is going to be one of our big challenges. So one of the things I was focusing on in the last year was how does my cross-government comms unit provide some strategic guidance without getting sucked into doing departments' jobs for them. I think we had started to get a model there that worked. Indeed, on some of the big issues we had some successes. Animal rights extremism three years ago had reached a point where the financial and the pharmaceutical industries were very, very sceptical about government's commitment here; the commitment of the Home Office to policing this area was not as visible as it probably should have been; the magistracy I do not think were as focused on what their powers were and what the opportunities were for them. So I think there was a sense that government was not very joined-up on that. Policy and comms people came together there and by a combination, as ever in these things, of getting something going, focusing some attention, getting a debate going around government, we managed to focus between the Home Office, the DTI as it was, and BERR and Defra a coherent government approach that actually put some positive messages out there, but also gave strength and encouragement to other participants there. So I think we shifted the terms of the debate around animal rights extremism in that area. And the learning from that was get your policy officials together, get some clear political leadership together and then the comms function will fall out of that quite effectively.

Q69 ***Lord Grocott:*** You were the Permanent Secretary for Government Communications and you mentioned about 3000 people maybe right across the piece. What proportion of the work was communications with the public and what proportion of it was dealing with the media?
Mr James: In terms of numbers 400 odd people were dealing with the media and the remainder dealing with broader comms responsibilities. The media is very resonant, and inevitably for Ministers in departments, having a grip on the media's agenda, having good media handling skills, being alert to what stories are coming up, where a newspaper is going to be on various things—newspapers still have a capacity to drive campaigns, to create a mood around policy initiatives and policy debate, and they are very expert at taking a policy initiative and making it real and making it live by pulling out individual examples of how it affects fellow citizens in a way that can be very vivid and very memorable—Ministers expect us to have good media handling skills and to focus on this, and I think that is quite proper. Equally, my sense was that we have not had a similar level of investment and support for the other disciplines, and one of the things I became particularly focused on early on was internal comms, because it seems to me that actually telling your own staff what you are doing, particularly in sensitive areas where policy initiatives were affecting teachers down the line out of the education department, health employees through the NHS, and not focusing enough expertise on internal comms so that people understood what these policies meant and what their impact on them was, because we also knew—coming back to the trust point—that the public trusted practitioners. If they went to their Primary Care Trust and they went to a school and they heard from practitioners very confused or unhappy stories about what these reforms meant, inevitably it impacted on their view of what the government was doing, and I do not think that supported Ministers. So we focused a lot on internal comms. The other issue around trust as well was in a world, as Bob said, where increasingly the Ipsos MORI poll tells us that other than estate agents, politicians and journalists are not in the first rank of the most trusted. What do we do about that? Partly one of the ways to deal with that was to say who do the public trust and who do they expect to hear from, particularly when I was wearing my hat looking across government at crises or coordinating planning for difficult public issues such as pandemic flu, avian flu outbreaks etcetera. They expected to hear from the Chief Vet; they expected to hear from

the Chief Medical Officer; they expect to hear from an expert in their field. Therefore, when we talk about stakeholder comms actually what we are talking about here is a department knowing and understanding all the different organisations it deals with and the way in which their policies and their regulations impact on those third party organisations, going to those third party organisations and having an intelligent dialogue with them early on, bringing them in and making sure that they are sighted on what the department's thinking is, making sure that is tested so that there is some listening. So that those professional groupings can understand where the government is coming from and why they are implementing the changes. So when you get to a point where something is announced publicly you have done some of that work in terms of getting buy-in or understanding for where government is going on stuff. So what are all these other people doing? I hope what they are doing is looking at internal comms, stakeholder communications, web-based communications, all of those areas, because I think they are vitally important in creating an environment in which when you come to your press announcement, you come to your broadcast moment actually there is a degree of understanding about why you have got to that point, why the debate has reached this point and why you are doing what you are doing.

Q70 ***Lord Grocott:*** Can I ask the specific question, that we all know that a huge number of letters arrive at government departments from members of the public, particularly the Department of Health—hundreds if not thousands. Would the people who were responsible for dealing with the correspondence be within your empire of the Government Communications Network? It is for you to answer the question and not me, but it does seem to me to be quite important that those queries from the public are treated as seriously and as importantly as queries from a journalist. Just to add to that very quickly, can you give us any indication at all of the way in which the volume of (a) media inquiries and (b) public inquiries has grown? I offer this to you really because there is a tendency to think, "There are 4,000 people there and what on earth are they all doing," but my impression is—and I would like you to correct me if I am wrong—that there has been a massive increase in both media and public enquiries of government as to what they are doing. Those are the two questions.
Mr James: Direct correspondence units, direct communications units, do often form part of the communications function. Interestingly some big departments like health have also incorporated their parliamentary questions and various other of their public debates, because the source for material for this—lines to take, background briefing, paragraphs about different policies—is all the same core material, and actually it needs to be used in a flexible way. So you can use paragraphs to answer parliamentary questions, to brief people on debates, to provide Number Ten with a background briefing on policy issues and to reply to letters. So they are part of the wider communications process. I do not have numbers but certainly anecdotally we have an enormous amount of correspondence now that comes in. I think that is part of a societal issue which is actually people expect their voice to be heard increasingly and people are not passive recipients of information—the Web has given them some kind of engagement with government in a way they have never had before, and I think that is provoking them to be more questioning, more critical and therefore they do phone us up, they do send us emails and they do write to us much more. So there is more activity. On the media side we face a huge explosion, as you know, in media. Partly that is not all journalism and it is not all those re-run channels on Sky—I can quote you 900 television channels out there and they are not all coming to government looking for information. But none the less there has been a huge explosion. From someone brought up as I was in a world with three television channels and then four was the norm, we are now faced with websites, with the rolling news. I went to the BBC to talk to their news and current affairs and the one thing that we absolutely agreed on was that "out of hours" was no longer a phrase that you could use—it was continuous.

Q71 ***Baroness McIntosh of Hudnall:*** Just very quickly going back to your point, I was very interested in what you said about how you were managing the information that was going to the public, and the way that that connects to the issue of trust. Just looking at it now there is a conventional wisdom out there that nobody trusts politicians; nobody trusts governments, that everybody is in a permanent state of enraged scepticism about any kind of information. Do you have research of your own to pitch against those bodies of information that say that politicians are not trusted or that government information is not trusted, that shows that actually there is a growing trust in the kind of information and how you are putting it out there compared, say, with four or five years ago?
Mr James: We do not spend money duplicating research that happens out there about who the public trust. Ipsos MORI do this regularly and we rely on their figures. We do do particular bits of work—and Alan is probably better placed to talk about that—around individual campaigns, individual websites, the stuff I quoted earlier about Directgov having as a high a trust as Amazon and the BBC. That sort of work we do to make sure that we are getting the stuff right.

Mr Bishop: That is absolutely right. All major campaigns are tested because if they are not considered trustworthy, if what we are asking people to do is not believed then they will not work, and the majority of campaigns have a direct response to them of some sort. We are asking people to do something, to call up, to call a line, to go to a website. I reiterate again that obviously we would regularly check the trustworthiness of our online communications now.

Q72 ***Bishop of Manchester:*** Going back to the Phillis Report, in that there were seven main principles enunciated, which look an antidote to deadly sins!
Mr James: That was the mood at the time, if you recall. As we were sitting through 2003 it was not a happy year!

Q73 ***Bishop of Manchester:*** As you look at them now in 2008 how important from your experience in government comms are those principles? It is easy to have a list like that and everybody can say at the beginning, "Yes, this is exactly the sort of thing we want". But then they can be put into the background, whereas in fact when you look at them one by one there are some really important issues which are being highlighted. Are they forgotten?
Mr James: No, not at all; they were central to what I thought I was there to do, absolutely. How did I turn that into real things? It feels such a bleak thing to talk about, but this framework which we established, called Engage, which is up on the Cabinet Office comms website, sets out principles for all communications across government. I did not just put them up on the website; we then did tons of seminars and I went out and talked about it all, and I have been doing over the last couple of years a whole lot of interactive events with communicators across government. It is incorporated into the National School for Government and some of our nominated training courses, so that when people join government comms now the Engage principles are not dissimilar to some of the motherhood and apple pie that you see here, which is what is it you are trying to do? It is back to my earlier point—what is it that you are trying to do? What attitude are you trying to shift or behaviour you are trying to shift? Who is it you are talking to? Do you understand where they are coming from at the moment? Have you thought about how you scope your argument so that it actually resonates with them? So do you treat people as individuals, do you think about where the citizen is in this morass of government announcements and regulatory shifts and impacts on their own lives; and are you carving a path that actually will reach the people you need to reach about this stuff? I think that absolutely addresses making a positive presentation of government policy, which is about putting stuff out there in a way that people can understand and is accessible, not just putting out press releases or briefing lobby journalists; but actually going to the next level where people actually can understand because of their choice of media, where they are getting their information from. So that required us to be a lot smarter and do a bit more research, but exactly—use all relevant channels of communication, not just excessive emphasis on the national press. Coordinate communication so actually on things like winter warming where you have three or four different departments involved in some different aspect there—DCLG, Health, DCFS, were they properly pulling together? And they did; this year for the first time we managed to get all of the departments involved in the winter warming campaigns to coordinate a single campaign to the public and to the relevant audiences. So these principles were central to what I was doing in my role.

Q74 ***Bishop of Manchester:*** Looking at those seven principles is there one among them which, when you look at it, you think to yourselves, "I wish we had done a bit more on that"?
Mr James: I should probably have done more on everything. Genuinely, the thing about this is that in government the scale of government—the size of these departments—the capacity for things to get lost or confused as messages get pushed through them, it is fine to launch something. My adage was that we do not need to launch some initiatives, what we need more importantly is just to slog on telling people about what we have already done. What is there to help them? How can we get more people to our website? How can we get more people to understand what these principles are and how to apply them in their own daily work? How can I make sure that people actually know and understand this stuff when they have just arrived or when they have just been promoted into a job? It is those issues that I hope my successor will slog on with, rather than trying to invent new initiatives. I think we have the right set of prescriptions here but I do not intend that in something the scale of government and the size of government that we have necessarily reached all the corners that we need to yet.

Q75 ***Chairman:*** Would openness be the number one priority?
Mr James: Yes. Bob talked about the adversarial culture with the media and that it has its place, and of course it does, and all of us as citizens welcome the fact that there are journalists out there asking awkward questions and at times pressing to find out what people are uncomfortable about and putting it into the public domain. So we cannot expect just to open a door and find instant openness, but actually I think what the new media is now offering us—and this more thoughtful and analytical approach to

providing strategic communication and support to departments and to ministers—actually will result in more openness; more access for the public; easier understanding of what it is that government is doing and how it impacts on their lives.

Q76 ***Baroness Eccles of Moulton:*** I believe you heard the earlier discussion in the previous interview about the line drawn between what the professional civil servant's role is that special adviser's role is in this communications subject. I do not know if there is anything you would like to add to that because I do have another supplementary question?
Mr James: Everyone has their role in this set-up. There is a proper role for special advisers and actually a good special adviser in a department provides an invaluable service—not just to the Minister but to the department as well—and I think protects civil servants from being sucked into or drifting towards having to do jobs that are quasi political, whatever it is. So I think actually that we have arrived at a point now where we are in a reasonable state of balance between the roles of the professional civil servant communicator and the role of the special adviser. After the terrible muddle that was created at DTLR and the fall-out from Jo Moore/Martin Sixsmith that Bob was talking about, the Review, the PASC Report, the Phillis Review itself, the learning from that was pretty clear for everybody who participated in it. You need to keep alert to these pressures and these tensions; you cannot just turn a blind eye, and whoever is responsible for managing these individuals needs to have at the back of their mind the notion that this needs to be handled with care and with thought at all times, and I think that is the culture and the environment in which we now work.

Q77 ***Baroness Eccles of Moulton:*** I think I probably already know the answer to my second question, which is in the Phillis Report it recommended that if there was any problem with the professional civil servant being brought under too much pressure by the special adviser that they could take their problem to you.
Mr James: Yes.

Q78 ***Baroness Eccles of Moulton:*** Have you had any experience of that?
Mr James: I have not.

Q79 ***Baroness Eccles of Moulton:*** I thought that would be the answer.
Mr James: We have had a calm four years.

Q80 ***Chairman:*** Just to complete the questioning, Bob Phillis was talking—and I would be interested in your view on this—about the lobby and how that could be reformed. He was in favour—and others have been in favour—of having a more open system, a press conference, a daily press conference, perhaps, taken by Ministers rather than always by the government spokesman. Reform of that kind, would that be something that you support after your experience? You are no longer in the government.
Mr James: We have reformed it in the sense that it has evolved in the last four years quite substantially. You can read the full press lobby briefing that the Prime Minister's official spokesman does every morning and afternoon on the Number Ten website. Since Phillis we have had the monthly press conferences that the Prime Minister undertakes. We also have innumerable online chats and access through the Number Ten website; they are even using Twitter now to promulgate what is going on at Number Ten and what is happening there. So I think we are trying to be more open about this. There was no appetite, as Bob said, either in the lobby or amongst those who managed the work with the lobby at Number Ten, to televise, and I think it is precisely because of the point you touched on there, my Lord Chairman, which is at the moment we have a civil servant as the Director of Communications at Number Ten, and is it an appropriate role for him to appear on television every day in the way that the President of America's spokesman does? If it is not going to be a role for that person are you going to have a Minister for Communications or information? How would that Minister sit alongside the ministerial responsibilities of his colleagues and Cabinet colleagues who would presumably much prefer themselves to stand up and talk about their own responsibilities than to devolve them to a generalist minister based at the centre? So I think there are tensions there, both political and practical.

Q81 ***Chairman:*** Surely the answer to your question is that if a Minister does feel strongly that he should be putting the case he should be allowed to go and put the case?
Mr James: Indeed, and I think Ministers would say that they do that at a time of their choosing when the department is ready to make announcements and engage in a debate with the public, with the media, whatever it is around their agenda. I think the notion that you would start a daily round there would be something that you would have to think quite hard about. I am nervous myself—personally I am nervous about an onscreen, on television briefing process because actually I think what you will then have to invent is another process, candidly, where people can come together and ask the nitty-gritty questions that journalists sometimes like to get down and dirty about in terms of briefings. So what we have at the moment is a pretty good system, but obviously I will be very interested to hear the evidence that some of your witnesses next week will give.

Q82 ***Chairman:*** Just before you leave it and leave—and we all do—just explain to me what the difference is between it being on the internet and it being televised? What is the basic difference?
Mr James: For me I think it would be the manner in which it might dominate evening news bulletins and then therefore impact on people's perception of the government in a very vivid way. Any government of any complexion I think would want to think about the impact that would have on the electorate, to have a televised press comms every single day about everything. Television is very resonant, is it not, in a way that perhaps the written word and online communication is not quite so?

Q83 ***Chairman:*** It sounds like the televising of Parliament debate.
Mr James: Yes. I may be being unduly cautious here and it may be that we evolve when we do this and in five years' time we all look back and wonder why we were all so nervous about it.

Q84 ***Chairman:*** Why do you have two briefings a day? I never understand that. Do you not put yourself on a treadmill in doing that?
Mr James: Some have argued why have one at all! As I understand it the formality is that the Prime Minister's spokesman is invited by the lobby and it is for the lobby to say when they would like to have these meetings and they have one in the morning and one in the afternoon.

Q85 ***Chairman:*** The poor Prime Minister has no say in this whatsoever?
Mr James: I imagine he might have, but at the moment that seems to be the process.
Lord Maxton: With the convergence the next big step is going to be controlling your computer through your television and watching it on television, so what you were saying about the line between the two that would probably discount it. If I want to watch Alan Johnson on Health I will be able to watch it.

Q86 ***Chairman:*** Many, many thanks to you both. We have kept you way beyond the time that we said we would. You have been very patient and you have also listened to the first session. Perhaps if we have other questions for you we could come back to you afterwards, as there may well be as our evidence goes on.
Mr James: With the greatest of pleasure.
Chairman: But it has got us off to a very good start. Many, many thanks.

WEDNESDAY 16 JULY 2008

Present	Bonham-Carter of Yarnbury, B	King of Bridgwater, L
	Corbett of Castle Vale, L	Manchester, Bp
	Fowler, L (Chairman)	Maxton, L
	Hastings of Scarisbrick, L	Scott of Needham Market, B
	Inglewood, L	

Examination of Witnesses

Witnesses: MR ADAM BOULTON, Political Editor, Sky News, MR TOM BRADBY, Political Editor, ITV and MR NICK ROBINSON, Chief Political Editor, BBC, examined.

Q87 ***Chairman:*** Welcome. You know what we are doing—we are conducting an inquiry into whether the government communication system is open, impartial, efficient and relevant to the public. We are obviously looking at the Phillis report and whether things have improved since then, whether the culture of secrecy and partial disclosure, which was identified, has been changed, whether the relationship between special advisers, civil servants has now settled and changed and whether communications in the regions have improved. Those are the sorts of issues that we will be going on. Could we just start, as we have three lobby journalists here, with the lobby, which we have already had evidence on? When I was on *The Times*, which was some years ago, I was drafted in as a lobby correspondent when both the regular political correspondents were on holiday with the advice that nothing ever happens in the first week of August and in fact Harold Wilson shuffled his whole Cabinet. I was called to a lobby meeting and it was taken by the Prime Minister himself but only on the basis that he was never quoted directly. So one had all these phrases like "It is understood that . . ." and "Government insiders say . . ." even though it was the Prime Minister who had been saying all these things. The Prime Minister now has his regular monthly press conference, I understand that, but how much of lobby briefing is now absolutely on the record? Adam, you are chairman, are you not?
Mr Boulton: I was chairman last year; I am the late chairman. The fact is that things have changed a great deal since your day inasmuch as the generality of lobby briefings, the twice-daily briefings by the Prime Minister's official spokesman, take place on the record, although the convention is that we do not identify Mike Ellam by name, we describe him as the Prime Minister's spokesman. He is now the Prime Minister's spokesman, whereas in the Blair era, he was the Prime Minister's official spokesman. One of the changes that the Brown prime-ministership made was that you should only have a spokesman; if you put official spokesman, it sounded as though there was an unofficial spokesman. The other aspect of lobby work, which is conversations which take place in the lobby, those continue to be, as I understand it, off-the-record and non-attributable.

Q88 ***Chairman:*** They are really quite important because, under successive governments, all these quotes one sees from a senior Labour MP, a senior Conservative MP, almost invariably unhelpful to the leader of the day, are never attributed to the person.
Mr Boulton: That is right and it is by the mutual agreement of the politicians and the press that those conversations in the lobby take place on that basis and indeed I can say, as lobby chairman, on the rare occasion when that convention is breached, one normally will get a complaint to the chairman asking why this has happened and he will be expected to take it up with the relevant members of the lobby. I have to say there is a slightly grey area, which is events at which lobby journalists are present, which would not formally be identified as lobby events. There was one occasion when there was a farewell party for one of the servants of the House of Commons and a lobby journalist was there as an invited guest and subsequently reported what had been said in the speeches. A complaint was made to me that this was breaching lobby rules. I have to say that I took the view that it was not, that he was there as a guest and I felt that repeating a speech made to a group of people was perfectly legitimate.

Q89 ***Chairman:*** Is this cloak of anonymity in the public interest?
Mr Boulton: My feeling is that it is good that the daily briefings are on the record; that is a step forward. It would not be in the interests to go back to the quasi-Masonic days when you were in the lobby and the meetings did not take place and they did not exist; that is quite correct. I feel that it is part of our political culture that we in this country accept non-attributed quotations in our journalism as part of the fabric of our journalism. That is not something which, for example, is done the United States but even talking to American journalists about this, they take the view that since we do not have a First

Amendment Bill of Rights in this country, it is a much more cloak-and-dagger process covering politics and that they feel that the way good journalists use these sources is legitimate. I have to say there was an interesting article in the *Financial Times* yesterday by Gideon Rachman, which you may have seen, comparing American and British practices.

Q90 ***Chairman:*** What do you think Nick Robinson?
Mr Robinson: It is worth looking back to where the lobby was—I was about to say "we were" but I was not there at the time—and where it is now. The entire system was cloaked in secrecy. It was considered rather shocking to even say that such a thing as a lobby existed and what the rules were. I remember Michael Cockerell writing a book about the lobby in the 1980s and it was considered a radical tearing up of the rules of the place that he even spelt out what was going on. We are long way from that. As Adam says, most briefings are now on the record. I would argue, and you may wish to come on to this, that we have not finished the journey, that they would ideally be on camera, on microphone and fully transcribed, because they are either on the record, and they might as well be fully on the record, or they are not really. Separate from that process of formal briefings, which are frankly no longer really exclusively for a closed shop called the lobby, they are pretty much for anybody who wishes to turn up, there is the issue of how journalism is done within this building and, what is more, as Adam was saying, the custom and practice about the acceptability of off-the-record and unattributable quotes. I suspect that it is the consumer of news who will have more influence on that than anything to do with the rules. I certainly detect a pressure in the internet age, if I might call it that, to be clearer about where I am getting my stories from. When I do stories with unattributable sources, there is now quite a flurry of reaction from the audience saying "How do you know that? Why do you know that? Who told you?" I will give you an example. I did a story on the eve of the Budget suggesting that the fuel duty escalator would be frozen once again and I got quite angry emails saying "We deserve to know. Was this a briefing from The Treasury that they should not have been making? Are you guessing?" In the end, even if you ask me, I am not going to tell you because we do not reveal our sources. It certainly has acted as a discipline on me that there is an increasing sense amongst the audience that they demand the right to know how we know things.

Q91 ***Chairman:*** Tom Bradby, what is your perception?
Mr Bradby: There are two things obviously here and on the question of unattributable quotes, that is very deeply embedded in our culture; it is not just about political journalism. Covering Ireland many years ago, people, for very obvious reasons, did not want to be attributed sometimes when they talked to you. Covering the intelligence agencies, covering the police, people sometimes have very good reasons for not wanting their names to be put out in the public domain so it is by no means restricted to politics. Nick is right that there is much greater pressure from viewers these days and all of us probably spend a lot more time thinking very clearly about how we present things to viewers. Sometimes when you read about some of the breaches of journalistic ethics, without wishing to be pompous, you are a bit shocked because we spend—I am sure all three of us do—hours and hours in edit suites debating everything that we do, whether it is fair, it is right, et cetera. I am sure we will come on to lobby briefings and their worth later on but, certainly in terms of unattributable sources, it is just very deeply embedded in our culture. By and large it is a healthy thing because it allows us, we feel, to report fairly and accurately a true picture of what is going on.

Q92 ***Chairman:*** Just let me ask one thing about the membership of the lobby. Not all journalists are members of the lobby or can be members of the lobby. At times it looks rather like the old dock work regulation scheme, that you have to be a registered journalist to get access. Is that fair?
Mr Boulton: Fundamentally there is a restriction on space and therefore on the size of the lobby, which is imposed by the Serjeant at Arms or in practice the Deputy Serjeant at Arms, and for long periods, most of the time, there is a freeze on new members. So it is difficult for organisations to get extra members, and that is not on our side, that is on the Palace's side as well. Most organisations, including all of ours, operate an alternate system, which is that you may have a large number of people listed as members of the lobby, but the theory is that only one of them is supposed to be present at any one time or any one meeting so that it does not get crowded. Broadcasters with their long hours explains why relatively speaking we have quite a lot of members. Is it a seniority thing? In most news organisations it is. It has to be said in broadcasting, most of the people who cover politics on a daily basis are members of the lobby. Most national newspapers will also have four or five people. The truth is there is a slight division between lobby journalism, which is not tied to reporting of specific speeches or specific meetings, which is tied to reporting on the general current and political events, and gallery reporting, which is more specific. I have to say, in my experience, this is a division of labour which is well understood and does

not cause a great deal of friction within organisations. People know how it works and what their task is and they are happy with it.
Mr Robinson: At the risk of stating the completely obvious, the reason that it is called the lobby is because it is access to the Members' Lobby; that is what it is from. There is a danger that people now think of the lobby in terms of going to the Prime Minister's spokesman's briefings. The origin of course is access to the Members' Lobby in the House of Commons, and that is inevitably going to be restricted in terms of numbers there. It does not seem to me automatic that you need to connect membership of that to access to briefings, and indeed that change was made. I think I am right in saying that the morning briefings now are pretty much open to all, whereas the afternoon briefings by the Prime Minister's spokesman, because they are in the House, are restricted. You can disconnect the two.

Q93 ***Chairman:*** Could you be a political correspondent—I think one or two have tried—without being a member of the lobby?
Mr Robinson: It would be an inconvenience.
Mr Boulton: The Guardian and *The Independent* both, again back in the 1980s and in reaction to Bernard Ingham, attempted it and both of them eventually took the decision to rejoin the lobby and they were not particularly compromised. It is certainly true that there are a number of journalists who cover politics very successfully from outside the lobby. One thinks of Michael Cockerell who will be one example, Michael Crick will be another, although currently Michael Crick is a member of the lobby. Occasionally there are moments of friction when people who are used to being fairly free-wheeling in the way they report politics then try to join the lobby but do not necessarily respect the relatively limited conventions.

Q94 ***Lord King of Bridgwater:*** I was interested in a point that Nick Robinson just made, entirely rightly. Does being a lobby correspondent give you access to Portcullis House as well?
Mr Bradby: Yes.

Q95 ***Lord King of Bridgwater:*** I think I knew the answer to that. How much time do you actually spend now in the Members' lobby?
Mr Bradby: I would say not as much as we spend in Portcullis, which actually tends to be where you spend a lot more time bumping into politicians. Certainly when I first came down here in the early 1990s, one spent a lot of time in the lobby. I just wanted to add very briefly to what Nick and Adam were saying. The lobby to me is two very different things. There is a lobby ticket, which is basically a golden ticket to wander round here, talking to people, getting to know people. The wonderful thing for me about reporting here as opposed to other types of reporting is that there are just so many people you can talk to who have a view that is worth listening to and it is building that view that actually informs our reporting and makes it worth while or not. Lobby briefings are rather a separate thing. I do not know what the other two think, but they have become very limited in worth as far as I am concerned. One of the things that really changed for me between the Tory regime that went out in 1997 and the Labour regime that came in was that you went to a lobby briefing and you would say to Alastair Campbell "What does the Prime Minister think about this?" and he would say "The Prime Minister thinks it is a load of ***" and you suddenly think "Oh my God" and you start writing and suddenly lobby briefings were full of information that could really be of use to you. Now, for totally understandable reasons which I am sure we will come on to, we have gone back to the days of lobby briefings. I think Mike Ellam is actually a very great public servant, talk to him privately, call him up, he is incredibly informative but the lobby, for reasons we perhaps understand, has just become very, very limited in its value as far as I am concerned.

Q96 ***Chairman:*** It is not worth going to it?
Mr Robinson: I am not sure I can count on the fingers of two hands the number of times I have been in six months.
Mr Boulton: You have the advantage of legmen. It is very basic operational information.
Mr Robinson: It could be put in an email.
Mr Boulton: It can be gathered by almost anyone and is an extremely limited expression of the Prime Minister's position. Certainly I would agree that basically this whole Phillis review was really a reaction to post-Alastair Campbell and the amount of toxin which had entered into the system. Certainly I would say that a lot of that toxin has died away, but it does mean that the basic flow of information from both government sources and Number 10 sources is pretty much at an all time low. If you look at your principles, more direct unmediated communication with the public, obviously websites provide that information but, across the board, quality of briefings in the lobby, quality of departmental briefings and availability of routine information, partly because of security being an excuse, we are probably told less. I have been in this lobby for 25 years, we are probably actually told less at lobby briefings now than at any time previously.

Q97 ***Lord Maxton:*** You are told less, but the general public has much more information available from the Government than it has ever had before. It is just that now it does not go through you.
Mr Boulton: Hang on; wait a minute. What do you mean by that?

Q98 ***Lord Maxton:*** Almost every piece of information is on the government website. You can get it, if you want it. Why would I turn on the 6 o'clock news and watch you Mr Robinson or you Mr Boulton when I can actually find out exactly what the Government have done on the website.
Mr Robinson: Indeed, that is your choice, but you may be in danger of confusing two things. It is undoubtedly the case that if you want to "mug up" on particular government announcements, you can now find the Green Paper for yourself and get a transcript of the government statement. What has become the issue of contention, what the Prime Minister's official spokesman actually said, what the minister said or not, let us take the example at random that people should be taken into hospitals to visit the victims of knife crime, you would not be able to find that from a government website. You would, whether you like it or not, still be dependent on political journalists and I would say that some of the information that is given to political journalists would not be published ever for the public to make its own mind up. The briefings would not be published in transcript form; they would not be on camera so that you could go back to them. I accept your point entirely that there is some information.

Q99 ***Chairman:*** How did that information come out, the one about visiting patients in Accident and Emergency?
Mr Bradby: Sky News, as I recall.
Mr Boulton: The sequence was very clear. There was briefing by officials, I suspect special advisers from the Home Office, to selected Sunday newspapers on what the Government were going to propose to do about knife crime which was reported in the *Sunday Telegraph,* amongst other newspapers. Probably not so coincidentally, we, in our regular negotiations for interviewees on Sunday morning, were told that the Home Secretary would be available on Sunday morning to be interviewed; clearly the issue was knife crime. I duly therefore effectively asked her to stand up what was being reported in the papers, whether it was indeed true that there was a proposal. She said "Yes" or "That is the Government's plan". We then reported that in good faith. Because of the conventions of exchange of information on Sundays, in particular between broadcast networks, that was widely reported before there had actually been an official announcement, a bit of paper on the website that you could have looked up, Lord Maxton, and therefore, even before the Government got around to releasing their bit of paper, there had been such adverse reaction that the Government then withdrew the proposal. The problem was that, rather than withdrawing the proposal, they chose to say they had never said it which was quite difficult.

Q100 ***Baroness Bonham-Carter of Yarnbury:*** They blamed the media.
Mr Boulton: Yes.
Mr Bradby: In terms of what we are talking about, that would quite a contentious issue. Let us just take a much simpler one, out in the G8 talking about Zimbabwe. It is not just what the Government have said on the record about Zimbabwe, for all of us it is about trying to understand where this story is going. For example, when he says that the 14 Mugabe henchmen have assets around the world, it is interesting to know where they might be. Does the Government know where they are? How easy is it going to be to chase them? Do we really think that because Medvedev signed up at the G8 that this is going to sail through the UN? What about China? There is a whole raft of stuff that we sit in briefings and want to know the answer to and it is up to us to then go on to the TV and try to explain to the public "This is what the Government said but here is some context". That is really our job and that is why briefing is important. Finally, I would say that I find the likes of Michael Ellam and James Roscoe really outstanding. You talk to them on issues like that and they are massively helpful. Go to a lobby briefing and you might as well stare at a wall for half an hour.

Q101 ***Lord King of Bridgwater:*** On this point, just to clarify the point about the lobby being able to question, one of the recommendations of Phillis that was not done is this business about televising briefings completely on the record and Nick Robinson has already referred to that. In some of the evidence we have had there is a clash between the written media and yourselves and your colleagues. What is the total membership of the lobby, as a matter of interest, and how does it split between television, electronic media and the written?
Mr Boulton: From memory, it is something over 200 and, again from memory, the majority are print journalists.

Q102 ***Lord King of Bridgwater:*** There is a lot of stuff about the inconvenience of the lobby meetings, criticisms by a former chairman of the lobby, not you, reference to the "buggeration" factor, almost making it deliberately difficult to get there. Are you still meeting at the Foreign Press Association?
Mr Boulton: No, we are not.

Q103 ***Lord King of Bridgwater:*** That has gone, has it?
Mr Boulton: It has to be said that the incoming Prime Minister made some efforts at conciliation. Basically there are two lobby meetings a day—this is partly to do with history—one is at the invitation of Number 10, one is at the invitation of the lobby. The one in the morning is at the invitation of Number 10 and used

to take place at Number 10 and then it moved to the Foreign Press Association. It is currently taking place in one of the ground-floor briefing rooms in the Treasury, which is generally regarded as much more convenient.

Q104 ***Lord King of Bridgwater:*** There is no televising.
Mr Boulton: No.

Q105 ***Lord King of Bridgwater:*** There is some confusion, because we get a lot now of the Prime Minister walking down that corridor and appearing in Number 10 when he is making some statement or reporting back.
Mr Boulton: Or his regular news conferences.

Q106 ***Lord King of Bridgwater:*** It is more than just monthly; it seems to be happening more frequently. It almost gives the impression that it is on-the-record lobby briefings.
Mr Boulton: Just to finish, there are the briefings in the Treasury, which everyone accepts is better and then in the afternoon, the briefings are hosted by the lobby and by the chairman of the lobby and take place in the shabby room up there. It may be shabby but I have to say lots of people have their beady eyes on it and the lobby committee has to fight a constant campaign to keep access to it. Broadly speaking, although this is a big generalisation, broadly speaking the focus of the morning briefings is more aimed at the electronic media because we are going to report immediately.

Q107 ***Lord King of Bridgwater:*** And the evening papers.
Mr Boulton: The evening papers have an awful lot of complaints. It is very, very difficult to satisfy the evening papers, partly because their own deadlines have come back. I think you will find that the *Evening Standard* and the leading regional papers do most of their work on the phone before the lobby because actually by 11 o'clock it is too late.

Q108 ***Baroness Bonham-Carter of Yarnbury:*** I am curious. You have all said that you hardly bother to go to the daily briefings because you do not get the information out of them. Are you saying that the very openness that has been introduced really makes them not worthwhile?
Mr Robinson: There is what I would describe as a Campbell paradox, that in other words, the Phillis Review was set up in part because of the poison, as Adam Boulton describes it, that entered into the system in Alastair Campbell's later years and yet, if you were to ask many journalists now and indeed lots of people in Government, they are rather nostalgic for the early Campbell era. Why? Because he was seen as someone who genuinely understood the Prime Minister's mind and often communicated it to journalists. That was both useful for Government and useful for the media. The paradox is that we somehow have managed to lose that. We lost it because of a toxic combination of Alastair Campbell's anger with the media and that issue of Iraq. In the process, it seems to me, there have been some healthy changes which are the more formalising of it, the re-establishment of the Civil Service's supremacy, a separation between politics and Government, but we have lost something at the same time which is a genuine sense of getting the Prime Minister's mind. This was never, of course, dependent on this person being political, as Bernard Ingham proved; it was more to do with the personalities of those people involved. If I may just pick up Lord King's point about the newspapers versus television as it were, I do not want to talk for newspaper colleagues because candidly I have not asked them recently but they probably share the views of the people here or broadcast journalists about the value of the morning lobby and there may therefore be very little loss about putting them on camera. The anxiety was always if you put them on camera, you lose this enormously valuable information that you get in other ways. There is not a lot to lose is what I would say and the gain would be that the public would see it for themselves; they would see what was going on. There would be a separate conversation about the afternoon briefings and whether the newspapers think there is still a value in having a private briefing.

Q109 ***Lord King of Bridgwater:*** Is the afternoon briefing a bit more of a closed circle? How many get in there?
Mr Robinson: Yes, the afternoon briefing is different in the sense that you have to have a lobby pass to go to it.
Mr Boulton: It is lobby members only.

Q110 ***Lord King of Bridgwater:*** I have been in that room a few times but I cannot remember how many get in.
Mr Boulton: You can get about 60 in there.
Mr Robinson: It is still on the record.
Mr Boulton: I would say two things. Although I agree with my colleagues about the paucity of information which we are given, they are important because they establish a principle, first of all; secondly, because operational information is given on a confidential basis as to what the Prime Minister is doing today, when Bills are going to be published and all the rest of it. The problem is that that information is entirely à la carte; we will sit there and dutifully write down what the Prime Minister is doing this week and the most important meeting of the week will not be

mentioned to us. The second problem, to get back to your problem about being able to do it all yourself on the website, is that you cannot. If they tell us what the Prime Minister is doing this week, we are not allowed to then go to our websites and put it up there. We have to inform that "Later in the week we will be hearing from the Government" or "The Prime Minister is going to go out to the country" and say this and that is on the basis of the confidential information which we are given. Just slightly to short-circuit on this whole question of televising, we are all in television so we do not think television is bad, we think it is a good idea. There were two issues. One issue was that if you have Mike Ellam, or the Prime Minister's spokesman, appearing on television, would that mean that we saw more of the monkey and less of the organ grinder and there has always been that danger. I think you would find Mike Ellam would be extremely reluctant to go on television or to become more of a personality. So that is one problem. The second problem was that when all these changes came in, the Downing Street line was that they were going to field ministers on a regular basis to do lobbies. In fact, to my recollection, that happened twice, both of them disasters. One was when David Blunkett, one of the most able ministers, walked in and discovered that he was expected to answer questions not just about his departmental brief but about everything and about the lobby journalists' discontent with the new system. Although he did it with his customary aplomb, he made it clear that he thought this was a burden that he could do without on a regular basis. The second briefing consisted of the Chief of Defence Staff and the Defence Secretary briefing the lobby on defence matters and within two minutes they had contradicted each other. It has to be said that after that Downing Street decided that it would go back to the lower level of briefing.

Q111 ***Chairman:*** So the Phillis recommendation that more ministers should apply is out of the window?
Mr Boulton: It does not happen.

Q112 ***Lord King of Bridgwater:*** You will remember the first Gulf war. I did daily, on-the-record, televised briefings with the Chief of Defence Staff and senior officers as well and it took quite a lot of preparation, it took quite a lot of early work to hit the timeframe. If the early experiments did not work, the two illustrations you give, it is still perfectly possible to do, and in respect of that occasion, the media expected it, is that not right?
Mr Robinson: The distinction I would draw is this: it seems to me—Adam has been in the lobby longer than I have—that we are now getting more on-the-record and on-camera briefings by the Prime Minister. It is, as you have noted, pretty routine now to see the Prime Minister and that is a change and it is reasonably routine during a crisis, say the floods for example or foot and mouth, to then see the relevant minister quite frequently doing on-the-record briefings, perhaps with their senior adviser if it is a scientific adviser, for example. I do not want to give you the impression that because it does not happen to a lobby briefing it never happens.

Q113 ***Lord King of Bridgwater:*** One of the criticisms is Number 10 grabbing it all; it is the centralisation of this. Is the effect that the Prime Minister has now been doing all the announcements at the expense of departmental ministers who are the relevant secretaries of state?
Mr Boulton: Effectively the change was brought in post-Campbell. One of the problems of the initial openness of Alastair Campbell was that people did indeed take that to be the voice of the Prime Minister. So even if Alastair used an unfortunate locution, such as talking about bog-standard comprehensives, that became a headline matter because it was seen to be what the Prime Minister was thinking. The way in which Campbell and Blair then changed their approach was that they said they did not want a spokesman who was going to be seen as a surrogate for the Prime Minister, so the spokesman would retreat into the background and they would put up civil servants who actually could say very little, which was what happened with Tom Kelly and others. In return, Blair did say "I will go on the record more. I will do a monthly news conference. I will do the bi-annual appearances before the Liaison Committee". You can see that on formal occasions the Prime Minister upped actually doing it himself, but that was partly because he felt more confident with that and, as it were, he would rather make his own mistakes than have Alastair Campbell make them on his behalf.

Q114 ***Baroness Bonham-Carter of Yarnbury:*** Returning to Nick Robinson's response to my question, you said something which seemed to suggest that you felt there was a paucity of information coming from the Prime Minister. Is that because of the system that now exists or because of the nature of the Prime Minister we have at the moment and the people who are around him or are you saying there is a real problem here about the way in which things are wrong?
Mr Robinson: My sense is that although Phillis recommended changes which have been implemented, what has not essentially changed is the culture and we still have the culture that Adam described as an à-la-carte attitude. In other words, there is not a presumption that there is a lot of information that the public have a right to know and that journalists have a right to ask for. It is still done

on the basis that they might give it. A trivial example, but it is always the best illustration of this, is that routinely, if you travel to the White House and you say "Who is attending this meeting with the Prime Minister?" down to the really trivial "What are they eating and where will they meet?", that is information that is traded as if it were a favour. You then discover that two hours earlier the White House press corps had been given a piece of paper saying "Attendees. Menu. Room" because there is just an assumption that that is core information.

Q115 ***Baroness Bonham-Carter of Yarnbury:*** But you seem to be almost saying that things have got a bit worse. That is really what I am trying to get at.
Mr Robinson: Do you mean under Gordon Brown?

Q116 ***Baroness Bonham-Carter of Yarnbury:*** Yes; that you are getting less. You were talking about the paradox of Alastair Campbell; it went on.
Mr Robinson: To be fair, just to be clear, Alastair Campbell was replaced not when Gordon Brown became Prime Minister but by Tony Blair. No, I was not making a particular point about Gordon Brown or indeed the Blair regime. There was a genuine effort by Gordon Brown when he became Prime Minister to separate out clearly the Civil Service and the political role. In the process of so doing, there is less information being communicated about the Prime Minister's wants, desires and plans, which I suspect is a source of frustration to Government as much as it is a frustration to the media.
Mr Bradby: May I add something on the Alastair Campbell paradox? There is an Alastair Campbell paradox and of course there is going to be; a politically appointed press spokesman is naturally going to feel much more at home expressing a wide range of views. A career civil servant, who has his future career to think about, is not going to want to be caught out; that is quite natural. It is difficult to see what can ultimately be done about that. I do not know whether the others would agree with me, but it is worth saying, because we are veering on to the negative, things have got a lot better and there have been a lot of positives. One of the things that Tom Kelly, David Hill, Michael Ellam and Gordon Brown, to be fair, have done is make everything, to me, feel a lot more proper in the sense that TV news, all types of news, sometimes are quite challenging; sometimes we say things that politicians do not like, sometimes they get a bit hacked off with us and get on the phone and get quite angry. Occasionally we get it wrong. What you do not want to happen is for favouritism to be the order of the day, to be excluded from X or excluded from Y because you happen to have said something, and I do not feel that is happening. I feel that there is a sense that Mike Ellam in charge has made things quite proper; he is quite proper about everything and I like that and it is important. So there have been quite big steps in the right direction. Is it perfect? No, we are dwelling on some of the things that are not, but we do not want to go backwards.
Mr Boulton: That is the great defence of the lobby system. It may seem like an elite, but the fact is that working for new organisations in my career, TV-am and then Sky, once you are admitted, you are on a level-pegging with everyone else. So this white commonwealth does not exist and it was undoubtedly the case, you can see it in the diaries, that by the end of his time Alastair Campbell hated the lobby and that was partly because he did not want to deal on a regular basis with people whom he regarded as antipathetic. The lobby locked him into having to do that, whereas what he wanted to do was to pick people who he thought would take as favours the information that he had. I would just like to make one point about this whole question of information which does go back to "It is all on the net; you don't need us". First of all, our job is to précis and mediate that stuff; that is what we are paid to do because people do not always have the time to do it. Secondly, there is no automaticity of what information goes on the net and what information departments put up about things. Each department has its own policy and certainly one of the things that has noticeably changed in Government since the new Labour years, since 1997, is that the departmental press officers, people who would routinely seek you out or you could seek them out and ask what really was going on in transport, or transport priorities, people who would, when a White Paper or Green Paper was published, automatically set up interviews, briefings, news conferences when that happened, that whole panoply has gone basically. The departmental press offices are much punier and more insignificant than they were once and the special advisers working with the minister from a partisan position fulfilled that. I personally think that is a loss and that is one of the big differences between our system and the American system.

Q117 ***Lord Hastings of Scarisbrick:*** I should like to go back to that point, if I may. If the special advisers have become so much more significant because they have the direct ear of their secretary of state and minister and they really do understand the policy and they filter it, do you consider them to be another element of the lobby? Should they be on the record as an element of the lobby? They are shadowy figures. Most of us know their names but we never say them.
Mr Boulton: Should we identify them by name?

Q118 ***Lord Hastings of Scarisbrick:*** Should they be part of the lobby? Should they be part of this circle of information? They provided you, for example, with

the information from the Home Secretary about the news story you broke on Sunday which then the Government said did not happen.
Mr Boulton: My view is that I regard all special advisers as tainted sources, so I would draw a distinction. I would rather be briefed by the head of media, by the civil servants and the political dealings.

Q119 ***Lord Hastings of Scarisbrick:*** As you have said, what is now happening is more special advisers have taken on that role. Have they become an extension, an addition to the lobby?
Mr Bradby: There are so many of them. Why do we have so many special advisers on the public payroll? I am never entirely clear about that. You go to some departments where you have very outstanding heads of news. We have had a lot to do with the Ministry of Defence recently; they have a really outstanding, very bright man. Why do we have so many special advisers in Government? Their sole purpose seems to be to protect their minister. That may be of value but why is the party not paying for that?

Q120 ***Lord Hastings of Scarisbrick:*** That is a separate point, but they do act as spin-meisters do they not?
Mr Bradby: Yes.

Q121 ***Chairman:*** In the old days, you would go to the official, the head of public relations at the Home Office or something like that. Would you automatically go to him or her these days or would you go to a special adviser?
Mr Boulton: I would not see great value in formalised briefings from ministerial special advisers. That is not what they do and when I use the word "tainted", one would take that information in that context. There is an exception, which is the senior press-related special adviser within Number 10. However we wrestle with this, there is Government and there are party politics and there is clearly a role for a Damian McBride, for a figure within Downing Street, close to the Prime Minister, who deals with party-political matters. It would be impossible not to proceed without that but really the whole issue is how you balance those two together. To take one example, the creation of a permanent secretary was clearly a way of dealing with the post-Campbell situation, that you needed a figure of stature to balance a Downing Street which was headed as a political operation with civil servants working within it, partly to protect the civil servants and to protect fair play across Whitehall. You could argue that now Gordon Brown has re-established Mike Ellam, who is a civil servant, as the Prime Minister's spokesman actually that role of permanent secretary is now redundant and I know it is vacant. I would say actually that there is still a problem with government communications and if you can get someone of calibre to occupy that role, it is very valuable. The problem is they may well feel that they are out of the game a lot and so it may not be that attractive a job for them to take up.

Q122 ***Lord Hastings of Scarisbrick:*** Mr Robinson, you were going to say something?
Mr Robinson: I was going to agree with Adam that there is not a function in formalising briefings and it seems to me that the market will drive in this. On the incidence here of what we have described as the knife-crime story, there is a discussion already taking place in Whitehall about how that went wrong. There is a discussion amongst our audiences about what we did and did not know and there should be a discussion in our news rooms about how precise we were with what we did and did not know for a fact rather than be guided. Those problems are not solved by saying certain kinds of briefing will now be on the record because that is not reality: the reality is that in the end the consumer of news will now feel a little more sceptical about what they are told. That is bad for Government, bad for us and we have to find ways of being clear about what is and is not the case.

Q123 ***Chairman:*** On that specific, you are not, or are you, going back on that story or are you saying there were defects in that particular story? It is always much easier to have actual specifics when we talk about these things. The visits to Accident and Emergency were given wide publicity. Do you feel there were defects in the way that that story was handled by the media?
Mr Robinson: By the media themselves?

Q124 ***Chairman:*** Yes.
Mr Robinson: No. I was not involved in the story and of course the involvement of the Sundays. Let me try to be as helpful as I can. The key moment, as Adam says, actually was his interview with the Home Secretary where she would say, if she were here, his question did not specifically say—this is not a criticism of him incidentally—"Are you going to take . . . ". Let me go back. I have tried to work out in my mind the following question about that story. Did the Government ever intend people to be taken into A&E wards and then deny it when they had a bad reception or did they ever intend it and just cock up the briefing of it and allow an inaccurate story to go out?
Mr Bradby: Adam did specifically ask that.
Mr Robinson: Not actually in words that I think were totally unambiguous. The lesson I would take for myself is that there would have been a value in absolutely specifically going back to press officers—forgive me this may have happened; I have not checked—to say "Are you specifically saying the following will happen or will not? Does that come with the authority of the departmental press office?"

Mr Boulton: In the interview, I said, "One of the proposals being mentioned is to take people who have committed knife crime into hospitals to see victims or to introduce them to victims' families. Is that your policy?", to which the Home Secretary said "It is". She then went on and said that in her view she felt that confronting people with the consequences of their crime could be more effective than imprisoning them automatically, that is criticising the Conservative policy. I then said, "But do you not think actually that people might not want thugs going into hospitals to visit the victims?" She did not correct me in her subsequent answer; she basically repeated her position that it was important to confront people with the consequences of their crimes. At the time I was not trying to be clever, I was just literally trying to say, "What are you proposing?" and to test that. My view, after that exchange, was that she had been given the opportunity to counter the drawbacks of the policy, that she had not taken it and therefore my clear assumption from the understanding of that conversation was that this was something which she was proposing. Did she say in so many words, "I want to take knife criminals into hospitals"? She did not; she agreed with my suggestion by saying "It is" that that was a policy. I think we were legitimate to make that interpretation but clearly, the position the Home Office have taken subsequently is that the media misinterpreted. I would call that a reverse ferret.

Mr Bradby: I should just like to add to one very important point that Nick made which is that the market is correcting a lot of this in the sense that, if you want to commit suicide as a Government or as a political party these days, the fastest way to do it is to be caught out "spinning". In the middle of the Tory conference Gordon Brown goes to Iraq, makes an announcement that was not properly thought out about troops coming back. It turns out it is not really strictly correct, as well as him having said he would make these announcements to Parliament and, by the way, some of the troops he said were coming home by Christmas are already home and here are the pictures of them arriving back home last night. That did him enormous damage and we could all quote 10 other examples in the last year of which this, whatever the ins and outs of it, is the latest one. The public are very savvy; as we all know, spin was a massive issue in the new Labour years and everyone around here is conscious that if you get caught out, and it still happens, but if you do get caught out, you are going to sustain a great deal of damage. That has done more to correct things than anything else.

Q125 ***Lord Hastings of Scarisbrick:*** Just to be very specific on this point on special advisers, in the light of what you have said and given what you have said Mr Boulton, that your information came from Home Office special advisers—

Mr Boulton: No; I am assuming the press story came from the special advisers.

Q126 ***Lord Hastings of Scarisbrick:*** What status would you give to special advisers in relationship to the lobby?

Mr Boulton: They do not work exclusively with the lobby; they work with any person covering politics. They operate as the non-attributable representative of their boss.

Q127 ***Lord Hastings of Scarisbrick:*** So they are part of a secret club?

Mr Bradby: No, they also work for a lot of specialists. If you are the Home Office special adviser, you deal with home affairs correspondents, if you are the Department of Health special adviser you deal with health correspondents and so on.

Q128 ***Bishop of Manchester:*** Just to wrap up this particular part of what we have been talking of and quite simply going back to the issue of the Prime Minister and his merging of the spokesperson and the Director of Communications, you will recall that that is quite the opposite from what the Phillis Review recommended. The Phillis Review is a fundamental document for this Select Committee and I really would be helped by a very brief comment from each of you. Do you think that the Government and in particular the Prime Minister have got this wrong and that the sooner he goes back to what the Phillis Review recommended the better?

Mr Robinson: I am struggling for an answer because I have to say it is not something that impinges a great deal on me in that sense. It seems to me clearly important that there is somebody for the wider communication strategy of the Government and much of Phillis was not about the stuff that we do day to day but was about regional media and on-line and so on. It is clearly important that there is a senior official in Downing Street and in Government that can do that but I cannot say it makes a lot of difference to my daily operation at all.

Mr Boulton: I would say that within the British political culture it is better that the Prime Minister's spokesman is a civil servant than that the Prime Minister's servant is a kind of quasi-presidential spokesman. Because of Parliament, because of the way Government work, while in some ways it led to a brief period of openness, it ended in tears before bedtime and it is possibly better to have this system. However, I would come back really in relation to your point. I can recall a time when, if you were going to do a Sunday newspaper piece on what the Government were going to put in a White Paper next week, if they chose to do an advanced briefing, you

would do that with a civil servant and you would do that with people who had actually been responsible for drafting the Bill and knew what was in it. I cannot think of them off the top of my head, but we have had a number of instances where the Government have ended up getting into trouble because, with all due respect, the briefing has been done by the special adviser, who frankly did not know what they were talking about and in any case was trying to put a political spin on it. That has not served the process which I am concerned about which is informing the public and getting it right; that has not served that process. It has given us all great political stories of cock-up and disaster but that is a different matter.

Mr Bradby: I feel the current system works quite well. I just feel it is really central to have the Director of Communications and official spokesman as a civil servant for the reasons I have really outlined and I will not go over them again; there is a sense of it being proper. It means that if you are a news organisation and yesterday you said something the Prime Minister did not like, you can go to the Director of Communications and say "We still want that interview. It is proper that we should. We are a major broadcaster. We are a major newspaper" or whatever. It is his job to maintain that sense of decorum and to remove any sense of favouritism or you being treated differently because what you said was not liked and all the rest of it. That is really, really central. Adam is right, you have to have a political special adviser like Damian McBride in there for all the reasons I do not need to go over; there are some things that just are political and you need the political handle on it. I feel the system works pretty well. Do you need an overall Director of Strategy? Maybe, but that is a separate question.

Mr Boulton: The simple point I would make is that with Bernard Ingham, although he is a widely criticised man, the single biggest insult you could say to Bernard Ingham was "That is a lie; that is not true". Bernard Ingham's memoirs recall at great length the two journalists who had the audacity to accuse him of being a liar. I have to say that the culture of the political adviser is one of expediency and, again, if you read Alastair Campbell's diaries, he was not embarrassed about lying on a number of occasions and that is a toxin within the system.

Q129 ***Chairman:*** We were going to ask you about that because that was part of your evidence to Phillis, was it not, that you should actually sign a declaration that no lies would be permitted? How frequent is that? How frequent is lying?

Mr Boulton: These days, from within the briefing system headed by the Prime Minister's official spokesman, it is sins of omission rather than sins of commission. Not being told stuff is one thing.

Mr Robinson: Economical. I think rightly, the current spokesman would be pretty appalled if he were accused of lying and he would be right to be appalled because there is no example of him doing so. I am quite frustrated he does not tell us things, but that is different.

Mr Bradby: I cannot see him lying.

Mr Boulton: I can even recall occasions where he has phoned me up and corrected himself spontaneously, "I should not have told you that, it is actually this".

Mr Bradby: I could not conceive of the official spokesman lying to me. I know that is a big statement, but it would never occur to me that he would lie to me.

Mr Boulton: Any civil servant should not lie and generally they do not lie.

Q130 ***Baroness Scott of Needham Market:*** Mr Boulton, you made reference earlier on to the decline in departmental staff in terms of their communications and so on. I wonder whether you could say a bit about what the nature of that decline is. Do they have fewer people? Do they just have the same number of people not being very helpful? To what would you attribute this worsening in departmental press capacity?

Mr Boulton: I am not a great expert on this because obviously we operate the lobby system. What I would say is that I note that the Phillis Review originally said that the government information service was not working. What I would also note is that there was a quite deliberate attempt, and understandable when there is a change of Government, to change the directors of communication in the departments to people who were thought to be broadly sympathetic towards the project. Certainly if you spoke to the civil servants, they felt that if they did anything that was deemed to be unhelpful to the Labour Government in terms of disclosing information that there would be consequences for that. I do not want to go over Stephen Byers, Jo Moore, all the rest of it, but certainly that was an attempt, a legitimate attempt and an open attempt, to try to create a politicised executive operation across Government. It did not work but the net result is that it left the system and even the career structure of being a government information officer pretty much devastated and I am not sure that anyone has actually focused on trying to re-establish that so it is a legitimate process. Just take a name at random. Mike Granatt, who recently was working with the Speaker, was someone throughout Whitehall of authority, who was respected, who knew about his subject. I cannot think really of a great many equivalent figures of that kind of stature. There are obviously very good people but they do feel very subordinate to the political web above them.

Mr Bradby: If you give the power to special advisers, it is very hard to get and keep very good directors of information. I would say it is very simple.
Mr Robinson: I do actually think there are some very good departmental press officers, some I deal with; I will not embarrass them by naming them. The key is actually the dominance of the centre. I do not know the genesis of this, but I am sure the Home Office had not planned to unveil its plans for knife crime to Sunday newspapers. I suspect that there was political pressure from Number 10 saying "We have to have something to say". Therefore, despite the genuine desire of Gordon Brown when he became Prime Minister to do things in Parliament first, the pressure to give something to the papers to say in this case, to fill the time between the headlines on knife crime and the announcement on Tuesday, meant that it was not said to Parliament first, it was not said formally, it was not said by the departmental press team and it was done by a special adviser—probably, I hasten to add because I have no evidence of that—and in a bit of a rush. So all of those things stem from the political pressure that Number 10 feels under, under any administration, to have things to say when they are in trouble.

Q131 ***Baroness Scott of Needham Market:*** Would you say, if there has been a weakening of departmental capacity in this area, that has been matched by more efficient working in these issues which go across the departments, particularly when there is some sort of crisis? Is that any better from your point of view?
Mr Robinson: For crisis communications, if we are talking about floods or terrorism and so on, there does seem to be a better system of regular on-the-record briefings by relevant ministers. I do not otherwise, frankly, have enough information to give you a useful answer.

Q132 ***Lord Corbett of Castle Vale:*** You will recall that right at the start of his report Phillis mentioned what he described as a three-way breakdown in trust between Government and politicians, the media and the general public. I am sure that you understand that the main purpose of government communications is not to feed you titbits, but it is to get information to the public; that is thrust of the thing.
Mr Boulton: I would argue that we are still a useful conduit.

Q133 ***Lord Corbett of Castle Vale:*** I accept that; I am just saying the main duty of an elected government is to explain to the public what it is doing and why. Now there are occasions when they will use you and there are occasions when they will not. You have hinted at this but I would like to put the question to you directly. Do you think there has been an improvement in the relationship between all those parties, the politicians, the media and the public, since 2004?
Mr Robinson: My answer is that if you look at the opinion polls, you will discover there has been no improvement in trust in Government or in trust in politicians or indeed in trust in the media to be fair. I was digging out a poll the other day where people were asked "Do you think politicians are out merely for themselves, for their party or do they do their best for the country?" The answer was that only a third of respondents thought the politicians put the country first; over half thought the answer was either themselves or their party. The poll was taken in August 1944 when there was a coalition government. This is not new.

Q134 ***Lord Corbett of Castle Vale:*** Okay, but I did not want to confine it to trust. My question was broader than that.
Mr Robinson: Our relationships between media and government communications have improved since 2004, yes, undoubtedly. My point was that I am not sure that is reflected in a change in public attitudes.

Q135 ***Lord Corbett of Castle Vale:*** You and your colleagues all have a role in this, according to Phillis, if you understand what he was arguing about. How do you try to keep in touch with what the public are feeling about what the Government are trying to do? For example, when was the last time any of you were in Birmingham, Burnley or Bristol meeting real members of the public, not there for party conferences or there because the Prime Minister was there. Do you feel that you ought to get around the country more than you give me the impression that you do?
Mr Boulton: We have a specific job which is fundamentally to cover the executive and Parliament and that is one of the reasons why we spend a lot of time there and that is quite important. However, all of us do go on a regular basis to the places you mention. Most recently, specifically, I was in Birmingham a month or so ago.

Q136 ***Lord Corbett of Castle Vale:*** May I ask you what you were doing?
Mr Boulton: I am just trying to remember actually.
Mr Robinson: I did a piece for television news recently from Birmingham which was about the so-called NEETs, Not in Employment, Education or Training. Your underlying point is whether we are out of touch with our audiences. There are two answers which are yes and no. Yes, by definition, if you spend your time reporting on power, which is what we are paid to do,

and spend therefore a disproportionate amount of your time in this building and in Downing Street, you are clearly not as regularly in touch with the views on the streets of Birmingham, Bristol and Burnley as you would be if you lived in any of those cities. However, are we more in touch than we used to be? Well frankly, I write a blog and get a lot of reaction to it and the amount now of viewer, listener and reader interaction via polling, blogging, emailing, texting and the like is much higher than it was when I started in this business. Would there be some value in power being less centralised in Britain? Yes, but that is not down to me.

Mr Bradby: We do try to get out and about. Clearly it depends on the political cycle as well. It just so happens that there has been a huge amount happening here; the Government are going through quite tough times, there is a lot to report on day by day. In the middle of an administration that has a big majority and is in no political difficulty, inevitably our ability to get out of here and spend a lot more time—and my organisation certainly always has a very strong desire to get me out of here into the country to do special reports on this, that and the other . . . Are we out of touch? Well, you could say "possibly"; I do not know.

Mr Boulton: You can take this argument too far. Why have a parliament at all, why not just have on-line plebiscites? There is an exercise of power from here. Obviously, I agree that electronic means, particularly on-line means, have meant that people can get at us a lot more and in a sense one of the advantages which we have over our newspaper colleagues is that we are identifiable. I can assure you that every day, whether it is a work day or a not-work day, wherever I am, people come up to me and tell me what they think about politics. The notion that we are out of touch—

Q137 ***Lord Corbett of Castle Vale:*** Possibly, but the people who email you are self-selecting, representative or not, it is purely random. I have to say I would have thought that it is actually no substitute for listening to people face to face because every minute of your working day each of you and your colleagues is making judgments about what the public are interested in and have little or no contact directly with them. That is my point.

Mr Bradby: Adam was making a slightly jokey point there. It is true when you do go out and about people come up to you. One of the things I find quite enjoyable about the job is that people come up to you and, without half the time bothering to introduce themselves—they usually think I am Nick Robinson, but that is a side issue—they will engage you in conversation on a train, on a bus, at home, on the beach in Cornwall.

Mr Boulton: They are not self-selecting.

Mr Bradby: They are people who just run into you.

Q138 ***Lord King of Bridgwater:*** You are attracting the wrong people to listen to.

Mr Bradby: Possibly.

Q139 ***Chairman:*** I fear I must bring this to an end because we have simply run out of time. Before I do, I would just like to ask each of you very succinctly, if you had any suggestions to make to the improvement in the lobby system most of all, what would they be?

Mr Boulton: One of the longstanding conventions of the lobby has been that the Leader of the House had a weekly lobby briefing which was the main point of direct contact between the Government and the lobby. That was something that fell into abeyance but was brought back by Jack Straw. Harriet Harman, although we sought her out, discontinued it. I think that is a real shame and damages Parliament, not least because it was concentrated around business and what was going on. If you go back further, the Leader of the Opposition also used to hold a regular briefing with the lobby and, again, that was very good for political discourse and sometimes what people overlook is that it is possible in the fluid form of a lobby, which is not unlike this particular gathering, to get more to the kernel of things than in a televised news conference.

Mr Robinson: I would endorse the idea of more ministerial briefings, returning to what Phillis described. There probably needs to be a dialogue between media and ministers about how they want to communicate what they are doing in their department on, say, knife crime and do not particularly fancy answering questions on Zimbabwe because it happens to be the story of the day. There may have to be a conversation about that. The only other change I would make, which is not to the lobby, is that we do need to say that Downing Street and others should build on the changes they have made and work out what it is automatically our right to know. I think they would find that there would be a response from the media, if there were a culture of automaticity. You are entitled to know who goes to meetings, where they are held, for goodness sake even, if necessary, what is eaten. Just get that stuff, be clear about what it is, the public and therefore the media's right to know. The lesson from expenses—forgive me for diversifying here—is that once it is all out there it is jolly boring and it is best to just get it out there in this age and be clear about what the public are able to know.

Q140 ***Lord Maxton:*** How about yours then? You are a public and paid official.

Mr Robinson: Yes, there is a perfectly legitimate debate about that, which is being discussed at the moment.

Mr Bradby: I think more ministerial briefings would be good. I would agree with Nick that we are slightly our own worst enemies because poor old ministers come here and find themselves being grilled on things that they may not want to talk about. So that is an issue but that would be helpful and shadow ministerial briefings as well. The other point I would make, which I have not really discussed but is increasingly an issue, is that the blogosphere is growing and the influence of blogs like Guido Fawkes's is growing all the time. Some people say it is a good thing, some people say it is a bad thing and we need to just keep an eye on how it is happening. It is influential and to some extent it represents a democratising process in the way this place is covered and we just need to keep an eye on how that is facilitated.

Chairman: Thank you very much; thank you very much indeed. We have overrun our time and we could actually go on for another hour at least, but thank you very much. We may have other questions but perhaps we can write to you on that. Thanks very much for coming.

Examination of Witnesses

Witnesses: Mr Tony Collins, Executive Editor, *Computer Weekly,* Mr Frank Gardner, Security Correspondent, BBC, Mr Nigel Hawkes, Health Editor, *The Times*, and Mr Tim Marshall, Foreign Affairs Editor, Sky News, examined.

Q141 ***Chairman:*** Welcome; I am sorry that we are a little delayed but those of you who were there before probably heard us overrunning and the reasons why that was the case. You are very welcome and we are looking, as you know, into the whole issue of government communications and we are looking to see whether, since the Phillis report, the culture of secrecy, partial disclosure has been changed, relationship between special advisers, civil servants, and whether communications in the regions are improving and how important they are as well. We might start looking at the health side and then move to defence and foreign affairs. Tony Collins, you gave some very interesting evidence which I heard a few weeks ago about how you felt sometimes dealing with the Health Department. You said that you had noticed, particularly over the last five years, an increasing aggressiveness and amorality on the part not so much of press officers but the people who feed the information to the press officers so you often get incorrect information. Would you like to expand on that?

Mr Collins: Well, it is wrong to blame the press officers because they sometimes do a very, very good job but the people within the bowels of the organisation who do not have to account for the information that they give can sometimes pass on information that Adam Boulton called the sin of omission. It is not lying, but it is information that is misleading and that leads to supplementary questions which we sometimes find very difficult to get answers to, which can go on for weeks and then eventually we may get an answer. For example, there was a case where the National Audit Office produced a report on the NHS IT programme, which is the world's largest non-military IT programme and the British Government's biggest IT investment. There was a summary of that NAO report by a minister in a press release which we did not think was entirely accurate because it said things that were not in the NAO report. We raised it with the Department of Health press office when a minister actually quoted from that press release but put into quotes things that were in the press release as indirect comments. After a few weeks and an exchange of quite a number of emails, we did eventually get a response that the minister had incorrectly interpreted the briefing and that there would be a correction in *Hansard*. Well that was two years ago and there has not been a correction. I find in general that there is not the deference to the truth or to fact that there used to be. This ambiguity creeps in in a way which protects the department and does not usually give us the information we are seeking.

Q142 ***Chairman:*** Is that because officials in the department, not necessarily the press officers but officials in the department, are protecting their own position?

Mr Collins: In this case protecting the national programme for IT. When the programme started we had a press officer come to see us who was a contractor, PR, and he said something very interesting which was that he was not a civil servant, he was a public servant. When we asked him what that meant, he said he was not bound by the Civil Service code of neutrality. We have since understood that what they may mean is that the department's press releases are one-sided in certain cases; not the sort of thing that a journalist could have got away with at journalism college. We have seen a control of information that we had not seen before, for example seeking the withdrawal of independent criticism of the national programme. For example, the British Computer Society published a report and the Department of Health sought to have that not put in

the public domain. They withdrew speakers from a conference where there was continued criticism of the programme by the organisers and there was a case where there was a press conference at Richmond House, the headquarters of the Department of Health where we were not invited. An invitation was sent to a number of magazines and national journalists, one of whom sent a copy of the invitation to me, and it was the first time I have seen an invitation to a press conference which was confidential and the journalist was asked not to pass on the invitation. I rang and asked whether I could go and we were told that the conference was full. My editor asked me to go anyway and about 18 journalists filed through the electronic turnstiles at Richmond House and when I went through, I had my way barred by the minister's adviser. We have not seen that kind of control of information in covering government IT projects in the past.

Q143 ***Chairman:*** How long ago was that?
Mr Collins: That was 2005.

Q144 ***Lord Maxton:*** Were you told why you were barred?
Mr Collins: Yes, I was told that it would not interest me.

Q145 ***Chairman:*** But it was in fact an issue entirely on your beat, so to speak?
Mr Collins: It was actually a demonstration by the minister and the head of the project of the new technology for the programme.

Q146 ***Chairman:*** Why do you think therefore you were excluded?
Mr Collins: This is pure speculation and I was told it would not interest me but I would imagine it was because they did not want me to ask informed questions at a press conference where the technology was being demonstrated.

Q147 ***Chairman:*** Because you have a reputation for expertise or for awkwardness?
Mr Collins: We have a reputation at *Computer Weekly* for covering the national programme for IT from the trusts' perspective; we represent the users of these systems. We take a view that is not based on our own judgment but based purely on the soundings from the NHS and they have been concerned about this centralised programme from the start, so we would be asking questions on their behalf. There is a conflict inherent in the project in that it is a centralised scheme at a time when the Government are trying to devolve decision making within the NHS.

Q148 ***Chairman:*** So we have the Health Department sending out an invitation to a press conference which is stamped "Confidential".
Mr Collins: It was not actually stamped "Confidential"; it said "Please do not pass this on".

Q149 ***Chairman:*** That is even worse in a sense. Then you have a journalist actually refused entrance is basically what you are saying. Right, okay?
Mr Collins: Yes.

Q150 ***Lord Maxton:*** I understand what you are saying about the problems with the centralised system but a centralised IT system which is going to carry medical records for everybody cannot be left to each individual trust to set up their own system. In fact that is one of the problems at the present time, is it not?
Mr Collins: That is a very good point but you cannot sustain a £12 billion programme on the strengths of its objectives. It is a very good scheme; the NHS supports the objectives of the scheme, but it is so impenetrably complex that it has run into four years of delays and trusts have been asked not to buy systems while waiting for these centralised systems that have not yet arrived and the National Audit Office pointed out in a report—

Q151 ***Chairman:*** We want to keep on the press aspects of this rather than the computer aspects. Nigel Hawkes, you are the Health Editor of *The Times* having done a number of other senior jobs as a correspondent on *The Times*. How do you find your relations with the Department of Health?
Mr Hawkes: Not particularly good. I found myself nodding when Adam Boulton was giving you evidence and saying that you would not these days ring departmental press officers to find out what is going on. You would not ring them up and say "Well this policy looks in trouble, what do you think?" You know exactly the answer you would get: you would get a stout defence of the policy and no suggestion that anything could ever possibly go wrong with it. This is the way the media operation of Government has been changed in the last 20 years, to my mind greatly for the worse. Indeed at the Department of Health now, they are even discouraging you from developing any relationship with an individual press officer. There is of course the White Book, which tells you which press officers are responsible for what parts of the department's activities, but if you are ringing with an enquiry, you have to ring a single number which will be staffed by somebody, you do not know who it is going to be, who then passes on the question. I do not understand the purpose of this; it was supposed to speed up the service but all it does effectively is prevent you from developing a relationship of trust with a particular press officer.

Q152 ***Chairman:*** Are you ever able to go through to the relevant official himself or herself?
Mr Hawkes: Only if they are organising a briefing. I might be able to if I made a request to speak to an official, yes, that might be possible.

Q153 ***Chairman:*** So this idea that there has been increased openness since 2004—you are saying a much longer period than that—sounds from your experience not to be the case at all.
Mr Hawkes: There is not greater openness, but my main criticism of the policy would be that everything is trailed. When a report is coming out, it is embargoed for a certain time and a certain date, sometimes to accommodate a parliamentary statement or something like that, but it will invariably be trailed, usually to journalists who are more likely to take a favourable view of it than to me, I must say. I accept that ministers, political advisers, can float ideas in this way. It is a good way of putting an idea into the public domain without having to claim ownership of it but it is not actually something that departmental press offices should be doing. It is a political act to decide that *The Guardian* will have this story or *The Independent* or *The Observer* or whatever. This happens all the time. Practically every detail in the Darzi report, which came out two weeks ago, had been trailed. This week it was the annual report of the Chief Medical Officer; there were stories in *The Independent* and *The Observer* trailing elements of that. These are things embargoed by the department with its own embargoes on them which it chooses to break.

Q154 ***Chairman:*** Not to mention the fact that the Darzi report was actually a statement to Parliament.
Mr Hawkes: Indeed it was; it was embargoed until 3.30 in the afternoon when a statement was being made, but if you look at the cuttings, you will find that virtually all the elements of that report had been leaked in advance or, as they prefer to say, trailed. It is wrong for a departmental press officer to be engaging in this for two reasons really. First, it makes favourites of particular journalists and particular newspapers and disadvantages the others, but, more importantly, it leads to bad reporting. What tends to happen is that certain things will get trailed in advance, sometimes on the understanding that you will not make any phone calls to stand them up or to get criticism of them. The stories appear and they are slightly half-baked stories: when the actual report appears, the appetite for writing about it has gone. Very often big announcements will be made, they will be so extensively trailed that by the time the report actually appears I cannot persuade my news desk it is of the slightest importance. "We knew all that already, did we not?" That leads to bad reporting.

Q155 ***Chairman:*** Where does the incentive for this come or where does it all originate? It obviously does not originate with a departmental press officer. It obviously originates higher up in the hierarchy. Is it a ministerial decision, a special adviser decision that it would be useful to have this in the public domain; they will have an exclusive story so they will give it a big show and all the rest?
Mr Hawkes: It is policy. This is what the departmental press office does. Where it originated I do not know. It originated probably in the Labour Party in Opposition and their skills at selectively helping one journalist, earning a few brownie points here; that is where it originated from. However, I have exchanged emails with the former head of media, head of news department at the Health Department about this, complaining about it, but it has not been changed. Where it started, I do not know, but it is now absolutely standard policy.

Q156 ***Chairman:*** In all fairness, I should say this before a Labour member says it, it is not just a characteristic of Labour governments I fear. One noticed it a bit at the end of the last Conservative Government.
Mr Hawkes: My experience goes back quite a long time under governments of all colours and it has certainly increased; I would not claim that it never happened. It is something that it is entirely appropriate for a minister to do or even a political adviser but when it gets down to the civil servants doing it, it has gone too far.

Q157 ***Chairman:*** To put it at its mildest, since 2004 and since the Phillis report, things have not radically improved as far as you are concerned in your working relationship with the Department of Health.
Mr Hawkes: They have not radically changed. There is a bit less manifest spin than there was. There was a tendency in those early years to announce everything about three times, especially new money, so you never knew whether it was really new money or not new money; that was particularly irritating and we have seen less of that. It has got slightly better, but it is still far from where it should be.
Chairman: I would like to move to security and defence and have the general position there.

Q158 ***Lord King of Bridgwater:*** A lot of attention is paid, and Frank Gardner particularly might be interested in this point, to the speech that Peter Clarke made when he was Deputy Assistant Commissioner about the way in which he thought operations were being sabotaged by the leaking of information and how irresponsible this was and the way in which certain elements of the security services, rather in the same way that we were talking about selective leaking or advantage given to particular

journalists, were giving information out which damaged security. Do you think that is a serious problem or was he just speaking in the backwash of some particular embarrassment that had happened?
Mr Gardner: That particular reference that he made in the Colin Cramphorn address was a reference to Operation Gamble, which was the interdiction of a plot in Birmingham involving the planned beheading of a British Muslim soldier. As I understand it, at the time SO15, the counter-terrorism command, were absolutely livid that somebody—and there were suspicions that it was somebody in the Home Office but it was never proven and it was always denied—that a civil servant had leaked details of that operation while it was still underway and there is a golden rule in dealing with the press that they never brief us on ongoing operations or very rarely. I have never been briefed on ongoing operations and if they do, it would madness, because if it gets out, it compromises the operation. In that particular case, as I understand it from SO15, one of the suspects was possibly still at large when the news was out.

Q159 ***Lord King of Bridgwater:*** What could the motivation have been? Could it have been to get a bit of news out to bury a bit of bad news somewhere else, one motivation that has been referred to before, or to gain kudos for the particular minister for whom he was working?
Mr Gardner: I do not know because it was never proven who it was. If they did find out who leaked it, it was never made public. I never heard who it was, so I just do not know.

Q160 ***Lord King of Bridgwater:*** What about the balance between the amount of information that you can obtain, you as active journalists working in these areas? There has been this great cry that we must have more openness and you now see open recruiting for MI5, MI6, more openness required from police on various issues. What do you think about this balance? It seems to me it gets into all sorts of areas. We have just had the earlier witnesses talking about this extraordinary problem that goes on over the Prime Minister's diary and what his engagements are because now there is a tendency for it all to be classified and minimum information given for security reasons as to where he is going to be and what he is actually going to do. What do you think about all of that?
Mr Gardner: These things tend to follow an historic pattern, that until something goes wrong, there will be increasing pressure for openness and then something will go wrong and everybody will pull in their horns and will go back down to a position we were a couple of years ago. This is happening actually at the moment with one of the intelligence agencies, where they have had a bit of a media upset, not involving me, but they are probably reviewing their relations with the media and will probably be that much more cautious for the next few months. Obviously after the whole Iraq WMD dodgy dossier period I am sure there was a review of media relations at SIS, at MI6.

Q161 ***Lord King of Bridgwater:*** This is a question that applies to everybody, but my own experience from the government point of view, and Phillis refers to a need for much greater professionalism, is the very rapid turnover of people, the lack of experience very often in the press offices and the idea that you will need to get greater professionalism into the press offices and greater continuity and this applies right across the security world where you are dealing with people who really know how to handle those sorts of issues. There is a reference that somebody gave, which certainly would bear out my own personal experience that the Ministry of Defence, for example, were considerably more professional in dealing with a lot of these issues because they actually have a lot of military people closely involved in that and there is a good measure of continuity. Would you like to comment on those points?
Mr Gardner: I am glad you mentioned the Ministry of Defence. I am not defence correspondent, my colleague Caroline Wyatt is, but there is some overlap and every now and then I do have to ring them and check things I am doing a story on that day. Generally I find that there is an enormous difference between speaking to serving officers who have recently been on operations, who are now manning a desk at the MoD, and civilians who, frankly, do not know nearly as much and will often be reading from a prepared script which has very much the stamp of central government on it; not quite spin but "This is the official line and we're sticking to it". I challenge people on this and say "Hang on, listen to what you have just said. That actually does not make any sense if you view it in terms of Operation Knight to the Charge which has just taken place in Basra for example in March", "I'm sorry that is what is written here". I am being a little unfair because the MoD have come on in leaps and bounds in the last two years; they are making more of an effort to talk intelligently to us and treat us as grownups, but they still have a way to go.

Q162 ***Chairman:*** Who are the press officers at the Ministry of Defence? Are they serving officers or a mixture? Who are they?
Mr Gardner: They are a mixture of both. They have given us three sheets of A4 size paper with all the various titles and so on. I am really straying into my colleague the defence correspondent's area here but one complaint which journalists often make is that it is a great shame that they got rid of the system

whereby you had a directorate for Navy, a directorate for Air Force and a directorate for Army. I forget what the acronym was—the military loves acronyms; TLAs, three-letter acronyms. That system worked pretty well and it was got rid of. If you could find the right person—and actually finding the right person is part of the fun of being a journalist—and then establish a dialogue, a relationship with that person, whereby they trust you and you trust them, you trust them not to spin and they trust you not to twist their words then you can get some decent information out of them. However, you have to burrow into that whole anthill that is the MoD and find the people who will talk plain English to you.

Q163 ***Lord King of Bridgwater:*** The point about them is not only were they directors of the separate services but they were uniformed as well, certainly in earlier times and I think recently. Is that one of the arguments? That is actually the point I should like to make more widely not just in defence. When I was involved in Environment, we looked at our press department and we did not just have press officers, who read out the press release and are not actually familiar, we moved a senior, high calibre guy out of the admin service, a senior member of the Department of the Environment, a civil servant, and put him in charge of the press department. There is a need for professionalism, people who have some background knowledge and understanding of the department they have been in and this idea about building up a sort of strong professional press department is part of the point. We want to get administrators trained in press, journalism, management and the techniques which are involved. It is not a black art; it does not take a long time to learn; politicians all have to try to learn it as best they can and that would improve the situation. Would anyone like to comment?
Mr Hawkes: When I was diplomatic correspondent in the 1980s, the Foreign Office ran a system very like the one you described where young diplomats at the start of their career, bright people with a big future ahead of them, had a spell in the press department and they were extremely proficient, they were very good; they did not necessarily tell you any more but you could develop a relationship with them and they would give you nudges and hints. It is a long time since I did that job and I believe the system at the Foreign Office has now changed but I would entirely endorse what Lord King of Bridgwater was saying.

Q164 ***Chairman:*** Perhaps that might be an opportunity for Tim Marshall to come in. You presumably do deal with the Foreign Office day by day.
Mr Marshall: Yes; seven days a week.

Q165 ***Chairman:*** Has the system changed and if it has, has it been an improvement?
Mr Marshall: It has changed slightly but there is still that system. Some high flyers come through and they are there because they are very, very good at their subject—you could get an Iranian specialist who will get the nuclear brief –and they go on perhaps even to an ambassadorship and they will be able to deal with the media. I am a bit of a patsy perhaps but I do think the FCO is possibly the best press department in Government.

Q166 ***Chairman:*** Is it because of that expertise?
Mr Marshall: It is because of the following, which was in place, because I believe this is what the FCO does; it certainly does it with me and it does it with the inner circle which you never ever get away from. The civil servants, not the Spads, can and should explain ministers' reasons and justifications for their decisions, actions and policies and their arguments for not taking other possible courses and why they do not accept the criticisms of their opponents. I am able, on a daily basis, to talk through why HMG went down that line on the Zimbabwe vote recently, why they do this, what would have happened if they had done that and they are happy to talk through that and that really informs you as a so-called specialist to be able to get the context. I do not know of any other department which does that. They have a piece of paper in front of them which has the line and they will read it to you and if you try to ask a question about it, it says "Computer says no" and they will read it to you again. The FCO by far and away does exactly what was recommended in Phillis and I am ashamed to say that I am a fan.

Q167 ***Chairman:*** As a diplomatic correspondent, are you also part of a small coterie of people who are branded diplomatic correspondents, so you have special access?
Mr Marshall: Yes and 'twas ever thus and 'twill always be. I do not actually see a way round that and it must be true for Nigel and it must be true for everybody here because when Brutus briefed against Caesar for the *Roman Times* it was like that. It is always going to be that way and I actually think that is reasonably healthy because when you get this relationship going with certain press officers in certain government departments—and I do have reason to ring across several—they know they are talking to someone who is not going to deliberately take something out of context because they have an agenda for their particular newspaper or whatever and spin it in a certain way. When you can have that relationship, it is extremely healthy for the flow of information and the contextualisation of your

specialist subject. It is a system which should be defended and not broken up. When everyone shows up, they clamp up and you do not get the flow because they know people and, if I might go against my colleagues, the lobby especially will take a situation, all agree what the line is and say that is the story, even when it is not necessarily. I was interviewed, with a solicitor present, by the anti-terrorist squad about the leak; it did not come from me I hasten to add, but I broke a number of lines that morning. I know that what Clarke was doing was firing a very, very heavy volley "This better not happen again" and "We're going to seek you out". The anti-terrorist squad had an investigation about who that leak was. It was not the stuff which came out in the morning; it was that somebody had told a newspaper journalist the night before "We're about to bust this lot". That was the problem. The question I have here which might have been asked is "Is this a situation you recognise?" It is extraordinarily rare. Clarke was so unhappy about it that he was able to do this shot. Political motives? Often it is a reasonably low-level person who wants to beef themselves up, if you will forgive the parlance, with perhaps a well-known journalist. It looks good in the pub. Occasionally there might be money involved at lower levels of lower crime stories but it is extremely rare and I think a message has gone out.

Q168 ***Lord Maxton:*** You are quite right in saying that those who give the briefing should be experts in the area. What about those who write about them?
Mr Marshall: Yes, they should be.

Q169 ***Lord Maxton:*** You should be expert as well. I am not talking about any of you here, but sometimes, certainly in the television media, up will come "Science Editor" or "Medical Correspondent" and you wonder what their qualification is in this area, do you not? I do. Are they doctors, do they have a medical degree, do they have a science degree or what?
Mr Marshall: Do they have the journalistic capacity to understand those and be a journalist? They do not have to understand about open-heart surgery, whether Nigel understands about how the budget for open-heart surgery is going to work this year, those are two different things.
Lord Maxton: I am not sure about that.

Q170 ***Lord Hastings of Scarisbrick:*** You referred in a previous answer to the lobby having a view and that view not necessarily being the way you, the specialists, see it. The four of you may like to make a comment each. What is your reaction to a relationship with the lobby?
Mr Marshall: They are extremely good at what they do. I am really happy that the Phillis report came up with the monthly briefings being on the record and the Downing Street website, because you can go back and look at what was said openly. Of course the old system is still there, the private briefings. You will never ever get rid of that. I find the lobby, because they are in the Westminster village, will look at a story, all agree what they think their line is and they are specialists in Westminster gossip. We do not like it when they come into our area.

Q171 ***Chairman:*** You sound like a trade union actually.
Mr Marshall: You must forgive me. There are brothers from over there . . .! I am trying to think of an example. It could be a very delicate issue like the negotiations with the Iranians to try to get our sailors freed a couple of years back. If there is a briefing and the lobby come in, they are looking at whether the Prime Minister is looking like an idiot on this. We are looking at the delicate negotiations which are going on, so there are two different things and they should be kept separate.

Q172 ***Lord Hastings of Scarisbrick:*** Mr Gardner, is your experience the same?
Mr Gardner: I have no contact with the lobby, to be honest. It just does not come across my area. One of the things you probably gather from all of this is that journalists have lots of different agendas and some people need to focus on what it means for the Prime Minister, whether the Government are eventually going to fall because of this, et cetera. The area I am in, both in my previous incarnation as a Middle East correspondent based abroad, living abroad, and now, is very much to concentrate on the facts but then to try to explain those to the public. I am afraid politics just does not come into it for me in my area.

Q173 ***Chairman:*** You actually work as a single person really, do you not? I do not know; I do not know whether there is a great security correspondent team.
Mr Gardner: There is actually. I would not call it "great" but it is called a "cluster" in the parlance, which is a little unfortunate. Back in 2004 I said I could not do the job on my own; I was doing *Breakfast News* to *Newsnight* and I was exhausted. I could not keep doing that. I pushed for a second correspondent. They appointed Gordon Carrera, whose first day on the job was the day after I got shot, so we did not really have a proper handover.

Q174 ***Chairman:*** Is there a group of security correspondents now?

Mr Gardner: No, there are two of us working for the main radio and TV outlets and there is somebody with World Service at Bush House, Rob Watson.

Q175 ***Chairman:*** Inside the BBC I understand but does it go wider than that?
Mr Gardner: Yes, it does.

Q176 ***Chairman:*** Other organisations and you join together for an annual lunch.
Mr Gardner: No, we do not but perhaps we should. That is a great idea, thank you.

Q177 ***Baroness Bonham-Carter of Yarnbury:*** My trade union has to come in here. Are producers involved?
Mr Gardner: There is a researcher. We do not actually have a full-time producer. Cuts? Thanks very much. Because of cuts we are very understaffed on this.

Q178 ***Chairman:*** Mr Marshall, just going back to your point about diplomatic correspondents, and there is another cosy group here, is not one of the hopes of the Government and the hopes of the Foreign Office that you will go soft on them because you are in the nice cosy group and you meet together and everyone is very friendly and has cups of coffee together? Is that not the other side of it? Does that not rather go against the basis of journalism?
Mr Marshall: Yes, it does and it is a danger and it is a danger you have to guard against. I have good relations with the civil servants. I do not bother myself as much with the politicians because you cannot trust them as much. Yes, of course you have got that going but you have to guard against it and when someone needs kicking, you have to kick them. The grownups realise that it is not personal and that we are doing our jobs and they are doing theirs. Yes, I have upset people in the past, but there is a bigger thing here. You are never going to get round this problem. It has always been that way and it will always be that way. If you do not develop the relationships, all you are going to do is get the read-out; you have to have the relationships and there is no way round it.

Q179 ***Lord Hastings of Scarisbrick:*** We had a fair bit of questioning to the previous witnesses about the role of special advisers and, taking Mr Marshall's point, you said you would rather talk to the officials than to the politicians. How much do any of the four of you have to do with advisers who are neither officials nor politicians?
Mr Hawkes: Less than I did a few years back. That has perhaps changed a little bit since 2004. Maybe it is just the particular personality of the political advisers that the last two secretaries of state have had but I have not had a great deal to do with them. When Alan Milburn was secretary of state, he had a very active special adviser who would ring me at regular intervals. Sometimes he would ring me when I was in the middle of a story and say "I gather you are writing about this. You should know . . ." and he would give me the line, which was helpful, I suppose. In my case, I have certainly been less in contact in the last few years.
Mr Marshall: What has happened is that between 1997 and 2003 we were pretty appalled at their behaviour and I suppose they were pretty appalled at ours. They just took spin to another level in a certain era. Then there was a shock to the system. I think you guys all realised that there was something going on here in the body politic and there are names we could mention who have written autobiographies. Then came Hutton, Kelly, the Iraq war dossier and all that and there was a real concentration of shock which resulted in things like Phillis. Since then things have got a lot better and I just do not bother myself very much with the Spads, as they are known, because they are not experts and the people I deal with are.

Q180 ***Lord Maxton:*** Have you noticed that since the Government have stopped spinning so much the Government have gone down very considerably in the opinion polls?
Mr Marshall: I do not necessarily think there is a correlation between those two things. One thing I would say is that the public still do not like us or you but what happened between 1997 and 2004 was greatly damaging. It might be able to come back, given that for the last three years things have got slightly better. The public may follow on a little bit and rank us up there with estate agents at some point.

Q181 ***Baroness Bonham-Carter of Yarnbury:*** I think it was Frank Gardner who said that the efficiency of the MoD press operation had come on in leaps and bounds. I was just wondering whether you would be specific as to what those leaps and bounds have been.
Mr Gardner: Yes. I am basing this purely on personal experience; other colleagues may well have different views. When the British forces deployed in strength to the Helmand province in the summer of 2006, there appeared to be a kind of collective ruling that it was all about reconstruction, when actually anybody who was there on the ground would tell you that it was not: it was about hard soldiering and fighting and there was no reconstruction going on at all. There seemed to be a view or a message coming from the MoD "No, no we're there to reconstruct". Actually when footage started coming out, getting smuggled out that had been taken by some of the Paras on their mobile phones, you saw just how down-to-earth the fighting was. Brigadier Ed Butler talked about guys being down to their last rations and last ammunition

in these ill-fated platoon houses. A different story was actually emerging on the ground and getting back because individuals in the Services were getting this footage back through mobile phones and so on. My colleague, Paul Wood, who was then defence correspondent, ran a big story on this at the time and it was quite a shock. People, the public in this country, had no idea in the summer of 2006 just how intense the fighting was because it was a phoney war between 2001 and 2006 in Afghanistan. There was a battalion size based up at Camp Souter in Kabul, a few Special Forces and a bit of fairly safe, benign patrolling in the North. There was no real war fighting going on. What I am coming to is that in 2006 there was an enormous amount of spin going on. That has largely fallen away, partly due to the introduction of officers who have served recently on operations. I come back to Lord King of Bridgwater's point, it is really important that particularly specialists who are covering defence and security are able to talk to people who know what they are talking about, who have been there recently, otherwise we are not going to respect them. I always argue, just from being a bolshie journalist, with people in Government. I test their lines against them and if I am talking to somebody who has not been there and who is saying "Well, this is what I'm told to say", I have no respect for what they are saying.

Q182 ***Baroness Bonham-Carter of Yarnbury:*** So you would say it is practical experience rather than Phillis.
Mr Gardner: Yes, in my case; others may well think differently.
Mr Marshall: I disagree with Lord King of Bridgwater. I do not think the MoD has come on that far. An internal debate is going on there about how modern they want to be and they are being dragged kicking and screaming into the 21st century. 2006 was a particularly black spot of spin. I fell out badly with John Reid when a few of us were having a conversation. He did say on Sky News "I hope not a shot is fired" and that had been misinterpreted to "not a shot will be fired"; he did say "I hope not a shot" so I give him some leeway on that. We were talking and he said "We are not going to go looking for the Taliban". I said "Don't worry, they're going to come looking for you". At that point it got rather nasty—the temperature chilled. We all knew, Frank knew, I knew, every defence correspondent knew we were going into a shooting match; every single one of us, yet over and over again the Government told us "No, no, it's benign, it's reconstruction". We said they were crazy. To this day I do not know whether they were lying or stupid, but I cannot think of anything else. We knew they were going into a shooting match and the British public were not prepared for it. Leave that aside, we had Afghan week a few weeks ago and the MoD were brilliant. They were brilliant with us, they cooperated and they gave us good access to information. I do think things are changing but they do need coaxing along a little bit.
Baroness Scott of Needham Market: Who do you think is driving that change? What is making that happen and why is it possible to change in the MoD and to have a good set-up in the FCO and on the other hand have one in the Health Department which is regarded as being pretty under par? Why is there this disparity?

Q183 ***Lord King of Bridgwater:*** The point you have brought out very clearly is that the FCO—and I remember—have future ambassadors in charge of the press office, they have the mainstream high flyers involved in the media side. There is not the same dependence on professional journalist press officers. Is that not part of the reason, that they do actually have, bluntly, better informed, higher calibre people with a real knowledge of the department they are representing, not some sort of journalist professional face?
Mr Hawkes: I would agree with that.

Q184 ***Chairman:*** Just to add to that, you also have to have ministers who have the confidence to say to those people that they can tell it as it is. It seems to me not enough just to blame the press officers. It is the ministers who really set down the policy, is it not?
Mr Collins: I would absolutely agree with that. It is the culture of the organisation which is reflected in the way the press offices behave. We have a very good relationship with the Passport Office after some very poor communications two or three years ago. Because the top man there wants open communications, it has happened. It is not really the press office. The Department of Health has a different culture and we have not had terribly positive experiences with the MoD either.

Q185 ***Chairman:*** There seems to be a certain clash of evidence on the MoD, whether it is edging forward or going into a Brave New World.
Mr Marshall: It is edging into a Brave New World.

Q186 ***Lord King of Bridgwater:*** The interesting point is that if you are Secretary of State for Defence—and I am not here particularly charged to defend the present occupant of that office—and if the policy has gone badly wrong in certain respects, you are also dependent on maintaining the morale of the people who are there, maintaining the morale of the people in the country behind them, their families and everybody else. That is a classic illustration of the most obvious way in which you get driven into a position in which—lying is not the right word to use,

but putting the best presentation you can on a very difficult situation is actually in the national interest. Attempts to undermine that in some ways are very difficult.

Mr Marshall: We are talking about 2006. I know what you did in Government but there is a wider thing. The British public was not prepared for what the British Government were about to do—go into a shooting match—when the MoD must have known it. Subsequent to that, yes, absolutely there is a duty of care to the people and their families, which includes getting us out there on the operations with them and showing that they are in the middle of a fight, which they are. That is what they want us to do. They want to show the British public that they are in a fight and that has now happened. In 2006 and 2007 there was almost a blanket "Oh, no, it's far too dangerous, you couldn't possibly come with us" "We'll take the risk" "No, no, it's far too dangerous". They have realised that we are in a war and the British public needs to know we are in a war. It is very positive and I hope you think there is some reasonably positive coverage of the British forces.

Q187 ***Lord King of Bridgwater:*** The two of you to the right side of the table have some degree of bipartisanship and do not drag politics into it. Move to the two on the left side of the table and you are in acutely political areas where there are lots of attempts to exploit and make pecuniary advantage out of things in a continuous and very active way. Is that not right?

Mr Hawkes: Obviously Health has been a huge political issue over the past 10 years. The Government have poured a lot of money into it; it wishes its reforms to be believed to be a success, so there is a very strong political imperative to sell a good message. Fortunately for correspondents who cover the patch, you do not have to rely on the Department; you have the medical profession, you have the managers, you have the patients, you have all sorts of people you can talk to and you can triangulate the issue from various sides. You are not really dependent on what the Department tells you and therefore their efforts to spin the news, put a positive spin on it, are beginning to fail a lot of the time. Great things have been achieved; do not get me wrong, there has been an improvement. However, you cannot pretend that everything is perfect. Perhaps maybe a more confident minister might produce a more confident press office, but at the moment I find they are just useful for getting the line; I would not use them for anything else.

Chairman: We must be wary of going back through all our ministerial experiences. I did the Health job for six years and listening to what you say about the BMA reminds me that they must be one of the great spinning organisations of all time and a great trade union as well.

Q188 ***Bishop of Manchester:*** I am a different kind of minister. May I come to the interim report which Phillis produced? In paragraph 5 there is an interesting description of the difference between special adviser and a civil servant. In both the sessions we have had this morning there has been some pretty trenchant criticism about some of the spin which the special advisers produce. In the first session, when the Civil Service was mentioned, I think I am accurate in saying that all the people who gave evidence spoke very affirmatively about the Civil Service and the sense of trust that they had in them. I think I have picked up slightly different nuances in this particular session. Tim Marshall spoke very positively about the Civil Service but I just wonder whether I am right in having detected that there is a less positive feeling on the past of Nigel Hawkes; in fact you did specifically, at the end of the reply earlier on in this session, say that you regretted in a way that a trend was beginning to develop—this is how I picked it up—in the Civil Service. I would like very briefly from all four of our guests at this moment to double-check, because it is rather important, whether a criticism is being made of the integrity of the Civil Service, that we do explore that and have it absolutely clear how you feel about the role of the Civil Service vis-à-vis the special advisers.

Mr Hawkes: My view is that the information function in the Civil Service has been politicised in recent years to a degree that was not the case under previous governments, of which I had some experience. I am not suggesting that civil servants tell lies or deliberately mislead. What they tend to do is fall back on the line, simply repeat the line and if that does not answer your question you do not get an answer. They will take quite a long time to produce an answer. They will often produce an answer in the form of an email, which inhibits to and fro discussion. I accept that this is the environment in which they are working and therefore I do not expect any more of them than that, but in the past I would have done and they are quite gifted and intelligent individuals who could do more in a less politicised situation.

Q189 ***Bishop of Manchester:*** Did you want to put a date on when you feel this change took place?

Mr Hawkes: 1997.

Mr Marshall: I think the Civil Service is not biased; it is a good outfit and you can trust them, that they are not lying to you. To go back to what I said, apart from the FCO and to a lesser extent the Cabinet Office, which does run a pretty good operation and in fact Downing Street does as well, most of the press officers in most of the Civil Service departments just do not know enough about their subject, nor are they

given enough rope, not to hang themselves but to be of assistance to people like Nigel. You need a higher calibre of person. Tom Hoskin has just gone from the Foreign Office to help at Downing Street and it is not a coincidence that he went from one top-notch place to the next. If you go round the other departments, you just do not get people of that calibre. The Foreign Office has brought in a guy called Carl Newns. He has the ear of the minister, he has the ear of all sorts of extraordinarily interesting people. It shows you they understand how it works.
Mr Collins: Because we are dealing with officials often rather than the press officers, I find that the officials work very well from that end, but when press officers get involved we can sometimes be surprised at the influence they have even on senior people in the department. My editor and I were invited into Whitehall to have a chat with the communications director of a very large department. He made it clear to us that they were not happy with our coverage of the department and that if we wanted access to their senior people, in order to make our coverage balanced, as he put it, we would have to start writing things that they were happy with. If there was a probationary period and we went through a few months of writing articles they were happy with, then they would give us access to their senior people, which my editor said we did not need. As Nigel said, once you have information you only go to the department for a line. I find officials very helpful, but I find press officers increasingly aggressive and unhelpful, with some honourable exceptions.

Q190 ***Chairman:*** I wonder whether there is a mistrust; it could be a caution or it could be a plain mistrust by officials and civil servants generally about the media. They are not confident about the media, they really do not trust the media and they think they are going to be up to all kinds of mischief. Is that fair?
Mr Gardner: This certainly comes down to a generic problem whereby often people are put in the role of media handling as though we were some sort of difficult species—well we are a difficult species, I accept that—people who have not necessarily got any expertise in media relations but are just doing it because it is Buggins's turn to be put in the media job. This is very much a problem in the military, not just in this country, but in the US as well. We specialist correspondents tend to do this for quite a long time. My colleagues who are diplomatic correspondents have been doing it for 10 years, people like Bridget Kendall and James Robbins, Tim has been doing his job for a long time and we build up a certain expertise in it. That is not matched by the people we deal with in Government. They do it max for two years and then they are rotated out. Often they have not asked to do it because they have any interest, it is just reshuffling "Oh, get so-and-so to do that job for a bit and see whether he's any good at it".

Q191 ***Lord Maxton:*** There has been much criticism of so-called spin from Government, but you yourself described how, in the political lobby, they all got together, they decided what the story was and they almost decided what the spin was going to be on that story. That is spinning.
Mr Marshall: I am not here to defend my colleagues.

Q192 ***Lord Maxton:*** Are you saying that the main political journalists are just as guilty of spinning as politicians?
Mr Marshall: Some journalists are. There are certain news organisations which take certain views on stories and certain political journalists will go along with that aspect of it. I am not saying that is healthy or good but 'twas ever thus and 'twill ever be; you just have to manage it.
Mr Hawkes: All specialist journalists talk amongst themselves. After a press conference they will all gather round and they will say "What's the line?"
Mr Marshall: Yes, and a brave journalist will say he does not agree and will do his own stuff.
Mr Hawkes: They just want to pool their information about what they have been told.
Mr Marshall: I would not dream of talking to him about anything.
Mr Gardner: Exactly.

Q193 ***Chairman:*** Last question, to all of you in turn. Has the position improved since 2004 in government communications? If it has improved, has it improved by very much? Have you any suggestions on how it could be improved further?
Mr Gardner: It largely has. In the area I deal with probably the big focus has been an absolute aversion, quite rightly, to the political use of intelligence because of the whole Iraq dossier thing. What this has resulted in, to our great frustration, but it is understandable, is that we cannot get any information out of the Foreign Office or any other departments as to what the intelligence view is on whether Iran is or is not building a nuclear weapon. There will be conventional Civil Service briefings on this and that is understandable because clearly people have decided that never again should intelligence be used for political purposes in the way that it was in the run-up to the Iraq war. In that sense it is probably an improvement. I definitely sense a desire to be helpful with government departments. I would still say this though: they are still in about 1985 when it comes to being in tune with the modern multi-media environment we work in. It is not just we broadcasters who have deadlines on the hour every hour. The newspapers now have websites, they upload video to it, if you read a newspaper, almost

certainly there will be a link at the bottom saying you can check, updated every minute, every hour whatever. We live in a very fast-moving media environment. Government departments generally are far too slow, unnecessarily. I am just going to give you an example here, a bit of research which I heard about a month ago that I wanted to do a story on. I had all the information I needed a month ago but, because it was told in confidence at a conference, I had to wait for permission to run it and it has taken over a month to get that permission, quite needlessly. It was not going to affect any operations; there is nothing secret about it.

Mr Marshall: Things are much better and they are getting better since 2004 because things were pretty bad before that. The flow of information is much better; they are putting things on the internet, the Prime Minister's conference is being televised, lobby on the record, these are all very positive things. People have obviously read parts of Phillis and they are trying to get more professional people into the media operations, but there are still not enough professional people. It is just people passing through for two years; sometimes they do not want to do it, so what is the point? It is a mixed picture. I have brought along an email from a colleague of mine. I am happy to give it to you, but in answer to that question, his second paragraph, after having praised the changes and things that are good, he then goes on to say "Having said that, I addressed a large group of government press officers a couple of weeks ago, about 60 of them, trying to indicate how we operate in a multiplatform, 24-hour environment. We have 60 radio stations we supply the news to, Channel Five we supply the news to, we have the internet, we have the television service, et cetera, and it is all 24/7. I got the distinct impression that they are several years off the pace, not surprising given the pace of change, but they have a long way to go. We in the media, especially when we are driven by commercial things or ratings, have had to embrace the "blogosphere", the this, the that, all this stuff; we have had to because it is survive or die. It is not like that in government press offices and I do not think they have quite understood 2008 and the multimedia platform.

Mr Hawkes: Have there been improvements since 2004? I think there is less obvious spin in the way policies are presented. That is a definite improvement. There have been big improvements in communications with the public through websites and participation events and so on. Big efforts have been made there but there is still an understandable reluctance to acknowledge that sometimes policies are not working. You cannot pretend everything is working 100% all the time. If there were more willingness to acknowledge a policy did not work so they will do something else, then they could build a bit of credibility with journalists and be taken a bit more seriously by them.

Mr Collins: I would reinforce Nigel's point that because there is a lack of willingness to accept problems you get difficulties such as those we have seen with exam results, the SATs difficulties, tax credits, child support, lots of IT projects going wrong and that is reflected right the way through to board level. If you look at the board minutes of some of the government departments, you see that there is no acceptance even at that level of problems. Everything is "There's been steady progress" until something goes horribly wrong. Until you have a change in the culture, I would suggest from the very top, at my level we will not see much improvement.

Chairman: That has been a fascinating session and I should like to thank you all very much for coming. Perhaps if we have any further questions we could contact you. Thank you very, very much for making yourselves available.

WEDNESDAY 8 OCTOBER 2008

Present	Bonham-Carter of Yarnbury, B	Inglewood, L
	Corbett of Castle Vale, L	King of Bridgwater, L
	Eccles of Moulton, B	Manchester, Bp
	Fowler, L (Chairman)	Maxton, L
	Grocott, L	McIntosh of Hudnall, B
	Howe of Idlicote, B	Scott of Needham Market, B

Examination of Witnesses

Witnesses: Ms Jackie Ashley, Columnist, *The Guardian*, Mr Benedict Brogan, Political Editor, the *Daily Mail*, and Mr Steve Richards, Columnist, *The Independent*, examined.

Q194 ***Chairman:*** Welcome. Unfortunately Trevor Kavanagh will not be joining us as he is attending the funeral of a close friend. We are conducting an inquiry into whether the Government's communications system is open, impartial and relevant to the public. We are obviously looking at the Phillis report and whether things have improved since then, whether the culture of secrecy and partial disclosure has improved, whether communications in terms of the regions have improved and the relationship between civil servants and special advisers. There is quite an agenda as far as that is concerned. Perhaps you could just help me on today's headlines. I see that all your newspapers, *The Guardian*, *The Independent* and the *Mail*, have got the story about a £50 billion bid to save banks, £50 billion being a fairly precise figure. As I understand it, that had not actually been decided until five o'clock this morning. No one is quoted in this story. *The Independent* says, "A £50 billion lifeline is set to be thrown to Britain's beleaguered banks". How do you think this story came to be public?
Ms Ashley: I would imagine it was one of two things. Either Robert Peston, who seems to be the Government's spokesman at the moment, put that out on his blog or, more likely, there was a Treasury briefing. I myself do not know. I was not in on that story. I am not in the daily news business any more. I would imagine they did not make that figure up out of a hat. That would have been put out by someone reliable, somebody that the journalists know and trust, presumably somebody from the Treasury.

Q195 ***Chairman:*** So it is an example of a pre-announcement of policy?
Ms Ashley: It would not have been done like that. It would not have been done as "This is what is going to happen". They would have been having a general chat about how things are going, because journalists are trying to find out all the time what is going on, the latest stage of negotiations, and I think that figure would have been mentioned then. I dare say the journalists would have then checked with other journalists as to whether they thought that figure was right and they would have agreed that that seemed to be the likely thing.

Q196 ***Chairman:*** And it would simply be understood it would be off-the-record?
Ms Ashley: Yes. That is why there is no source to it.

Q197 ***Chairman:*** And every newspaper in the country actually has the same story?
Ms Ashley: I am not sure every paper does.

Q198 ***Chairman:*** I checked this morning and I could not find a national paper that had not. I confess, I did not go to every regional newspaper as well, but I think every national newspaper has got the story on £50 billion.
Ms Ashley: It has to be said that in some cases newspapers, if they have not got it, will then follow up the story in another newspaper and make a call and check. It was not necessarily the case that every single newspaper received the briefing. It is possible that a couple of papers did and then what happened is that at 10 or 11 o'clock at night or whatever the news desk gets on the phone and says, "Why haven't we got this story?" and the hapless journalist will then check with his own sources and confirm it. Ben will know a little bit more about how this particular story came about because he was on the job yesterday as it were.
Mr Brogan: That is certainly true, I was. The story sort of emerged during the day. It has obviously been running heavily for days and we have all been pursuing it very closely. The question we were all seeking to answer was what was the Government going to announce and when was it going to announce it. As the day developed yesterday it became fairly clear that an announcement was imminent. How did that become clear? Because the more we talked to people, not just in the Treasury, but people in the City, people in Number 10, in other parts of Government, one got the sense that the Government had reached the stage where it was

ready to make its announcement and then it became a chase to find out precisely what that announcement was going to contain, what the numbers were going to be and the mechanics of how it was going to be announced. At one point yesterday we thought the announcement was going to come yesterday evening and in order to prevent a sudden flurry of evening news bulletin speculation that something was going to happen within hours a number of us were told when we asked that the decision had been taken and that the announcement would be made tomorrow morning. When we asked what the announcement was going to be we were told "You will have to wait until tomorrow morning". As far as the figure that you have mentioned is concerned, the likely scale of the Government investment in banks has been a source of speculation for some days and there has been a number in the ether since the weekend. Jackie mentioned Robert Peston. He certainly was floating figures of anywhere between £35 and £60 billion. There was almost a process of osmosis where the figure 50 started crystallising and it crystallised last night.

Q199 ***Chairman:*** You just happened to be spectacularly accurate!
Mr Brogan: It was helped by the fact that a number of us were able to have conversations with people in Government along the lines, as I am sure you will recall from your days as a journalist, of "Does this figure sound about right? Is this in the right ballpark?", and some of us were given a helping hand, that is how it works.

Q200 ***Chairman:*** What do you think, Steve?
Mr Richards: I am sure that was the sequence because Ben was involved in it and, like Jackie, I was not last night. I also think it is an entirely legitimate sequence actually. I do not see anything sinister about it in the sense that an announcement was being made formally at seven o'clock this morning. Most people will not read newspapers until after that time. There was feverish speculation all day when I left about what was going to be in it and so on. It strikes me that there is nothing contradictory in having agreed this figure of £50 billion in time to brief the newspapers and then meet all night to get these details right. You are talking about huge figures. You need all kinds of negotiations, which I think did genuinely go on through the night. I actually do not see anything sinister in this sequence.

Q201 ***Chairman:*** We are simply asking about the mechanics at the moment. Was it the Treasury or the Government trying to take control of the agenda?
Mr Richards: It is very hard when you have got a crisis on this scale and everyone knowing that a meeting of pivotal importance is taking place. In a way taking control of the agenda becomes almost meaningless. Trying to sort of retain any sense of where the agenda is going I think is probably more the context in which they are seeing things at the moment and rightly so. They are not in control of a lot of this, quite clearly, but they were in control of a particular piece of information as a result of a meeting they had last night. You can sort of see the sequence: you make the formal announcement at seven o'clock this morning having met all night to finalise the arrangements, but you give some information the night before. Ben has told you where it came from.

Q202 ***Chairman:*** You do not agree with Jackie Ashley's theory that it is Robert Peston actually leading you all?
Mr Brogan: I think there is an element of that. One cannot deny that Robert Peston has been playing an instrumental role in this story. Anybody who is in the news business has to pay close attention to what Robert Peston reports, because he is well-informed, he is well-connected and on a number of occasions he has broken the news, and so it would be foolish in the extreme to ignore him. Some might say that gives him an extraordinary degree of power, but more power to his elbow. If he is the journalist who is leading the charge on this one, good for him. You were focusing on the £50 billion figure. Of course, this morning the £50 billion figure turns out to be just one-third of a much bigger package and that is what makes it all the more interesting. We focused on the £50 billion because it was an important element of the story and, given that it involves all our taxes being invested in these banks, rather significant. The fact that we are also providing £250 billion in guarantees to these banks is also significant.

Q203 ***Chairman:*** We will come back to the general issue of the pre-announcement of stories in a moment. Let me just start with the lobby system. Are you all members of the lobby?
Mr Richards: Yes.
Ms Ashley: I am not. I was. For 12 years I worked for ITN as Political Correspondent where I was a member of the lobby. Then I was for two years the Political Editor of the *New Statesman* when I was also a member of the lobby. For the last six years I have been a columnist on *The Guardian* and I am not a member of the lobby, but I do have one of these marvellous Press Gallery passes which means I can go where I want except into Members' Lobby, which is not a great disadvantage to me anymore. When I was a lobby correspondent I spent a lot of time in Members' Lobby. I remember talking to yourself there. It was the place where one would do most of your business as a political journalist. I find these days that very little actually happens there any more,

and in fact Portcullis House and 4 Millbank, where people come to do the broadcasting, are two key places. If you drink too many cups of coffee in Portcullis House, which I do, you can still do a very good trade there in finding everyone you might want to talk to is coming by and you chat. That is how you get a sense of what is going on and get to see most of the people you would want to see. I do not miss my lobby pass any more.

Q204 ***Chairman:*** The other aspects of the lobby, correct me if I am wrong, are the official briefings that the lobby gets. Do you have access to those?
Ms Ashley: I could go to the morning one but I do not choose to do so because I do not find it a valuable use of my time. I cannot go to the afternoon ones.

Q205 ***Chairman:*** Remind us of the difference between the two.
Ms Ashley: The morning one is open to any journalist who wants to come along and the afternoon one is only for lobby journalists.
Mr Brogan: I should declare an interest here as I am the current chairman of the lobby. There are two lobby briefings. There is one at 11 o'clock that is held over in a room in the Treasury and there is one at 3.45 which is held here in the Palace. The morning one is hosted by and is really the responsibility of the Government's communications machine and Number 10. They have ended up using a room in the Treasury for various logistical purposes. The one in the afternoon is hosted by and held on the premises of the parliamentary lobby, so that one we control and the morning one Number 10 controls.

Q206 ***Chairman:*** On the Number 10 one the Number 10 spokesman presumably talks. Who do you invite to the afternoon one?
Mr Brogan: Do you mean to attend or to do the briefing?

Q207 ***Chairman:*** No, to brief or to request it.
Mr Brogan: The main person is the Prime Minister's principal spokesman, who is a civil servant and who comes and speaks to us every afternoon.

Q208 ***Chairman:*** Will he have spoken in the morning to you as well?
Mr Brogan: He will also have done the briefing in the morning. He is the main conduit of information from the Government to journalists and to the media. In the past it was a regular occurrence that every Thursday the Leader of the House would come and brief the lobby on parliamentary business. This was the case up until Jack Straw and Harriet Harman who, to my deep regret, discontinued the practice.

Q209 ***Chairman:*** It sounds as though the chief spokesman at Number 10 is on a bit of a treadmill if he is doing it twice a day. Is there pressure on him to have something new to say every time?
Mr Brogan: No. You could argue that we are all on a bit of a treadmill really. It is fair to say that he is a very hard-working and assiduous civil servant who is the person who is in constant contact with the Prime Minister and who has an oversight of what the Government is trying to communicate on a daily basis, and to that extent he is no different from his predecessors over the last decades. He is not under any pressure to come up with something new to tell us. It really is just a running through of that day's Government business, the announcements the Government is making and the things the Government wants to say something about. It could range from a statement from the Department for Culture, Media and Sport to what the Prime Minister has to say about latest developments in Russia. He is then available to answer questions from journalists who are gathered there about anything to do with Government business.

Q210 ***Chairman:*** The Independent and *The Guardian* tried at one stage to run without access to the lobby and that failed.
Mr Richards: It did, that was long before I wrote for it from what I can remember, but not very successfully. It made great waves at the time as if it was making some sort of very bold stand against what is seen as this elite unattributable gathering. It soon joined because it just missed out on very basic information, which is in effect what you get from this lobby. I think it needs de-mythologizing. When I was a BBC political correspondent like Jackie at ITN you were then obliged to go. I do not go to the twice a day thing. There were people in the BBC who were not in the lobby who thought that something kind of mysterious happened twice a day at 11 o'clock and four o'clock. I remember one of our editors saying "Get to the lobbies!" as if we all went to a confessional box and heard something utterly revealing from some mysterious figure. As Ben will confirm, much of the time it is very basic logistical stuff about where the Prime Minister is going to be the next day and this kind of thing and it really is not these great revelatory moments delivered down to a privileged few.

Q211 ***Chairman:*** If it is not that secret, why is it not just opened up to anybody?
Mr Brogan: I wonder if a lot of the myths about the lobby date back to when it was a secretive organisation that you were not supposed to talk about. You were not supposed to even confirm that these meetings happened. You certainly never mentioned the names of the people who attended or

who it was who was briefing on behalf of the Government, but that changed quite dramatically in two big steps. The first one was under John Major, when Gus O'Donnell was his spokesman, where it was decided that this had become a bit too much of a comedy act and it needed to be opened up. So for the first time it was agreed that in future journalists who were reporting on what was said in the lobby could attribute it to the Prime Minister's spokesman. That sounds a fairly mundane change but it was quite a dramatic change because suddenly things that were not attributed were attributed and you could see where the information was coming from. Then the next change really happened under the current Government early on under Alastair Campbell where it was decided to put it all on the record. So you were allowed to record what was said, you were allowed to attribute it to the Prime Minister's spokesman and once the technology developed to allow them to do it transcripts of both lobby meetings were put up on the websites. So suddenly something that had been closed and very secretive and quasi Masonic years ago was suddenly quite an open thing. The only thing that is not open is that it is not on camera, but that is much more to do with the fact that civil servants are perhaps reluctant to become faces on television.

Q212 ***Chairman:*** You would not mind it being on camera?
Mr Brogan: I have no particular objection to it. I do not know whether that would particularly improve things or make it even more informative.

Q213 ***Chairman:*** Does it put journalists who are not members of the lobby at a disadvantage?
Mr Brogan: That is a legitimate question.
Ms Ashley: I personally would love to see it on camera. I would not spend my time going there because as a columnist it is not a good use of your time, but I would love to be able to just turn on my computer and click in every day and see what is going on. As it is, every day I read the summary or, if I need to know more urgently, I will phone a friend who has been, which is what *The Independent* and *The Guardian* used to do when they came out of the lobby briefly: they got all the information from speaking to their friends on the phone. I cannot see why it cannot be televised now.
Mr Brogan: There is no reason at all other than technical problems to do with the sort of garret room we occupy at the top of the Palace which might make it tricky for cameras. The difficulty is that it might become a bit like the Chamber of the House of Commons where the minute you televise it it becomes tempting to sit in your office and watch it on television and not attend.

Q214 ***Baroness Bonham-Carter of Yarnbury:*** Why are the likes of Jackie excluded from the second lobby meeting? Is it because of space restraints? What is it that is said in that second briefing that creates the need for restraint on who is allowed to go?
Mr Brogan: The restriction on the 3.45 briefing is that it is open to all the holders of a 28A lobby ticket which is issued by the authorities of the House of Commons. So if you are entitled to be in Members' Lobby to talk to MPs you are also entitled to attend that briefing. It is absolutely legitimate to say that what is said at that briefing does not vary particularly from what is said at the morning briefing that is open to all journalists. One of the issues would be negotiating with the Commons authorities the passes that would be required to open it more widely to journalists. The other issue is that it is not open to people who hold 28A passes or what used to be the Parliamentary Press Gallery reporter passes, but you could open it to them, I certainly would not object to it, but most organisations based in the Press Gallery at Westminster have journalists with both lobby passes and non-lobby passes. You only ever send one person from the organisation to the lobby briefing. I do not think it would necessarily increase membership from among the members of the Press Gallery.

Q215 ***Baroness Bonham-Carter of Yarnbury:*** So it is really about mechanics?
Mr Brogan: Broadly.
Ms Ashley: The Guardian does have several people in the lobby. I could speak to them if I wanted to.

Q216 ***Lord King of Bridgwater:*** A lot of the lobby briefing is about what the Prime Minister is doing. How good is the liaison for the lobby when it is an important departmental story, which is quite a bit of detail but the detail may be crucial, for example, on Treasury today? How well will it cope with that or who will cope with it?
Mr Brogan: It is often the case that if there is a particular departmental announcement which contains a lot of detail the relevant director of communication or the press spokesman for that department will come to the lobby briefing with the press spokesman from Number 10 to answer detailed questions and technical questions. It is a regular occurrence that we bring in press officers from other departments to provide that kind of explanation. It is also the case that the lobby and whoever happens to be the chairman at any given time becomes a sort of clearinghouse for other departments that have announced that they want to hold a briefing on a particular issue. There is certainly a very easy and free-flowing communication between the lobby and the Government's communication machine more broadly to ensure that when there are specific issues

that require the expertise of particular departments that is provided.

Q217 ***Baroness McIntosh of Hudnall:*** Let me just go back to this question of the openness of the briefings that are given to the lobby and the fact that it changed and things are on the record. Jackie, you said it would be very useful to you if you could see it or get easy access to the information live. It has been put to us by one or two witnesses that this degree of openness actually in some ways works against the information really being useful because it is much more cautiously conveyed because it is attributed and because it is open. What view do you have about the impact of that openness on how journalists behave in relation to securing unattributed information, which clearly has driven, for example, everything that we were talking about earlier? Information which is not attributed has not come through the lobby. Has there been a corresponding increase either in the amount of information that is available in that way and/or the extent to which journalists, whether they are in the lobby or not, pursue politicians and civil servants for unattributable briefings as the lobby has become more open?
Mr Richards: I think that, whatever structural changes you make or analyse, in the end political communication will always work on two or three different levels and always has done. In America, for example, where you have televised briefings, the guy who does the briefing—and if not him, somebody else—will phone up close columnists and favoured journalists to give different forms of information. It has always happened and always will happen. To some extent the endless analysis of the way the lobby is structured and the way things are delivered on or off the record actually is irrelevant because this information will get out in all its different forms whatever structure is put in place. That is my broad view of it.
Ms Ashley: Since the days of Bernard Ingham and Alastair Campbell the whole nature of lobby briefings has changed beyond recognition anyway because with both Bernard Ingham and Alastair you felt you had someone that knew exactly what their masters were saying or thinking—perhaps in Alastair Campbell's case maybe a bit before his master thought it! You really felt you were getting a real sense of what was going on in the Prime Minister's mind. There was a step back probably post the Hutton report and David Hill came in and was much less controversial, more straightforward and then that has continued through. I think Michael Ellam is the same. So you are not getting that same sense of real briefing of the Prime Minister's mind anyway. It is already on the record so I cannot see what the difference would be to put the cameras in on the lobby thing. I think Steve is right, you will always get the unattributable briefings, the contacts between journalists and Ministers, journalists and special advisers and, more rarely, journalists and press officers. I do not think you get much off-the-record at that level, but you always have the ministerial and the parliamentary contacts with journalists that you cannot stop and nor would you want to stop them.

Q218 ***Baroness McIntosh of Hudnall:*** The question that arises then is what is the function of formal lobby briefings in that environment?
Ms Ashley: Simply practical, to be telling you what the response is to the day's events, what the Prime Minister is doing that day and what announcements are coming. You do need a basic structure to the day for the daily journalists of what is happening.

Q219 ***Baroness McIntosh of Hudnall:*** If it is the case, as Steve Richards just told us—I know that he was referring to America, but I imagine something similar goes on here—that you can get a different story by having an off-the-record conversation with somebody who amplifies what had been said or tells you something different, then what is the status of that information and why should anybody treat it seriously?
Ms Ashley: Of the extra information or of the lobby information?

Q220 ***Baroness McIntosh of Hudnall:*** No, of the formal information, of the information which has been given on-the-record. What is its materiality in a world where you can go somewhere else and get another story?
Mr Brogan: I think its materiality is largely to do with the fact that a government on a 24-hour news cycle has to get its message out somehow. The Government does a lot of things every day. It does not just talk about who is up and down in Cabinet or whether or not it is pumping lots of money into the banks, it gets on with daily business. Every day the Government—and the Government is centred on Number 10—needs to get that message out. It needs to be able to say, "We're announcing this, this and this. We're doing this about Russia and this about Palestine". That bundle of information, which is very routine information, it is not spin, it is not interpretation, it is just factual information, needs to be got out. It has been found through trial and error over the years that one of the easiest ways of doing that is to get the guy with the information in front of a whole bunch of people who want the information and to have that conversation going. I think that is why this structure has emerged. The fact is that it has emerged slightly organically. There used to be a time many years ago when as a young lobby correspondent I would ring up an MP and one of the first questions the MP would ask if he did not know me was, "Are you a

member of the lobby?" and that was a form of code for saying, "Can I talk off-the-record to you and be certain that you are not going to stiff me by saying who I am?". That was a long time ago. I do not get that question so much anymore!

Q221 ***Lord Grocott:*** I was extremely interested in what Steve Richards had to say there—I hope I am reflecting you accurately—in that you said, whatever structure you set up, it will be the informal structures, the contacts, the phone calls in the night, et cetera that are really the mechanism whereby politicians and the media communicate. I happen to agree with that. I am not saying that it is a good system, just that there is a degree of inevitability about it. If that is the case and I think it is, given that the whole direction of travel as far as governments and politicians are concerned has been towards more and more openness, Ministers now have to make their diaries freely available to the media, is there a two-way process here? Are we, the public, entitled to know about the contacts that journalists have? I know you are going to come back at me about protecting sources. Surely it is a significant piece of information if, for example, a particular journalist in any given week was speaking to 80% of people from party A as opposed to 20% of people from party B. To what extent is the responsibility on rebuilding trust a responsibility that journalists need to take? I speak as a member of the NUJ.

Mr Richards: There are about three themes there. The rebuilding trust theme is massive. I would argue there that the media have a huge role to play. I think that is a separate issue from the way information gets out. Hugo Young once wrote a brilliant piece, it was when *The Guardian* withdrew from the lobby, saying the key element to a story is the unattributable source. He made a very valid point. In other words, if Hugo Young wrote a column on the economy and his source was the Chancellor of the Exchequer, the fact that readers do not know that means they are excluded from a very important piece of information. However, none of the information would be out there if the source was revealed. That compromise will be endlessly made and replayed, but that is not about trust, that is just the way politics functions.

Q222 ***Lord Grocott:*** It is about trust in the accuracy of the report. We could all bring examples where the whole of a piece is about unattributable quotes, sometimes in inverted commas, without naming the person. That seems to me to be entirely the wrong way of doing things. The piece would not exist were it not for the unattributable quotes. The unattributable quotes are always attributable to some person. It usually says something like "A senior Government person". You tell me, what is a senior Government person? Is that 10 people? Is it 20? Is it 50? Would you all agree on who those people were because generally speaking I find most controversial the unattributed quote the more senior the person is to whom it is attributable?

Ms Ashley: The Guardian endlessly has these initiatives where we are not allowed to quote anybody unattributably and we all go through a few months of tearing our hair out and then we go back to it again. Let me take a concrete example because you cannot really talk about these things without an example. Let us talk about the rumblings against Gordon Brown that we have seen through the summer. I myself have written pieces where I have quoted unattributable Cabinet Ministers, Ministers and MPs saying, "It's terrible. He's on notice. We're thinking of resigning . . ." If I had quoted what they will only say to me on the record they would say, "Gordon Brown is the best Prime Minister we've ever had and he will certainly lead our party into the next election," because if they knew their names were going to appear in my piece that is what they would say. What they say to me when they know it is unattributable is what they actually think, which is that he is making a dog's breakfast of it and if he does not sharpen his act up something is going to happen. What do I do as a journalist? Do I say I will not take an unattributable quote, so I am not going to represent what you and quite a lot of your colleagues are saying, or do I say I will only take something with your name to it, in which case I am not giving the readers a true sense of what is happening in Parliament?

Q223 ***Chairman:*** What I suppose you have to do is you have to use your own judgement on how serious this particular person is. We all know that in any party there are some who are in a constant state of rebellion and dissatisfaction with life in general. If it is just one of the usual suspects—and even the Liberal Democrats have usual suspects—that is one thing, but if they are serious people that is another. In that sense we just have to rely on journalists, do we not, for their judgement?

Ms Ashley: What happens is you build up relationships both with politicians and with your readers over the years. Most of us journalists know who each other's contacts are or a lot of them. We know who drinks with who, who dines with who and who talks to who.

Q224 ***Lord Grocott:*** Should the public not know which journalists are in constant contact with whom? It is freedom of information.

Ms Ashley: I think if they did know then the information would dry up pretty quickly; that is the problem.

Q225 ***Bishop of Manchester:*** Before we leave the lobby briefings issue I just want to explore the role of Ministers in it. As you know, the Phillis review recommended that there should be more hosting by Ministers of lobby briefings. I think I am right in saying David Blunkett did that on one occasion and was not wholly happy with the experience, and then on another occasion the Chief of Defence Staff and the Defence Secretary contradicted each other in front of all the journalists and that seemed to end the experience. From your point of view, was it worthwhile? More importantly, do you feel that better contact between government and journalists maybe of a more reliable nature, that is, if you had the Minister there, would aid things considerably or would it make no difference at all?
Mr Brogan: It depends on what we are talking about. It is certainly the case that were we to have a member of the Cabinet, for example, who was willing on a daily or weekly basis to come up and sit in front of gathered members of the lobby and field questions on any subject under the sun on the record then I think people would be very keen for that. You rightly mentioned that there have been occasions of that in the past where it has gone incredibly well from our point of view because we have got great stories out of it but it has not gone particularly well from the point of view of the Minister who then has found himself on the phone with Downing Street trying to explain why he said that and it does not quite match what the Government had said earlier. It is a slightly risky proposition, and Ministers are quite risk averse in the sense that they do not want to put themselves in a situation—it is a bit like appearing on *Question Time* or doing PMQs where they have to face questions about things that are outside their brief. They tend to be very uncomfortable about that. I suspect that may be one of the reasons why Harriet Harman has pulled out of talking to the lobby, that she did not want to expose herself to the dangers of being asked questions about routine Government business or what is going on in politics. The reverse is that the Minister for Food might decide to come and brief us once a week and it may be that, even with the best will in the world, we may not necessarily find a lot of things to ask about food policy on a given Thursday, for example, and therefore the danger is that you could hold those briefings and they would not necessarily be particularly productive either in terms of information or news.

Q226 ***Chairman:*** You might like to have a Treasury Minister, for example, at the moment to come. To have it inflexible with the food minister coming every second Thursday would seem to be absurd. Surely you could choose to have the Ministers who are in the news at that moment answering questions on their subject. I can see why a social services secretary might not want to go and answer questions about international development and that is perfectly sensible, but he might want to answer questions about his own subject.
Mr Brogan: If the Committee might like to recommend that the lobby should have the power to summon Ministers to come and give evidence, I think that would be an astonishingly good development!
Mr Richards: I think those questions lapse into this error of assuming again omnipotence on behalf of lobby journalists. For example, right now the Treasury is giving a detailed briefing, which will no doubt be attended by every economic specialist in London, on this extraordinary news story. The people feeding that news story today will not just be lobby journalists, that would just be one element of the story and on a day like this, I suspect, a relatively small element of the story. To some extent when there are big news stories, September 11, a big education story or whatever, it is not all done by the lobby at Westminster, the specialists do tend to get separate briefings at the department.

Q227 ***Chairman:*** It is done by a different lobby.
Mr Richards: You could argue that that is the case, yes.

Q228 ***Lord King of Bridgwater:*** I am interested in the briefing we have had here. There is this new idea that Ministers should brief the lobby. I have memories of coming to that upstairs room which, I seem to remember, did not have much disabled access but fit journalists got there. I also remember that during the first Gulf War we had a briefing every morning, that is exactly what Steve was saying, and all the defence boys were there, but then because it was such a big story it was highly political as well and so a lot of the lobby used to turn up to that as well. I remember having the Chief of Defence Staff standing beside me. It is not impossible for two to appear. I do not think we all came to blows. Do you not remember that? I think the one thing you cannot do is say, "And by the way, what's happened over pensions?" or "What's happening over social security?" or "What's happened to your colleague who has gone missing in South America?".
Ms Ashley: I think there is a point about this Leader of the House briefing which we used to have and which I used to find very valuable, because at the moment there is no way of saying, "So what is coming up? Where's the legislation going? When are we going to have the debate on this key part of this legislation?" It is always an overview of what is coming in the next week or the next couple of weeks.

Q229 ***Lord King of Bridgwater:*** That is all they know.

Ms Ashley: That was very useful to journalists.

Q230 ***Lord King of Bridgwater:*** Then they have got a brief from the department and they have got to follow that thing of lines to take. If they ask you about the Criminal Justice Bill, which you do not know anything about or what you are doing about some Defra Bill, you are getting very much secondhand information from the Leader of the House, are you not, except for the programme?
Mr Brogan: It may be that we should move to the French system where you have a government Minister who is designated as the government spokesman and therefore should make him or herself available on a regular basis.
Chairman: We have been round that course before as well!

Q231 ***Baroness Scott of Needham Market:*** If we accept the point about the lobby, the kind of mystique being more apparent than real, it is certainly very clear that within that there are certain individuals who develop access and a presence which surpasses others and we have talked about Robert Peston, for example. What are the characteristics that lead to that sort of relationship? What are the things that give particular journalists an edge over the others, and what are the down sides? Does it mean that the rest of you are always playing catch-up with one individual like Robert Peston?
Mr Brogan: It would be lovely to think that it is my charm and ability that accounts for the fact that I have good contacts in government, but I think it is largely to do with the fact that I am the Political Editor of the *Daily Mail*. Trevor Kavanagh is a genius journalist, but I think it helped enormously that he was the Political Editor of the *Sun*. It is the same for Nick Robinson, Tom Bradby and Adam Boulton. There is a direct relationship between your level of access and the ease with which you can talk to people across government, in Cabinet, Number 10 and the news outlet you work for. Certainly that is something which is often in danger of being accentuated. My colleagues in the regional media lobby often complain that they are neglected as a result. It is often the case that one of the things I have to deal with as chairman of the lobby is decisions by a department or the Government to announce something just out of time for evening newspapers out in the regions, for example, which find themselves completely stuffed just because nobody has thought of them. The question of access is entirely to do with who you happen to work for.
Ms Ashley: I would agree with that. There is also the factor of how long you have been around and who you know and who you have got on with over the years, because let us face it, people do have a drink together or a cup of coffee together, politicians and journalists occasionally speak together, you do develop relationships with people over the years and I think those matter, and that is the difference between making a phone call to the minister at the weekend or at night and getting through and them picking up the phone or not. That is partly a function of being around and partly a function of how your relationships develop. I think Ben is absolutely right: whoever was in his job would have his calls returned.

Q232 ***Lord King of Bridgwater:*** Is that not the answer why Robert Peston is very important? It is absolutely crucially important the *Today* programme does not go wildly out—in the current situation we are in, if we went wildly off on the wrong tack it could have catastrophic consequences. If you are a government it is critically important that you get the messages across. It is a difficult challenge here. The *Today* programme has far the biggest circulation of any communication in this country of the more concerned or thinking classes.
Ms Ashley: And yet arguably the *Today* programme's political reporters do not get the greatest access. Nick Robinson does, but he would not consider the *Today* programme his main outlet. With Peston I think it is slightly different because he came from a business background. He is obviously not to do with politics. A lot of his contacts are with people in the City, in business, and it is because he has those kinds of contacts that people in government feel they have to talk to him as well. In a way it is not just his position.

Q233 ***Chairman:*** Mr Brogan, I notice that your paper today is actually saying the BBC's Robert Peston was accused of helping to trigger the tumultuous fall in UK bank shares yesterday. It does not sound as though he is propping it up too well just at the moment.
Mr Brogan: I am not sure I want to turn this into an evidence session about Robert Peston's journalism. I want to approach the point that Lord Grocott raised earlier, which is the question of trust, and Lord King touched on it as well. The *Daily Mail* has a very close relationship of trust with its readers. Every day 2.3 million people give or take are willing to spend 50p to buy a copy of the *Daily Mail* and that relationship is vitally important to us because we are a commercial organisation that stands or falls on our ability to sell newspapers, and therefore the Editor of the *Daily Mail* trusts me and our readers trust us to get the story right, to talk to the right people and make sure that in our coverage we are on the money when it comes to what is going on in politics. That means that when we approach stories and when we approach our coverage we give this a lot of thought and we do not take wild punts and we do not go off on funny tangents, we try to stick on the story because that is what our readers expect of us.

Q234 ***Lord Inglewood:*** As you know, the inquiry is really trying to assess what, if any, impact the conclusions of the Phillis report may have had in the landscape we are all talking about. I think it is fair to say that the general impression that has so far been given to us by the evidence we have received is that there has been a general improvement in this kind of relationship between government, politicians, the media and the general public. First of all, in very general terms, is that something you might subscribe to? Let us be a bit more specific. It was suggested in that report that the government should embrace the principle of "openness, not secrecy," whatever precisely that might mean. Has that happened or is it the case that people are open about the things they want to be open about and secret about the things they want to be secret over and it was ever thus and it will always be that way? In terms of you trying to do your job to try and discover what is actually going on, obviously it does not play a part in the context of breaking news, but is the instrument of the Freedom of Information Act as important, more important or less important than openness on the part of your interlocutors within the government establishment?
Ms Ashley: I still feel there is an attitude on behalf of certainly the government's communications service that it is "our" information and we are doing you a favour by letting you have it, which I think is slightly different from the American system where it is, "Can we help you? Here is the information". The Freedom of Information Act has almost made it even more like that because people will tell you privately that whenever they get a freedom of information request they groan, it is an "Oh dear, these people are coming after us". I do not know how you ever change that culture, I think it is very difficult. Although it is better now than it used to be, there is still that culture of it is our information and I am doing you a favour if I am telling you and I will probably try and delay giving you information until it is a bit too late anyway. There is a lot of that goes on.

Q235 ***Lord Inglewood:*** So it is a culture of secrecy?
Ms Ashley: I think it remains a culture of secrecy, yes.
Mr Richards: I think the context of the Phillis report was misjudged. I do not think there is a sinister development in the number of special advisers. I personally, although this is a minority view, did not think there was anything especially sinister in the role that Alastair Campbell played; in fact I think it was the opposite, I think it was a totally open relationship. He was Blair's Press Secretary. You did not, as a journalist, phone up Alastair Campbell to have a candid discussion about the flaws of Tony Blair; that was not his job. I did not think there was anything sinister in any of that. I did not think there was a reason for the Phillis report. I think lots of the Phillis report was incredibly naïve. This term "openness" can mean a thousand different things. I agree with Jackie about the press officers of a lot of the departments, I think there is a culture there of secrecy, but in a way even that is now being overtaken because quite a lot of the information that they used to give out you can get on the internet in about five minutes. The role of the Civil Service press office needs looking at, but that is never where the focus is. There is this myth that this Government has invaded that neutrality by bombarding the advisers who are utterly unreliable, biased, aggressive and vicious. I think that is part of the mythology and the reality is far more complicated than that.

Q236 ***Lord Maxton:*** What you are really saying is that in fact there has been a great increase in the availability of news, it is much more open than it was in the past. Lord King made the point that he did his ministerial briefings to the lobby, but they were secret. They were not on the record, they were off the record. Now these lobby briefings are on the record. Is that not a more open society?
Mr Richards: It is more open. Everyone was saying when these ministerial memoirs of this Government came out "Oh, it'll be revelatory and sensational" but we knew it all.

Q237 ***Chairman:*** Is not the more important point that Jackie Ashley made and we found it when we were doing our investigation into ownership and that is, that the attitude in the United States is far more open to inquiry than it is in this country? It is not just government. We had a certain amount of difficulty, you may be amazed to know, in getting information out of media companies as well, not least newspapers. I do not know why there is that. Why do you think there is that? Do you agree with that division and why is it?
Mr Brogan: I wonder if in America there is a much clearer culture which says that the Government is the servant of the people and the people pay taxes. You do not necessarily get that impression in Whitehall always. The original question was about the Phillis review. My honest answer would be that I am not quite sure what difference the Phillis review has made certainly as far as my working is concerned. Lord Maxton is absolutely right to say that there have been these developments to make the lobby briefings, which is where I do most of my business now, on the record, but those were universal decisions taken by governments, first a Conservative government and now a Labour government. Certainly the most recent changes in how the government communicates the most significant ones were the ones that were introduced by Gordon Brown when he came into Number 10 and again seemed more to do with

unilateral decisions taken by a new Prime Minister rather than anything recommended in the Phillis review. I tend to agree with Steve, after going back and re-reading the first review some years on, that a lot of it does sound slightly naive and I am not quite sure what impact it has had.

Q238 ***Lord Maxton:*** So what is the purpose now of these two meetings every day? If something breaks between the morning meeting and the afternoon meeting, I assume you go to the relevant departmental website or the 10 Downing Street website and you get that information before the afternoon meeting.
Mr Brogan: No, we do not. It would be lovely to think that government websites, including the Number 10 websites, operate in real time to use the jargon, but the fact is that there is a bit of a lag time between information being available and it appearing in useable form on websites. I know this internet thing is the future, but I actually quite like talking to people, whether it is MPs or members of Number 10.

Q239 ***Lord Inglewood:*** Is it fair to say that the whole debate about the Phillis review was really an argument more about form than substance and that the reality is that the world goes on and there is a slight cycle, the pendulum can swing one way and another, a bit in favour of openness, a bit in favour of secrecy and these kind of initiatives do not have a great deal of bearing in the real world on the way these things are done for real?
Mr Brogan: I think there is a lot in that. The big problem for the Phillis review is it has been overtaken by the Freedom of Information Act and the impact that that has had. Equally, it did not speak to the fact that how a government communicates is ultimately decided and influenced by the people at the top who set the tone as to how open he or she wants to be. Going back to Steve's point earlier, you can change your systems, you can abolish the lobby or have us meet in permanent session all day. The fact is that there are going to be public ways of getting information out that have operated since time immemorial which is to do with people like me talking to people we know.

Q240 ***Baroness Bonham-Carter of Yarnbury:*** One of the recommendations in the Phillis report that was instituted was a personnel point, that is, that the two posts of Prime Minister's Official Spokesperson and Director of Communications were separated and that did happen for a bit and then under Gordon Brown I think it has reversed again. Did it make any difference having two people or one person covering those roles?
Mr Brogan: In a funny way it has not. Those were mechanistic changes in the dying days of the last regime. In a funny way what Gordon Brown did was just decide I want one person who runs my communications and he is going to be a civil servant and he is going to be my chief spokesman. I remember when Michael Ellam, who holds that role and who is a very talented former Treasury civil servant, took it there was a great debate as to what his title should be. The argument inside was that they should move away from all these complicated titles with commas and brackets and just move it down to the Prime Minister's spokesman full stop, which was incredibly simple. I think what we should mention is that while the Prime Minister introduced a single Civil Service spokesman and made him the lead spokesman for the Government, if you want to know what the Government has to say it comes from that person and no-one else, he did nevertheless retain a political special adviser who provided his political communication and who did the stuff that Michael Ellam cannot do as a civil servant, but that is no different from what operated under the previous regime.

Q241 ***Baroness Bonham-Carter of Yarnbury:*** And that was Damian McBride?
Mr Brogan: Exactly.

Q242 ***Baroness Bonham-Carter of Yarnbury:*** Who has now gone.
Mr Brogan: He has moved to another role. He has been replaced by somebody else.

Q243 ***Baroness Bonham-Carter of Yarnbury:*** What is his other role?
Mr Brogan: As far as I understand it, he is involved in longer-term strategic and policy issues in Number 10.

Q244 ***Baroness Bonham-Carter of Yarnbury:*** So he will not be dealing with journalists any more. Is there someone who will be?
Mr Brogan: There is indeed.

Q245 ***Baroness Bonham-Carter of Yarnbury:*** It sounds to me like nothing has really changed.
Mr Brogan: No. You have somebody who does the Civil Service bit and who is preeminent and then you have somebody who does the political bit that the civil servant cannot do. That seems to me a fairly straightforward arrangement.

Q246 ***Baroness Eccles of Moulton:*** At the beginning of the meeting we had a very interesting discussion about how the £50 billion Government support for the banks emerged and crystallised during yesterday

and the very interesting way in which it developed as the day went by. At the moment we are in the grips of a global event which probably none of us has experienced the magnitude of before. The question is a much more direct and specific one, which is whether any of you have been approached with pre-announcement information by either specialist advisers or government officials? I think we are talking about events of perhaps not quite such earth shaking importance as we were discussing earlier. Is that the case? Does this ever actually happen?
Ms Ashley: Perhaps I could come in as a columnist here, which is a very different job to a daily news journalist. I will very often get people, particularly in the areas that I am known to write about like health or social care, who will come to me and say, "Jackie, we're doing this. We're announcing this next week. Would you like any guidance? Would you like any help with figures? Would you like some people to talk to?" I see nothing wrong with that because it then gives me the time to get my head round it, to then talk to the people in the pressure groups concerned or anything else. That does happen quite regularly. Having said that, it is not only special advisers, it is also the pressure groups, charities, other MPs, all sorts of people do come to people, particularly now we have our little email addresses at the bottom of our pieces all the time. My inbox is constantly clogged with people saying how about this idea for a column or how about that idea. I think that is the way the journalistic conversation goes now. Anyone wanting to get their bit in public will approach a journalist and it is then up to the journalist as to what use they make of that information.

Q247 ***Baroness Eccles of Moulton:*** I suppose that is all right as far as it goes, but as far as the public is concerned, it sees information coming to it through the media before the official announcement has been made by Government and these are always labelled as "leaks" and that seems, from the receiving point of view, to have a rather different impression to what you have just explained, which seems to be perfectly all right. There is a disconnect between the way it appears and happens with you and the way it appears to the public.
Ms Ashley: There is no doubt people would try and give you a bit of information in the hope you will then write about it in a favourable way. They are not going to tell you something in the hope that you will say what a terrible idea this is. I think then you have to trust the integrity of the individual journalist to make their own decisions as to whether or not (a) it is worth writing about and (b) whether or not it is a good or bad thing. Journalists are then left to take their own view of it.

Q248 ***Baroness Eccles of Moulton:*** But then they have to hang on to that information until the Government has made an official announcement.
Mr Richards: I do not think there is that disconnect. I think there is in Parliament. I know a lot of parliamentarians get very worked up that they are not the first to hear of an announcement when it is made in a statement in the House of Commons or the House of Lords. When Brown first came in he decided to stop formally doing pre-announcements on the *Today* programme, for example, and then when they would offer someone to speak, a Minister once they had made the announcement in the House of Commons, they would often say the next day, "That's yesterday's news. We don't want them". They started missing out on the slot where many people would hear that announcement. The problem is you now have to work within the rhythms of news because people, sadly, do not get politics unmediated. I wish they could but they do not. They get it mediated. So they will not be here at two-thirty or three-thirty to hear it in the House of Commons and the House of Lords. They will hear it and read it and watch it and that is just the reality of the world in which we all live.

Q249 ***Baroness Eccles of Moulton:*** Maybe the term "leaks" will gradually disappear from the vocabulary because obviously it is misleading.
Mr Brogan: Yes, it is misleading in that context, it is, especially if you hear the Minister talking about it; clearly it is not leaked.

Q250 ***Chairman:*** Is not what you just said, and it may be an entirely, I am sure it is, truthful description of the position, but it is rather saying, if I am a parliamentarian, which I hope I am, that the *Today* programme is rather more important than Parliament.
Mr Brogan: No, no, definitely not. In fact, I think in many ways the *Today* programme's influence is over-exaggerated in some ways. It cannot take a view. I think newspapers are hugely influential because they can take views and a programme cannot, but clearly what it does do is provide an audience and Parliament is massively important, but it does not provide an audience and that is the issue when you are trying to get information out.

Q251 ***Chairman:*** Do you get exclusive stories as a reward for support? Jackie Ashley has talked about a genial way, but do government departments occasionally go to their friends in the press, it may be on an issue, it may be on party lines, and say, "This is what we are going to do"?
Ms Ashley: I think that does happen, I am afraid, yes, it probably does.

Mr Richards: And it always has, but reward is perhaps the wrong way to look at it. I think it is certainly true that first you have the question of Ministers who are in charge of a policy, the planning and announcement and those Ministers may have relationships with particular journalists or particular newspapers. They may feel that their pet project is going to get a particularly fair hearing in *The Independent* or *The Daily Mail* or *The Telegraph*, depending on the subject, and, therefore, all ministers want their projects to be noticed, to be fêted, to have an impact and to have achieved something and to do that they want it to be heard about, reported and, therefore, they will occasionally place it. On the point on pre-announcement leaks, so-called, I think the thing to remember at all times is that, when that happens, it is because a politician behind it wants that to happen, so we should be clear that we are not talking about unilateral action by officials or special advisers, but a politician, and sometimes those reasons could be as mundane as you happen to be the Minister for Defence and you are about to do something really interesting concerning troops in Afghanistan and it is in the grid, the sort of timetable for announcements that week for this morning, and yesterday or two days ago you realised that this morning everything was going to be wiped off the map and your story is going to get no airtime, so you may decide to actually brief *The Telegraph*, for example, two days before or a day before in order to get a chance of some kind of coverage for it before it gets wiped off the map by bigger events.

Q252 ***Baroness Scott of Needham Market:*** I was just interested in Steve's point about being a pragmatic response to journalistic timetables because the question then is: in whose interests is this? One of the advantages of having the announcement in Parliament and all the journalists hearing it together is that, as a citizen, you then get a kind of more rounded view of what the policy is. The problem with the situation as just described is that you get one partisan journalistic view and the public maybe have to wait several days before the full story gets revealed or the full impact of the policy and I just wonder if there is an extent to which the citizens are not being best served by the approach that exists at the moment.
Mr Brogan: I do not think they are being best served, but, unless you make it compulsory for them to watch a statement at 3.30 in the afternoon, that is not the way they are going to do it, sadly. I agree with you, I think in a way again, which is really underestimated, that some of these statements are fantastic politics actually, the way you get an interchange between a Minister, especially if it is a controversial announcement, and then what happens for the next hour in the House of Commons. I personally love it and I think other people would love it if they watched it, but they do not.

Q253 ***Baroness Scott of Needham Market:*** I was not suggesting that the nation would cease working in order to watch a statement, but simply by going to one favoured journalist who is going to give it a good run-through the first time just means that you have to wait several days, as the citizen, before the issue has been picked up in a more rounded way. That was all.
Mr Brogan: No, it is an imperfect process you get.

Q254 ***Chairman:*** But pre-announcements, even in the time I have been in Parliament, do seem to have increased now in number. I will not say it never happened in the 1980s, it obviously did, but it certainly happened more in the 1990s and it probably happens more now. I think that is not an unfair way of putting it.
Ms Ashley: I think there was much more deference for the parliamentary system then. Ministers would not want to pre-empt the parliamentary questions and they would think, "Oh, we can't do that, it's not proper". I think now people are more concerned with getting themselves on the media which, for better or worse, is the way it is these days.

Q255 ***Lord King of Bridgwater:*** Do you think you get used a bit more? I just get the feeling that there is a bit of pre-announcement going on which is actually kite-flying—that somebody is given the story and then, when the world blows up, we do not hear any more about it. Do you think there is a bit more of that going on?
Ms Ashley: Yes.
Mr Brogan: Yes, I do.

Q256 ***Lord King of Bridgwater:*** That is actually a risky approach by any Minister or government department because in many cases that journalist will not trust them again. Is that not right, that they run it off as a story of what is going to happen and they are actually being used? Am I right?
Mr Brogan: Yes.

Q257 ***Lord Inglewood:*** As intimated in an earlier comment, parliamentarians feel very strongly about statements being made to Parliament, but the events of the last 24 hours seem to me to make it pretty clear, that, as far as the decisions about what might or might not be done to assist the banking system are concerned, it was to the market that the statement had to be directed, and Parliament, in reality, was of secondary importance, because, if you had got it wrong vis-à-vis the market, that was meltdown. Now, is that a fair assessment of the realities of it?

Ms Ashley: I think that is a particular case though, is it not? Most statements which are pre-leaked or not are not sort of affecting the markets in that way.
Lord Inglewood: That is true, but it is important because it is actually indicative possibly of a principle that has a wider application, is it not?

Q258 ***Chairman:*** We have kept you past the time that we promised, but could I thank you very, very much for coming. It has been a fascinating session and perhaps, if we have got any other questions, particularly about the mechanics of the Lobby, which I think we are now getting our minds round, we could come back to you, but thanks very, very much indeed.
Mr Brogan: Could I just say that Joe Haines, who was Harold Wilson's Press Secretary, did scrap the Lobby for a time. It is worth looking at; it is very interesting.

Q259 ***Chairman:*** I remember.
Mr Brogan: You were probably on the other side at that point, and they just got 150 calls a day and, for logistical reasons, reinstated it.
Chairman: Thank you.

Examination of Witnesses

Witnesses: Mr Bob Ledwidge, Editor, Regional Political Programmes, BBC; Mr David Ottewell, Chief Correspondent, *Manchester Evening News*; and Mr Chris Fisher, Political Editor, *Eastern Daily Press*, examined.

Q260 ***Chairman:*** Thank you very, very much for coming. I am sorry we are running a little behindhand, but it is important for us that we try to bring into our investigation—I will not go through the whole business of what it is all about and government information and so on, but that we try to bring in the importance of the regional media in all of this. I think I had better declare an interest as I was Chairman of two regional newspapers in Birmingham and in Leeds, and I know that part of my claim was always that, based on, I am sure, impeccable public opinion research, the regional press was more trusted than the national press. Doubtless, you agree with that. I do not know whether it applies to broadcasting or not in the same way. Some of the latest developments as far as regional media are concerned are not altogether encouraging, I think. Is the BBC intending to continue with its present emphasis upon regional news?
Mr Ledwidge: Yes, absolutely, and it is sad to note that ITV is diminishing its regional news operations to some extent which we in the BBC regret. It is still going to have a regional news service, but a reconfigured one, not quite as local as it was before, but the BBC is absolutely committed to regional and local broadcasting.

Q261 ***Chairman:*** So we are not going to see any cutbacks as far as that is concerned?
Mr Ledwidge: Well, not as far as I am aware, but I do not have the say-so, sadly.

Q262 ***Chairman:*** Let us ask you then about the various issues. The Phillis Report was published in 2004. Has there been a noticeable improvement as far as government communications are concerned at regional level since then? Have you noticed that?
Mr Fisher: Well, if there has been an improvement, my Lord Chairman, it has somehow passed me by. I think it is the case that the more things change, the more they stay the same. In my experience, communications with the regional media by the government information system have always been mediocre at best, and I think that is still true today.

Q263 ***Chairman:*** Would that be your view as well, Mr Ottewell?
Mr Ottewell: My view would be that the quantity of information we get has certainly improved since the review, but that has not translated necessarily into more and better coverage, and I think the reason for that is that the quality, as far as we are concerned, is often too low and I think that is based on, and I am sure this is something we will talk about a lot, a fundamental misunderstanding sometimes of the requirements and the nature of the regional press.

Q264 ***Chairman:*** Tell me about those.
Mr Ottewell: I think there has always been a sense that we are treated as a sort of poor relation really and we are feeding on scraps and there is a sense that what we are often getting from the government information service is a sort of attempt at a regional spin on something we will have already seen nationally and which will already have come out nationally perhaps or a fairly half-hearted attempt to regionalise something which is not necessarily the most up-to-date or interesting news.

Q265 ***Chairman:*** Do you all feel that?
Mr Ledwidge: I can endorse that last point. Just to explain my role here, I run a unit here at Westminster which supplies all the regional TV operations of the BBC around the country and all the 45 local radio stations with political news from Westminster, but at the same time, knowing about the questions that were

coming up here, I have been in touch with my colleagues around the country to try and gauge their views because it is a very different view if you are sitting in Newcastle as to how government press operations work than it is for somebody sitting here at Westminster. The overall answer that I would give to the question, "Has it improved?" is yes. Although a couple of political editors I spoke to in different regions said no, the majority view is yes, and I would endorse what David said, that they all say that there has been an increase in quantity of press releases, but not necessarily the quality or the understanding of the output and what its requirements are. Everyone who thinks even that there has been an improvement thinks there is an awfully long way to go in terms of understanding the needs of these important audiences. Just to put a quick plug in here, the term "poor relation" was used by David and that was one term that was used by a political editor in one of the BBC regions to me yesterday, but we are talking big, big audiences here. The most-watched news sequence on UK television is 6.30 to 7.00 on BBC One, the regional news half-hour. Papers like Chris's, I know, outsell the big national dailies in their own area. BBC local radio in England alone gets 7.3 million listeners a week. We are talking big, big audiences here and I believe that actually a lot of politicians have absolutely woken up to that, but I think that maybe there needs to be more, as it were, media literacy amongst some of the press office teams in Whitehall departments and elsewhere.

Q266 ***Chairman:*** But how would I get the message over? If I were the Secretary of State for Health, how would I actually manage to get a message over to every region? Clearly I would not be able to kind of tour round, so how would I actually do it?
Mr Ottewell: I think you have certainly got to try and do more and you have got to try and find perhaps some way if it is a policy which particularly impacts on a particular region in a certain way. I am sure there are creative ways of finding a genuinely regional line or message and that is what we need. Most large regionals, and I put both our papers in that category, yes, they want to be a paper of record, yes, they want to share information, but they are also tabloid newspapers or newspapers and the newness of something and the exclusivity of something is something which we take into account and rightly so, and I think there is a lack of understanding of that basically, that we will just sweep up and print what they want us to print. I think there is not always an attempt also to make people available which is important as well. We sort of feel that we are sweeping up and we will get what we are given rather than their making it easy for us to make news out of what they are trying to tell us.
Mr Fisher: There are a number of ways, my Lord Chairman. For example, the Secretary of State could call in the representatives of the regional media here at Westminster to a press conference and allow us all to put questions to him or her, but that rarely happens and, if it does, it tends to be a sort of brief encounter in which you are allowed one question each and you leave usually feeling very much the poor relation again. I think the underlying problem is that the government communication system just does not actually get the regional press. Every so often we are assured that it does, but very quickly you discover again that it does not.

Q267 ***Lord Grocott:*** I think that the vast majority of Members of Parliament and politicians actually attach far more significance to what the regional and local media are saying and their contacts with them than they do nationally and are acutely aware of the need to ensure that regional outlets get the information that they need and that they contact government politicians when they are short of information. On a sort of practical level, the Lobby, that is in many ways, I suppose, less important to you, the lobby system and the way that it operates, when you are looking for good regional stories, but nonetheless I know that a lot of your members, perhaps not all, are members of the Lobby. How significant is that and do you get the lobby access that you want? Occasionally, there is arm-wrestling, I think, amongst the regional press about them not having enough lobby access, lobby passes.
Mr Fisher: It is obviously important to me; I am in it.

Q268 ***Lord Grocott:*** Yes, I realise that, but not everyone is, are they, and there is often competition?
Mr Fisher: It no doubt has many flaws, but one of its virtues is that it is a democratic institution in the sense that I have as much an opportunity to put a question to the Prime Minister's Press Secretary there as does the political editor of *The Times*, but there is also a sort of unofficial communication system that consists of spin doctors and special advisers and that, I have to say, does not take much notice of me and seems obsessed with just a few national papers.

Q269 ***Lord Grocott:*** But are not the main kinds of stories in which your readers will be particularly interested of the type of the bypass being announced around a particular town or city in your region or the opening or closing of schools or post offices or anything of that sort, and is there a mechanism in place that works that ensures that you are the first to know, or after Parliament, I hope, or the MPs that you know in good time and effectively about that kind of information?

Mr Fisher: Sorry, it is obvious, but can I say to start with that actually many of the readers of the *Eastern Daily Press* read only the *Eastern Daily Press*.

Q270 ***Lord Grocott:*** I know, I am well aware of that.
Mr Fisher: So they will not be looking just for local or regional stories, but they will be looking for national stories there as well, so in that sense people in the government communication system should be interested in talking to me as well as political editors of national papers. In response to your further question, there does not seem to be much of a system. I can remember a time not many years ago when at the end of the normal lobby briefing on a Monday morning, I think it was, there was then a special one for the regional press which was helpful, not in a great way, but it was helpful, but that ended.

Q271 ***Lord King of Bridgwater:*** You said one very interesting thing about regional news programmes from 6.30 to 7.00. What actually is the listening figure there?
Mr Ledwidge: The viewing figures, funnily enough I checked these just before I came and, for example, last Friday 5.1 million people watched that sequence which was more than the six o'clock news, the national news, which preceded it, so actually, to go back to your earlier session, BBC regional news each night gets more than twice as many people as buy *The Daily Mail* which is obviously considered a very significant publication by politicians and government departments.

Q272 ***Lord King of Bridgwater:*** But the phrase, which I think Lord Grocott used as well, is that you talked about regional and then you said "regional and local".
Mr Ledwidge: Yes.

Q273 ***Lord King of Bridgwater:*** Some regions work better than others. I am a south-west person and region does not work at all really for the *Western Daily Press*. I do not know how much the *Eastern Daily Press* covers of the East Anglian region, but the *Western Daily Press* only covers part of it and it is much more local. I think the difficulty for the Government is that regional press is a difficult concept, do you not think?
Mr Ottewell: It should not be though, should it, because anybody who lives in, for example, my region in the North West knows how the regional media works. It should not be that difficult to have a reasonable amount of expertise. As my Lord said, we are talking about significant players here and it seems odd to me that most people in the media can have a very good understanding of how each region works and how the regional media work in a particular region and yet the Government does not seem to have the expertise. It is perhaps because still there is a sense that significant communications are still based very much in London and it is still very much a top-down structure, I think. That is certainly the feeling that we get in the regions and we just do not have understanding, genuine local understanding of how our regions work in terms of the media.
Mr Ledwidge: If I could just answer Lord Fowler's earlier question about what the Secretary of State for Health or the Health Minister would do, one benefit of having my unit here at Westminster is that there are teams in government departments that will ring us direct. Now, I can disseminate that information very, very quickly to BBC regions and local radio stations around the country, so some government press officers get that and use that facility, which we are happy to do, and for others it is a complete revelation to them. There is no doubt that there is a feeling, as it were, out there in the BBC regions sometimes that, to quote one editor I spoke to yesterday, "It seems that, although there's a will to do this, to engage more with the regional media, the real brownie points seem to be for coverage that will be seen and heard in the Westminster and Whitehall village", so I still think that there is a perception out there around the country, and I do not want to call it "institutional", but there is a cultural bias or forgetfulness when it comes to the regional media. Just to echo what David and Chris have said, we have to sort of operate on two levels. We are, as it were, a national news service for all local radio stations around the country, and there are 2.5 million people who only listen to those local radio stations, so they get their national as well as their local news, but we also have a direct regional responsibility and local responsibility. Just to give one positive example from the current economic crisis of the way that clearly some ministers absolutely get it, on a previous major day for financial news, the Bradford & Bingley morning, the Chancellor of the Exchequer was in Millbank, just up the road, giving a series of interviews and one which he did give in addition to the network's was to my reporter for all the BBC local radio stations. He also agreed to do a completely separate and individual interview for BBC Radio Leeds and of course the Bradford & Bingley employs a lot of people in West Yorkshire. I think that was very positive. That is an example of, I think, the politicians absolutely getting it. I do wonder, and I do not want to cast any aspersions, but, if a bid had gone in from BBC Radio Leeds to a press officer in the Treasury, whether, on a fast-moving story like that and with the Chancellor being so busy, it could have been engineered in the conventional way.

Q274 ***Lord Inglewood:*** I ought to declare an interest as the Chairman of the Cumbrian Newspaper Group. From what you have said, gentlemen, it seems to me

that your feel is that the Government's regional news operations basically regurgitate material from the centre rather than supplying what I might call 'national news with local characteristics'. Now, do you also feel that behind what they are doing there is an element of pork-barrel politics, trying to get you to pick up things that look at government in the most favourable way? Then, to move on from that, I was a Member of the European Parliament for 10 years and found, like all my colleagues, that newspapers were not terribly interested in what we were doing. What we failed properly to understand, which I have now learnt from having gone, as it were, to the other side of the fence, is of course that newspapers and radio stations carry stories because they want to get readers and listeners. Do you think that the government press operation fully understands that that is a crucial part of what they ought to be doing? Finally, and this is a point to David Ottewell about the regions, I would like to endorse what Lord King said, that the regional aspect is much more complicated than is sometimes given credit for because, for example, where I come from the truth of the matter is that what goes on in Manchester is not of particular interest to us. Indeed, I once remember explaining to a BBC senior person when it was proposed to move the local news from Newcastle to Manchester for us, I did not think people in London expected to get their local news from Amiens. I think these sensitivities are rather greater sometimes than those who sit at the centre suppose them to be.

Mr Ottewell: Just to pick up on that, you would accept that everybody who lives in the North West knows that, that is well-known. I used to work on the Carlisle papers and it was well-known there that, although we have the region in the North West, it is a complicated picture, but that should not be hard for press officers to understand and yet we will often get statistics and so forth which only have a sort of North West picture and they are virtually useless to analyse.

Q275 ***Lord Inglewood:*** I think you are concurring then rather than disagreeing.

Mr Ottewell: Absolutely, and it should not be that hard to understand. Presumably they aggregate those figures from lower-level figures, so why can we not just be given the lower-level figures and aggregate them as we see fit, yet you will ask and they will say, "Oh no, we only have a regional figure", and it just seems that often it can be nothing other than laziness, I think, and that is a very good example of them not understanding how the regions work and how the regional media work. In terms of the selling newspapers aspect, I think we are coming back to this almost patronising view of the regional press and I think somebody mentioned earlier that often the types of stories we will be interested in will be bypasses and schools and so forth, but it is not that simple. I think that when people are looking at newspapers like the MEN, they should be thinking more about how they would be thinking of the London *Evening Standard*, for example, and yet that does not seem to be the way government thinks about us and there is a sense that we are getting quite anodyne information and that we will be satisfied with a picture of the Secretary of State shaking a hand or sticking a spade in some allotment somewhere, but it is not the case; we are looking for news as much as the *Evening Standard* or the nationals.

Mr Fisher: I should confess that I have not actually spoken to a COI officer at Cambridge for a long time and that is because—

Mr Ledwidge: You are still calling it the "COI"!

Mr Fisher: Yes, and I slowly, but surely, came to the conclusion that I knew more than their press officers did at Cambridge, so what was the point? Do they do much more than regurgitate press releases from Whitehall? Not a lot more, in my opinion. Their press releases often try to regionalise national announcements with a sort of barrage of statistics, but this leads to a further problem. The eastern region is a very strange, unnatural entity created by a sort of stroke of a bureaucratic pen and, if my news desk in Norwich gets regional statistics which include Hertfordshire and Essex, they are regarded almost as alien places and those statistics are of extremely limited value. The figures need to be broken down to a much better local level.

Q276 ***Lord Maxton:*** Can I just have some clarification on the BBC regional news. Did your five million include viewers on the opt-out programmes at half past six on BBC Scotland, BBC Wales and BBC Northern Ireland?

Mr Ledwidge: Yes.

Q277 ***Lord Maxton:*** Because those three in particular of course have their own political agendas which are quite different from the rest of the country. Have you any breakdown of how many of your viewers of that five million actually came from those three areas rather than the regions?

Mr Ledwidge: There will be a breakdown and I can get it for you, but I do not have it off the top of my head, I am afraid.

Q278 ***Lord Maxton:*** I think it would be quite useful.

Mr Ledwidge: What I was quoting were what are called 'overnight figures'. You subsequently get consolidated figures, but they are the overnight figures and there will be a nation-by-nation, as well as a region-by-region, breakdown.

Lord Maxton: It just would be quite useful, I think, to have those.

Q279 ***Baroness Bonham-Carter of Yarnbury:*** I think you probably actually agree to this question, but maybe I could just ask it and see if you could give me some details about how things could improve. The Government, you have been clearly saying, could use local media better. Can you tell me specifically how you think this could be done? For instance, does every department have a press officer who is dedicated to dealing with the regions or not? Is this something that would improve things?
Mr Ledwidge: Some departments at Whitehall do, but I am not sure that there is a huge benefit in that. This is my own personal view, not necessarily the BBC's view, but to take an example, if you are wanting to know about a new hospital building, to go back to the Department of Health again, you want to talk to a press officer on that desk, not the one person, if there were such a person, who does all regional media all around the country. If you look at the Department of Health alone, you have got scores and scores of press officers and what I would argue is that people need to be aware of the needs of the regional media alongside the national media in whatever press officer role they have in Whitehall. Some have got it, we should not be negative about it, and I spoke to one political editor who said that he rang a government department, saying he was from BBC staff and was wanting to get an interview and some information, and he said, "Yes, *South Today*" and he had to explain what his regional news programme was because the press officer said, "Well, can't you do an interview over the phone?", and he said, "Well, no, we're television, BBC One in the south". Others absolutely understand it and, in terms of improving matters, (a) it is that culture across Whitehall communications departments and greater media literacy, and (b) it would help if the regional operations which Chris was talking about, for example, in Cambridge or Newcastle or Birmingham or Manchester were that bit more closely connected to the central government departments. Overall, there has been an improvement, according to the people I have spoken to around the country, but there are still occasions when, for example, in the case of a ministerial visit to a region, "Well, this is the first I've known about it", says the government press officer in the region, so they need to be more joined up.

Q280 ***Baroness Bonham-Carter of Yarnbury:*** So more joining up is what you want?
Mr Ledwidge: Yes.
Mr Ottewell: You have mentioned something very important there. At the top of my wish-list, and it is perhaps not practical or feasible, would be one person, a sort of cross-departmental head of communications for my region based in my region who understood my region and was both confident and well-informed enough to instantly brief on a range of subjects across—because that is often the problem, that people in the regions often either are not confident enough or well-informed enough to tell us what is happening on a breaking story and people in London do not understand the region, so you are sometimes caught in the middle of that. I think ideally for me, and it is perhaps not feasible, would be to have somebody who was both extremely well-informed and senior and confident enough to brief, yet also who understood the region and ideally was in the region because, if you look at how, for example, the parties work, the parties' communications are much more successful and the reason for that is that they have people in the regions who understand the regions, and you will find that a lot of our political news will originate not from a government press release, but from a party-political contact.

Q281 ***Baroness Bonham-Carter of Yarnbury:*** Actually it is quite similar to the way the BBC works.
Mr Ledwidge: If I could echo that, the most common criticism of the regional as in 'out in the region' press offices that I have heard from BBC journalists is that they just are not proactive enough. There are exceptions. The BBC East Midlands political editor told me that recently the GNN, Government news network, press team in the East Midlands actually went on a visit to the BBC in Nottingham to see the studio, to talk to journalists in radio, online and television about what their needs are. I would say that is probably unusual compared with some of the stories that I have heard, so I think there just needs to be more of an effort to get on the front foot to understand the nature of the region, if you are based in that region, and to make sure that you know the way that local and regional media work and, yes, to answer Lord Inglewood's point, to be aware of what will be appealing to listeners, viewers and Internet readers.

Q282 ***Baroness Bonham-Carter of Yarnbury:*** We heard from Benedict Brogan—I do not know if you heard the previous session—that he thought that the lobby system put regional journalists at a disadvantage. Now, I know that Mr Fisher has said he finds it democratic and he is in it, but would the other two of you agree that it does not work to the advantage of regional journalists?
Mr Ledwidge: Well, I do not feel deprived. I am not a member of the Lobby, I do have a pass to come into the Houses of Parliament, but of course the BBC, being one BBC, always has at least one journalist at the morning and afternoon lobby briefings and usually they are sitting about two or three metres away from me and we have in our newsroom here at Westminster a debrief from whoever has been at the Lobby on all that has been said, so, to be honest, I do not feel deprived and I do not think my team do.

Chairman: Can we come back to the Lobby in a moment; we will not miss it.

Q283 ***Lord Corbett of Castle Vale:*** Mr Fisher, you were Chairman of the Newspaper Conference.
Mr Fisher: Many years ago.

Q284 ***Lord Corbett of Castle Vale:*** With your colleagues, you have been quite critical of the government information service. Are you aware of any steps that the Newspaper Conference has taken to seek a meeting either with the boss man in Downing Street, the head of communications there, or whoever to discuss these issues and to see what can be done to put them right?
Mr Fisher: I am not aware of any such proposal at the moment, but this is not a new problem, it is an ongoing problem.

Q285 ***Lord Corbett of Castle Vale:*** But that underlines the point I am making. What have you tried to do about it?
Mr Fisher: Well, over the many years, and, by the way, I was Chairman of the Newspaper Conference back in 1989, so I am a bit out of touch with the Newspaper Conference in that sense, but there have been many contacts over the years, get-togethers and it is at such get-togethers that one gets these assurances that, "Yes, we do understand how important the regional press are", and you leave feeling slightly better and then a week later you realise that actually nothing has changed and nothing will change.

Q286 ***Lord Corbett of Castle Vale:*** Let me just ask another one then of each of you. Is there one thing that you would like the Government to do to give the regional media a better service?
Mr Fisher: Well, I would like the regional press operation to be brought far more into the loop than I actually think it is. How proactive is it? I have spoken to my paper's news editor, Paul Durrant, and I was rather shocked to discover that he gets a phone call about only once every three weeks from the people at Cambridge actually flagging something up and usually communication is done by means of the website. I would also like, I do not know if it is possible, to bring the regional press operation more into the unofficial information system based here because one has concluded over many years that special advisers and spinners often know far more than the official press people. If the government machine can have regional ministers and regional whips, can it not have a regional special adviser who really is quite close to Number Ten and actually does know what is going on?

Q287 ***Lord Corbett of Castle Vale:*** What about you, Mr Ledwidge?
Mr Ledwidge: Just one positive thing you have just reminded me that a few people have said is that the advent of regional Ministers appointed last year in some regions has led to a better service with regional Ministers not only obviously being in the region, but more contact and more stories coming through their offices. The single thing, apart from, as Chris says, greater joining up with the government press offices around the country and Whitehall, would be to say to Secretaries of State, "You should instruct your communications directors and press officers here in Whitehall on every announcement to think regional and local". I do not like box-ticking, but just to get it into the heads of people on whatever story they are doing, regional and local, "Are we serving those big audiences and readerships out there?" because I think too often, through all the evidence I have gathered from my colleagues and from what I know at Westminster, it is a bit of an afterthought, and maybe to spread, and I have positive stories to tell, but to spread good practice which some departments have to other departments. Let's face it, the overall word I would have for government communications with the regional media is "patchy". It varies between departments and it varies within departments, depending on the press officer that you speak to, so my single extra thing would be secretaries of state, who, I think, generally do believe in it, to make sure that it is something that their press teams and communications teams act on.

Q288 ***Baroness Eccles of Moulton:*** We have talked a lot about how the news that is disseminated to the regions and locally should be much more tailored to the needs of those areas, but there is another side to this and this is for there to be a greater understanding in depth from the sources of the news of what those regions and localities actually need, but on a topical basis, not just knowing that in the South West the main interests are X, Y, Z and in the North East they are whatever, but much more what the trends, views and thinking in those regions and localities actually are. Mr Ottewell suggested that there could be somebody who was quite senior and really understood how news could be received and delivered locally, but maybe that same person could also send another set of messages in the opposite direction, as it were, back to the sources of the news so that they were much more appropriate in a topical way to the audience that was going to receive them. I do not know if there is any way that that could be enhanced or whether it would not be a very easy task.
Mr Ottewell: I sort of agree with the thrust of what you are saying basically. The reason I was talking about having a single person who could do that, and, if you are asking for one way I would like to improve

things, that would be top of my wish-list, as I said, it is because there is maybe a breakdown somewhere, I do not know why, between us knowing what we want, the Government saying it knows what we want and trying to provide us with what we want and yet it does not happen. Just to say something that would also sort of tie it in with the lobby discussion we were having, I am not in the Lobby and I think Chris said that one thing he wanted was better informal communications with the regions, I completely endorse that and that was kind of what I was getting at with the idea that you can have one person, a point of contact, who could do that. Now, perhaps it should not be necessary to have one person doing that and perhaps the people based in London or wherever should just have a better appreciation of the regions and the needs and the nature of the regional media, but it is just not the case at the moment, I think.

Q289 ***Baroness Scott of Needham Market:*** I had a whole raft of questions which I think I probably do not need to ask because my sense from what I have heard so far is that you do not believe that there is either a coherent set of structures which enable this communication to take place, nor is there a real culture of wanting to make it happen. I do not know whether that is fair, but that is certainly what I picked up, so I do not really think we need to explore that any more, but I just wanted to make a comment about this regional minister question and about whether that had made a difference. You said it had worked in some areas and not in others and I am just wondering what makes it work, what are the characteristics of where it works? Then the second question I wanted to ask was that so far we have talked about the regional impact of national policy, but what about when there are stories of national interest, but which are regional-specific, so something, for example, like flooding in Gloucestershire which is a story the whole country is interested in, but it clearly has particular ramifications for the area, so what is your experience of communications in those sorts of stories which are emerging quickly?

Mr Ledwidge: First of all, what makes it work in some regions with a regional minister and not in others, I would not like to say because I do not have direct experience of that, but I suspect it is down to the energy and the commitment of, and the time available to, that regional minister and his or her press team. In answer to the second question about floods in Gloucestershire last year, this actually is an example of where I think Defra did well and I have had conflicting views on a number of government departments from the people I have spoken to around the BBC and in the regions and Defra is praised by some and then others say, "Well, it depends which press officer you get. They don't seem to know about our region or the significance of that area of agriculture", et cetera, but on the flooding, the Defra flooding website was praised last year and newsrooms were using that quite a lot. I have to say, our BBC websites were also incredibly good at that time and I know that at least one water company was using that for their information about what was happening in their area, but the ministers concerned did absolutely get the importance of reaching local audiences in Hereford and Worcester, Gloucestershire and the other affected areas, and I know that Hillary Benn, for example, the Secretary of State, did individual interviews, a number of them, for those local radio stations and also, I know, without wanting to quote him, it reminded him how important the local media were, and local BBC is, at a time of crisis.

Mr Ottewell: If I could maybe throw in a more political example, you will obviously be aware that Manchester was chosen as the site of the first regional casino and we all know what happened there, but what was interesting around that time is that obviously that was a local story of national import and what tended to happen then was that various key national newspapers were clearly being briefed and well-briefed on developments a long time before we were. Now, to me that is totally unacceptable, that we cannot get the information they are being given when it is something which, okay, it is an interesting talking point, it has moral dimensions and so forth, but for the people of Manchester that was thousands of jobs in a very deprived area and it mattered more to us and yet we could not tell them exactly what was going on, although the *Daily Mail* and *The Daily Telegraph* were being extremely well-briefed, so for months they were in complete limbo.

Q290 ***Chairman:*** Were the *Mail* and *Telegraph* stories accurate ones?

Mr Ottewell: They were accurate and I was getting the same briefings from Manchester, but I was getting them much later. Basically, I was chasing them and trying to get information second-hand.

Q291 ***Lord King of Bridgwater:*** Actually that story was as big a story in Blackpool because it was not going to Blackpool as it was going to Manchester and it was not going to the Dome.

Mr Ledwidge: That was a big story for us as well, *North West Tonight* and Radio Lancashire for Blackpool and Radio Manchester for what was happening or not going to happen in east Manchester.

Q292 ***Chairman:*** I hear what you say about basically the Minister driving the agenda in a sense at the regional level if he is the Minister for a particular area, and he certainly can do that by saying, "I want to be on this, I want to be on that", but, if he has got a weak team, there is nothing much he can do about it, is there, from memory? A Minister certainly cannot start changing the team, so, if the team is weak, it is all down to the director of communications or whatever and it is not really down to the Minister. Do you see the point I am making?
Mr Ledwidge: Yes, but I would have thought the Minister ought to realise, and you obviously know this far more than me having been Secretary of State and a Minister, but there must be a realisation at some point that things need to improve and things need to change from within the departments, I would have thought, but yes, maybe the team needs changing if things are not being acted upon.
Mr Ottewell: I do not know what Chris's experience is, but from the North West's point of view, to be honest, the appointment of a regional minister has made very little difference to media output, but I do not know what your experience is.
Mr Fisher: I agree with that. Frankly, my paper has not really taken the appointment of a regional minister very seriously, partly because she represents a seat in Hertfordshire and that is regarded as a long way away from Norwich, but not entirely for that reason; there just is little impact and little difference.

Q293 ***Chairman:*** I suppose partly also because he or she is not really a regional minister in the sense that all the decisions are taken by different departments and they are not actually taken by the regional ministers. They are there to explain policy and to defend policy.
Mr Fisher: I think it is seen as just an example of tokenism, to be honest, my Lord Chairman.

Q294 ***Baroness Howe of Idlicote:*** What I have been listening to is absolutely fascinating, but on the subject of just what effects the lobby system has on all of this, it has left me a little more confused, I have to say, because we certainly had evidence that the lobby system encourages unhealthy closeness between government and a small elite group of journalists. That was one set of evidence which certainly did not seem necessarily to be agreed by everybody, but nevertheless, it gave rise to anonymous briefings around the place, but that seems to happen whatever system you change, that it goes back to governments finding a way of getting their messages out and indeed journalists finding a way of getting the information that they need. Looking at what is happening regionally and locally and listening to what all of you have said, I have remained really quite puzzled. You have referred to the problems you have as being ongoing and each one of you has given some interesting examples of how it could be improved, but you have not had any proper reaction from government or from officials and so on. To me, the whole business of regional and local is crucially important. We have had evidence of specific instances, but, if it is this important and if your role is so important, why have you not got a list of priorities of what changes you would like to have in order of priority and then, between you all, agreeing whatever the priorities are, and then the people in the particular areas that you need with the skills in communication about what is important and so on? Am I being over-critical of the fact that I do not think you have got as far as I think you ought to have got with how government treats you?
Mr Ottewell: As Chris said, lobbying goes on all the time with government to change things and we will always get positive—I know my editor has made this point countless times at various levels and he will say, "This is what we need", and there will be the suggestion that things will change, but, for whatever reason, they do not. For example, on the issue of more access to prioritising regional media when Secretaries of State are doing interviews, for example, there will be a suggestion, "Oh yes, sorry, we shouldn't be leaving you out. We should be prioritising you when it is a regional visit", but then that does not happen in practice. We can point out that this was supposed to have happened, but at the end of the day a special adviser is going to do it the way he wants to do it basically and will say, "You, you, you", and then you are at the end basically and that carries on, so it is a cycle really where we will raise it, they will say, "Oh okay, we'll fix it", but then it does not happen on the ground and nothing ever seems to change or certainly not significantly. On the other point with the lobby system, I am not a member of the Lobby, but we do have a lobby correspondent. I have no problem at all with the Lobby, I think it is a necessary evil, I think it does work to some extent and there is not really any other way of doing it. However, I do not think it should be at the expense of regional correspondents being able to get access to that same information.

Q295 ***Baroness Howe of Idlicote:*** So how would you change it? You would say that all of you should be members of it?
Mr Ottewell: Well, not necessarily, but I think there is a sense that people think that once the Lobby is satisfied, the press are satisfied, and I think that is the problem. The problem is not with the Lobby for me, but it is that once that is done and dusted, I want to still be able to phone somebody who can tell me what is happening without their saying, "Well, you are not in the Lobby".

Q296 ***Chairman:*** You are based in Manchester?
Mr Ottewell: Yes, correct.

Q297 ***Baroness Howe of Idlicote:*** What about, for example, if somebody said that some Ministers at specific times did hold regional briefings or briefings for regional representatives? Is that a good thing?
Mr Ottewell: For me, that would be perfect. If there could be somebody based in the region who was empowered to give basically all the same information that would come out of lobby briefings, it would be absolutely marvellous for me, but it does not work that way. The way it works at the moment is that lobby briefings happen and that is basically it and then it is very difficult for me later to try and get the information, so, if for any reason our lobby correspondent is not there or whatever, it is very difficult for me to get that level of information at a later date.
Chairman: If lobby meetings were televised, you would be able to look in when you wanted to.

Q298 ***Baroness Howe of Idlicote:*** Well, that would be one way, but is it the same as the more personal contact?
Mr Fisher: It is not just a matter of the Lobby. I will defend the Lobby.

Q299 ***Chairman:*** You are a lobby member?
Mr Fisher: Yes, and I do not regard it as an evil, by the way. As I say, I think it is essentially democratic in that sense, and I wish more regional papers were represented in it. But it is not the only government communication system operating here. There is, as I have mentioned a couple of times before at least, another sort of provisional wing, if you like, of the government information service at Westminster and that is less democratic, and maybe I can give you an illustration. Last Thursday, I could not get there because I was dealing with a phone call, but I know that at the 11 o'clock lobby briefing the spokesman for Number Ten refused to take any questions about a government reshuffle. But I know that already by then at least two national paper political editors had received messages tipping them off to expect things to start happening by about teatime that day. Well, actually it did not happen then, but events took a different course and it was delayed until Friday, but, if they are receiving those phone calls tipping them off to expect a Cabinet reshuffle to start later in the day, why am I not receiving that call?
Chairman: Which is rather an important operational point for you as well, is it not, because, if one of your Ministers is being shuffled, you want to get it into the evening newspaper? I remember getting into terrible trouble with the *Birmingham Evening Mail* for not telling them when I was about to go.

Q300 ***Baroness Howe of Idlicote:*** But, to go back to my main point before obviously others want to join in, why do you think you are not being as powerful as I think you ought to be? I really am fairly amazed at the lack of your getting your way in quite a lot of these things.
Mr Fisher: I think there is a culture here which, as I said earlier, just does not get or understand the regional press, and it is significant. It just does not understand it.
Mr Ledwidge: Just to give examples, you say, "What are your priorities? What are you doing about it?", here is something. We are in a very fast-moving news environment and we are dealing with many, many stories a day. The Ministry of Defence, to take an example, may make a statement, publish a press release about the movement of troops. We have said, members of my team, "Look, please do tell us where they are coming back to. Are they coming back to Catterick? Are they coming back to Colchester?" Squadrons, battalions, we need to know where they are so that we can target the information to the particular station and region concerned. It is such basic practical stuff sometimes. It sounds almost mundane, but we need to get that kind of very basic information into all government communications, but we do say this and then one press officer gets it, but the next may not know, so it is not as though we are all being passive about what is a problem, but it is not a problem absolutely everywhere and, as I say, the overwhelming view is that there have been improvements.
Mr Ottewell: But they do prey on our goodwill slightly as well, do they not, in that they know that we do want to be ultimately a paper of record in a way perhaps not all the nationals do, so, if there is a visit, if there is an announcement, we do feel an onus on us and that is one of the reasons, as I think somebody mentioned earlier, that we are slightly more trusted than national papers because we do make an attempt to be a paper of record and they know that. I think they know that, even if they give us the bare minimum, they have still got a reasonable chance of getting coverage, and I think that is really almost an abuse of our goodwill basically because they should not be giving us a worse service just because they can rely on us doing something for them.

Q301 ***Chairman:*** How many lobby passes does the BBC have?
Mr Ledwidge: I will have to check on that. I would not imagine more than about a dozen, but I am not certain.

Q302 ***Chairman:*** A dozen?
Mr Ledwidge: I will have to check on that, Lord Fowler, and I will come back to you with an answer.

Q303 ***Lord Grocott:*** I was going to ask something very similar. When Chris Fisher said that he thought it would be nice if there were greater access to the Lobby by regional journalists, what is the ceiling on this and how are they allocated? Is there just a finite number of lobby passes? Certainly when I had anything to do with it, this is how it seemed to operate, that historically almost they are frozen in time between the various news outlets, and some maybe get more passes than they need and others get fewer, but is there a finite number? Question two then is what is the reason for that finite number, because I do not think it can be surely just the physical number of people who can go to the Lobby, but is every seat taken every morning and afternoon?
Mr Fisher: I do not think there is a finite number.

Q304 ***Lord Grocott:*** So, if you applied for another couple of lobby passes from Manchester or the North East, as far as you know, they would be granted?
Mr Fisher: As far as I am aware. The problem is more one of regional papers sort of ending their representation in the Lobby. That is more of a problem at present. Perhaps I can give another illustration of where, in my opinion, it goes wrong. One of life's irritants for me is the so-called "op ed" or opinion editorial by which an article will be written supposedly by, but in reality for, a minister or a top opposition politician. It will try to sort of regionalise a national policy issue, but these articles are usually absolutely hopeless, of very poor quality, absolutely patronising and often one senses that the words, for example, "West Midlands" have been scratched out and "East Anglia" have been put in and that is about as close a reference to what is going on in the eastern region as you can get. They are so poor that my paper almost refuses on principle to run them. Surely the government information system and indeed opposition parties can do better than this.

Q305 ***Chairman:*** Okay, that is the challenge for the politicians. We have kept you past your time, but is there anything you want to add, any further way you think that things can be improved as far as the regions and coverage are concerned?
Mr Ledwidge: One thing that I ought to mention which some of my colleagues in the BBC around the country mentioned, and we have not spoken about, is the regional development agencies, which are substantial players now in many regions both in terms of the influence they have and the money they spend. One point that was made to me was that the press offices in those regional development agencies, an arm of government, if you like, are ultra-cautious and it is hard to get interviews with people from the regional development agencies and there is a reluctance to appear sometimes or to be providing information that can then help a programme or a news outlet. I think again it is a case of greater engagement within those regions between the press offices and the regional media and a greater trust needing to be built up between them.

Q306 ***Chairman:*** That is fairly important, is it not, because the regional development agencies themselves can be criticised for not being sort of 'democratic' institutions at any rate and, if they were then secretive as well, that just kind of underlines it all?
Mr Ledwidge: Well, yes, I think that is right and maybe there is nothing to hide, and I am sure there is not, but there is this element of caution, as I said, which a number of people have mentioned to me.

Q307 ***Chairman:*** Okay. Anything from your side, Mr Fisher? You have been pretty frank about your views.
Mr Fisher: Well, I hope I have not appeared negative, my Lord Chairman, but I thought it was probably best to say things as I see them.

Q308 ***Chairman:*** We welcome that.
Mr Fisher: Can I just say this to illustrate the sort of lack of clout of regional papers: that my paper has been campaigning since 1984 for an all-motorway and dual-carriageway road link between London and Norwich. Norwich is widely perceived as the regional capital, it is little more than 100 miles from London and, as I say, my paper has been banging away about this for 24 years and that road link is still not there.

Q309 ***Chairman:*** Mr Ottewell, what about you?
Mr Ottewell: I guess I am actually quite pleased that you are all puzzled as to why nothing has improved, despite the so-called power of the regional lobby, because we are too basically, so I am actually pleased about that. I hope that the key thing that will come out of this is that the Government will take these issues seriously, and also the other message I would want to give is that a few key people in an area like the media can make a huge difference.

Q310 ***Chairman:*** Yes, I think that is an important point. Well, many, many thanks for coming. I apologise for keeping you past the time on quite a busy news day—the Chancellor of the Exchequer, I see, is up in the Commons now at this moment—but thank you very much. If we have got any other points, we might write to you on those.
Mr Fisher: Thanks very much and thanks for inviting us.

Supplementary letter from Mr Bob Ledwidge, BBC

I would like to thank you for inviting me to answer questions last week as part of your committee's inquiry into Government Communications.

One of the specific questions you asked was 'How many lobby passes does the BBC have?' I wasn't sure, but promised to write and let you know. The answer is 30, and that figure includes all the BBC's Regional Political Editors around the country.

Lord Maxton asked whether the 5.1 million audience figure which I quoted for the 6.30 pm Regional News from the previous Friday night (3rd October) included Scotland, Wales and Northern Ireland. I confirm that it does. He also wanted to know the breakdown for the Nations. The answer is that within the 5.1 million average total who watched the slot in the UK there were 486,000 viewers in Scotland, 212,000 in Northern Ireland and 134,000 in Wales.

Finally, one subject which we didn't get to in the session was the importance of up-to-date internet information for journalists. The majority of BBC Political Editors I've spoken to around the country think there has been an improvement in this area by government departments. However, most believe the navigation and signposting on government sites could be a lot easier.

One told me that sometimes it's "mind blowing trying to find the right regional information in a useable form", with statistics lost in massive reports. On the other hand, one told me there was a good GNN regional site detailing the government's house-building targets for his region with an easy-to-read breakdown *by local authority area*. All agree there's a huge appetite for regional and local breakdowns of figures on many subjects which isn't being satisfied. As we indicated to the committee, a top line statistic for an entire government region, whether it's on hospital waiting lists or house re-possessions, isn't really enough for the local media to tell the story accurately and make it locally relevant.

I hope this information helps, and I wish you luck with your report.

Examination of Witnesses

Witnesses: Mr Nick Gurr, Director-General of Media Communications, Ministry of Defence, Mr Ian Hargreaves, Strategic Communications Director, Foreign and Commonwealth Office, and Ms Sian Jarvis, Director-General of Communications, Department of Health, examined.

Q311 ***Chairman:*** Welcome. Thank you very much for coming. You know what we are about. We are conducting an inquiry into whether the government communications system is open, impartial and relevant to the public. We are obviously looking at the Phillis report and whether things have improved since then and whether the culture of secrecy and partial disclosure, which was identified, has been changed and other issues which go with that, including the relationship between special advisers and civil servants. We have got all your biographical details. Mr Gurr, I think you are the only one who has been in the Department of Defence for some time, have you not?
Mr Gurr: Yes.

Q312 ***Chairman:*** In the sense that you are—
Mr Gurr: —an administrative civil servant, yes, or I was until I took up this post.

Q313 ***Chairman:*** Did you cease to be an administrative civil servant then?
Mr Gurr: For the duration of this post, yes.

Q314 ***Chairman:*** We will come back to that. Ian Hargreaves, do I not remember you from journalism? Were you not a journalist? You are turning now from poacher to gamekeeper, are you?
Mr Hargreaves: I hope that I am not literally turning at this moment, my Lord Chairman. You remember me from the time when you were Transport Secretary and I was the *Financial Times*' transport correspondent.

Q315 ***Chairman:*** I knew it. I knew there was some wound I had!
Mr Hargreaves: I was hoping you might have forgotten that! Most of my career has been in journalism, with the *Financial Times*, the BBC, the *New Statesman*, but in latter years I have spent a period running the journalism school at Cardiff University and then doing two large communication jobs, one for BAA plc and now for the Foreign and Commonwealth Office.

Q316 ***Chairman:*** Are you a regular civil servant?
Mr Hargreaves: I am.

Q317 ***Chairman:*** So you have joined the Civil Service?
Mr Hargreaves: I have.

Q318 ***Chairman:*** Sian Jarvis, you also were a journalist, you have worked in television and radio, but you have been Head of News in the Department of Health since 1999.
Ms Jarvis: I joined from GMTV. Before that I trained at the BBC as a journalist. I joined as Head of News in 1999 and in 2001 I was promoted to Director of Communications at the Department of Health, and then about two years ago I became Director-General of Communications.

Q319 ***Chairman:*** What is the difference between all those titles?
Ms Jarvis: It is a restructuring of the Civil Service. The director-generals are the most senior level of management before the permanent secretary and directors are now the next rung down and then we have deputy directors after that.

Q320 ***Chairman:*** We asked the Cabinet Office in early July for information on the number of communications staff costs. We gave them a generous deadline of 16 September and we received their reply at 6 o'clock last night, which does not say too much for the speed of government communications. Obviously we have not really been able to digest in that time that which has been said. I am not blaming you for that. How many communications staff do you have? How many of those are press officers or dealing with the press, and what does it cost?

Mr Gurr: Perhaps in the interests of making this answer as understandable as possible I will come at it in slightly bite-size chunks. My central communications budget, as the Director of Communications in MoD responsible for the central communications organisation, is about £15.6 million. I have about 180 staff in my organisation, 28 of whom are national press officers and eight deal with the regional media. The rest are a combination of support staff, photographers, graphic staff and people dealing with websites. We also have a training organisation and a deployable media operations capability that can be sent to operational theatres to provide a media capability there. All of that is included in the 180 people who work for me. There are a further 157 staff in the MoD whose prime role is communications who do not work for me. These are people who are in the service commands, places like the Meteorological Office, the Hydrographic Office, our Estates Organisation and the Equipment and Support Organisation. We have not got a total figure for how much these people cost, but my best estimate—

Q321 ***Chairman:*** So that first figure of £15.6 only covers the 180, does it?
Mr Gurr: Yes. The best order estimate I could give for the others is about £15 million. If you add all of this together you come up with a total of about 337 people across defence as a whole and a budget of about £30 million, which is less than 0.1% of the defence budget. I like to think that everybody in defence has some responsibility for communications. For example, we have public relations officers in every regiment or on every ship but they were not included in those figures. They have other primary duties and just do communications as part of an overall task which focuses on a number of things.

Q322 ***Chairman:*** In that total of 157 would roughly the same proportion as the proportion for the 180 be dealing with the press directly?
Mr Gurr: It is difficult to say. I think it will vary from organisation to organisation. In the Met Office, for example, where they have got quite a big and regular dealing with the media, it probably will be of that order. In some of the other parts, for example, defence estates, there are probably more people dealing with internal communications and websites. It will vary across the piece.

Q323 ***Chairman:*** We will come back as the questioning goes on and examine some of this, but let us just get a broad picture first. What about the Department of Health?
Ms Jarvis: In the Department of Health we have 30 press officers who deal directly with the media. With administrative support that is a total cost of £2 million. Overall and included in that number we have 122 communicators and they do a broad range of jobs, marketing, so all the public health campaigns like obesity, alcohol, smoking, but also included in that are recruitment campaigns, social care and NHS. We do branding. We have a team that specialises in NHS comms and managing the network of NHS communicators. We have a digital team who manage the websites and other social marketing developments, publications and printing and internal communications for the Department of Health. Our total budget, including the public health campaigning for 2007/08, was £45 million.

Q324 ***Chairman:*** Am I right in saying that you have 30 press officers and 122 other communicators?
Ms Jarvis: No. The 30 is included in that number. One hundred and twenty-two is the total number of communications people, and 30 of those people deal directly with the media.

Q325 ***Chairman:*** Your 122 cost £45 million, is that right?
Ms Jarvis: No. That was for the campaigns. The actual bill for staffing, in other words the admin budget, is £7 million. The 122 people cost, including their travel and expenses and that kind of thing and training budget, just over £7 million to be employed.

Q326 ***Chairman:*** And the £45 million?
Ms Jarvis: That is programme spend so it will be the campaigns, websites, all that kind of thing.

Q327 ***Chairman:*** Obesity would come under that, would it not?
Ms Jarvis: Yes. This coming year we are going to be spending £23 million on obesity. The overall budget for obesity over three years is £75 million. That is what we have earmarked but obviously we have not spent that yet.

Q328 ***Chairman:*** So £25 million you are spending on obesity, are you?
Ms Jarvis: That is for the forthcoming year. In those figures we only spent £1 million on obesity in terms of preparing for the campaign.

Q329 ***Chairman:*** I am glad to see the health budget is just as obscure as when I was there! Ian, what are you spending?
Mr Hargreaves: The number that I think is most comparable to Nick's 50 and the lower number that Sian gave you is just under £11.5 million, which is what we spend on running a press office, that is, internal communications, public diplomacy and the money that is directly able to be spent by myself and my colleagues. The press office within that, as you can see from the White Book numbers, in recent years has
